The snake was a young one, and the wounds probably not as deep or the virus quite as poisonous as if made by a larger specimen.

In a second letter Robert says: "I felt a sharp pain in my left ankle the instant the snake bit me, and after a little while under my knee and then my hip."

During a residence of over twelve years in Florida, I only came across six of these snakes, notwithstanding that three-fourths of my time was spent in the woods and fields hunting, surveying, etc.

Dr. Yarrow's experiments with rattlesnake virus (now in progress at Washington) will probably be of lasting benefit to the country at large. The results will be eagerly looked for by every reader of FOREST AND STREAM, including REDWING.

HARTFORD, Conn.

AN ANTLERED DOE.—A party of hunters returned from the West Mountains a few days ago, and during the hunt Mr. Beauregard Kenner succeeded in bringing down what he supposed to be a buck, but which, on examination, proved to be a fine doe, with as magnificent a pair of antlers as ever adorned the head of the proudest buck of the Wasatch. We understand that Mr. Kenner has preserved the head and horns for the curious to look at if they so desire.—*Home (Dak.) Sentinel.*

SEX MARKINGS IN GROUSE.

Editor Forest and Stream:

It is very gratifying as well as interesting to see how much light is thrown on the question of sex markings in grouse by such close observers as Mr. Swift, of Elmira, and Mr. Davidson, of Lockport, both in your own State. I am just in receipt of a very instructive private letter from the latter gentleman, and for fear he might not give his permission I send you a liberal extract without asking it. Mr. Davidson says:

"I have read with pleasure and interest your own and Mr. Swift's notes in the two last issues of the FOREST AND STREAM and I was somewhat taken aback when I read in yours that I claimed 'the two central feathers in the *female* had the black band near the end broken and irregular instead of a pure black, sharply defined, as is the case of the male.' Now, I do not know that I wrote you in regard to this marking, but if I said *female* it was a mistake, as I should have said *male*. At that time we had only three specimens, two of which I supposed were males, one adult and one young bird. The latter was one which flew into a house and which we kept alive for six or eight weeks. Both of these (supposed) males had the broken irregular band marking in the two central tail feathers, and the one (supposed) female did not have this marking. We now have two more specimens, taken Nov. 27, 1886, male and female. These two birds I dissected and know them to be of opposite sex. The male has but a very slight irregular band marking, while the female has the band broken and irregular the entire width. Therefore I have come to the conclusion that this marking is no certain indication of sex, at least in birds of under one year of age, but I should be inclined to think that in birds of two or more years of age the band in the male bird would be more regular and distinct than in the female of the same age. I agree, however, with Mr. Swift and yourself that the ruff is the most certain criterion by which to judge from, as in the male it is larger and more glossy black than in the female. You will bear in mind that I did not dissect the first three birds of which I wrote you, but only judged the sex from general appearances."

Mr. Davidson evidently would say, if he carried his statement out more fully, that the ruff of the male grouse has a changeable metallic lustre which is not found at any age in the ruff of the female and which corresponds exactly to the sheen of the cock's plumage or that of the gobbler. My own observation is that the liver browns of the young females change gradually to black, beginning with the first moulting, but that while the ruff and other dark markings become a pure black, it is always a dead black and never a lustrous or changeable one.

JAY BEEBE.

TOLEDO, O., Dec. 15.

PLUMAGE OF THE MALLARD DRAKE.

Editor Forest and Stream:

In the New York *Times* of Aug. 11, 1887, appeared an article by Frank Wilkeson, entitled "Along the Manitoba Road," from which I extract the following:

"Throughout what used to be marked on the maps as Rupert's Land are extensive areas of low, swampy grounds, reed and grass grown, and hundreds of small lakes. The Canadian Pacific Railroad winds for miles through a portion of this swampy region, and in every swamp and lake were thousands of mother ducks surrounded by their young, and scores of geese were also there. The region is the breeding ground of wild waterfowl. Snipe and plover ran along the shores of the open lakes, and white gulls flitted softly over the lakes, crying mournfully. I looked at these birds with great interest, and quickly saw that the ducks were mostly mallards and that there was not a drake among them. I asked an Englishman who breeds hunting dogs at Winnipeg, and who is a sportsman, where the drakes were.

"In the far north," he replied, and then he added, "They stay here until the ducks begin to set, then they suddenly disappear. A few weeks after the shooting season opens immense flocks of old greenhead mallards arrive from the north and at once mingle with the young ducks. Yes," he repeated, "the drakes summer in the far north." This has already appeared as a reprint in FOREST AND STREAM of Aug. 25. It is evident that neither Mr. Wilkeson nor the "Englishman who breeds hunting dogs at Winnipeg, and who is a sportsman," are much acquainted with the habits of the mallard, else they would not thus accuse the drakes of withdrawing from the scenes of family life and seeking a bachelor solitude in the far north during the summer months, when the callow young are most in need of a parent's fostering care. 'Tis true, as a good authority tells us, the drakes display no paternal regard for their young, but they, at least, do not deny them the solace of their presence. I speak from an experience much further north than Rupert's Land, where the mallards also breed in great numbers.

I can assure Mr. Wilkeson, from personal observation, that he has been deceived by appearances—by the disguise which the old greenheads assume—the same, as we are told, which a certain historic personage put on to elude the vigilance of his pursuers, namely, the garb of the female. He looked to find greenheads, which, of course, he did not see, hence concluded they were absent.

The mallard has two annual moults, the first in the spring of the year, and again in the autumn. In the summer the drake loses his green head, which is so characteristic of this male species, and the tuft of curly feathers on the tail; in September the disguise is thrown off, and he reappears with the green head and other markings which are familiar to the fall and winter sportsman. His summer plumage assimilates so closely to that of the female that he might be very easily overlooked when in the midst of his family.

Coues, in the second edition of his standard work on American ornithology, makes no mention of this seasonal plumage of the mallard drake. T. H. STREETS.

GAME IN IDAHO.

THE Salmon River Mountains in Idaho are of the most rugged order, their crowns encircled with perpetual snow, and the timber line plainly marked in summer by a somber bleak stretch between the blue-green fir and pines and the white. The dense forests and deep cañons with frowning walls are barriers that have resisted the invasion of the game butchers who have depleted the western slopes of the Rockies of their wealth of noble animals. These untrod wilds hold the reserves that have fed the Red men in their caves and on the Reservations, and stocked the lava plains and river bottoms winter after winter with thousands of deer and antelope to be ruthlessly slaughtered. And the swarms are going forth again this winter. As we passed up from the low Snake River Valley we saw herds of deer like sheep on the bare broad lava plains, with no cover but the boulders and the low craggy sage brush. At one point we intercepted a drove of the blacktail which must have numbered thousands. The plain was level for two or three miles and we could not see either end of the moving herd. They parted as the stage rattled over the stony road, and galloped away out of pistol range and then turned to look at us. They had just passed from the mountains, where the new snow was deep and soft, to the low river bottom where the ground was bare.

We were bound for the silver mines, 6,000ft. above the sea. The lumbering coach was exchanged for a light, finely-rigged, four-horse bobsled. The dry snow squeaked under iron-shod feet and steel-shod runners, but the sleek horses tossed their heads, champed the bits and carried us to the higher and colder regions. Still antelope, deer and prowling coyotes were seen at every turn of the road, all seemingly fleeing from the snow which had fallen a few hours before. It was a strange sight to see these pretty creatures going in graceful swinging bounds over the prairie without the shelter of timber, which is associated with such animals in one's mind. My fingers itched for a good rifle. And then I would say, "Why should I murder the mild-eyed beauties?" They are murdered by the thousand on these plains. They are shot down in the snow by greedy murderers, where they lie as long as the hunter can kill, when they are skinned for the hides. This wholesale slaughter has gone steadily on for years, each winter's snow bringing a new supply from the reserves; from the mountains so bold and blue in the distance. After we reached the heavy timber belt we saw no more game. The deer seemed to have all gone but the tracks of elks and moose crossed the road. These monarchs of the woods seemed, too, to have been disturbed by the elements. The only abode of the white man in the mountain region was the new mining camp, and even these shy animals did not seem to realize their proximity to the enemy. They had been browsing around within rifle range of the camp.

The light of the next day came with loud reports of bursting timber in the log houses, and the snapping of a thousand trees on the mountain side that seemed to be splitting with the first freeze. The temperature had dropped down 30° in twelve hours, but the clear blue sky gave promise of a calm bright day. A hunt was decided upon. The dense evergreen trees held the snow. It was light and dry, and not deep beneath the interlaced branches over all the great wilderness. We moved noiselessly over the downy carpet. We had gone a mile from the quartz mill; I was separated from my companion by a little timber-clad knoll. Something white scudded past the dark butts of the trees as swiftly and as lightly as the shadow of a cloud. I was looking for the dark form of an elk or a moose. The flitting of a form so swift and so white that it could only be seen in broad daylight when it came in contrast with the black tree trunks struck me at once as being very strange. I am not superstitious, nor a believer in any sort of supernatural manifestations, but my philosophy was very unsatisfactory for a short time. Although noiseless, I soon learned that the mysterious objects made tracks in the snow like other earthly beings. I was not long in deciding that they were mountain sheep, but their pure white color, their swiftness and the fact that I had not noticed large, colored horns, was evidence against the sheep theory.

My speculations were abruptly ended. The loud report of my friend's rifle came from the direction the tracks were leading me. I discovered the fortunate hunter three hundred yards further on bending over his prize. He had brought down a wild goat. I had driven the little herd very near to him where he was waiting for me. One of them had stopped to look back, in such a position that his white body showed plainly against a tree beyond, and afford a fine mark for the hunter's deadly rifle. It was probably the common Rocky Mountain goat. It was heavier than the average class, with short strong legs. Its fleece was as fine as some graded Angora goats I have seen, and of spotless white. The horns were slender and recurved, and the eyes were pink or light red. I have learned from Indians and other hunters that their haunts in summer are near the region of perpetual snow, and that they scamper up the steep slopes with great speed whenever routed from their lairs, and never rest till they are upon some snow bank, depending upon the inability of the eye to distinguish the outline of their bodies against the white back ground. They climb the rocky heights equally as well as the mountain sheep, and defy the attack of wolves and other beasts of prey when in their chosen rocky defiles.

After we had suspended the goat to a limb out of reach of the wolves, we determined to cross a very rocky cañon. We had cautiously worked our way to the bed of the dry water course, and were debating the question of the ascent, when the broad trail of a wallowing bear was discovered. It seems to be the nature of the bear to hibernate, but I have often found his tracks in the snow and trailed him to his den. We started after bruin with a zeal born of the true sportsman spirit. To kill a bear is the hunter's greatest pleasure. Two miles of laborious tramping and the casual observer would have noticed more evidence of perspiration than enthusiasm. But we were soon rewarded with a glimpse of a black round ball of fur seemingly rolling up the steep side of the cañon. He had left his temporary shelter under the rocks and was trying hard to gain the rim rock. The snow was deep on that side of the cut. His progress was slow. We hurried forward to a point directly before him, and trained our repeaters upon him. It would not add to my reputation as a hunter to tell how many shots I fired, but finally he let go and came rolling in obedience to the laws of gravitation. He formed himself into a wheel with his feet and nose turned in. He reached the foot of the bluff with a grunt 30yds. from us, and straightened out into a dead run, showing no effects of injury either from the jamming against the rocks nor from the bullets we had fired at him. But a hasty, lucky shot brought him down. The cunning creature had rolled down the rocky steep not because he was wounded, but had adopted that plan of escape after finding it impossible to climb over the rim rock above him while under fire. He was only slightly wounded before the tumble-down. ROXY NEWTON.

MASSACHUSETTS GAME NOTES.

WORCESTER, Dec. 4.—As far as my personal observation goes, and from the accounts of friends, I think I am justified in saying that here at least the shooting season has been fully up to the average.

Ruffed grouse and flight woodcock have been quite numerous, and some good bags were made. One market hunter says he has killed over three hundred grouse so far, and another has scored about forty flight woodcock, besides one hundred and eighty grouse. In one day out a few weeks ago another person and myself put up about twenty-five grouse and five woodcock. I have not heard many reports as to quail, but should say they were scarce. One gunner told me that he had struck only three or four bevies this season. In a bag of twenty-five birds made by three gentlemen from the city, there were seven quail, six woodcock and twelve grouse.

Gray squirrels were, in comparison with last year, almost a minus quantity in some places. One person got six where he got thirty last year.

Rabbits have been scarce, owing to the extensive use of ferrets by wood-choppers, etc. A man's chances who hunts simply with dog and gun are completely destroyed by these miserable pests.

The geese have gone over, at least many of them. Last Tuesday I saw a flock of about thirty "honking" for all they were worth and flying due west. I also heard of several other flocks numbering from twenty-five to eighty. As being a little unusual I mention the capture of an otter weighing thirty-five pounds by a farmer living near here.

The other day I was overhauling my tackle, revarnishing my rod and setting things in order for next spring, when the sight of hooks, flies, spoons, etc., just made me ache to drop my hook in the old holes I have so often fished, and can so well see now, although the bleak fields and bare trees are strangely out of sympathy with my thoughts of alder tangles and green leaves.

PEMIGEWASSET.

NON-RESIDENTS IN NEW JERSEY.

Editor Forest and Stream:

On page 293 of the laws passed by the Legislature of New Jersey in 1878 you will find the following:

1. Be it enacted by the Senate and General Assembly of the State of New Jersey, That from and after the passage of this act, no person or persons non-residents of this State, shall kill, destroy, hunt or take any doe, buck, fawn or any sort of deer whatsoever, or shall kill, destroy, hunt or take any partridge, moor fowl, ruffed grouse, quail, woodcock, Wilson or gray snipe, reed bird, rail bird or rabbit, at any time, or shall catch any speckled brook trout, or speckled river trout, black bass or salmon, at any time in this State, without complying with the by-laws of game protective societies, organized or to be organized under the laws of this State, the person so offending shall forfeit and pay the sum of fifty dollars for each and every offense, and may be proceeded against in any county of this State wherein such person or persons may be arrested, or wherein such offense shall have been committed, and in default of the payment of the forfeit money, with costs of prosecution, any person or persons so offending shall lie in the common jail until the same shall be paid, one-half of the forfeit money shall be for the person prosecuting for the same, and the remainder paid to the collector of the township wherein the conviction may be had, and all acts and parts of acts inconsistent with this act, are hereby repealed; provided, that nothing in this act shall prevent residents of this State from taking game or fish, subject to the existing laws of this State.

2. And be it enacted, That any member of any society for the protection of game and fish, organized under the laws of this State, shall be empowered to make arrests of any person or persons who may be found violating any of the provisions of this act, or infringing any of the laws of this State made for the protection of game and fish, and bring him or them before a magistrate for examination.

The third section of this act provides that county clerks shall keep in their offices records of the lists of members of such societies.

The above law may offend against the constitution of New Jersey, against the constitution of the United States, against common sense and against everything else, as well as it does against the laws laid down by Lindlay Murray, but nevertheless it is the law of the State, and it has not to my knowledge been declared unconstitutional by any court of this State. The law, as is clearly apparent, gives societies incorporated under the laws of the State vast powers, and these powers, as all others, may be used with advantage or they may be used without just discrimination and thus become tyrannical. I do not know whether other New Jersey game protective societies depend on special charters which may have been granted them by the Legislature, but I do know that our association, incorporated as it is as the law provides, has been advised that fees might be collected from non-residents. We do not shirk any duty by not doing so. We might have passed a by-law by which no non-residents of the State shall be allowed to shoot in Passaic county unless they are members in good standing of the Passaic County Fish and Game Protective Association, but we have in no way taken advantage of the first section of the above act. The Legislature gave game protective societies a certain right, but there is nothing to compel such societies from exercising that right. The fields and waters of Passaic county are open to all as long as the laws of the State are observed.

It may be argued that game societies might pass ridiculous by-laws, and might perhaps provide that all hunters

shall stand on their heads while discharging their firearms. That would be an unreasonable use of the right given by the Legislature, and the courts would undoubtedly interfere. The only question is, whether the exaction of an annual fee is a reasonable exercise of the power conferred by the Legislature. Is it not probable that the same court which recently decided that $2 per year was not too large a fee for a license to keep a dog would also decide that any not excessive sum would be proper for non-residents to pay for the privilege to hunt in the State? It ought to be remembered that New Jersey courts have always been jealous of the rights of its citizens as against those of other States, as many a creditor has ascertained in this State.

But the law as to non-resident sportsmen is foreign to us; we do not care whether it is constitutional or not, and have no desire or occasion to test the law. Most of our members are residents of this State, and we have no desire to go out of Passaic county for the purpose of finding subjects for litigation. We have enough to do in Passaic county in looking after the interests of sportsmen here.

The law gives our association the right to collect in the court the fees due us from persons who become members. It does not require us to do so, and we have never made any such attempt. When a member falls behind in his dues he is simply dropped from the roll of membership and no more is said about it. This is only another case in which we have a right which we do not exercise, and which no law compels us to exercise. The Passaic County Association was organized for the purpose of protecting game and fish and birds, and propagating the same, and, although we did once step a little outside of our purview in testing the dog law, because it affected owners of dogs in Passaic county, we have no desire to step outside of our boundaries and in any way interfere with the workings of other protective associations. They perhaps can give you some valid excuse for compelling non-residents to pay license fees. CHAS. A. SHRINER.

Sec. Passaic Co. Fish and Game Ass'n.

PATERSON, N. J., Dec. 19.

SHOOTING NOTES.

I KNOW of about nine late woodcock this month. As I said before, I do not believe the timber-doodles are bothered much by the cold. Certainly the weather about the first of December was freezing enough to send both woodcock and snipe southward, but it appears that a few tarried behind. Near Boiling Spring, N. J., Dec. 3, a fat snipe was killed, and in Warren county, N. J., Dec. 2, 3 and 5, nine woodcock were shot in the vicinity of Hackettstown. Mr. Jules Reynal, of White Plains, N. Y., and Mr. Ernest Stables, of this city, were shooting in Westchester county on Dec. 3, and started a big woodcock. Mr. Reynal has shot 49 woodcock this season and some 150 quail. Not bad for covers so near New York.

My experience has been simply ridiculous. I gave up quail shooting in New Jersey about fifteen years ago and have been shooting West ever since. This year, owing to sickness at home, I have been obliged to content myself with three or four day trips to places where I was get-at-able. Three days in Warren and Sussex counties, N. J., last week resulted in my seeing four quail. I got three of them. They cost me at the rate of $72 a dozen. The fact is I have spent more money in monkeying around here than it would have cost me to spend for two months in Missouri or Arkansas, where with all my heart and soul I wish I was.

Wherever I have been I have found the country overrun with young shooters to the manor born, who market every bird and rabbit they can kill. I was offered five woodcock and two grouse for 35 cents, all fresh killed. I refused the tempting offer, as I have made it a rule never to purchase game in any section where I am myself shooting, for by doing so I would simply encourage the killing of it to the detriment of my sport. Still, I do not depreciate those who sell game. In my opinion a man has as much right to sell a woodcock as he has to eat it. If possible I would prevent him from shipping it for sale to another State. I advocate home consumption. I fancy it would be impossible to pass a law in New Jersey to prevent the game of that State from being shipped to this city for sale. Even if such a law were passed it would only join the dead letters.

I don't profess to know it all, but from what I have seen from shooting in seven different sections in New Jersey this season and the great scarcity of game everywhere, I think that a law should be passed prohibiting the killing of quail for several years in the northern counties. The same complaint—that game is scarce—also comes from Maryland and North Carolina. In the last named State Vice-Chancellor Van Fleet, Walter Knight and Wm. Gummere, of Newark, spent ten days and found few birds on grounds where last season they were numerous. Heber Brientnall, Frank Watts, Lem. Thomas and Dr. Pindell, of Newark, tried East New Market, Md. They had fine "hunting;" they were guided about for nearly two days and did not see a bird. Mr. Brientnall come home disgusted with the "steer," which turned out to be a professional shooting hotel one.

Like the ghost of Gaffer Thumb, the Maryland license-to-shoot-law has popped up to scare Northern sportsmen. It has risen from $5 to $20; and I am informed the fine is $50 or ten days in jail, or both, for shooting without the necessary permit. A few weeks ago there came to Greenboro Mr. Mills, superintendent of the Delaware Railroad, and a party of friends. They were unprovided with licenses and were arrested, and Mr. Mills has taken an appeal, and says he intends to test the constitutionality of the law. Some day the South Jersey Society will also catch a Tartar, who will knock their present by-law regulations higher than Gilroy's kite. If it were any one else but provincial Puiladelphians who had been scooped in by this very flimsy racket I would wipe away a tear.

The Rev. W. S. Rainsford, of this city, and the village blacksmith of Southampton, L. I., have been killing some small bags of quail this season near Bridgehampton, L. I.

Mr. Rutherfurd Stuyvesant, of this city, is making great improvements on his game preserve at Allamuchy, N. J. As far as I know, it is the largest and best-stocked preserve in the East. Mr. Stuyvesant has recently purchased several large farms adjoining his estate; one on the mountain between Allamuchy and Wiretown will be made into a deer park. On the main estate Mr. Stuyvesant is fencing in fifteen acres of ground with wire netting, 12ft. high, a portion of this is also roofed over with wire netting. In this inclosure he will keep his English pheasants, and next season hatch out over 5,000 pheasant eggs. In addition to this Mr. Stuyvesant is securing the shooting privileges on all the farms in his vicinity. During the past few months he has added half a dozen to his list. In time he will have secured the best shooting in Warren county, and will have lots of game for his friends to pop away at. I have been told that Mr. Stuyvesant advocates a close season in New Jersey for the next five years. If such a law is passed, what will the law-breakers of Danville do then, poor things?

Some of Mr. Stuyvesant's I-talian quail, as the farmers call them, are residing on the Arnold and Stephens farms on the Great Meadows. The flock is about thirty strong. A few of these birds have been shot by young Arnold this season. When once flushed they are hard to find again. Those who have seen them say that "the birds tree."

ADIRONDACK DEER HOUNDING.

WE have already said that certain paragraphs of the report of the New York Commissioners of Fisheries, prepared by Gen. Sherman, were unacceptable to two of the Commissioners, and in deference to their views would be omitted from the report, which is to be presented to the Legislature at the approaching session. The paragraphs were these:

"In regard to deer hounding they would repeat what they uttered in their report on this subject in 1886. The trial for two years of the limited hounding law has not been attended with the results its framers promised. The assistance that was to be rendered by the guides in the enforcement of the law has not come. The guides, rather, have fraternized with the law-breakers, and between the various classes of poachers, viz., gentlemen sportsmen, guides and pot-hunters, the deer are passing away like chaff before the wind.

"As an illustration of how things are working, it may be stated that last summer there was detected and arrested a gentleman of high personal standing, hounding deer out of season, who at the legislative session appeared before the Game Law Committee in advocacy of the present hounding law!

"If there is one thing in futurity that is sure to come, and come quickly, it is the extinction of the deer in the great forests of New York. To save them, both jack-hunting and hounding must be vigorously forbidden, and dogs of the hound kind kept out of the woods at all seasons."

AUBURN, Susquehanna County, Pa., Dec. 15.—Am just home after a week spent in the wilds of Wyoming and Sullivan counties. Owing to unfavorable weather no hunting was done. The entire absence of snow, with the woods dry and noisy, rendered successful still-hunting impossible. Bears are doubtless on the increase, while the deer are certainly being driven out by dogging. But the mortality among the dogs far exceeds that of the deer. Not more than one dog out of five taken into the woods gets out alive. All the "natives" and all visiting still-hunters are constantly on the alert, and "love powders" are often used where the use of lead is impracticable. Convictions are hard to secure under the present law, and killing the dogs is considered only a partial protection to the deer.—BON AMI.

THAT IDEAL GUN.—The kind of gun for general use I want to see is a "combination gun" with a noiseless .22 barrel on top for sitting flocks and rookeries, a central 12 cylinder bore for wing shots, buckshot and explosive slugs for large dangerous game at close quarters, and a lower .44 rifled barrel for alligators, deer, etc. It should have a magazine in the stock holding about four shots for the central barrel. With this gun we can take our first fowl sitting with the .22 and the next on the wing with the 12, or our first deer standing with the .44 and the next running with a charge or two of buckshot. Its other advantages are apparent. Who will be the first to make it? —HAL HELLION.

THE ROD AND REEL ASSOCIATION.

THE National Rod and Reel Association held its annual meeting for the election of officers for the coming year, and other business, on Saturday last at 2 P. M., in the laboratory of Mr. E. G. Blackford, in Fulton Market, New York. The following officer were chosen: President, Henry P. Wells; Vice-Presidents, Hon. Henry P. McGown, John A. Roosevelt, William Dunning, D. W. Cross, Daniel B. Fearing, Cornelius Van Brunt, Louis B. Wright and Eugene G. Blackford; Secretary, Gonzalo Poey; Treasurer, James L. Vallotton.

Mr. Endicott offered the following resolution, which after some discussion was adopted: "That a committee be appointed to draw up the protest of this Association against the catching of menhaden, by steamers and other vessels, except under such restrictions as will prevent the destruction of food fishes." He related his experience on the coast of New Jersey this year, and repeated what appeared in FOREST AND STREAM last week on the subject.

Judge McGown stated, that as a member of the Cuttyhunk Club he had fished for striped bass from Cuttyhunk Island, in Buzzard's Bay and Vineyard Sound for many years, and the menhaden were formerly plenty there, but now they could not get enough to chum with. Something should also be done to stop the wholesale netting of bluefish and striped bass, but it was a difficult thing to do. He hoped that the chair would appoint a good and efficient committee.

Mr. Blackford would like to see such a committee appointed. There were great interests involved in the menhaden oil and guano industry, and it would be well if some of the prominent menhaden men could meet with this committee and exchange views. The subject of the migrations of sea fishes is not understood, a good illustration of this was the fact that the menhaden men made such poor catches during the season a few years ago that they met and agreed to restrict the catching and appointed a committee to memorialize Congress on the subject of restrictive laws. The meeting adjourned, and in less than a week the fish struck in on the coast and they had an immense catch, larger than in several previous years. He thought that it would be well to consider the interests of the menhaden fishers and get them to consent to a form of legislation which would be satisfactory to all.

On being asked by the president if he would serve on the committee, Mr. Mather declined, saying that if it was to be a compromise he was not a fair juror, being strongly prejudiced against the whole menhaden fishery, which he believed to be the invention of the evil one. It might be difficult to find a committee composed of anglers who had no prejudices of this kind, but he felt sure that his views on the subject would prevent him from acting impartially. The menhaden men had never considered the interests of the anglers, and he did not see why this Association should consider the interests of the menhaden fishers.

Mr. Dunning said that he had much to say on the subject to the committee, as he had studied the menhaden for years. He thought that a close time might be established so that they could only be taken at certain seasons.

Mr. Endicott replied that a fixed close time would not suit the menhaden men; they caught fish when they came, and the date of their coming was very uncertain.

Mr. Blackford said that in the history of our migratory fishes there were records of certain species having deserted our coast for years and then reappearing. He quoted Prof. Huxley as saying, after examining the herring fisheries of Great Britain, that the efforts of man were not a factor in the decrease of sea fishes, and that this view was indorsed by the late Prof. Baird. Some years ago he held decided views on the subject of the menhaden fisheries and thought that they were injuring other fishing interests and proposed laying the case before Congress, but after overhauling his notes which had been kept for a series of years, recording the abundance or scarcity of different fishes he found that he had no facts to lay before Congress. In his remarks on this subject he would like to have it understood that he had not a dollar invested in the menhaden fishery.

President Wells remarked that during the time he had been a member of the Association there had been no question before it that compared in importance with the present one.

Judge McGown hoped that the president would not appoint all the members of the committee from among the salt-water anglers, as they might, like Mr. Mather, have too strong prejudices on the subject. He did not wish to injure any person who fishes for a living, and the committee should be composed of men who could do justice to all.

Mr. Endicott stated that was just his idea. He wanted to see justice done to the poor New Jersey farmer and fisherman who formerly went down and caught his winter's food, or bought it for two or three cents a pound, while now if he got any bluefish to salt for his family they cost him eight cents per pound at least. He was not looking at the matter from the mere standpoint of sport, but realized that only by means of nets could the markets be supplied with fish, and the poor man who lived in the city or country get his dinner of cheap and wholesome food, but he did want to see some restriction placed on a wholesale system of fishing which followed a school of fish into the bays and captured the last fin. When a menhaden steamer sights a school of fish it gets every one. It cuts off a portion and surrounds it with a purse net and then cuts off another portion and so on until the school is gone. When a section is cut off by a steamer it does not rejoin the main body, and as the fish are usually surface swimmers their destruction is easy

The discussion closed and the president appointed the following gentlemen as the committee: Francis Endicott, Chairman; E. G. Blackford, Hon. H. P. McGown, C. Van Brunt, Louis B. Wright. Of this committee two are salt-water fishermen, Messrs. Endicott and McGown, while the others, with the president who is *ex officio* a member of all committees, are trout and salmon angers.

Mr. Mitchell moved that a committee be appointed to revise the by-laws relative to the admission of members. This was carried and the chair appointed Messrs. Fred. Mather and Francis Endicott as such committee.

It was then resolved to hold a meeting at the same place on Saturday, Jan. 14, 1888, to decide on the time and place of the next tournament and to consider the rules to govern the contests. A vote of thanks was tendered to Mr. Blackford for the use of his laboratory at various times, and the meeting adjourned.

CHARLES FRAZEE MURPHY.

CHARLES FRAZEE MURPHY, a noted maker of split-bamboo fishing rods, and the first one to make a rod on that plan from tip to butt, died in Newark, N. J., Dec. 15. He was born in 1825, and from a very early age was an enthusiastic angler and sportsman. As he grew up he became recognized as one of the best fly-casters and crack shots in America. For the last forty years he has caught more fish and killed more birds than any man in New Jersey. In his youth he was known as the strongest man of his size in that State. He stood 5ft. 6in. and never weighed over 125lbs., yet he could easily lift a barrel of flour or plaster and put it on his head. He could also cross an unplastered room by gripping the beams overhead with his fingers and thumbs. When he was 56 years of age he jumped a few inches over 100ft. in ten successive standing jumps. He was also a great boxer, and as quick as a flash. On one occasion he got decidedly the best of "Awful" Gardner, when that terror of the ring was in his prime. He excelled in all athletic sports where strength and quickness were requisite.

In 1860 Mr. Murphy conceived the idea of manufacturing split-bamboo rods for the trade, and for a number of years supplied the rod, made of four strands, to the well-known firm of Andrew Clerk & Co., in New York city. Had Mr. Murphy patented his process of manufacture, it is thought he would have made a fortune. "Honest Charley Murphy," however, was a very conscientious workman, and he would not intrust to any assistant the work he thought it necessary for him to perform. Thus,

while he made but a limited number of rods every year, they secured good prices, and were eagerly sought for by the most prominent anglers in this country and Europe.

A more honest man and a true friend never lived. In temperament he was nervous, excitable and self-willed. Mr. Murphy was unquestionably an original. He was fond of any kind of fun and was possessed of a quaint, dry wit. In speaking of him the other day his friend, the Hon. Amos J. Cummings, of New York, remarked, "It takes all kinds to make a world, but Mr. Murphy's death has completely broken up the set."

During his long lifetime in the field he was the associate of many noted sportsmen, among whom were Henry William Herbert (Frank Forester) when he lived in Newark; Henry Toler, Mike Sanford and Bill Darrah, who under other names are the leading characters in the "Warwick Woodlands." With either fly or bait rod Mr. Murphy was an expert, and a hard man to beat. He was a great lover of nature and a close observer. When fish and game began to grow scarce he became very bitter in his denunciation of the "march of improvement." He said he "could no longer go shooting on the Newark meadows without some locomotive or other coming along and knocking the gun out of his hands." Mr. Murphy throughout his shooting career held to the muzzleloader. A better snipe shot never lived. He once killed 94 without a miss. Two years ago he was appointed game and fish warden for Essex county.

As a living treasure of local history, as a genial and ever fresh source of stories that were better than history, Mr. Murphy will be best remembered. His personal activity, his quick motions, his short, lithe, well proportioned body, his bright eye, his long soft hair, all seemed to be and to make part of his story; and his wonderful memory was the treasure house of his jewels, and his perfect art in drawing out his incidents was the setting that gave them double worth and interest.

REARING SHAD IN CONFINEMENT.

THIS is the last new thing in fishculture, and the following official correspondence, which we are permitted to publish, is self-explanatory:

U. S. Commission of Fish and Fisheries.—Cold Spring Harbor, N. Y., Oct. 1.—Prof. G. Brown Goode, Commissioner of Fisheries, Washington, D. C.: Dear Sir—I have had an unusual experience with shad during the past season, which I deem worthy of reporting. On May last I received from Central Station, in Washington, several consignments of shad eggs, to be hatched at this station and distributed. Adjoining the hatchery was a little pool, fed by a spring and inclosed by a lath fence, where I kept several domesticated wild fowl, such as wood-ducks, teal, etc., but no mallard nor black ducks. In the water were a pair of large carp, weighing perhaps six or seven pounds each, which bred during the summer, as did also some goldfish—the ducks not appearing to trouble them at all. It was a convenient place for us to throw dead fish eggs, which were devoured by the small fish, and in the course of our hatching we made several deposits here of shad eggs which were in bad condition. In handling these and running off the bad ones there always are, as you are aware, a few good ones adhering in the masses of bad ones. About the middle of August I had occasion to drain this pond, which, by the way, was only about 20ft. in diameter and was provided with a coarse outlet screen merely sufficient to confine the ducks and large carp, and to our astonishment we found three young shad among the other fishes. At the first haul we caught two, which were dead by the time we took them from the other hardy fish, and placed them in alcohol. The next haul we were on the lookout for shad, and caught a live one, which we carefully dipped up and placed in one of our rearing ponds with some trout about its own size, but it was found dead the next morning. There is no way that young shad could have got into this pond except from the eggs placed therein, as the fish do not run up to spawn in this harbor, nor is there any doubt in my mind as to the species, the saw-belly, which marks the family, being distinctly visible, as is also the prolonged sub-orbital bone which distinguishes the species. This is the first instance within my knowledge of shad being grown to any size in confinement. Should you wish one or all of these fish they will be forwarded at once. Very truly yours, Fred Mather.

U. S. Commission of Fish and Fisheries.—Washington, D. C., Oct. 4.—Fred. Mather, Esq.: Dear Sir—In reply to your interesting letter in regard to the rearing of shad to considerable size at the Cold Spring Harbor Station, I am requested by Professor Goode, Commissioner, to let you know what we ourselves have done in the matter. For several years past we have obtained in the fall of the year, when we have drawn our pools in the yard, a number of young shad from 2 to 3in. long which were introduced there during the hatching season as fry, the pool having been used to wash out the cans and pans used in handling fry. In 1885 I made the experiment of stocking one of the carp ponds in Washington with about 30,000 shad fry, which were hatched out and sent down from Central Station. The ponds were drawn the following autumn to collect the carp, and from them were obtained and counted upward of 7,000 shad ranging in length from 2½ to 5in. Since some shad were obtained from the pond in seasons when no fry were introduced, the experiment although suggestive was not conclusive. To repeat it under conditions which absolutely excluded all chance of error or possibility of introduction of the fry accidentally or by design, we sent 30,000 fry by messenger, a distance of three hundred miles to Wytheville, Va., which were placed in a freshly dug pond about one-tenth of an acre in area, and which was fed by surface water from a running stream. In September of this year, in presence of Professor Goode, I had the pond drawn and find by actual count nearly 2,500 young shad from 1¼ to 4¼in. in length. Although the percentage attaining this age was large I am satisfied that more than half the shad that were in the pond escaped during the time it was being drawn, since when the pond was nearly empty we discovered an opening around the screen which permitted the shad and carp, which were also in the pond, to pass through in the several hours during which the pond was being emptied. Doubtless double as many shad escaped from the pond as were recovered and counted from it. Acting upon the suggestion offered by this experiment I propose, during the ensuing year, to reserve the large pond at the carp ponds for the purpose of making the experiment of holding and rearing the shad for several months. This pond has an area of about six acres and will be stocked with several million fry. Care will be taken to exclude all other fish from the pond and as far as practicable to do so, to secure an abundant growth of vegetation in the pond to serve as nurseries for the food upon which the young fry feed. In the light of experiments already made we would have reason to expect from this experiment to be able to turn out in the Potomac in October, at least 20 per cent. of the fry placed in it in the spring, which would then be fish from 3 to 5in. in length. We will certainly be able to give back to the Potomac each year several times as many mature shad as are taken from it by the fishermen, and these will be of such a size and vigor of movement as to be comparatively safe from capture by the other fish. The results of the experiment made in 1885 will be found in the Bulletin of the U. S. Fish Commission for 1886, page 441. Very truly yours, M. McDonald, Chief of Division of Distribution.

Cold Spring Harbor, N. Y., Oct. 11, 1887.—Col. M. McDonald: Dear Sir—I have your letter of Oct. 4. I would like permission to publish what you say about rearing shad in confinement in Forest and Stream and in the next State report. It is very interesting to know that shad can be reared in ponds. I thought I had made an original discovery. One trouble with breeding them will be their disposition to die when handled. * * * Very truly yours, Fred Mather.

Washington, D. C., Oct. 12, 1887.—Fred Mather, Esq.: Dear Sir—I will be glad to have you publish what I have written you in regard to our experiments in rearing shad in confinement. What you say in regard to their delicacy in handling is a very important matter. The experiments we propose to conduct next year will be in a pond of six acres, communicating directly with the Potomac River, and when we find it desirable to turn out the fish, say some time in October, the gates communicating with the river will be opened at high tide so as to permit the fish to pass out with the ebb of the water. We will in this way transfer them without any possibility of risk in handling. I look for most important results in our shad work from the extension of this method of rearing in large ponds in connection with our shad streams. Work already done has certainly been very effective, but I believe that returns from work of this character will be much larger in proportion to the expenditure. Very truly yours, M. McDonald.

THE CONNECTICUT COMMISSION.

WE have the twenty-second report of the Fish Commissioners of Connecticut to the Governor, January 1888. It opens with a tribute to the late Prof. Spencer F. Baird, and says: "As the present Fish Commissioners of this State were all in office when the United States Fish Commission was established by Congress in 1871, they can, perhaps more thoroughly than most men, appreciate the great work that Prof. Baird has accomplished during his administration of the office. The New England commissioners had at that time just solved a serious problem in salmon breeding. They had demonstrated that the adult fish taken in the spring and early summer, and confined until the breeding season in October and November, could be successfully used for procuring eggs, which in due time hatched and produced strong, healthy young fry. With the limited means at the disposal of these State Commissioners, the operations were necessarily conducted on a small scale. Prof. Baird, soon after his appointment, became interested in this work, and has since contributed the greatest part of the money for its continuance. Prof. Baird was singularly fitted for the position of United States Fish Commissioner. His training as a scientist had taught him to examine all sides of any matter submitted to him, and he realized as well the importance of a comprehensive plan for the Commission, as he recognized the necessity of thorough attention to the smallest minutiæ of the work. His operations became more and more extensive as Congress continued to increase the appropriations, and eventually he was as well known in Europe as at home, and secured for the United States the reputation of having the best equipped and most progressive fish commission in the world."

In speaking of salmon which were introduced into the Connecticut River which proved that this fish could be restored to that stream which once bore them plentifully, and might yet but for the greed of fishermen, they say: "The State of New York now finds itself in a position similar to that of Connecticut in 1878. A large number of salmon were at that time coming into the Connecticut River, and nearly every one of them was captured before it had traveled 15 miles up the river. The Commissioners were powerless to prevent it. They had begged the previous Legislature to protect the salmon which they were sure would appear, but were laughed to scorn as crazy fanatics. The 500 Connecticut River salmon of 1878 caused quite a temporary excitement, sold for about $1 per pound, and became a thing of the past. Four States had co-operated to produce those salmon, and one State—Connecticut—received the whole benefit. It may be readily conceived that the other States do not desire to assist Connecticut in any further operations upon the Connecticut River. In New York State, as a result of salmon planting several years since, about 30 salmon were reported to have been taken in the Hudson River during the past season. The Fish Commissioners of that State are now striving to prevent the capture of salmon, which are intended to stock the river, and unhesitatingly refer to the result in Connecticut as a warning. Time will show what will be accomplished, but fishermen are much alike, and a fifteen or twenty pound salmon proves too great a temptation to nearly all of them."

An article from the New York *Times* is quoted which contains the following truism: "Mankind, at least a large portion of it, is singularly ignorant of what are its true interests, and in gaining a livelihood it gleans all it can to-day, quite indifferent of the morrow. It is exaggerating a natural impulse to call the wholesale capture of fish something actuated by greed alone. The fisherman is no more greedy than the farmer or the man of general business; but the farmer knows what are the limits of production and something about the laws which regulate it. The fisherman does not."

All parties who applied for trout on or before March 1st, were supplied, and 4,000 of the young fry were allotted to each. Favorable reports of the good results of the trout distribution continue to reach the Commissioners, and many of the former applicants are enthusiastic over the improved condition of streams a few years since nearly exhausted, but now once more teeming with trout. Others mention brooks in which no trout had been seen for years, now fairly alive with them as the result of two or three years' planting.

The catch of shad was small in 1887, being 37,600 less than on the previous year when the catch was 117,950, while in 1885 it was 190,300, according to the statistics gathered by Mr. R. B. Chalker, a practical fisherman at Saybrook. Mr. Fenton reports that in the Housatonic and Farmington Rivers there was a decrease in 1887, as compared with 1886, of about 40 per cent.

The season has been a remarkable one, from the fact that, with the exception of the Delaware and Connecticut Rivers, the catch of shad has been unusually large. A curious fact is, that while the catch in the Delaware is reported as "the poorest ever known," the catch in the two rivers above and below, the Potomac and Hudson, has been almost phenomenal.

Superintendent Fenton hatched and planted in the Connecticut and Housatonic Rivers and their tributaries 9,167,000 shad, and the number of salmon taken in the former river is given as thirty. The Rogers fishway at Birmingham, on the Housatonic, was in full operation and proved successful for all kinds of river fish except shad. It will be re-modeled next year by the patentee who thinks he can make it successful.

THE NEW HAMPSHIRE COMMISSION.

THE work of taking eggs at Sunapee Lake is finished for the season, and 225,000 eggs, from both the brook trout and the newly found Oquassa trout, have been taken, and also 15,000 eggs of the landlocked salmon. Commissioner Hodge is of the opinion that the lake is now thoroughly stocked, and if the protective laws are enforced the lake will afford good fishing. Col. Hodge has noticed this season a large increase in the number of small black bass, which are evidently on the increase, and perch are being gradually driven out.

A local paper says: "The work of the Commission at Sunapee Lake has been a brilliant success, its results affording sport for fishermen without number, who come from all over New England and even from more distant States. For this work we are indebted to Col. Hodge more than to any other person. It has always been his belief that the chief usefulness of the Commission lay in restocking our ponds and streams with native trout, and he has made a personal matter of Sunapee Lake. Indeed, he never received from the State a penny in compensation for the first four years of his work here. The first season his only shelter was a little lodge built of boughs, open at one end, with a fire in front of it. Then he had a little board shanty, which sufficed until Dr. Quackenbos gave him the little house on the beach. Going before the Legislature of 1887 for a special appropriation for the lake, he had only to name the sum desired. Six hundred dollars a year was appropriated for two years.

"A comfortable house has been erected, at a cost of about $225, containing three rooms and a cheery fire place. The capacity of the hatching house has also been increased and a new supply of water put in, 900ft. of 2in. pipe having been laid.

"Col. Hodge showed us a beautiful oil painting by Bickford, a Massachusetts artist, we believe, who has been with him this fall making a special study of the trout peculiar to the lake, sometimes called oquassa. Mr. Bickford has had exceptional opportunities at the hatching house, is indeed an artist, and has succeeded in getting a 4lb. oquassa on to canvas in fine shape, with all its characteristics of form and coloring.

"Of this variety Col. Hodge is still of the opinion that the ichthyologists will eventually have to give it a distinctive name, as it has characteristics belonging to no trout found anywhere else in the world. It is already famous wherever the English language prevails. It must be native and peculiar to Sunapee Lake, and some of them have probably been caught before now without any notice having been taken by fishermen of the characteristics that distinguish it from the common brook trout which attain such proportions here."

POLLUTION OF STREAMS IN OHIO.—Columbus, O., Dec. 8.—On Monday night the City Council adopted a resolution, offered by Mr. Fleck, which provided that a conference should be held by certain Councilmen with the State University Trustees, the object being to consider the plan, or rather to propose it in a new shape, of obtainigg some sewerage through the University Farm with the design in view of having the State authorities authorize and equip a system for experimenting on sewage infiltration on a small scale. The extreme north end has been deprived of sewerage for years on account of State and municipal laws in regard to the Olentangy River. The proposed main sewer through the University Farm would greatly relieve a bad condition of affairs and also prevent the surface drainage from going into the Olentangy. So it is with a double force that this argument in favor of the infiltration experiment is advanced. The northern district of the city could furnish the sewerage and the State could try the experiment of getting rid of it. All needed is the ways and means to make the experiment, which would cost but little and will go a long way toward determining a point which is of as much interest to the State at large as any problem that yearly presents itself and receives attention. The State sustains a fine university, in which science and learning is striven for as much by the instructors as the collegiates. It pays its learned men to delve deep into the mysteries of nature and so bring forth the results which ultimately benefit mankind. Why is it not proper then that financial co-operation should be given in a work which aims at acquiring knowledge of the greatest human ills—that of the effects of sewage matter? Professor Orton, of the University, a most able scientist, has pronounced the location afforded for a system of artificial infiltration on the bottom lands of the farm as suitable as nature could have planned and made. The problem presented to the city of Columbus does not interest her citizens alone. The eyes of the populace of other cities, suffering equally and worse from the curse of improper methods of disposing of sewerage, would be turned upon an experiment that is of vital moment. Assistance to this plan should come from every city in the State, since it will demonstrate something for all. The matter should be urged, and it seems reasonable to hope that the Legislature would authorize the expenditure of money for the purpose. It is not a Columbus matter, it belongs to Ohio, and no measure instituted for the relief of her cities would meet with more general approbation. It is to be hoped that the University trustees will appreciate the value of the idea and will authorize the city, in connection with the State, to make the experiment on a small scale. It will be an instructor in itself, if such a design is carried out.

THE NEW YORK COMMISSION.—Geo. Roberts brought to the Adirondack station at Lake Brandon 1,119,000 lake trout eggs, being the best catch of eggs of this fish ever made by any of the New York men. Supt. Marks has now on the trays at this station nearly two million eggs of lake and brook trout, the figures being 1,000,000, all secured from wild fish. The yearly report of the Commissioners is now in the hands of the printer, and it is proposed to have it before the Legislature before its adjournment this year.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5582.**

THE BOOMING OF ARTILLERY.

THE FIRST GUN.

THE American Kennel Club is an association which assumes to have special charge of the interests of dogs and dog matters in this country. The crowning blunder of its career was committed last week, when its executive committee passed a new rule which provides that every dog entered at any show held under the rules of the A. K. C. must be registered in the American Kennel Club Stud Book. * * * The present attempt to bullyrag the dog owners of America into registering their dogs is a last desperate device to keep afloat their venture, which was undertaken by the A. K. C. a year ago, and which then had not the slightest prospect of success. * * * The A. K. C. has chosen a very unfortunate expedient to rally the dog public to the support of their publication. Most self-respecting people are much more easily led than driven, and when the A. K. C. says "you must register in our stud book or you cannot show under our rules," *they make it certain either that shows will be held under other rules than theirs*, or else that the shows which are held under their rules will be failures from a financial standpoint, as well as in numbers of the dogs shown.

The sense of justice inherent in every man will rebel at such an arbitrary rule as this, and we venture to predict that if it is enforced, dog shows this year will show such a falling off as will astonish those delegates to the A. K. C. who were concerned in the passage of this rule. In all the history of dog shows in America no such serious blow has been given to these interests as is threatened by the passage of this rule.—FOREST AND STREAM, Dec. 15.

THE SECOND GUN.

Coercion will not succeed here any more than in Ireland. Neither will any attempt at muzzling the press or prohibiting free speech. A temporary success may flatter those who, sitting in a dark room without any windows, have necessarily a restricted view, but those who look ahead, investigate and see and argue for better administration will eventually succeed. As for the resolution compelling registration of all entries at A. K. C. shows, it simply means we cannot make the official pay by the voluntary support of the breeders, and in order to protect our pecuniary interests we must coerce people and make those support us who don't wish to do so. I can see other results likely to accrue from this and the refusal to acknowledge non-members' shows, but they are yet to be developed; but this is not the time to expatiate on that subject.—*Porcupine in Sporting Life.*

THE THIRD GUN.

Editor Forest and Stream:

At a special meeting held to-day to consider Rule 2 of the American Kennel Club, it was moved and voted that the secretary be requested to notify the American Kennel Club that the New England Kennel Club withdraws from the American Kennel Club on account of the following clause in said rule: "Rule 2. Every dog * * * must be entered in the American Kennel Club Stud Book," etc.

J. W. NEWMAN, Sec.

BOSTON, Dec. 17.

THE FOURTH GUN.

[*By Wire to Forest and Stream.*]

NEW HAVEN, Conn., Dec. 21.—*Editor Forest and Stream:* The New Haven Kennel Club has voted to withdraw from the American Kennel Club.—S. R. HEMINGWAY.

REVERBERATIONS.

Editor Forest and Stream:

The first entries to close for the year 1888 will be for the Collie Club sweepstakes announced to be held at the New York show. I am an owner of one or two puppies I thought I would enter in this sweepstakes, but the new robbery rule of the A. K. C. renders it impossible for me as an independent American citizen, opposed to the revival of the ideas of government upset a century ago, to support any show which will aid in the carrying out of the new rule. Time is short and I would urge upon the Collie Club managers the necessity of advising the would-be subscribers to the sweepstakes what their position is.

I would also say the same to the Philadelphia Kennel Club officers who I notice announce a series of sweepstakes with entries closing Jan. 15. The success of Philadelphia this year depends upon the club following in the footsteps of the New England Kennel Club and repudiating the robbery rule. This is no time to be fooling about. Philadelphia wants the cream of the entries which she will have if she strikes off from the opposition. Exhibitors will draw a very sharp distinction between New York and Philadelphia if the former attempts to stay by the robbery rule and the latter repudiates it. A BREEDER AND EXHIBITOR.

Editor Forest and Stream:

I believe that all dogs that are exhibited at any show should registered, and I do not care a continental whether in *American Kennel Register* or American Kennel Club Stud Book, and I would go so far as to have a rule to prevent any dog being exhibited with "pedigree unknown." What would Beaufort, Graphic, Brackett, Naso of Kippen, Nick of Naso, Tammany, Bang-Bang, Robert le Diable, be worth if shown with "pedigree unknown?" If dog shows are to improve dogs, let's have blooded dogs. Show catalogues cannot be relied on always, but have the dogs registered in the *American Kennel Register*, or A. K. C. S. B., and for any error in pedigree found that cannot be explained let the exhibitor be suspended. Let's have the views of exhibitors over their own names. A. C. COLLINS.

HARTFORD, Conn., Dec. 17.

[*From the Turf, Field and Farm, Dec. 23.*]

Editors Turf, Field and Farm: When I wrote you a week since I was too mad to go into a discussion of the iniquities of the above rule, and really wrote more to give notice that Sir Lucifer would be out of the way of aspirants in the miscellaneous class, simply referring to the gag rule as the last straw on the camel's back. To seriously discuss the rule itself, I do not think that I am a very marked exception to the ordinary exhibitor in refusing to be bulldozed, and even although the end bulldozed for is really a good one, I am not an unusual crank in refusing to do a thing when forced into it that I might have done willingly enough if allowed a little liberty of action, and I think many exhibitors will say the same, that they will not be dragooned into supporting a stud book whether they like it or not.

Then what will be the actual effect? Remember that dog show are not primarily intended as profitable speculations; incidentally they may be so, if the promoters have good luck, but the underlying ground of their existence is improvement of dogs, gratification of the desire to see good specimens, &c. The entry fees are not intended as affording revenue to the club, but to pay a part of the expenses of the show. Now who are the exhibitors? I take the catalogue of the last Pittsburgh show, as I am better acquainted with the exhibitors there than at any other show. I have gone over the list carefully, and out of 438 exhibits, 191 are by strictly local exhibitors; exhibitors who never show elsewhere than in Pittsburgh. In addition to those I have selected, there are a great many names that I never heard of at any other show, but I keep the number strictly within those I know as only local exhibitors. One of these exhibitors gets a premium list and comes to the show office to make an entry; he sees that the entry fee is $2, and puts up that amount, but the secretary says: "Oh, no! I want fifty cents more." "What for," says the innocent exhibitor, "don't your premium list say two dollars?" "Yes, but there is fifty cents for the official register, the American Kennel Club Stud Book." The exhibitor's answer will depend greatly on whether he is a cussing man or not; if he is, he will probably intimate his wishes that the show, the secretary and the "official" be insured from warm weather for a long time. At all events, his action will probably be a walk out of the secretary's office without filling out his entry blank. Is there anything unreasonable in his so doing? Is it a legitimate part of a dog show to collect money for an outside operation? Allow that the "official" is a kindred industry to dog showing, is it one that an exhibitor may properly be coerced into supporting?

Any reasonable exhibitor will cheerfully agree to such an entry fee as is proper to cover the show expense, but when it comes to his contributing to something he never heard of, don't care a fig for, that has no evidence of its existence, he very naturally suspects a swindle and an extortion, and kicks. Then suppose the exhibitor has entered his dog in the *American Kennel Register*. That satisfies him on that score; the dog is recorded where all who run may read, and know all that is required to be known. What does he care for an "official" record? What better is it that what he has?

This is as far as I dare to trespass on your space at present, and with your permission I will dissect how much "official" character the A. K. C. S. Book has, how far it is the work of the A. K. C., and what is the quality of the work it has done, as well as some of the childish folly perpetrated at the late A. K. C. meeting. Yours truly, W. WADE.

HULTON, Pa., Dec. 17, 1887.

AMERICAN FIELD TRIALS.

[*From a Special Reporter to Forest and Stream.*]

FLORENCE, Ala., Dec. 16.—Wednesday morning the weather was cool and damp. Following is a summary of the running in the Derby:

Second Series.

Ollie S. beat Miss Thompson.
Jacobin beat Latonia.
King's Mark beat Hector.
Jack Modoc beat Cinch.
Dave R. beat Sunshine.
Laddy beat Lilly B.
Joey B. a bye.

Third Series.

Joey B. beat Ollie S.
Dave R. beat King's Mark.
Jacobin beat Jack Modoc.

Thursday morning the weather was cool and clear for the

Fourth Series.

Dave R. beat Laddy.
Joey B. beat Jacobin.

Final for First Place.

Dave R. beat Joey B.

Final for Second Place.

Joey B. beat Laddy.

The judges divided third money between Laddy, Jack Modoc, Ollie S. and Jacobin. The judges were Messrs. H. M. Markley, I. M. Brumby and J. H. Whitman. Dave R., the winner, is by Gath's Hope out of Daisy F. The Mandan race was not run as parties could not agree on rules. The drawing of the

ALL-AGED STAKE

took place Wednesday night. There were 51 entries, and out of this number 31 starters. The order of running was:

Cassio against Daisy F.
Dad Wilson against Effie Hill.
Lad of Bow against Tasso.
Nellie Cambridge against Bessie B.
Joy of Prince William against Noble C.
Spot against King's Mark.
Lass of Bow against Rena.
Rod's Gem against Bun Roy.
Cyclone against Keystone.
Jean Valjean against Dan.
Nat Goodwin against Bow of Portland.
Chance against King Noble.
King's Dan against Pap Smizer.
Bohemian Girl against Gay Gladstone.
Graphic III. against Joe Pape.
Prince Mack a bye.

The stake was begun on Thursday at 12:30, immediately after the finish of the Derby. The judges were Messrs. Gilbert, Brumby and Markley. Daisy F. beat Cassio in a brilliant heat. Dad Wilson beat Effie Hill, Dad showing much the best on game.

Friday morning the weather was cool and clear, but toward noon it was cloudy and threatened rain the remainder of the day. Lad of Bow and Tasso were the first brace; they ran a very poor heat, which the judges have not decided. Nellie Cambridge beat Bessie B., Nellie showing well on game. Noble C. beat Joy of Prince William in a heat void of interest. Spot beat King's Mark in a fair heat. Lass of Bow beat Rena, out-classing her all round. Rod's Gem and Bun Roy heat undecided. Keystone beat Cyclone, Keystone showing well on game.

Special to Forest and Stream.

FLORENCE, Ala., Dec. 19.—Undecided heat between Lad of Bow and Tasso given to Lad. Undecided heat between Rod's Gem and Bun Roy given to Rod's Gem. Saturday morning, Dec. 17, weather cool and cloudy. Jean Valjean beat Dan. Chance beat Beau of Portland. Nat Goodwin beat King Noble. Pap Smizer beat King's Dan. Bohemian Girl beat Gay Gladstone in a fine heat, both dogs showing well. Joe Pape beat Graphic III. Prince a bye. Monday morning, Dec. 19, weather cool and cloudy. Second series, Dad Wilson beat Prince. Lad of Bow beat Daisy F. Nellie Cambridge beat Noble C. in a nice heat on the part of Nellie. Spot beat Lass of Bow. Keystone beat Rod's Gem. Jean Valjean beat Pap Smizer. Nat Goodwin beat Bohemian Girl. Chance beat Joe Pape. This finished the second series. In the third series Lad of Bow beat Dad Wilson. This ended the work for the day.

The Champion Stake was declared off to-day, it being impossible to procure judges.

Many prominent sportsmen are present and the trials each day are witnessed by a goodly number of interested spectators. Among those here are: Major Renfroe and J. W. Martin, Atlanta, Ga.; Col. J. H. Trezevant, Dallas, Tex.; P. T. Madison, Indianapolis, Ind.; J. R. Stice, Jacksonville, Ill.; E. O. Hurd and R. S. Waddell, Cincinnati, O.; B. P. Holliday, G. A. Lougee and Wm. Strickland, Mississippi, F. I. Stone and F. J. Waddell, Chattanooga, Tenn.; R. M. Dudley, J. M. Lasseter and Andrew Young, Nashville; John Davidson, Monroe, Mich.; Dr. Maclin and Major Murnan, Keeling, Tenn.; John Bolus, Wooster, O.; J. Mack, New York; H. W. Fuller, Louisville, Ky.; W. B. Gates, Memphis, Tenn.; T. S. Martin, Lexington, Ky.; C. G. Stoddard, Dayton, O., and many others with whose names I am not familiar.

[*By wire to Forest and Stream.*]

FLORENCE, Ala., Dec. 20.—Morning cloudy and stiff wind. Jean Valjean beat Spot. Chance beat Nellie Cambridge. Keystone beat Nat Goodwin. Fine work on part of Key. Fourth series: Jean Valjean beat Lad of Bow in a good heat. Chance beat Keystone. Fifth series: Jean Valjean beat Chance and won first. A brilliant heat on the part of Jean. Sixth series: Lad of Bow beat Spot. Chance beat Lad of Bow and won second. The judges selected Daisy F., Lad of Bow and Keystone as the best beaten dogs and divided third equally between them. Jean Valjean, the winner, is a game goer, very stylish on point and very decided in his work.

EASTERN FIELD TRIALS.

THOMASVILLE, N. C., Dec. 3.—*Editor Forest and Stream:* In your report of the Eastern Field Trials Club's Derby you state that Luke White and Mr. Tucker protested the decision in the case of Ossian and Waterford being placed equal third. So we did, but I believe we had much stronger grounds for doing so than your readers are apt to infer from your report.

Neither of us protested in our own behalf, as we had no reason that I am aware of, for believing that we would receive any part of the awards. On the contrary I knew that my dog would not be selected because he was beaten by Ossian, whose right no one disputed, and it would be inconsistent to give Roger Williams equal honors with a dog that had actually beaten him in the third series.

The reason we protested was this, two of the judges stated in the presence of most reliable witnesses that Waterford was not as good as several other dogs in the stake, and when asked why they placed him in preference to better ones, they accounted for doing so by stating what was clearly a misapprehension of Rule 20, of the E. F. T. Club's Running Rules, viz.: "We could not help ourselves, as we were bound by the rules to select from the dogs beaten by the winner of second place." This belief was soon dispelled by looking at the rules, which plainly state that all prizes besides first and second, may be awarded by selecting from all the other dogs in the stake.

The judges had a perfect right to select Waterford and no one could dispute their selection on any grounds whatever, provided only that they believed him to be the best dog in the stake after Joey B., Go Bang and Ossian. They stated that they did not believe him to be as good as several other eligible dogs and we entered a protest simply and only in the interest of fair play to all. You say "the Board of Governors very properly refused to sustain the protest." Then kindly inform me who is at fault, for there is "corn" somewhere and I will cheerfully acknowledge it if it can be laid at my door. Waterford had a bye in the first series, was beaten in the next series and only beat Romeo (who was off his nose by your report) in the tie for second. Your report states that he ran "fairly well," while the work of Dave R. and other competitors is spoken of in far higher terms. Still this may be all right, but the question is, Did the judges place Waterford equal third with Ossian because they believed him better than all other eligible dogs in the stake? I heard two of them say, No. Will they deny that they said so?

I hope the Board of Governors of the E. F. T. Club will see the inconsistency of offering an equal third, which cannot consistently be awarded in the spirit it is intended. A fourth prize would be far better.

With all their faults, I love and admire field trials, but it is just about time to try and get things right. I never protested before in my life, but in future I shall not hesitate to do so when I believe a mistake may be corrected or any good accomplished by such action. Nothing that I have said or done was intended to reflect on the honor or integrity of the judges, for I believe them to be above board in every respect. I thought I discovered an error and I called attention to it, and I shall have to keep thinking so until a clearer explanation is given than your report embraces.

LUKE W. WHITE.

IMPERIAL CHANCELLOR.

Editor Forest and Stream:

I exceedingly regret the articles as to this dog that have appeared in your last two issues; partly because they seem to attach a value to my opinions that I neither desire nor deserve, and because the whole affair arose from a misunderstanding. However, the tone in which Mr. Moore attacks the original article, seems to me to call for reply.

As I understand it, that article appeared entirely on account of the error in A. K. R., by which it was made to appear that Chancellor was owned by Dr. Lougest, of Liverpool, England, which disposes of the charge of Mr. Marshall attempting a "free ad.," a matter not needing any "disposition" to those who know Mr. M. Imperial Chancellor is one of the four Crown Prince dogs that I have seen, that have good hocks. Debonair, Prince Waldemar and Ilford Cambria being the others. Lorna Doone is fair, but not good. Imperial Chancellor is unmistakably a larger dog than any other Crown Prince one that ever came over here, and after a careful search over show reports, stud books, etc., I am sure that there was never another Crown Prince dog shown that was his equal in size. Orlanda may have weighed as much as Chancellor does, but he had not the height, length, bone and muscle. As to Ilford Caution, the comparison is odious, they never figured in the same day in England. Caution never won a first except in a puppy class.

Chancellor won something like half a dozen, and beat many distinguished dogs. Chancellor was always a light-fleshed dog, active and strong; Ilford Caution was always a fat, lazy, flabby dog, and never walked an active step in his life. Where he surpasses Chancellor in size must be due to fat, not muscle. Mr. Moore surely made a slip of the pen when he mentioned Caution's larger ears, for that is one of the dog's great defects. As to hocks, Chancellor is a bit cow-hocked, as well as I can remember, but it certainly is very little; and Mr. Moore should remember that the English papers put down Minting as both cow-hocked and crooked-legged, and I will go as far as Mr. Moore will in disputing this. However, cow hocks are but a small blemish, even in a specimen, as compared with the wretched straight ones that disgrace most of the Crown Prince line, and in a stud dog are no defect whatever, for they are invariably the result of bad rearing and are not transmitted to the get, while straight hocks are one of the most potent defects of transmission.

A mastiff is simply of use as a watch; as such, it is his first duty to spring on an offender and knock him down. To this, cow hocks are no impediment; but with straight hocks a dog can only rear up and fall forward, he cannot get his hindfeet far enough under him to get his weight on them to spring.

It is curious that all this Crown Prince—Ilford Claudia litter should be in this country, and no two of them at all resembling each other, that beautiful bitch of Mr. Aston's, Ilford Cambria, being the third. These are all that I can find in the Stud Book. When three litter brothers and sisters vary so greatly, the results of the stud produce will be an interesting study. W. WADE.

HULTON, Pa., Dec. 7.

JOHNNY AND DRAKE.

Editor Forest and Stream:

It is now upward of six months since I requested Mr. Mason to back up the statement publicly made by him in the widely circulated columns of FOREST AND STREAM, that "Drake is a much better dog than Johnny." In the next issue to that in which my letter appeared was published one from him, in which he anything but complied with my request. I then wrote requesting him to stick to the point at issue and he did not reply. Four months ago I wrote again reminding him of my request, and still there is no answer. I hope nothing is the matter with Mr. Mason, as I should be sorry to hear that he was unable to use his pen. As, however, he has written two or three times in FOREST AND STREAM since then, I do not think he can be on the sick list. Mere forgetfulness, probably. Should this meet his eye it will serve to remind him of the promise contained in his Hartford report. I would also refer him to FOREST AND STREAM of Aug. 4, Vol. XXIX., No. 2, in which issue I compared the two dogs point by point, and settled the Newark judging. If Mr. Mason is still in doubt as to the correctness of this statement and Mr. Hemingway persists in his misstatement of fact, I will undertake to procure the affidavits of Mr. Richardson, Mr. Tallman and Mr. Martin, duly sworn before a notary public, to sustain my account of the affair.

In my last letter I inadvertently omitted one or two points in which Johnny is Drake's superior. I will therefore enumerate them now. Johnny has a straight, broad, powerful back, while Drake's is not sraight and is not nearly so broad or powerful. Johnny's loin is also much better than his brother's.

I have obtained the following measurements which will serve to throw light on the subject. It must be remembered that the dogs were worked very hard during the past autumn and are thin and in anything but show condition:

	Johnny.	Drake.
Girth of head	18½	19
Girth of jaw	11½	10½
Length of head	9 9-16	9
Length from nose to eyes	4	3½
Length from occiput to eyes	6¼	6
Height at shoulder	18	18¼
Girth of chest	29¼	26½
Girth of foreleg	8	7

It will be noticed that there are discrepancies in the measurements of lengths of the heads, but the full length measurements were taken over the tops of the heads, not down the stop and along the nose. I ask Mr. Mason to compare the foregoing carefully and draw his own conclusion. I have no doubt of what it will be and feel confident that he will acknowledge that he was in error. Every man is liable to make mistakes, and when it is proved to him that he was wrong he loses nothing, but rather gains, by frankly acknowledging his error of judgment.

Before concluding I must correct an error which crept into my last letter. It reads, * * * "he (Johnny) may be a little more throaty than Drake." This is wrong. Johnny is decidedly throaty while Drake is not, therefore he beats Johnny in this particular. Honor where honor is due.

A MEMBER OF THE AMERICAN SPANIEL CLUB.

WINSTED SHOW.

THE third annual dog show of the Winsted Kennel Club was held at Winsted, Conn., on Dec. 14, 15 and 16. There were over one hundred entries, and the quality was excellent, particularly in the spaniel, beagle and fox-terrier classes. The judges were Dr. H. Clay Glover, of New York, for setters and pointers, and Mr. James Watson, of Philadelphia, for all other classes. The full list of awards was as follows:

AWARDS.

MASTIFFS.—1st and special, D. Strong's Don II.; 2d, G. L. Forkett & Co.'s Bessie.

NEWFOUNDLANDS.—1st and special, E. D. Holt's Prince; 2d, withheld.

ST. BERNARDS.—SMOOTH-COATED—1st and special, Chequasset Kennels' Norman.

DEERHOUNDS.—1st, withheld; 2d and special, J. K. Parson's Bevis.

POINTERS.—1st and special, A. Spring's Capt. Bogardus; 2d, L. Bevan's Rex; 3d, G. E. Marble's Kirkermer. *Puppies:* 1st, withheld; 2d and special, A. Spring's Sportsman.

ENGLISH SETTERS.—*Dogs:* 1st and special, A. J. Lee's Don Belton; 2d, Perry Hill's Prince Fred II.; 3d, J. E. Hair's Rock. Very high com., E. E. Sackett's Dell. *Bitches:* 1st, withheld; 2d, Mrs. A. Cairns's Cleopatra.

IRISH SETTERS.—*Dogs:* 1st and special, Isaac Ferguson's Macduff. *Bitches:* 1st and special, Isaac Ferguson's Adaline; 2d, D. Maxwell's Press II. *Puppies:* 1st, J. Maxwell's Nip.

CLUMBER SPANIELS.—1st, E. Lustig's Siva.

FIELD SPANIELS.—1st, Walter Scott's Black Flash; 2d, S. R. Hemingway's Ruler II.; 3d, A. C. Wilmerding's Newton Abbot. Very high com., Pearl Lake Obo.

COCKER SPANIELS.—CHAMPION—W. West's Doc.—BLACK—*Dogs:* 1st, J. P. Willey's Baby Obo; 2d, G. H. Carr's Obo V.; 3d, W. H. Moseley's Jerry. *Bitches:* 1st, W. H. Moseley's Riette; 2d, J. P. Willey's Beatrice W.; 3d, W. Scott's Uno.—OTHER THAN BLACK—1st, J. B. Daniel's Pete. *Puppies:* 1st, W. Scott's Jennie; 2d, W. H. Moseley's Jerry.

FOXHOUNDS.—1st, withheld; 2d, W. Scott's Gipsey.

BEAGLES.—CHAMPION—1st and special, C. F. Judson's Twinkle.—OPEN—*Dogs:* 1st, C. F. Judson's Racer, Jr.; 2d, withheld. *Bitches:* 1st, A. Keen's Moddy.

FOX-TERRIERS.—CHAMPION—Blemton Kennels' Lucifer.—OPEN—*Dogs:* 1st and special, Blemton Kennels' Bacchanal; 2d, T. Bland's Vet. *Bitches:* 1st, Blemton Kennels' Tiara; 2d, Dr. C. I. Bailey's Mt. Toby Sparkle. *Puppies:* 1st and special, A. H. Norton's Mt. Toby Primrose; 2d, Dr. C. I. Bailey's Mt. Toby Sparkle.

COLLIES.—*Dogs:* Equal 1st and special, C. E. Osborne's Lothian Chief and Clarence Bryant's Ben Lomond. High com., W. J. Martin's Rex. *Bitches:* 1st, C. E. Osborne's Lothian Maid II.

BULLDOGS.—*Dogs:* 1st, C. D. Cugle's Merry Monarch; 2d, E. S. Porter's Caliban. Very high com., C. E. Pani's Tostig. *Bitches:* C. D. Cugle's Soudan.

BULL-TERRIERS.—*Dogs:* 1st, C. D. Cugle's Jackson. *Bitches:* 1st and special, Guard Bros.' Lady Winchester; 2d, J. E. Maddrah's Blanche; 3d, E. H. Mallette's Tip. *Puppies:* 1st, Guard Bros.' Lady Winchester; 2d, G. S. Rowe's Duke of Winchester; 3d, C. D. Cugle's Jackson.

PUGS.—CHAMPION—1st and special, Chequasset Kennels' Young Tohy. *Dogs:* 1st, R. B. Sawyer's Chequasset Diamond; 2d, Chequasset Kennels' Duke. *Bitches:* 1st, Chequasset Kennels' Victory. *Puppies:* 1st, withheld; 2d, Chequasset Kennels' Duke.

TERRIERS.—OTHER THAN CHAMPION—1st and special, G. B. Owen's Diogenes; 2d, W. Scott's Jumbo.

ITALIAN GREYHOUNDS.—1st and special, E. S. Andrews's Fly.

BEST BRACE OF SPANIELS.—J. P. Willey.

IMPORTANT BEAGLE PURCHASES.

—Wrightsville, Pa.—*Editor Forest and Stream:* I am pleased to inform you that I am again the owner of champion Bannerman, having repurchased him from Mr. F. T. Lane of Glencoe, Ill. He is as sprightly and vigorous as ever. I also purchased from Mr. Lane that splendid little bitch Una, winner of first and special, Chicago, 1884, there beating Champ, Bonnie and others. I also bought Dots, a very good bitch, and others. Mr. W. Stewart Diffenderfer, of Baltimore, Md., the owner of the Woodbrook Beagle Kennel, has disposed of the last of his kennel to me, viz: Goodwood Music, a grand brood bitch, full of that quality requisite in a brood bitch. Mr. Diffenderfer, in speaking of her field qualities, wrote me, "She has few or no equals in the field." Goodwood Rally, one of the most promising dogs it has ever been my good fortune to own or see. King William is another of the dogs bought of Mr. Diffenderffer.—A. C. KRUEGER.

KINO.—Cleveland, O., Dec. 4.—*Editor Forest and Stream:* I see Mr. Schellhass would like to know the breeding of the English beagle Kino. I am positive that I bred the dog and that he is litter brother to my champion bitch Bonnie. I told this to my friend in Wrightville, Pa., whom I met at the Pittsburgh show last spring, but I guess he thought it would sound better to call the dog imported. In 1884 Dan O'Shea had him in Cleveland. He was not entered right, and so was not shown. My wife and I recognized him at once. We went to O'Shea and asked him where he got him. He told us he was out of his Music by Rattler. As I know Dan to forget about dogs, I wrote the man my dog had been sold to in London, Canada, and I received the reply, "The dog you sold me I sold to Dan O'Shea; you saw him in Cleveland." O'Shea sold him, I think, to Mr. Satterthwaite. Now his telling me he bred him, and others that he imported him, confirms my belief that Kino is the dog without the letter from London. Surely Kino's pedigree is just as good as though he was imported, if not better.—CARL WHITE.

THE COCKER QUESTION.—Hornellsville, Dec. 12.—*Editor Forest and Stream:* I suppose it is hardly fair to "jump on a man when he is down," but Mr. Charlesworth, who is a breeder but not an exhibitor, and is a writer who is not familar with his subject, has only himself to blame. As I remarked before, he should post himself before he rushes into print and treads where no one else in England or America has dared to (see "The Wanderer's" letter in last issue), and then his ideal cocker (?) will not get called so many hard names. His deep-chested "bloodhound" cocker caps the climax. I well remember once when talking to Mr. Kirk about the weasel-shaped Helen that he said "he knew she was faulty, but then she has such a nice round body." That is just what a real cocker always had, and what our standard calls for now; "ribs well sprung, body well ribbed back, and short in coupling." Come again, Mr. C., and in time you may learn what a cocker looks like.—J. OTIS FELLOWS.

MASTIFF PUPPY SWEEPSTAKES.—Dec. 17.—*Editor Forest and Stream:* The American Mastiff Club offers at the coming show of the Westminster Kennel Club to be held in New York city, Feb. 21 to 24, 1888, mastiff sweepstakes, for puppies born in the United States or Canada on or after Feb. 1, 1887, and entered at this show, $25 added by the American Mastiff Club and open to all comers. Entrance fee $5 each, to be paid to the secretary at 9 West Thirty-fifth street, New York city, at the time of entry. The winner to receive 75 per cent. of the sweepstakes, 25 per cent. to go to the second. With the entry a certificate from the breeder of the date of birth of the contestant will be required. Entries close Feb. 6, 1885. By order Executive Committee, American Mastiff Club.

MORGAN EXPRESSES THANKS.—And all those who attended the trials at High Point will appreciate what he says: "HIGH POINT, N. C., Dec. 10.—*Editor Forest and Stream:* We have not experienced any time any better than we have in 1887 at the Eastern Field Trials. For this has been the best Trial in our Town, and it is a good thing to our Town and we hope it will retinue in our Town. We know times are hard and we are glad to see it coming to our Town because it helps us out while times is hard. The gentlemen says they cannot find any fault whatever, for they have been taken better care of this time than they have since they have been coming.—MORGAN TILMAN.

SALE OF SARSFIELD.—Peekskill, N. Y., Dec. 15.—*Editor Forest and Stream:* I have sold to Mr. W. W. Sweeney, of Gem Kennels, Chardon, Ohio, my imported Irish setter dog Sarsfield (Champion Garryowen—Currer Belle II.). I part with him for no fault. He is a grandly made dog of superb style, and judging by what I have seen of him in the field, he is all Mr. Giltrap and the London *Field* claimed. His puppies are handsome and I have some very flattering reports of some of them that have been on game this fall. As a stock dog, he is a success, and should, and does, nick well with bitches of the Elcho strain.—WM. H. PIERCE.

PUG MEDAL.—Dec. 18.—*Editor Forest and Stream:* I will offer as a special prize a gold medal, to be known as the Geo. W. Fisher gold medal, for the best stud pug dog under 15lbs., at the Westminster Kennel Club show, the Philadelphia and Boston shows this spring. The value of the medal is $10, and will be very handsome and neat, and it must be won three times by the same dog before it can be claimed. In case it can not be divided in the above named shows it will be as a special in the next shows held under A. K. C. rules.—GEO. W. FISHER.

TOY DOG SHOW.—The first annual exhibition of the New York Poultry Exchange held at Madison Square Garden Dec. 14 to 21 had a department for toy dogs. There were 31 entries and four litters of puppies. The exhibit comprised one wire-haired fox-terrier, one black and tan terrier, seven Yorkshire and two toy terriers, five pugs, two King Charles, two Blenheim and one Japanese spaniels.

WEIGHT OF MASTIFF PUPS.—*Editor Forest and Stream:* Dr. J. P. Thompson, of Johnstown, Pa., desires me to say that his English mastiff pup Sandycroft Burly, which was bred by me, weighed when nine months old 143¼lbs. This is 6lbs. more than the Amidon dog, and is, I believe, the heaviest mastiff weight for that age yet recorded. —VICTOR M. HALDEMAN (Milford, Del., Dec. 15).

MONARCH'S RECORD.—Boston, Dec. 15.—*Editor Forest and Stream:* I have just to-day learned that my Monarch did not receive a special prize at the show, as I have it advertised. You will therefore please take the word special out.—E. B. SEARS.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Devonshire Queen II. By Dr. S. W. Clark, Jersey City, N. J., for liver and white pointer bitch, whelped Aug. 4, 1887, by Mort of Naso (Nick of Naso—Temptation) out of Devonshire Queen (A.K.R. 3127).

Motion B., Max B., Minnie B., Millie B., Maudie B. and Mattie B. By H. D. Brown, Waterbury, Vt., for black cocker spaniels, two dogs and four bitches, whelped Oct. 30, 1887, by Black Pete, Jr. (Black Pete—Miss Ginger) out of Althea (A.K.R. 842).

Nellie L. By Sam Langdon, Augusta, Ga., for red Irish setter bitch, whelped May 25, 1886, by Gratton (Elcho—Rose) out of Nannie (Elcho II.—Dell).

Moll Pitcher. By Jas. A. Whitten, Lynn, Mass., for red Irish setter bitch, whelped Oct. 16, 1887, by Tim (A.K.R. 3988) out of Floss (A.K.R. 3437).

Lady Teazel. By Contoocook Kennels, Peterborough, N. H., for orange tawny and white St. Bernard bitch, whelped Sept. 7, 1887, by Victor Joseph (Beauchief—Bertha) out of Hermita (Hermit—Daphne II.).

San Diego. By Henry Fierman, San Diego, Cal., for white, with brown mark around one eye, bull-terrier dog, whelped Aug. 19, 1887, by Silk II. (Hinks's Silk—Puss) out of Pansy Royal (Young Royal Prince—Princess Louise).

Nix and Clover. By F. L. Webster, Lawrence, Kan., for white bull-terrier dog and white, brown markings, bitch, whelped Aug. 19, 1887, by Silk II. (Hinks's Silk—Puss) out of Pansy Royal (Young Royal Prince—Princess Louise).

Midget Pug Kennels. By L. S. Hudson, Lansing, Mich., for his kennels of pugs.

NAMES CHANGED.

Tom to Don John. Black cocker spaniel dog, whelped Oct. 30, 1886, by Smut (imported Rover—Nixey) out of Ready (Czar—Dot), owned by Horace Turner, Detroit, Mich.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Ilford Claudia—Minting. E. H. Moore's (Melrose, Mass.) mastiff bitch Ilford Claudia (Ilford Caution—Brenda II.) to his Minting (Maximilian—Cambrian Princess), Oct. 3.

Boss Gretchen—Ilford Caution. T. G. Avery's (Buffalo, N. Y.) mastiff bitch Boss Gretchen (Boss— ——) to E. H. Moore's Ilford Caution, Dec. 11.

Nova B.—Gus Bondhu. W. H. Beede's (Lynn, Mass.) English setter bitch Nova B. (Pride of Dixie—Fairy Belle) to A. M. Tucker's Gus Bondhu, Nov. 28.

Phyllis—Black Pete II. H. D. Brown's (Waterbury, Vt.) cocker spaniel bitch Phyllis (A.K.R. 5293) to his Black Pete II. (Black Pete—Althea, A.K.R. 842), Nov. 24.

Pluck—Reckoner. J. E. Thayer's (Lancaster, Mass.) fox-terrier bitch Pluck (Dudley Crash—Cabal) to his Reckoner (Regent—Nita), Nov. 5.

Di—Reckoner. J. E. Thayer's (Lancaster, Mass.) fox-terrier bitch Di (A.K.R. 2694) to his Regent (Regent—Nita), Nov. 25.

Richmond Dazzle—Reckoner. J. E. Thayer's (Lancaster, Mass.) fox-terrier bitch Richmond Dazzle (A.K.R. 5031) to his Reckoner (Regent—Nita), Nov. 26.

Baby Susie—Reckoner. J. E. Thayer's (Lancaster, Mass.) fox-terrier bitch Baby Susie (A.K.R. 4113) to his Reckoner (Regent—Nita), Nov. 20.

Lorna II.—Chieftain. J. E. Thayer's (Lancaster, Mass.) deerhound bitch Lorna II. (A.K.R. 336) to his Chieftain (A.K.R. 3726), Nov. 14.

Thora—Chieftain. J. E. Thayer's (Lancaster, Mass.) deerhound bitch Thora (A.K.R. 4034) to his Chieftain (A.K.R. 3726), Nov. 21.

Countess Zina—Bran: J. E. Thayer's (Lancaster, Mass.) deerhound bitch Countess Zina (A.K.R. 4031) to his Bran (A.K.R. 2612), Nov. 11.

Miss Mixture—Belgrave Primrose. J. E. Thayer's (Lancaster, Mass.) fox-terrier bitch Miss Mixture (Mixture—Shame) to his Belgrave Primrose (Belgrave Jerry—Wasp), Nov. 14.

Lulu—Barry II. W. J. Ehrich's (New York) St. Bernard bitch Lulu (Nero, A.K.R. 3762—Ruth, A.K.R. 3145) to his Barry II. (A.K.R. 3760), Nov. 18.

Bessie Noble—Planter. O. D. Thees's (New York) English setter bitch Bessie Noble (Count Noble—Lady May) to Percy Ohl's Planter (Dashing Rover—Vanette), Dec. 1.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Nerina. E. H. Moore's (Melrose, Mass.) St. Bernard bitch Nerina (Nero III.—Idalia), Dec. 15, twelve (four dogs), by Chequasset Kennels' Duke of Lancaster (Plinlimmon— ——).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Sarsfield. Red Irish setter dog, age not given, by Garryowen out of Currer Belle II., by Wm. H. Pierce, Peekskill, N. Y., to W. W. Sweeney, Chardon, O.

Blossom. White bull-terrier bitch, whelped Aug. 19, 1887, by Silk II. (A.K.R. 738) out of Pansy Royal, by Frank L. Webster, Lawrence, Kan., to W. T. Ingram, Omaha, Neb.

San Diego. White, brown around one eye, bull-terrier dog, whelped Aug. 19, 1887, by Silk II. out of Pansy Royal, by Frank L. Webster, Lawrence, Kan., to Henry Fierman, San Diego, Cal.

Lady Teazel. Orange tawny, correct white markings, rough-coated St. Bernard bitch, whelped Sept. 7, 1887, by Victor Joseph out of Orgar, by C. E. Lewis, Suspension Bridge, N. Y., to Contoocook Kennels, Peterborough, N. H.

Mettlehorn. Orange tawny, correct white markings, St. Bernard dog, whelped Sept. 4, 1887, by Grimsell out of Hermita, by Contoocook Kennels, Peterborough, N. H., to A. Miller, Providence, R. I.

Ray. White, black and tan English setter bitch, whelped Sept. 11, 1881, by Guy Mannering out of Lemonade, by Jules Reynal, White Plains, N. Y., to Franklin Satterthwaite, Newark, N. J. [This is a correction of notice in last issue.]

Max B. Black cocker spaniel dog, whelped Oct. 20, 1887, by Black Pete, Jr., out of Althea (A.K.R. 842), by H. D. Brown, Waterbury, Vt., to E. E. Myrick, Augusta, Me.

King Harry. Black Newfoundland dog, whelped Oct. 20, 1887, by Brown's Follie out of Fanny B., by H. D. Brown, Waterbury, Vt., to Geo. T. Howard, Little Compton, R. I.

Jumbo. Tan Great Dane dog, whelped Sept. 5, 1887, by Thyrus II. (A.K.R. 4836) out of Helen (A.K.R. 4855), by H. D. Brown, Waterbury, Vt., to E. A. Buck, Chattanooga, Tenn.

Black Jocko. Black cocker spaniel dog, whelped July 25, 1887, by Black Pete out of Phyllis (A.K.R. 5293), by H. D. Brown, Waterbury, Vt., to C. G. Lincoln, Hartford, Conn.

Helen. Tan Great Dane bitch, whelped Sept. 20, 1886 (A.K.R. 4865), by H. D. Brown, Waterbury, Vt., to E. A. Buck, Chattanooga, Tenn.

Tom. Black cocker spaniel dog, whelped Oct. 30, 1886, by Smut out of Ready, by J. E. Patterson, Detroit, Mich., to Horace Turner, same place.

Devonshire Queen. Liver and white pointer bitch, whelped June 18, 1884 (A.K.R. 3127), by Floyd Vail, Jersey City, N. J., to F. W. Payne, New York.

Peggie. Light fawn mastiff bitch, whelped June 5, 1887, by Bruce II. (A.K.R. 4643) out of Madge III. (A.K.R. 4880), by Chas. H. Pratt, Norwood, Mass., to Miss Maud Kent, M.D., Walpole, Mass.

Merry Monarch. Fawn bulldog, whelped April 27, 1884, by Monarch out of Penzie, by Chas. D. Cugle, Hartford, Conn., to Camilo Enrique Pani, Aguascalientes, Mexico.

Tostig. White, brindle face marking, bulldog, whelped Aug. 2, 1885 (A.K.R. 2225), by Chas. D. Cugle, Hartford, Conn., to Camilo Enrique Pani, Aguascalientes, Mexico.

Jackson. White bull-terrier dog, whelped Feb. 29, 1887, by Prince out of Fanny, by C. D. Cugle, Hartford, Conn., to Camilo Enrique Pani, Aguascalientes, Mexico.

Soudan. White bull bitch, whelped Oct. 4, 1884, by Billy out of Zoo, by Chas. D. Cugle, Hartford, Conn., to Camilo Enrique Pani, Aguascalientes, Mexico.

Beatrice. White, fawn face markings, bull bitch, whelped April 3, 1887, by Rustic King out of Soudan, by Chas. D. Cugle, Hartford, Conn., to Camilo Enrique Pani, Aguascalientes, Mexico.

Tom Caution. Fawn mastiff dog, whelped Feb. 20, 1887, by Ilford Caution out of Winchell's Bess, by E. H. Moore, Melrose, Mass., to Louis Hasbrouck, Gopdensburg, N. Y.

Brenda. Fawn mastiff bitch, whelped Sept. 17, 1882, by Turk out of Lioness, by E. H. Moore, Melrose, Mass., to Frank C. Graves, Franktown, Col.

Ilford Prince. Fawn mastiff dog, whelped July 27, 1887, by Ilford Caution out of Bess, by E. H. Moore, Melrose, Mass., to Wm. M. DeBois, Annapolis Royal, N. S.

Prince Karl. Orange and white St. Bernard dog, whelped July 19, 1887, by Merchant Prince out of Bernie V., by E. H. Moore, Melrose, Mass., to J. Louis White, Boston, Mass.

Turk. Orange and white St. Bernard dog, whelped July 19, 1887, by Merchant Prince out of Bernie V., by E. H. Moore, Melrose, Mass., to E. H. R. Lyman, Northampton, Mass.

Gladys. Fawn mastiff bitch, whelped Oct. 3, 1886, by Ilford Cautian out of Bona, by E. H. Moore, Melrose, Mass., to F. C. Myers, Oakland, Cal.

Duke Ronald. Orange and white St. Bernard dog, whelped Jan. 11, 1887, by Merchant Prince out of Sequa, by E. H. Moore, Melrose, Mass., to Otto W. Volger, Buffalo, N. Y.

Jumbo. Fawn mastiff dog, whelped April 27, 1887, by Ilford Caution out of Fannie, by E. H. Moore, Melrose, Mass., to S. H. Myers, Augusta, Ga.

Carlotta. Fawn mastiff bitch, whelped Sept. 8, 1886, by Ilford Caution out of Fannie, by E. H. Moore, Melrose, Mass., to Frank C. Graves, Franktown, Col.

Silk II.—Pansy Royal whelp. White bull-terrier bitch, whelped Aug. 19, 1887, by Frank L. Webster, Lawrence, Kan., to J. H. Rucker, Athens, Ga.

Chieftain—Ramona whelp. Fawn deerhound dog, whelped September, 1887, by J. E. Thayer, Lancaster, Mass., to W. W. Harrison, Philadelphia, Pa.

Chieftain—Lorna II. whelp. Fawn deerhound bitch, whelped June, 1887, by J. E. Thayer, Lancaster, Mass., to W. T. Lawson, New York.

Ilford Caution—Bess whelp. Fawn mastiff bitch, whelped July July 20, 1887, by E. H. Moore, Melrose, Mass., to L. A. Hall, Boston, Mass.

Merchant Prince—Sequa whelp. Orange and white St. Bernards, whelped Jan. 11, 1887, by E. H. Moore, Melrose, Mass., a dog each to F. M. Freemont, Atlanta, Ga.; Chas. D. Freeman, New York, and Marcus Beebe, Malden, Mass., and a bitch to S. C. Heald, Boston, Mass.

KENNEL MANAGEMENT.

☞ No Notice Taken of Anonymous Correspondents.

AMATEUR, Lowell.—Are warts in a dog's mouth indicative of disease, and is it necessary to remove them? I have a pointer the whole side of whose mouth is one continuous line of warts. Ans. No, warts are, as a rule, not indicative of general disease. If not large enough to cause trouble in deglutition, they can be left alone. They can be removed by touching them with fuming nitric acid on a match or pine stick. Puppies are more subject to distemper than dogs over a year old.

G. M., Newark.—1. Can you tell me why my Irish setter is losing all of her hair? It comes out by the handful. She seems perfectly well. I feed boiled Indian meal, with the addition of the leavings from the table. Her hair came out the same way last June. 2. Please tell me what is good for worms in a setter puppy 8mos. old. Ans. 1. Give Fowler's solution of arsenic, 5 drops morning and evening in the food. 3. Give a purge of castor oil, 2 teaspoonsful, and 4 hours later give 20grs. of powdered areca nut made into a large pill with lard.

W. S. S., Red Jacket, Mich.—Having no veterinary up here, I beg to trouble you again. The canker receipt you sent me worked a perfect cure in my Newfoundland dog. He is in perfect coat, spirits and health, except for the other trouble described. He is well-built and powerful, but is getting perceptibly weak in his hindlegs and quarters. Has had the distemper, and think he is over it. Ans. We do not think the symptom you mention is serious. Give 5 drops of tincture of nux vomica three times daily in a little sweetened water. Keep the bowels clear.

B. B. H., Harrisburg, Pa.—My Irish setter, 8mos. old, has for four or five days been having from one to three fits a day. They begin by his eyes becoming set, shaking head violently; and frothing at month, he will fall down in convulsions lasting two or three minutes, and on rising he seems to be blind, running over and against anything in his road. In 15 minutes he seems all right, but cries as if in pain. Appetite good. Ans. Purge with castor oil, tablespoonful. Do not feed meat. Exercise regularly. Look for worms.

F. A. P., Bath, Me.—Can you tell me of anything I can use to stop my dog from continually scratching. He had the red mange last summer, but I cured him of that all right. I wash him once a week in borax water, and use Fowler's solution, but it does not stop him from scratching himself on his forelegs and stomach. I feed him dog bread, oatmeal and scraps from the table, and give him exercise. Ans. Keep bowels free and use the following ointment night and morning after washing:

℞ Ung. zinc oxid.....℥iss.
Ung. diachylon.....℥ss.
Mix. Sig. External.

J F Brown	7	5	8	5	9	7	8	4	9	10—72
F Merrill	5	10	6	9	10	6	6	6	6	6—70
E Brown	9	5	7	8	5	7	8	7	4	8—68
C Wright	6	5	5	5	7	8	7	7	8	4—62
C H Poor	8	7	5	7	4	6	9	5	0	5—56

During the latter part of the summer the butts needed replacing, and there was no shooting at all at the range for several weeks, and during the open season for gunning most of the men have failed to report there, so that at the present time the boys are just beginning to shoot in earnest, and to-day had a very pleasant meeting, with these scores as a result. During the vacation the butts have been enlarged, making room for three targets where we formerly only had one. The shooting house has also been enlarged to double its former size, and the latch string is out. Some new members have come in, and more are expected.—J. P. M.

A RIFLE CALENDAR.—The Winchester Repeating Arms Co. have issued their calendar for 1888. It is a handsome piece of work and will be sent to any reader on receipt of address and 4c. to cover postage.

PAINE VS. BENNETT.—During the present week Ira Paine has been busy in Providence, and in addition to his professional work has been giving some attention to the score made by Mr. Bennett, of Boston, during the week preceding. On Mouday he wrote:

PROVIDENCE, Dec. 12, 1887.—*To the Editor of the Herald:* I beg your pardon for troubling you, but in justice to myself I make one more and final communication concerning that pistol record of Mr. Bennett's. I had ascertained, previous to my letter of Saturday the following facts: That Bennett used the new and improved ammunition, which was not obtainable at my trial; that as long as he used the old ammunition he failed to beat my score; that A. C. Gould, editor of the *Rifle*, knew these facts, but suppressed them; also reported said trials, making the continued assertion that Bennett has beaten "Paine's best record under the same conditions," when he knew such statements were absolutely untrue and misleading to the American public. Friday last, at the Narragansett Club I made 878 points, 10 more than Bennett made the same day, with a .38 instead of .44cal. Smith & Wesson army revolver, losing 12 points by the difference in caliber. The score can all be properly verified. If I do not come to Boston and prove these assertions I authorize you to donate the inclosed $500 to any Boston public charity you may select. When I have the time I will give the new ammunition a trial and send reports accordingly.—CHEVALIER IRA PAINE (14 Delaine street, Providence, R. I.).

This letter was followed by a more formal challenge directed to Mr. Bennett, in which he challenges him to accept one or all of the following wagers: $1,000 that he (Paine) can make more bullseyes in 600 shots than Bennett did or can; $1,000 that he can beat the record made at Walnut Hill; $1,000 that he can shoot 600 shots against Mr. Bennett and beat him, any time or place. He deposited $1,000 each with the Boston *Herald* and *Globe* for Bennett to cover.

On Dec. 16 F. E. Bennett posted a forfeit of $100 and challenged Mr. Paine, who disputes his superiority, to a six-day shooting match for $250 a side and the revolver shooting championship of America, the match to be shot at Walnut Hill between April 1 and June 1, 1888. The conditions for the match proposed by Mr. Bennett are 100 shots per day for six consecutive days, a standard American target, at a distance of 50yds., with a .44-cal. revolver.

Chevalier Paine was shown Mr. Bennett's challenge to him, and said that his engagements would not permit him to answer it. He did not consider Mr. Bennett in his class, and if he wanted to make a match he must look in the same class of amateurs. This shooting he did not consider his best, and he only wanted to beat Bennett's record, and having done that was satisfied.

During the week the Chevalier made of himself a very lively mitrailleuse, he shot 1,900 rounds with a 38-calibre revolver at a standard American target, distance 50yds. and 1ft., Monday, at the grounds of the Narragansett Gun Club, in the presence of the president of the club, E. W. Tinker, and Deputy Chief of the City Police John Brown, who measured the distance and verified the shots. Tuesday he made 190 shots and made 174 bullseyes, with a total of 1670, and out of a possible 1,900 averaged 87.9. The scores were: 89, 85, 87, 85, 90, 92, 87, 89, 86, 85, 92, 85, 85, 91, 87, 88, 91, 88, 88—1,670.

Wednesday he fired 100 shots and made 84 bullseyes, with a total of 874 out of a possible 1,000; average, 87.4. Scores: 92, 89, 89, 86, 88, 85, 85, 83, 89, 85—874. This gives him a total of 2,544 out of a possible 2,900; 258 bullseyes out of a possible 290, and a grand average of 87.69.

On Saturday the 17th, Chevalier Paine completed 600 shots with a revolver at the United States standard target, 50yds. distance, at the grounds of the Narragansett Gun Club, in the presence of Newton Dexter, Esq., of the Rhode Island club, and J. C. Dyer, of the *Journal*. He fired 210 shots, and scored 1,679 out of a possible 2,100, making a grand total of 5,170 with the 600 shots, or 107 more than F. E. Bennett made at Walnut Hill. The ammunition was from the house of William R. Shaeffer, of Boston, and was made by the Union Metallic Cartridge Company.

ST. LOUIS, Dec. 18.—Fifteen members were present at the last weekly shoot of the Pistol Club, which resulted in favor of Lard. Following are the scores out of a possible 120:

W J Lard	12	12	12	12	10	10	12	12	11	12	—117
G W Alexander	11	12	11	10	11	12	11	12	12	12	—114

M C Billmeyer	7	12	12	9	10	2	3	6	12	10	— 83

OWENSVILLE, Ind., Dec. 13.—The Owensville Ballard Rifle Team, good light, light 2 o'clock wind, standard target, 200yds. rise, national rules, gold and leather medals:

J Montgomery	8	9	7	6	9	5	6	7	7	5—69
G Witter	6	7	4	10	5	6	9	8	6	7—68
W Roberts	8	4	5	7	4	6	5	4	9	8—60
R Speck	5	5	5	5	9	7	7	5	3	5—56
J Daugherty	8	4	4	6	6	3	7	8	4	5—55
J Stone	4	6	4	4	7	8	7	5	6	4—55
M G Daugherty	8	6	4	6	8	3	6	4	4	5—51

J. Montgomery, gold medal. McGrade Daugherty, leather medal.

CLOSE SHOOTING.—Mr. C. D. Reilly, of Randolph, N. Y., speaking for a fellow townsman, says in a recent letter: "Last summer Mr. Bartlett shot at a distance of 25ft. five .44-cal. balls in succession through a plain gold ring eleven-sixteenths of an inch in diameter without breaking or injuring the ring, using a Winchester rifle and shooting off-hand."

SCARBORO, Ont., Dec. 15.—The members of the Scarboro Rifle Club had their annual match over their ranges at Agincourt today for the Cooper Cup, which was won by Alex. Kennedy with a Bullard rifle. Ranges 400 and 500yds., 5 shots at each range: A. Kennedy 44, J. Clarke 41, A. McPherson 43, J. F. Davison 42, J. Chisholme 42, J. Angus 40, J. Chester 39, R. Donaldson 38, S. Iteuers 56, S. Kennedy 35, J. Walton 52, — Ashbridge 26, R. McCowan 24, J. W. Grainger 22.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

BROOKLYN, Dec. 16.—Many old-time members of the Coney Island Rod and Gun Club met to-day at Woodlawn Park, L. I., and with fourteen at the traps did some clever work. The first prize was won by Mr. F. Lanzer with a clean score of seven killed and none missed. M. J. Kearney, S. Hopkins and W. Cameron scored a tie for second prize, which Mr. Kearney won on the shoot-off. Mr. P. Davenport, who tied Mr. P. Lieb for third prize, won on the second trial. Here are the scores for first prize, won by Mr. Lanzer:

H McLaughlin (23)	1010001—3	S Hopkins (21)	1011111—6
J E Lake (25)	1011001—4	H Blattmacher (25)	1010011—4
F Lanzer (25)	1111111—7	G Ayers (25)	1011010—4
L Davenport (29)	0011111—5	W Stewart (30)	1011010—4
H Minck (23)	1101000—3	H Donnelly (25)	0111100—4
M J Kearney (29)	1011111—6	W Cameron (29)	0111111—6
P Leib (22)	1011011—5	C Wheeler (23)	0011110—4

Messrs. Ayers and Donnelly divided the fourth prize, and Mr. Hugh McLaughlin won the fifth prize.

WELLINGTON, Mass., Dec. 17.—There was a good attendance at the grounds of the Wellington Club to-day. In the merchandise match Snow broke his 20 birds straight, which is the only clean score made thus far in the contest, and scored a point in Class A. Sanborn won in Class B, and Swift and Gerry each scored a point in Class C. Following were the winners in the sweepstake matches: 1. 6 blackbirds—Perry first, Gerry second. 2. 6 clay-pigeons—Maul first, Gerry second. 3. 6 clay-pigeons—Gerry first, Maul second. 4. 6 blackbirds—Swift first, Perry and Snow second. 5. 6 clay-pigeons—Perry, Gerry and Sanborn first, Swift second, Bradstreet third. 6. 6 blue rocks—Ward first, Swift second, Perry third. 7. 10 blackbirds, merchandise match—Snow first, Ward and Gerry second, Brown, Stone and Perry third, Swift fourth. 8. 10 clay-pigeons, merchandise match—Snow first, Warren and Swift second, Sanborn third, Gerry fourth. 9. 6 clay-pigeons—Warren, Swift and Sanborn first, Gerry and Brown second, Perry third. 10. 6 clay-pigeons—Perry and Gerry first, Snow, Ward and Brown second, Hart third. 11. 3 pairs blackbirds—Snow first, Gerry second.

BABYLON, Dec. 16.—In the pigeon shooting match at the Westminster Kennel Club grounds to-day, Mr. Thorne defeated Dr. Knapp by a score of 92 to 78 out of 100 birds.

NIAGARA FALLS, Dec. 16.—A very interesting live pigeon and blackbird trap shooting tournament took place on the Whirlpool Gun grounds here to-day. The following are the scores:

First Shoot—Nine blackbirds, entrance $1.50; class shooting:

J Wyper, Hespeler, Ont	111111111—9
G Briggs, Ontario	100000100—2
W H Case, Buffalo, N. Y	010100111—5
Wm Hines, Toronto	110101111—7
A Westbrook, Brantford, Ont	010101100—4
Jas Bampfield, Niagara Falls, Ont	010100010—3
J R Smith, Point Colborne, Ont	111111100—7
C Millon, Niagara Falls, Ont	111001110—6
E M Moody, Lockport, N. Y	111111111—9
G Murphy, Niagara Falls, Ont	110010110—5
G M Wright, Hamilton	110111111—8
E H Smith, Lasalle, N. Y	100111111—8
J H Smith, St. Thomas	110011111—8
Wyper, Hespeler, Ont	111100110—7
E H Smith, Lasalle, N Y	111111110—8
Wm Gombert, Tonawanda	100111100—5
Stovey, Buffalo, N. Y	101001001—4
Stauber, St. Thomas	010001110—4

Wyper and Moody divided first money, Wright and E. H. Smith second, J. H. Smith and Hines third, Millon fourth.

Second Shoot—Ten live pigeons; entrance $3:

George Briggs, Toronto	1111010111—8
Hines, Toronto	1101011110—7
Adams, Buffalo	1100111111—8
Gombert, Lasalle, N. Y	1110101100—6
Lansing, Rochester, N. Y	1111100111—8
Moody, Lockport, N. Y	0111101111—8
Case, Buffalo, N. Y	1101011110—7

Messrs. Briggs, Adams, Lansing, Moody, E. H. Smith, J. H. Smith, having all tied, killing their eight birds each, mutually divided the four prizes equally between them.

Third Shoot.—The most interest centered in this contest, it being a match shoot for $100 a side between Geo. Briggs, Toronto, and Bishop, of Niagara, Ont., two crack shots, 21 live pigeons each:

Briggs, Toronto	101101111110001111110—15
Bishop, Niagara	110010101111101010000—11

Fourth Shoot.—Guaranteed purse $60; $25 first, $18 second, $12 third, $5 fourth; entrance $3: 7 live pigeons:

Stover, St. Thomas	0111111—6
Wyper, Hespeler	0111111—6
Moody, Lockport, N. Y	1111110—6
Case, Buffalo, N. Y	1111111—7
E H Smith, La Salle, N. Y	0111111—6
Lansing, Buffalo	1110111—6
Adams, Buffalo	1111111—7
Rogers, St. Cathariacs	1111111—7
Bishop, Niagara	0111110—5
Besser, Buffalo	0111111—6
Forsyth, Hamilton	1111111—7

In the ties for first money Rogers and Forsyth again tied, killing their 3 birds each. They then divided first and second money. Adams took third, Case fourth.

Fifth Shoot.—9 blackbirds; entrance, $1.50:

Gombert, La Salle, N. Y	111011100—6
Besser, Buffalo, N. Y	110001111—6
Murphy, Niagara Falls, Ont	101101111—7
Forsyth, Hamilton	111001111—6
Claridge, Chippewa	001110110—5
Minton, Buffalo	111110110—7
Wyper, Hespeler	111111111—9
Moody, Lockport, N. Y	111011110—7
Malloy, Niagara Falls	110101111—7
Storey, Buffalo	010001111—5
Bampfield, Niagara Falls, Ont	011111010—6
Case, Buffalo	111010111—7

Wyper, Hespeler, proved himself once more as the knight of the day, and secured first money, killing his 9 straight birds; Murphy, Minton, Moody, Malloy and Case divided second money; Gombert, Besser, Forsyth and Bampfield divided third; Claridge and Storey fourth.

Sixth Shoot.—6 blackbirds; entrance, $1.50:

Moody, Lockport, N. Y	110111—5
Wyper, Hespeler	111111—6
Smith, La Salle, N. Y	111011—5
Murphy, Niagara Falls, Ont	011110—4
Gombert, La Salle, N. Y	111111—6
Forsyth, Hamilton	111101—5
Besser, Buffalo, N. Y	100101—3
Case, Buffalo, N. Y	101111—5
Hill, St. Thomas	010111—4

Wyper and Gombert divided first. In shooting off the ties, Forsyth took second money, Case third and Murphy fourth.

DUNELLEN, N. J., Dec. 14.—There was a large attendance today at the regular semi-monthly shoot of the Middlesex Gun Club on their grounds at Dunellen. The scores were remarkably good as the birds were all strong flyers. The scores of Vice-President Smith, "Uncle Billy" Seigler and Charley Smith deserves particular mention. The contests for the gold trophies were very interesting. Forrest and Miller tied in Class A, divided first money and agreed to shoot off for the badge next month. D. Terry and Tee Kay tied in Class B, Tee Kay waiving claim to badge. Appended are the scores, the ties being divided:

Sweep No. 1, 4 live birds, handicap rise:

C Smith (30)	0122—3	S G Smith (29)	1212—4
Forrest (30)	1101—3	Clark (30)	010 —1
Dickens (30)	1110—3	Seigler (30)	1111—4

Sweep No. 2:

C Smith (30)	1211—4	Clark (30)	1211—4
Forrest (30)	0101—2	Seigler (30)	1221—4
Dickens (30)	1101—3	Manitz (30)	1211—4
S G Smith (29)	1112—4	Quad (28)	1200—2

Sweep No. 3:

C Smith	1211—4	Seigler	1211—4
Forrest	1121—4	Manitz	1111—4
S G Smith	2121—4	Quad	2210—3
Clark	2200—2		

Sweep No. 4:

C Smith	1110—3	S G Smith	1112—4
Forrest	2111—4	Clark	2111—4
Dickens	2211—4		

Sweep No. 5:

C Smith	1011—3	Seigler	1111—4
Forrest	1101—3	Manitz	1212—4
S G Smith	1121—4	Quad	1111—4
Clark	2011—3	J S Voorhees	0121—3

First divided; C. Smith and Clark second.

Sweep No. 6:

C Smith	1112—4	J H Force	2021—3
E Miller	1011—3	D Terry	1011—3
Dickens	2010—2	Tee Kay	2010—2
Forrest	2200—2	S G Smith	1101—3
Seigler	1211—4	Quinlan	1211—4
Manitz	0211—3	Creeley	2100—2
Quad	1111—4	Willis	1122—4
J S Voorhees	1122—4	Choffee	1010—2
Conover	1101—3		

Optional sweepstake, $5 entrance. Class A, badge shoot, 7 live birds, club rules, handicap rise:

S G Smith	1101122—6	Dickens	1211011—6
Seigler	0202111—5	J D Voorhees	2110101—5
C Smith	1111201—6	Forrest	2112211—7
Manitz	0100111—4	J H Force	0111210—5
Miller	1112111—7	Quinlan	0221111—6
Conover	2101212—6		

Class B, same as in Class A.

D Terry	1121221—7	Lawrence	1011211—6
Daniels	0000000—0	Tee Kay	2122211—7

Miss and out, 30yds. rise: Manitz 1, Quinlan 3, Miller 3, Willis 2, S. G. Smith 0, Seigler 2, Choffee 0, See Mc Moreo. Quinlan and Miller divided.

TORONTO, Dec. 17.—The first of the series of shoots for the West End Gun Club's silver cups came off at Dan Blea's grounds at West Toronto Junction this afternoon. The shooting, which was at Peoria blackbirds, from 3 spring traps, 18yds. rise, was good, as the following scores show:

First Class.

Blea	1111111111111—15	Kipp	1010101111111—12
McDowell	1111101111111—14	Wilson	1060011011011—9
Wakefield	1101011111110—12	Brown	011110100w.
Dollery	1101111111011—12		

Second Class.

McLaren	0111010101111111—11	Evans	0100101111101101—9
Jackson	1011101101110111—10	Derry	1001101101001101—8
Kennedy	1101001111101101—10		

Third Class.

Spiller	0110001111011101—9	McMurray	0111100010000000—5
Gourman	0110000110111011—8	Hobart	0001100000000000—3
Hallaru	1100001101101101—8	Lynch	0000000000000111—2
Watt	1100010000111101—7		

The cup in each class must be won by a competitor three times before it becomes his property, consequently there will be at least two more shoots.

TORONTO, Dec. 17.—The Owl Gun Club held a team shoot at C. Ayre's grounds, Eastern avenue, this afternoon, to decide who should pay for the annual dinner to be held next month. Capt. Tynon's team will provide the spread, as Capt. McDowall's men defeated them by a score of 110 to 101. Ten artificial birds each:

Capt McDowall	7	Capt Tynon	5
J Humphrey	7	J Townson	4
Sandys	7	H Humphrey	5
Colborne	7	Douglas	7
G Carruthers	8	Jobbett	8
Maginn	5	Longbottom	5
Rice	4	Montgomery	4
Ellis	8	Ayre	8
J Carruthers	7	Rogers	7
Pickering	7	Wm Felsted	7
Lockhart	6	Louden	4
H Townson	4	Lalor	5
Unwin	5	Smith	4
Beaty	4	Robertson	2
Stewart	4	O'Leary	4
Hoffman	3	Henrich	1
Musson	3	Doherty	3
J Felsted	4	Fogg	4
Graham	2	Kennedy	1
Lennox	5	Simpson	5
Webster	3—110	Harrison	3—101

NEWTOWN, N. Y., Dec. 13.—North Side Gun Club of Long Island, 7 live pigeons, ground traps, handicap, 80yds. bound, club rules, gold badge and three money prizes:

Duryea	1111111—7	Krumbeck	1100010—3
Kroger	1101111—6	Berger	1011110—5
Eberhardt	0111111—6	Bohnecke	1101111—6
Barlow	1111101—6	Wahlen	1011100—4
Winholz	1110111—6	Grau	1111011—6
Manning	1100011—4	Bussell	0100110—3

After the regular shoot a sweepstake match took place, 11 entries, miss and out. After the fifth bird was shot Kroger and Manning divided. S. Lyon, referee.

EMERALD GUN CLUB.—New York, Dec. 13.—Regular shoot of the Emerald Gun Club at New Dorp, Sea View Park, Staten Island, live pigeons, ground traps, 80yds. bound. Shot under club rules:

G Remsen (25)	0101101111—7	P Butz (21)	1011111110—8
Wm Glaccum (25)	1011111111—9	N Maisel (21)	0111111101—8
Schermerhorn (21)	1011010111—7	P J Keenan (21)	1100010011—5
J Sidley (21)	0010101010—4	J H Voss (25)	1111011111—9
R Regan (21)	1011001010—5	F Schrader (25)	1110111111—7
Thos Codey (21)	1000111111—7	M McMun (30)	1110101001—6
M Cherry (21)	1100100100—4	M W Murphy (21)	0100011111—6
Dr Dwyer (25)	0101100011—4	S McMahon (21)	0010031111—5

Ties: Miss and out for first, Glaccum 1, Voss 0; second, P. Butz 2½, N. Maisel 3; third, G. Remsen 0, L. Schermerhorn 2, Thos. Codey 2½, F. Schrader 2; fourth prize or Oseikie Trophy won by M. W. Murphy.—THOS. CODEY.

ST. LOUIS, Dec. 16.—About a hundred enthusiasts gathered at Compton Avenue Park this afternoon to witness the match shoot between Capt. Bogardus and J. L. Winston, of Covington, Ky. The day was dark and gloomy, and the scores were remarkable under the circumstances. This operated against Bogardus, whose eyes are not very strong. He used a 7lb. 6oz. Smith hammerless, and had never shot with it before. Winston used a 9¼lb. gun of the same pattern, the only difference being that he used a 10, while his opponent's was a 12-gauge. Winston's finish was especially strong, he killing 23 birds out of the last 24. The pair started off promptly at 1:30. Out of the first string of 10 Bogardus killed 9 and his opponent 8. In the second each killed 9, while in the third Winston killed 10 straight and Bogardus missed 1, thus tying the score at 30. In the fourth Bogardus again took the lead, killing 9 to his opponent's 8. Both killed 9 in the fifth, leaving the score 45 to 44 in favor of Bogardus. Winston tied the score in the sixth round, killing 9 to Bogardus's 8, and took the lead in the seventh, killing 10 straight, while Bogardus missed 1. Both killed 8 in the eighth, and killed the whole round in the ninth. Winston missed his first bird on the last round, and the score was tied. From this out the greatest excitement prevailed. At 97 each they were tied. Bogardus missed his 98th bird and his last one, while Winston killed his last 3 birds, winning the match by a score of 99 to 98. Live birds were used, and they were all strong flyers. W. Z. Colville presided as referee and stakeholder. The men met early in the morning and placed the stakes in Mr. Colville's hands. Hunt P. Wilson acted as scorer. After the match Bogardus challenged Winston to meet him again under the same conditions, live tame birds to be used. Winston accepted, and the match will probably take place in Cincinnati, Jan. 2. Following is the score. Hurlington rules governed, allowing the second barrel for birds not killed with first, and the figure "2" denotes birds killed with second barrel:

Winston.....0101122112101111111112111210102111111120211
1212101111111212111011101212111112110012221112—90
Bogardus.....2221101111111012101211111111011012102121111
1100112222110111111101111211111111111111111010—88

OMAHA, Dec. 18.—*Editor Forest and Stream:* The appended sbore shows the result of a shoot at the Base Ball Park this afternoon. 50 live pigeons, 30yds. rise. At its conclusion the loser challenged the winner for another match, same terms, to be shot soon:

Parmalee.....1001111111101101111111111001111111111111111111—44
Meritz.....1111011111111011110111011101111111101111110111—42

JERSEY CITY HEIGHTS.—At the regular meeting of the Jersey City Heights Gun Club, held at their club rooms, Newark avenue, Jersey City, the following officers were elected for the ensuing year: Pres., Wm. Hughes (old reliable No. 1), unanimously re-elected; Vice-Pres., W. F. Quimby, of 301 Broadway, against his vigorous protest; Sec. and Treas., Alfred Heritage (old South Paw). Executive Committee—Dr. J. B. Burdett, Geo. B. Eaton and F. W. Mitchell. Official Scorer, J. J. Maher. Speeches and toasts were made and given by the outgoing and incoming officers. Old South Paw, as usual, was bubbling over with enthusiasm on club matters. A communication was read from the Easton, Pa., Gun Club, desiring a friendly match with the club at live birds or inanimate targets. It was unanimously resolved to accept the challenge, 10 or 20 men each club, 10 live birds each, to be shot at Easton any time to suit the Keystones. A committee was appointed to confer and make the necessary arrangements, so a good time is expected, of which more anon. There will be sweepstake shooting at live birds on the grounds of the J. C. H., at Marion, Monday, Dec. 26, commencing at 10 A. M., open to all.

PHILADELPHIA, Dec. 14.—Four leading gun clubs of the country shot a team live pigeon match for an elegant bronze cup, presented by General E. Burd Grubb, at Andalusia, to-day, and the Philadelphia Gun Club won by the score of 122 out of a possible 150. The teams consisted of three men each, and each shot at 50 live pigeons, 30yds. rise, 50yds. boundary. F. C. Arnold, of the Riverton Gun Club, acted as referee, and Reuben Etting kept the official score. The shooting began at 8:30 A. M., and lasted until late in the afternoon. A bountiful collation was served on the field. The teams and their total scores were: Philadelphia Gun Club—Macalister 43, Handy 41, Eckert 38; total 122. Riverton Gun Club—Davis, Downing and Gillingham; total 116. Westminster Gun Club of New York—Grant, Wilmerding and Smith; total 113. Tuxedo Club of New Jersey—Keene, Watson and Pierre Lorillard, Jr.; total 112.

NEW YEARS SHOOT.—If any of your readers have never been there, it will pay them to attend the shoot of the South Side Gun Club, at Newark, on New Years day. The grounds may be reached in an hour from New York, trains running almost half-hourly; the club has a comfortable house, and can trap clay-pigeons as fast as can be done. Shells and lunch can be had right there, and an attractive programme is promised. This club is perhaps the only one in New Jersey which has held Saturday shoots without a break for the past six years. Rain or shine the trappers are there, the house warmed and in order, and he who cannot get rid of fifty or a hundred cartridges in an afternoon has himself to blame. It is expected that during the coming year a programme shoot will be held on one Saturday of each month.—HUNT.

DEATH OF EUGENE BOGARDUS.—Lincoln, Ill., Dec. 10.—Yesterday Eugene Bogardus, eldest son of Captain A. H. Bogardus, the champion wing shot, died of congestion of the lungs. Eugene was well-known as a trap shot, having shot in public exhibitions with his father and younger brothers since 1878.

JERSEY CITY.—J. R. Outwater, of Jersey City, and L. B. Cambell, of Little Silver, N. J., will shoot again on the day after Christmas on the Jersey City Heights Gun Club grounds for $400. The gun club will have a big sweepstake after the match.

LONG BRANCH, Dec. 14.—A shooting match at live pigeons came off at Sea Girt this afternoon. The contestants were Ephraim Sewell, of Long Branch, and George Waldo, of New York. 100 birds were shot at 28yds. rise, Hurlingham rules, for $100 a side. A large crowd witnessed the match. The score stood: Waldo 42, Sewell 40.

HARTFORD.—The officers of the Colt Gun Club for the present year are: President, L. B. Crary; Vice-President, H. Jacobs; Treasurer, W. R. Hopkins; Secretary, M. F. Cook.

BOSTON, Dec. 14.—There was a large attendance of trap shooters at the range at Walnut Hill to-day. The weather conditions were favorable. Appended are the day's results: Sweepstake events—5 clay-pigeons, Swift and Nichols first; 5 clay-birds, Swift, Warren and Wild first; 6 blackbirds, Warren first; 10 Macomber birds, Warren first; 5 pairs Macomber birds, Curtis first; 10 clay-pigeons, Snow, Warren and Knowles first; 5 pairs bats, Knowles first; 7 quails, Straightaway, Smith and Snow first; walkup match, 6 clay-pigeons, Warren, Curtis and Nichols first; 6 clay-birds, Hart and Swift first; 6 bats, Perry and Smith first; 3 pairs clay-pigeons, Knowles first; 5 clay-pigeons, straightaway, Swift first. Macomber badge match (10 singles and 5 pairs)—Smith 16, Wild 15, Snow 15, Warren 13, Curtis 13, Hart 12, Swift 12, Nichols 11, Crown 7. Merchandise match (19 singles and 5 pairs)—Knowles 17, Class A; Warren 15, B; Smith 13, C; Swift 13, C; Snow 12, C; Nichols, 12, D. Vistors' match—Wild 17, Class G; Crown 9, H.

MONTREAL, Dec. 10.—The second match for the Costen Challenge Cup, at 20 Peoria blackbirds, 18yds. rise, was shot to-day on the Montreal Gun Club grounds, Captain Howard acting as referee. The weather was abominable, but the shooting was the best seen in Montreal for years. There were six clubs entered—Lachine, Montreal, Cote St. Paul, St. Johns, St. Hubert and St. Lawrence. Lachine had two teams in the field, making seven teams to shoot. The first match was shot two weeks ago, and was won by the St. Lawrence club, but they were not in it at all to-day. The team scores were not extraordinary, but some of the individual scoring was very good; Robertson, of Lachine, and Cook, of Cote St. Paul, breaking 17 birds each, while Wallace, of Montreal, and Penniston, of Lachine, broke 16 each. Lachine's first team won with 69 birds and Montreal came second with 64. The shoot was unfinished on account of darkness. But that did not affect the result, as Lachine could not be beaten.

THE GRAHAM-KLEINTZ MATCH.—Arrangements have been made with the Easton, Pa., Gun Club, by Messrs. W. Graham and J. Frank Kleinz, to shoot two matches on their grounds at Easton, Pa., on Monday, Dec. 26. The conditions are 50 live birds each, Hurlingham rules, Kleinz to use a 10-gauge gun and stand at 30yds., Graham to use a 12-gauge and stand at 28yds.; 50 live birds each, Long Island rules, Kleinz to stand at 26yds., Graham at 24yds., total score to count; to be for $150 a side.

MONTREAL, Dec. 12.—A shooting match for a cup emblematic of the championship of Canada will be shot on Montreal Gun Club grounds on Monday, Jan. 2. The conditions will probably be 10 Peoria blackbirds, 18yds. rise. Pigeon shooting is arousing much interest in Montreal just now, and the shoot on New Year's day for the Coston cup and the championship will be the biggest event that has taken place here for many years. It is expected that there will be a large number of entries from Ontario clubs, and every arrangement is being made to make the affair a success.

A LIVELY PRIZE.—A live pigeon shoot for a seven-year-old horse, who can trot in 2:40, will be held on Dec. 22, at General Wayne (Elm Station, Pennsylvania Railroad), open to all, Brewer and Graham barred; chances $5, Rhode Island rules, 25yds., miss and out. Shooting will commence at 1 P. M. sharp.

NEW JERSEY.—A gold badge for the championship of Monmouth county, N. J., will be shot for at Oceanport on Dec. 26. The contest will be open to all residents of Monmouth county. No entrance fee will be charged, but birds will be charged for at 25 cents apiece.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON..... } Albany, N. Y
Secretary-Treasurer: P. L. MIX. }

Vice-Com.	*Rear-Com.*	*Purser.*
Central Div..Henry Stanton...	R. W. Bailey.....	E.W. Brown, 146 B'way, N.Y.
Eastern Div..L. G. Jones.....	Geo. M. Barney....	W. B. Davidson, Hartford.
N'thern Div..A. D. T. McGachen.	W. G. McKendrick.	S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

A. C. A. NORTHERN DIVISION.

THE executive committee of the Northern Division met in Peterborough on Friday, the 9th inst. There were present Vice-Commodore MacGachen, Rear-Commodore McKendrick, Purser Samuel Britton, Messrs. Miller, Geo. Hatton (proxy for K. Martin), Dr. Douglas (proxy for Wm. Graham); Messrs. Bruce, Murphy and McKinnon, of Orillia C. C.; J. G. Edwards, F. H. Dobbin and R. H. Hopkins, Lindsay C. C.; Messrs. H. C. Rogers, J. Z. Rogers, E. B. Edwards, G. M. Rogers and others of the Peterborough C. C.

The Vice-Commodore occupied the chair. The minutes of the previous meeting were read by Mr. S. Britton, Purser of Northern Division.

Mr. H. C. Rogers read a satisfactory report, giving in detail particulars referring to the organization of the Northern Division, and incidents of the meet held last summer at Stony Lake. The total receipts for the year were $320.67, while the expenditures reached $295.90, leaving a balance on hand of $24.77. The membership of the Division stands at 189 to date. The accounts have been audited and certified as correct.

The purser read communications from the secretary of the A.C.A. and other Division who were unable to attend; also from the purser of the Orillia Club inclosing fees for sixteen members of that club who desire to join the Northern Division.

The question of defining the geographical limits of the Division was discussed, with the understanding arrived at that the territory embraced Ontario as far east as Ottawa, though it was assumed that the inclination of members would be to belong to the Division nearest at hand. The Ottawa Club would be urged to join the Northern Division, and an invitation extended to the nearest American clubs.

Referring to the important question of a site for the 1888 meet, Vice-Commodore MacGachen gave details of a visit paid to the vicinity of Lake Couchiching, at Orillia. He commended the locality as very suitable.

Mr. Murphy, O. C. C., laid before the meeting a map showing the site of the proposed camp on Horse Island, Couchiching Lake, and said he thought the site a favorable one. Mr. McKinnon said they were anxious to have the meet near their town and the people of Orillia would exert themselves in every reasonable way to secure the camp. He was the owner of the island proposed to be occupied and would be prepared to make some improvements, erect wharves and do other things.

Some general discussion ensued in a conversational way, after which Mr. McKinnon generously offered to place the island at the disposal of the Association free of expense. By a vote of the committee the offer was recommended to the committee for acceptance, matters of detail being left in the hands of the executive committee. A resolution of thanks was then formally passed.

With regard to the date of meet it was understood that the time would fall, say about two weeks prior to the general meet at Lake George. Mr. E. B. Edwards communicated to the meeting that Mr. E. B. Tredwen, of the R. C. C., England, had promised to visit Canada next summer and spend some time at the meet of the Northern Division.

At the close of the general meeting the executive committee met and selected Horse Island, Lake Couchiching, as the site for next year's meet; date, July 23 to Aug. 4.

The following committees were appointed: Railway and Transport—H. C. Rogers and Wm. Thomson. Camp Arrangement—Messrs. S. S. Robinson, Wm. Thomson, Tipping and McKinnon.

After the meeting the visiters were entertained at Welsh's restaurant by the Peterborough Club.

The prospects for next year are very bright and a large increase in membership is assured. It is hoped that there will be many visitors from the neighboring American clubs, as the site is very convenient and central. For sailing, cruising, etc., Lake Couchiching and adjacent waters cannot be surpassed.

The date and site for the proposed meet have been submitted to Com. Gibson and formally approved by him.

The balance sheet of the Northern Division for the year is as follows:

RECEIPTS.

Membership fees received by Division Purser	$251 00
Received from General Secretary	2 00
Badges sold at camp	30 00
Proceeds of sale of lumber	37 67—$320 67

EXPENDITURES.

Amount forwarded to General Secretary	112 60
Postage account	15 20
Printing account	35 99
Traveling expenses	5 00
Salaries and wages	73 50
Lumber, etc	43 91
Freight charges	6 30
Refunds	4 00
Balance on hand	24 77— 320 67

THE NEW DIVISION OF THE A. C. A.

THE following circular needs no explanation, as it sets forth exactly what is to be done at the meeting on Jan. 3. In order to make the new division a success it is desirable that all canoeists should be interested in it, and unattached canoeists as well as A. C. A. members will be welcome at the meeting. There are many small details to be considered, and in order that all may be prepared to vote intelligently on the questions to be presented, it is necessary that they should familiarize themselves to some extent with the constitution and formation of the A. C. A. before attending. Expressions of opinion by letter will be welcome from all canoeists in the proposed territory, as it is the desire of the promoters of the new division to bring it within the reach of every canoeist:

To the Members of the A. C. A. residing in New Jersey, Delaware, Southern New York, Eastern Pennsylvania, Eastern Maryland, and Eastern Virginia:

GENTLEMEN—Pursuant to a call published in FOREST AND STREAM of Dec. 1, 1887, a meeting was held in New York on Dec. 9, 1887, to consider the question of forming a new division of the A. C. A. At this meeting there were present a large number of A. C. A. men and unattached canoeists who were unanimously in favor of forming the proposed new division, and the undersigned were appointed a committee on organization, charged with the duty of calling a general meeting to organize the new division, should it meet with the approval of the majority of A. C. A. men residing within the proposed district.

The proposition is that a new division be carved out of the Central Division, to be known as the "Seaboard Division," or by some other appropriate name, bounded as follows: Beginning at the extreme eastern end of Long Island, thence running westerly through Long Island Sound to the southwest corner of the State of Connecticut; thence in a general northerly direction along the boundary line between the States of Connecticut to the point where the southern line of Putnam county, in the State of New York, intersects the Connecticut boundary line; thence westerly, crossing the Hudson River at the Highlands at West Point, and following the Highlands through Orange county, New York, to Port Jervis, at the northwest corner of the State of New Jersey; thence southwesterly through Manch Chunk and Harrisburg and along the Blue Ridge Mountains to the Valley of the Potomac River, thence southeasterly, following the Valley of the Potomac and including both slopes of that valley, to the Chesapeake Bay, and to the Atlantic Ocean; and thence northerly along the Atlantic coast to the eastern point of Long Island, at the place of beginning. Another proposition is to continue the southwesterly course along the Blue Ridge range of mountains to the valley of the James River at Lynchburg, in the State of Virginia; and thence, following the valley of the James River, to the Chesapeake Bay, which would include all rivers emptying into that bay.

Pursuant to a resolution passed at the meeting above referred to, the undersigned committee hereby gives notice that a meeting will be held at the rooms of the Columbia Institute (which has been kindly offered by Professor Fowler for the purpose) at No. 729 Sixth avenue, in the City of New York on Tuesday, the third day of January, 1888, at 8 P. M., for the purposes (1) of passing upon the question whether the proposed new division of the A. C. A. shall be formed; (2), of fixing the boundaries of the new division, (3) of electing officers of the new division, and (4) of passing upon such other matters as shall regularly be brought before the meeting.

All canoeists residing within the proposed new division are cordially invited to attend the meeting and take part in the discussion of all questions that may come before the meeting, it being understood, however, that none but A. C. A. members will have the right to vote upon the questions to be there determined.

As there is no special provision in Fowler for the Constitution or the By-Laws of the A. C. A. providing how a new division may be formed, it is necessary that the formation of the new division should receive the sanction of the majority of the A. C. A. men residing within the proposed district. Each member of the A. C. A. residing within the proposed district is therefore requested, if he does not intend to be present at the meeting in person, to write his answer to the question printed on the inclosed postal card and send the same to the Chairman of the Committee on Organization.

WILLIAM WHITLOCK, Chairman,
Dated, Dec. 17, 1887. 247 Fifth Avenue, New York City.

Committee on Organization.

A ZINC CANOE.

Editor Forest and Stream:

The description of a tin canoe in the FOREST AND STREAM brought to my memory a canoe that I had in 1873, when I was yet in my teens. My mother had a small case of figures carved by the Esquimaux of Labrador out of walrus teeth. Among the figures was that of a hunter in his kayak. I already was the possessor of a wooden canoe, but I was ambitious to possess a craft that was capable, as I had read, of outdistancing a ship's longboat. I had seen a kayak, too, that summer floating at the stern of a yacht, but though I had examined it as well as I could, I had unfortunately not been able to take any measurements. However, I decided to take the ivory kayak as a working model. I obtained an idea of what the dimensions were from calculating the figures at 5ft. 2in., which is about the average height of the Esquimau. I had no hides or whalebone, so that I fell back upon zinc. Living in a country town, I could only find tin in small sheets, which would have made too many joints, and besides, the salt water would rapidly have rusted it through. My canoe was a faithful imitation of the ivory kayak—something less than 12ft. long and 2ft. wide.

At last it was finished and launched, and I essayed to paddle across the harbor. There was a little lop on the water. I was a strong swimmer and perfectly fearless on the water, but I can't think even now of that paddle without breaking into a perspiration. It first rolled to port, then without any warning over to starboard, efforts to bring it to an even keel only made matters worse. Now she stood on her head and kicked and then she would rear and try and fall back on top of me. After infinite trouble I got back to the wharf, but no creature except myself can ever realize what turning that infernal tin can meant. I afterward put a 6in. zinc keel on her, and thus steadied I got across the harbor, a distance of about a mile, but I came back in a boat. Several times I came down to look at her, but I never ventured to get into her again, and she finally broke her nose by catching in the wharf, and the last I heard of her was my father giving her to a boy on the condition that he took her off the premises. That zinc kayak cost me $11 if I remember aright, but I got fully $50 of excitement out of her.

It was a comfort to read in the August *Century* in an article by A. W. Greely, that "This dangerous craft (*i. e.*, the kayak) is gradually dying out in Greenland, and only the brighter and more ambitious boys acquire it. Practice must commence at a tender

SAIL PLAN OF CUTTER PILGRIM.—Designed and Built by E. L. Williams.

age (that, of course, explains my failure, I was too old) and must be continued assiduously." Greely describes the kayak as a shuttle-shaped boat consisting of a wooden framework, which is fastened together generally by sealskin thongs, over which is stretched a covering of tanned sealskin as neatly and tightly as in the sheepskin of a drumhead. The skin covering is so well tanned, and it is so deftly sewn together with sinew thread by the Esquimaux women that no drop of water finds its way through skin or seam. The use of seal thongs in uniting the stanchions gives great strength and equal elasticity, allowing with impunity great shocks, which would otherwise destroy so frail a structure. The boat is usually some 15ft. long, and from its central point gently curves upward—from a width of 20in. and a depth of 10in.—to pointed ends. Both prow and stern are carefully armed with a thin moulding of walrus ivory, which is a protection to the skin covering when the hunter, spinning through the water, strikes small ice, or, in landing so throws forward and upward his kayak that boat and man slide easily and safely up the edge on to the level surface of a floe. The only opening is a circular hole with a bone or wooden ring, its size being strictly limited to the circumference of the hips of the largest hunter who uses it. A waterproof combination jacket and mittens of oil tanned sealskin is worn by the hunter, who tightly laces the bottom to the ring so that no water can enter the kayak. Thus equipped the hunter faces seas which would swamp any other craft. A double-bladed paddle in skillful and trained hands propels this unballasted, unsteady craft with great rapidity, from five to ten miles an hour. The paddle properly handled enables an expert to rise to the surface if, as happens at times, the kayak is upset. This tiny craft, with full hunting gear, weighs scarce 50lbs., and will carry a load of some 200lbs. besides its occupant. In conclusion I would recommend all canoeists to read Greely's beautiful account of our brothers' gallant life and heroic end. Asticou.

Ottawa, Dec. 5.

BROOKLYN C. C.—The regular annual meeting of the Brooklyn C. C. was held on Dec. 13. The officers elected for 1888 are: Robert J. Wilkin, Commodore; Harry C. Ward, Vice-Commodore; John Johnson, Measurer; M. V. Brokaw, Purser.

Yachting.

INTERNATIONAL RACING.

WITH this week the ten months' limit is practically ended, and as no challenge has yet been received there is little prospect of a race next year. In spite of some idle rumors, nothing is yet known of the plans for next year on both sides. No confirmation of the reported challenge from Mr. Jamieson has been made, and though he will build a large cutter for next season it is unlikely that she will challenge for the Cup. A report has been circulated in England and on this side that Gen. Paine will take Volunteer across for the Cape May and Brenton's Reef cups, now held by Irex and Genesta; but while such a trip is by no means unlikely, it has not yet been decided on by Volunteer's owner. Nothing is yet known of any new cutter from Mr. Watson's hands, except one of narrow beam, 60 tons rating, Y. R. A., about the size of the New York Y. C. second class, for Mr. Paul Ralli, of London.

AMY, steam yacht, Mr. E. D. Morgan, has been sold to Count Lanza di Mazzarina, of Palermo, and is now fitting out at Liverpool for the Mediterranean.

GETTING THERE FAST.

Editor Forest and Stream:

Puritan, draft 8ft.; Mayflower, 9ft.; Volunteer, 10ft.; Burden shooner, 11ft. Only 18in. more to go before reaching the draft of the regular cutter. Mr. Burgess is getting there at top speed. By the time our slow British cousins have wrestled successfully with the adoption of the centerboard, they will suddenly wake up to find America the land of keels and cutters. The centerboard has already shrunk below the cabin floor. Now, in the race for low ballast, 1ft. more added to keel will soon see the little remnant of the centerboard abandoned altogether. That is the direction in which the weathercock is now pointing, and Yankees won't take long to work the problem out to its logical end. Meanwhile we are building two keel boats to every centerboard, and the cutter boom is moving along with more vigor than ever.

Sequence.

THE NEW BURGESS SCHOONER.

LAWLEY'S are now pushing the work on Mr. Burden's schooner. With the trunk entirely below the floor, as in the Vandal, the cabin arrangements will be equal to those of a keel boat. The following abstract of the specifications is given in the Boston *Globe:* The yacht will be 95ft. long on deck, 79ft. 11in. on load waterline. 21ft. beam, 10ft. deep, 11ft. draft. In carrying out these specifications it is understood that only the very best materials and workmanship shall be employed. All the woods shall be sound, clear and free from shakes and other defects. All iron work (except the floors and frame braces and ties) shall be galvanized and wrought of the best Norway iron.

Keel white oak, sided as per plan, moulded 20in. and worked in four pieces, as in Sachem. Scarfs not less than 7ft. long, bolted with 1in. metal bolts below rabbet, not more than 10in. apart, and one row of 1in. steel bolts above garboard, breaking joints with the bolts beneath. A lead keel shall be cast by the builders as per design, and bolted with yellow metal 1½in. bolts nutted on the floors with alternate bolts nutted on the keel. Sternpost white oak root, sided 10in., tapered to 4in. at keel, moulded to work 3in. inside of rabbet. Hornbeams white oak, moulded 12in. at post, 6in. at ends, sided 4in., screw-bolted, extending on to deadwoods 6ft.; hung to post with two ⅞in. rods. Stem white oak, very clear grained, sided 7in., to work 3in. inside of rabbet. Frames, white oak, double, of natural crooks, spaced 22in., screw-bolted with ⅝in. galvanized iron, boxed and keyed into keel and well-bolted. Fore and aft cants single, of hackmatack, heels through-bolted from side to side. Siding of double frames, 5in., of single 6in. All moulded 9in. at heel, tapering to 4in. at heads. Top timbers 4in. sided, of hackmatack.

Chain plate frames in one length of natural crooks, sided 6in. Top timbers of locust continued to form stanchions. A ⅜in. iron plate 5in. wide at heel and 3in. at head to be fitted between the halves of each chain plate frame. Diagonal strapping of ⅜in. iron in wake of rigging as required. Floors forward and aft of centerboard trunk of best cast gun iron, extending to deadwoods, 5×4in. in throats, arms 3ft. long, tapered to ends. Alternate bolts through the lead keel will nut on these floors, and opposite them a ⅞in. lag screw. Arms bolted to frame with ⅞in. screw bolts 6in. apart. Limbers to be cut throughout whole length of vessel, keelsons to be worked each side of centerboard trunk, boxed over heels of frames, white oak, 6×9.

Stringers in one length each side, of Georgia pine, 8×3, to take platform beams, which shall be well secured to them, and fastened at each frame with one galvanized iron ⅝ screw bolt, and one treenail. Bilge stringers, Georgia pine, five each side, in not more than two lengths each from stem to stern, fastened like preceding. Center stringers, 8×4, two each side, 8×3. Ceiling, from 3ft. forward of foremast to 3ft. aft of mainmast, Georgia pine, 1in. Deck beams, hackmatack, with moulded lower face and well finished, 6×5 forward, and aft reduced to 5×4; dovetailed into shelf and through bolted. Partner beams, Georgia pine, 8×7. Partners tied to mastheel or keelson by ⅞in. bars, with turnbuckles. Lowe deck beams, 5×5 at masts and 4×4 elsewhere. Hanging knees, hack matack were required, screw bolted, not less than 13 pairs.

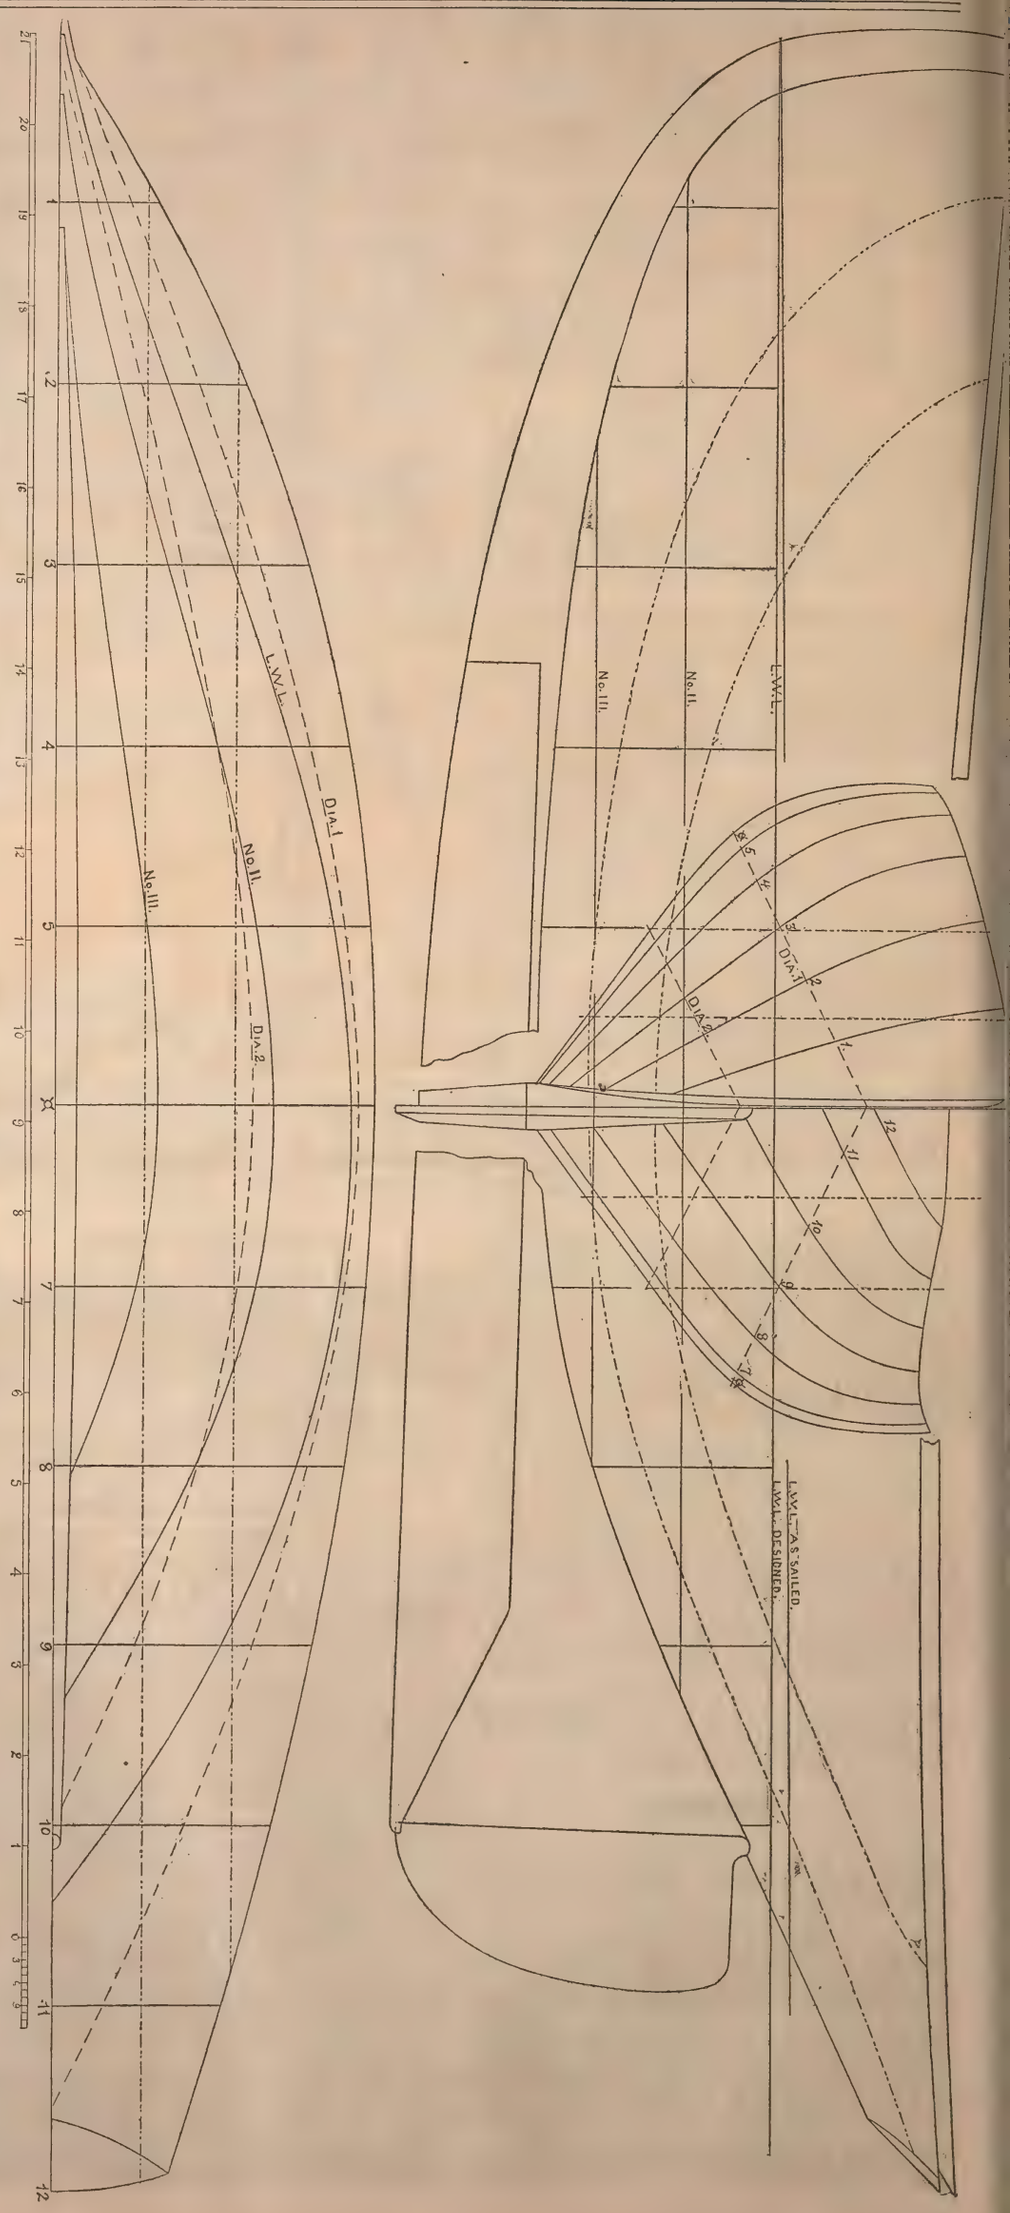
Planking, garboards and next six strakes white oak, in long lengths, 2½in. Above, Georgia pine, 2½in. Square fastened with 1in. locust treenails and ⅝ yellow metal dumps. Top from 6in. above l.w.l. may be galvanized iron fastened. Plankshеer, white oak in three lengths, very clear, 10×2⅜. One bolt in each beam and driven nearly through shelf. Deck, clear white pine, 2⅜×2⅜, very dry, in as long lengths as procurable. Edge of grain up, spiked and bunged. Nibs at least ¾in. wide, jogged into plank-sheer. Bulwarks, ¾in. white pine, mahogany stained inside, with lower strake 3×1½. Stanchions, locust, 3×3 at heel, 2½ square at head. Chain-plate stanchions, 6×4. Cap, white oak, 6×2, of oval section, hook-scarphed and copper-bolted. A good water course to be cut behind stanchions.

Companions, skylights and hatches mahogany, with heavy brass guards, hinges, etc., all to be fitted with battens and thumbscrews for securing the covers. Chocks, brass. Belaying pins, steel. Ring bolts on deck where required. Deck pipes and funnels for cabin and galley stoves of brass. Centerboard trunk, lower logs 14×6, oak, following courses Georgia pine, 4in. Bolts 12in. apart, 1in. steel, each through three courses. Posts, 5×5, oak. Top, oak 3in. thick, fastened with heavy lag screws 6in. apart. Centerboard, lower course oak, rest Georgia pine, 4in. thick. To have a cast iron shoe, steel bolts, 1in., every 12in., going through 3½ courses. Two side straps of ¾ spring steel, galvanized. Chain-plated, best Norway iron, 3×⅜, tapered below as directed, at least 7ft. long. Deadeyes, 7in. lignum vitæ. Bobstay of galvanized steel wire, 4½in., set up with pipe turn buckles.

Tanks galvanized iron, one each side of centerboard box, to hold 500 gallons each. Anchors galvanized, Cape Ann pattern, one 300 pounds and one 500 pounds. Chains, tested galvanized crane, 60 fathoms 13-16 and 40 fathoms 10-16. Windlass, Thayer's, Deering patent. Mast winches with independent heads. Mast saddles mahogany, 8in., with steel pins. Buffer, Edson's patent, main-sheet buffer, sheet No. 2. Steering gear, Reed's diamond screw, with tiller in case of break down. Boats, one 14ft. cutter and one 19ft. gig. Both bright cedar, lapstreak and copper fastened, with mahogany seats and gratings. Cutter with pin, mast and sprit. Davits, two pair galvanized steel. Brass life-line, stanchions from main rigging aft, 28in. high. Blocks, complete set for racing schooner, of best make. Rigging, best crucible steel for standing and best manila bolt rope for running rigging.

Masts, Oregon pine; bowsprit same. Topmast, boom, foreboom and gaffs, spruce, as per sail plan. Spinaker and topsail yards as required. Sails supplied by owner; bent by builder. Handsome oak gangway with brass stanchions. Hull to be thoroughly calked and seams properly payed and filled. Hull to be carefully joined and painted a priming coat and two coats of white above waterline, and two coats of Rahtjen's paint below waterline. Figurehead, stripe around plankshеer, and scroll work on quarters to be gilded.

Cabins to be fitted and finished in first-class style, equal to that of Sachem, but without carved work. Arranged as per plan, and finished in mahogany and white pine. Extension table of mahogany, with racks. Staterooms fitted with berths, lockers, bureaus, etc., marble-topped washstands, with nickel plated pumps piped to tanks. One w. c., with lever seacocks on waste and flushing pipes. One bathtub of 18oz. copper, tinned. Officers' rooms, galley, pantry and forecastle to be properly fitted with all necessary berths, lockers, bureaus, etc., large ice chest, well lined and drained into centerboard well. The whole cabin fore and aft to be properly painted and varnished. Galley and forecastle to be finished bright with two coats of spar varnish. Inside of hull frames and stringers to be well oiled, and covered with one coat of spar varnish.



Finally the builders shall supply all necessary and useful fixtures and fittings for a first-class yacht of the same size, whether herein mentioned or not, but the owner shall find the movable furniture, such as compass, binnacle, stoves, kitchen ware, cutlery, glass, china, mattresses, upholstery, linen and blankets, lamp and lanterns.

THE CRUISING CUTTER PILGRIM.

TO the many readers of the FOREST AND STREAM who have for two seasons followed the little Pilgrim in her cruise along the coast of New England, the accompanying plans will be of more than usual interest; while to those who are looking forward to similar pleasant excursions afloat they offer many valuable suggestions. No doubt the model is capable of improvement, a better boat in many respects may be produced on the same dimensions, but in the Pilgrim we have a boat that has fulfilled the actual requirements of three seasons' cruising on big waters in a most satisfactory manner, in spite of the fact that a moderate cost was kept in view along with the requirements demanded by rough water cruising. The object of the owner, an old sailor, was to secure the necessary accommodation for himself and his three young boys in a boat that could be safely handled by such a crew at all times, that could make long runs in coasting with perfect safety and independence; and how thoroughly he and the builder have succeeded is well told in the interesting log that has appeared in our pages. Depending on himself and his young crew of landsmen, with an extra crew at times, the owner, Dr. W. H. Winslow, left Boston in August, 1885, and made his way as far east as Mount Desert, returning to Boston by the middle of October. In the following season he left Boston in August, going over the same course and spending some weeks about Mount Desert and Penobscot Bay, finally laying the boat up in October. The Pilgrim was designed and built in 1885, by E. L. Williams, of South Boston, builder of the little cutter Mamie, whose lines have appeared in our pages. As stated above, she was designed solely for cruising, and her builder was limited to a certain amount. Her dimensions are:

Length over all	24ft.
l.w.l.	21ft. 3in.
Beam, extreme	7ft. 2in.
l.w.l.	6ft. 9in.
Draft	4ft. 6in.
Least freeboard	1ft. 5in.
Iron keel	3315lbs.
Iron, inside	800lbs.
Lead, inside, added 1886	600lbs.
Total ballast	4715lbs.
Mast from fore end, l.w.l.	6ft. 9in.
Deck to hounds	18ft. 3in.
Head	2ft. 6in.
Topmast, fid to hounds	14ft.
Bowsprit outboard	11ft.
Boom	22ft. 3in.
Gaff	15ft.
Topsail yard	16ft.
Spinnaker boom	21ft. 6in.
Area mainsail	312sq.ft.
Staysail	63sq.ft.
Jib	71sq.ft.
Total, lower sails	446sq.ft.
Working topsail	97sq.ft.
Jibtopsail	60sq.ft.

The designed waterline was but 20ft. 6in., and the draft 4ft. 3in., but in her second season 600lbs. of lead was stowed as snugly as possible among the iron ballast aft, trimming her by the stern to a draft of 4ft. 6in., the draft forward being about the same, and lengthening the waterline to 21ft. 3in. The boat is shown at this new waterline in the drawings, but the waterlines in the half-breadth plan are as in the original design. At the same time that this change was made the rig was altered by the substitution of a topmast in place of the original pole mast, with a staysail and yard topsail, but still the area is small for any purpose but cruising with a small crew or alone. The room inside, of which we shall say more next week, is of course very limited, the headroom of 4ft. 2in. is not enough where a man lives aboard for days, and on the same length and beam it would be possible to deepen the hull so as to give much more room in all ways in the cabin, while the performance in rough water would be improved, the additional draft of 6in. or even a foot being no detriment for such work as the Pilgrim has done. This, however, and the substitution of lead ballast, would have carried the cost far above the original figure, and the owner's experience has been that he has obtained a maximum of good qualities at a moderate cost. After two seasons' cruising the Pilgrim was sold to be replaced by a larger craft as soon as business permits another cruise.

BURLINGTON Y. C.—Mr. W. S. Phelps has received a full set of plans for a yawl or cutter, designed by Mr. Kunhardt. She is 32ft. 6in. on deck, including clipper overhang forward. Waterline, 24ft.; beam moulded, 6ft. 2in.; draft, 5ft.; least freeboard, 2ft. 3in. Displacement, 6 tons; ballast on keel, 5,000lbs. iron. Mast steps 6ft. from forward perpendicular, and is 23ft. 6in. long, deck to hounds, with a 4ft. masthead in addition. Topmast 15ft., cap to hounds. Mainboom, 20ft.; gaff, 17ft.; hoist of mainsail, 19ft. Bowsprit beyond forward perpendicular is 13ft.; jib on foot, 17ft. 9in. The mizzenmast steps 20ft. abaft the mainmast, and is 14ft. 3in. deck to hounds; boom, 12ft.; gaff, 8ft. 3in., and hoist of sail 11ft. There will be 5ft. 10in. height in cabin under a 12in. house, and about 30in. floor. This is the fifth yacht of cutter model furnished by Mr. K. since October.

THE ENGLISH LENGTH CLASSES.—On Dec. 2, a conference of half a dozen English yacht clubs was held at Southampton, at which it was decided to adopt the Y. R. A. rating by length and sail area, and to abolish the length classes. This will throw all the length class boats, of great beam and depth, in with the narrow cutters of about the same length. The results of such racing cannot fail to add much to the present knowledge of the value of beam and depth.

LENGTH AND SAIL AREA RULES.—The *Engineer* of Nov. 25 contains a very interesting paper on the rating of yachts by an anonymous contributor, who has expended much labor in the preparation of a diagram showing graphically the relations between length, beam and sail area in the leading racers.

SEAWANHAKA C. Y. C.—The navigation class, under Captain Howard Patterson, opened on Saturday night with 25 scholars. After the class a supper of roast oysters and welsh rarebit, prepared by the members, was served in the kitchen of the club house.

NEW YACHTS FOR THE SECOND CLASS.—Besides the yacht designed by Mr. A. Cary Smith for Mr. E. S. Auchincloss, which will be to the full limit of the class, a model and design for a centerboard boat by Mr. Watson for a New York owner is now on the way.

WINTER CRUISING.—Nonpareille, yawl, Mr. Sanford B. Pomeroy, is now fitting out at the C. Y. C. basin for a cruise to the West Indies. Montauk and Yampa will sail early in January, and Gitana will sail from Boston about the same time.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

H. B., Flatbush, N. Y.—We can supply them.

E. D. B., New York.—Opinions differ. See letter from Mr. Theodore Roosevelt in last issue.

G. M., Newark.—Can quail be raised in a wire coop, and how large should it be for a dozen? Ans. Yes. Cage should be at least 6x8. Change the sand often.

J. J. C., Philadelphia.—It is impossible for us to tell you who owns the best St. Bernard dog and bitch, for we do not know. If you want to buy, you will find good stock advertised in our advertising columns.

J. F. L., Salem, Neb.—I have heard prairie chickens hooting on at least two occasions this fall; on the morning of the 17th was the last. Is it common for them to hoot in the fall? I have never noticed it before. The weather has been warm and dry for some time. Ans. The hooting in fall is not very uncommon. Ruffed grouse drum in fall and winter, and why should not the pinnated grouse hoot.

SNARE, New York.—Myself and friend went on a shooting excursion to Ronkonkoma, Long Island, about a week ago, and found quite a number of quail. While in the fields I destroyed a dozen snares, all within a mile of the Waverly Gun Club grounds; and when I was about to destroy another one, a farmer jumped out of a thicket and told me if I destroyed it he would have me arrested. I did not destroy it. Could he have had me arrested if I had broken the snare, and what would have been the damage? Ans. He could not have had you arrested for destroying the snare, and he would not have done so. If you were trespassing on his posted land he might have you arrested on that score.

Indian Hollow Brook Trout Hatchery.
WINDHAM, CONN.
R. E. FOLLETT, Proprietor.
Brook Trout of Superior Quality Furnished in Quantities to suit Purchasers.

UNITED STATES COMMISSION OF FISH AND FISHERIES, Washington, D. C., Sept. 7, 1887.
Richard E. Follett, Esq., Windham, Conn.—In reply to your inquiry as to the quality of the trout eggs purchased by me for the Virginia State Commission, I beg to say that they arrived in prime condition, hatched out good, healthy fish, and with little loss. Twenty-five hundred were distributed just after beginning to feed, the rest retained until now, when we have about 50,000 fish from 3 to 4in. long for distribution from this lot.
Very truly yours, M. MCDONALD, Commissioner Fisheries, Va.

MARYLAND FISH COMMISSION, Oakland, Sept. 19, 1887.
R. E. Follett, Esq.—DEAR SIR—The trout eggs you sent me last winter were so well handled that our loss was nothing in transportation, and the count was rather over than under. In hatching we obtained 98 per cent. I shall favor you with more orders this coming season. Very truly yours, G. W. DELAWDER, Commissioner.

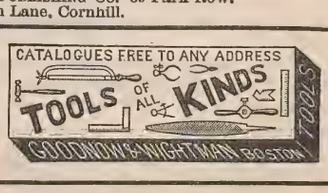
CANOE HANDLING.
By C. B. VAUX ("DOT").



A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners: and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

Manufactured solely by
GEO. B. EATON, 570 Pavonia Avenue,
Jersey City, N. J.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1887 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1888 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1888 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportsmen, anglers and naturalists, make up these pages.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away. Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., New York.

HOLIDAY PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of holiday gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for the holidays. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Sport with Gun and Rod.

This superb volume contains a vast amount of matter of the highest interest to the sportsman. Almost all kinds of American game birds, mammals and fishes are treated in its pages, and it is profusely illustrated by some of the best American artists; 886 pp. Three styles are published: Embossed leather, $15; cloth, $10; cloth, on cheaper paper, $5.

Antelope and Deer of America.

By HON. J. D. CATON, LL.D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Rod and Gun in California.

By T. S. VAN DYKE. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By DR C. A. NEIDE. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. BOWYER VAUX ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In his book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and it is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7 00.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual for boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Hunting Trips of a Ranchman.

By THEODORE ROOSEVELT. A delightful book of hunting adventure in Dakota and Montana. Price $3 50.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Forest Runes.

Poems by "NESSMUK." With artotype portrait and autobiographical sketch of the author. Cloth, 208 pp. Price $1.50.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among American sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. WYNN, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

Uncle Lisha's Shop.

LIFE IN A CORNER OF YANKEELAND. By ROWLAND E. ROBINSON. See advertisement elsewhere.

Artotypes of Paintings.

By JOHN M. TRACY. Mr. Tracy has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. We have for sale a series of admirable artotypes of these paintings, which preserve with admirable fidelity the spirit of the originals. The artotypes are 15x20 inches. Price $1 each.

Book of the Black Bass.

By JAMES A. HENSHALL, M. D. Comprising its complete scientific and life history, with a practical treatise on angling and fly-fishing, and full descriptions of tools, tackle and implements. Illustrated. Cloth, 470 pages, Price $3.00.

The Still-Hunter.

By THEO. S. VAN DYKE. A practical treatise on deer-stalking. Extra cloth, beveled, 390 pages. Price $2.00.

Southern California.

By T. S. VAN DYKE. Its valleys, hills and streams; its animals, birds and fishes; its gardens, farms and climate; its insects and reptiles, with hints on going to California. Extra cloth, bevel edge, 235 pp. Price $1.50.

Cruises in Small Yachts and Big Canoes;

Or, Notes from the Log of the "Watersnake" in Holland and on the South Coast, the Logs of the "Water Rat" and "Viper" on the Thames and South Coast; with remarks on anchorages for small craft. By H. FIENNES SPEED. Cloth, 280 pp. Price $2.50.

Yachts, Boats and Canoes.

By C. STANSFIELD-HICKS. With special chapters on model yachts and singlehanded sailing. Numerous illustrations and diagrams and working drawings of model yachts and various small craft suitable for amateurs. Cloth. Price $3.50.

Camping and Cruising in Florida.

By JAS. A. HENSHALL. With a list of fishes and birds, 84 illustrations and maps. Cloth, 250 pages. Price $1.50.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. Cloth, 250 pages. Price $3.00.

Forest and Stream Publishing Co., 39 Park Row, N.Y.

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson's poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actual canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. The upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene. In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channel outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scene is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border, and the artist's remarque and signature, and form artist's proofs, an édition de luxe.

The prices of these engravings are as follows: Singly, $3.00; any group of 4, $10.00; the complete set, $30.00. Any group of four may be ordered, but we beg to suggest the following groups as strong combinations:

Group A.	Group B. (Upland.)	Group C. (Duck).
Plate 1, The Reverie.	Plate 3, Snipe Shooting.	Plate 9, Duck Shooting—over Decoys.
" 2, The Dawn.	" 4, Woodcock Shooting.	" 10, Duck Shooting—Flight
" 7, Trout Fishing.	" 5, Quail Shooting.	" 11, Homeward.
" 8, Deer Hunting.	" 6, Grouse Shooting.	" 12, Home.

AUDUBON'S
Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1856, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories,

Aududon's Birds have never been equalled.

Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.

Sire, champ. Result; dam, champ. Diadem.

SENTINEL—Fee $15.
To a few approved bitches after Nov. 1. Sire, Bacchanal; dam, champion Safety. Winner of 1st, puppy class, Newport.

REGENT VOX—Fee $10.
Prize winner.
Sire, Tackler; dam, Sandy Vic.
Address GERMAN HOPKINS,
tf Hempstead, L. I.

ENGLISH MASTIFFS.
IN THE STUD,

To a limited number of approved bitches, THAT GRAND MASTIFF DOG

MONARCH
(A.K.R. 5507).

1st and 3d, N. E. Kennel Club, April, 1887, only time shown, not 11 mos. old.
Full pedigree sent on application.

FOR SALE.

An exceptionally fine litter of pups, by the above Monarch out of Salva (A.K.C.S.B. 6853).

WYOMING KENNELS,
Box 108, Melrose, Mass.

POINTERS IN THE STUD.

SACHEM, champ. Beaufort's best son. Fee $25. For speed and endurance he has no superior.
SURPRISE, by champ. Nick of Naso ex Polly. Fee $25.
NASO BOY, champ. Nick of Naso's best son. Fee $25.
To any breeder who will run one or more of their get in a field trial, I will allow return service free of charge.

FOR SALE.—The Derby winners for 1888, by champ. Graphic ex champ. Clover. These puppies are handsome rich liver and white, and just the age to be handled. Address with stamp,
CLIFTON KENNEL,
203 Summit avenue, Jersey City, N. J.

Silver Shoe.

Imported pug dog; a grand sire. Weight 13lbs. **Stud Fee, $25.** (A.K.R. 3758). Pups for sale.
MIDGET PUG KENNELS,
sep1,tf Lansing, Mich.

CRICKET.

Smallest prize pug stud dog in this country; weight 9½lbs. (A.K.R. 3230), in the stud. Pedigree and full particulars. HENRY C. BURDICK, 150 Bridge st., Springfield, Mass.

The Kennel.

MASTIFFS

For sale, very choice bred ones, of different ages, sired by **Boss**, *winner of special prize, the best mastiff bred in America*, New York, 1886). Also choice ones sired by **Pharaoh** (see *Harper's Monthly* of May, 1887, for pictures of both). From the best imported and prize winning bitches.
J. WINCHELL, Fair Haven, Vt.

FOR SALE.—ENGLISH MASTIFF, FINELY bred, handsome, obedient, clean and beautifully trained. A grand watch dog, sleeps in house at night, 18mos. old. Address ENGLISH MASTIFF, 1235 Arch st., Phila., Pa. dec15,2t

AN ENGLISH BEAGLE BITCH FOR SALE, bred and broken by H. C. Wolfe, Lewisburg, Pa. Full pedigree, 3 yrs. old. THOS. MANLEY, Zoölogical Garden, Philadelphia, Pa. dec15,2t

FOR SALE.

Three fox-terrier dog pups, whelped Feb. 24, 1887, out of Warren Lady, (A.K.C.S.B. 4746), by Bacchanal (A.K.C.S.B. 5452). Address WM. T. McALEES, 22d & Callowhill sts., Phila., Pa. dec15,1mo

IRISH SETTERS.

Very choice lot of pups, by champion Bruce, winner of 24 prizes on the bench, not including specials, out of Little Nell (champion Elcho ex champion Rose), both field trial winners. Also by champion Bruce out of Daisy (Chief ex Leigh Doane), winner of 2d in the field; Chief and Leigh are also winners in the field. Every pup guaranteed to make a good worker with proper training. I. HENRY ROBERTS, Mooretown, Burlington Co., N. J. dec15,tf

COCKERS, ALL AGES, BLACK PETE AND Obo stock. Cockers at stud. *One-half express paid* on all bitches sent me. Address with stamp, H. D. BROWN, Waterbury, Vt. nov17,10t

WILL FINISH REPAIRING SOON. ALL who are contemplating purchasing one of my Llewellyn setter puppies at the lowest price such stock was ever sold at, must do so immediately; price will advance. For particulars address with stamp, CHAS. YORK, 9 & 11 Granite Block, Bangor, Me.

FOR SALE CHEAP.—ENGLISH SETTER dog Macbeth (Clifford—Donner's Bessie), 2 yrs. old, good field dog. N. F., Neary Kennels, Wade st., Bridgeport, Conn. 1t

FOR SALE.—ROUGH ST. BERNARD MALE pup, 6 mos old, grand head, extra large size, weighs 85lbs. now; cheap. HENRY MUELLER, Box 59, Rosebank, Richmond Co., N. Y. 1t.

FOREST AND STREAM

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, DECEMBER 29, 1887.

VOL. XXIX.—No. 23. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

Forest and Stream Publishing Co.

ANSWERS TO CORRESPONDENTS.

RUMORS AND TALK.

EARLY last autumn rumors reached the FOREST AND STREAM that two hunters, Vic Smith and his partner Rock, were hunting on the eastern border of the Yellowstone National Park, making their headquarters at or near Round Butte, which is said to be within the Park. They were reported to have shipped out last spring two wagon loads of elk horns, and the hides of elk, sheep, deer, beaver, lynx, fox and other animals, and last fall to have sent out two more loads of elk horns, also to have killed five head of buffalo on Specimen Ridge, within the Park.

We at once took measures to have these reports investigated, but owing to detention in the mails and the fact that some of the persons to whom we were obliged to go for information were absent in the mountains, far from railroads and post-offices, we are only now able to lay before our readers the results of our inquiries.

Vic Smith and Rock did occupy the cabin at the Round Butte during the months of November and December, 1886, and no doubt killed a large quantity of game. They were constantly watched by Captain Harris's scouting parties, however, and it is not believed that they killed anything within the Park. The cabin which they occupied has always been regarded as outside the Park, but what its exact position is no one knows, since Congress has never provided for a survey of the boundaries of the Park.

It is learned that when these two men took possession of the cabin, Capt. Harris sent Barronette, then Government scout, to their camp to caution them, and to see that they did not hunt inside the Park. They stated, and Barronette reported, that they hunted exclusively on Hellroaring Creek, still further away from the Park lines. Hellroaring is a favorite resort for elk, bison and other large game.

During the months of November and December, Barronette, sometimes accompanied by non-commissioned officers of the Superintendent's force, visited Smith's camp at frequent intervals, and uniformly reported that the game which Smith marketed was killed in the Hellroaring Basin.

During this time other hunting parties attempted to locate near Smith's Cabin, but within the Park, and were ordered off. These parties knew where Smith was camped, but none of them are known to have asserted that he was in the Park.

Late in December, 1886, Smith applied to Capt. Harris for permission to transport his meat through the Park, in order to ship it by rail from Cinnabar, stating that the snow was so deep in the mountains that he could not get it out except by the route down Hellroaring Creek. Permission was granted to transport the meat, which represented about thirty-five elk, across the reservation, and it was shipped to Livingstone. Soon after this, however, reports began to be circulated that it had been killed in the Park.

This year notice has been served on all professional hunters in the region about the Park, that they will not be permitted this winter to transport game meat through the Park. Orders have been issued by the Superintendent that all parts of the carcasses of game found in the Park are to be seized, and the wise measure has been adopted of throwing the burden of proof on the persons found with such things in possession.

Early last September the Rev. Dr. Nevin, of Rome, Italy, and Mr. Lispenard Stewart, of New York city, came into the Park from a hunting expedition in the country to the south. They brought with them as trophies seventeen pairs of elk antlers and two bear skins. These articles were seized by the military, but upon the declaration of their owners that none of their trophies had been taken in the Park, and that all of their hunting had been done well south of the Park line, they were restored to them, and were shipped by rail from Cinnabar. Their shipment may have given rise to reports that antlers procured by hunters in the Park were being shipped. It is probable, however, that Vic Smith may have shipped some antlers, for it is certain that he gathered some in the Park last spring, from elk that had died during the winter. Many wagon loads might have been procured, and while no permission was given to any one to collect them, no measures were taken to prevent it.

The Territorial newspapers are savage in their attacks on Captain Harris, and are somewhat given to printing complaints from offenders against the regulations of the Department, who have been interferred with by the Superintendent's force. They write as if they would like to see all the barriers about the Park thrown down so that the lawless public might be free to work destruction in the reservation. They seem to forget that the existence of the Park is a great thing for Montana, that it brings into the country people who spend money there, and draws the attention of the outside public to the resources of the Territory.

Captain Harris's administration in the Park has been firm, but we believe that it has always been wise and just.

THE NATIONAL FISH COMMISSION.

WHEN the bill creating the United States Fish Commission was prepared, it was worded with special reference to the appointment of Prof. Baird to the office; and with his approval it was made a condition of the office that no salary should attach to it. Prof. Baird undertook willingly the building up of the bureau, but he saw with characteristic acumen that he could not carry through the great work to a successful conclusion if the Commission were to be plagued by the importunities of office seekers and imperilled by office appointing intrigue.

When Prof. Baird died the bureau had grown to be an important and complex branch of the public service, with a disbursement of $500,000 per annum, and demanding for its control and guidance high scientific attainments, rare executive ability and capacity of physical endurance. The law provided that the head of the Commission must also be a civil officer of the Government. It was manifestly impossible to find a man who could perform the duties of Commissioner and those of another office as well. Prof. G. Brown Goode, the Assistant Director of the National Museum, has held the position since Prof. Baird's death, but he has urged the President to relieve him at the earliest practicable day, as he has not the physical strength to attend to the duties of both posts.

A bill has been passed by the Senate providing for the office of Fish Commissioner, with a salary of $5,000 per year, and it is hoped that the House will pass it. If the bill becomes a law, we presume that Prof. Goode will be asked to retain his place in the Commission and will be relieved of the National Museum directorship. Such a law will abolish the anomaly of requiring exacting service of a public officer and paying him nothing for it.

THE MEANING OF RULE TWO.

BEFORE accepting a measure it is well to consider the motives and true purposes of those who propose it. A clique within the American Kennel Club has proposed a new measure to the effect that before a dog can be exhibited in any show under the club's control it must have been entered in the club's stud book. What is the motive prompting this measure, and what are the true purposes of those who are trying to foist the rule on dog owners? Neither motive nor purpose is occult. Their motive is to save their own pocketbooks. Their purpose is to get at the pocketbooks of others. Under some conditions the motive and purpose would be highly laudable. In this instance they will not present themselves in that light to reasonable minds.

Some time ago a few individuals thought that they saw a way of gratifying their personal spite, and providing one of them with a fat berth where for little work much pay might be reaped. The scheme was to publish a stud book—an "official" stud book—and to give Mr. Vredenburgh, the club's "official" secretary, an "official" salary for editing it. They acquired control of the malodorous and dead-alive National American Kennel Club Stud Book, which after having died several times under circumstances more or less "shady," was gladly handed over to them, with the cordial blessing of its then "publisher." The costly character of the concern, as shown by the past, made it quite clear that some one must stand the prospective loss of the book in its new hands. The individuals who were at the bottom of the scheme had no money of their own; so they set about persuading somebody else into going security. A sufficient number were induced to pledge themselves to make good whatever loss might attend the "official" stud book venture. These sanguine individuals, it appears, put too much faith in the rosy promises of the Vredenburgh clique. They did not anticipate a deficiency. They did not expect to be called on to put their hands into their own pockets to "shell out" for stud book expenses. This, however, is just what they have been called on to do. And instead of doing it, they propose to save themselves and shift the deficit off on to others by recourse to an "official" ruling that the dog owners and breeders of this country must contribute fifty cents all around. In other words, instead of paying the stud book bills out of their own pockets, as they agreed to do, these financiers are going for the pockets of other people.

It was a sharp game, and one that would succeed most admirably in some undiscovered country where all dog men are fools and are crying to be gulled. But those conditions do not obtain in this country to-day; and it is to be very seriously questioned whether the pocketbooks of the sureties will be saved at the expense of other people.

The Fox Terrier Club managers announce that they will stand the expense of the compulsory A. K. C. registration of dogs entered for their sweepstakes. This is virtually a concession by them that the head money is an unjust tax, which the exhibitor cannot reasonably be expected to pay, but which—out of magnanimity and a desire to see a good entry list—they will pay for him.

ADIRONDACK DEER.

COMMISSIONER ROBERT B. ROOSEVELT explains that the theory that hounding deer stimulates them to breed was put out by himself and his fellow Commissioner Bowman as a joke. That is to say at a meeting of the Fish Commission of this State, when the topic of discussion was the right or wrong of hounding does heavy with fawn, Messrs. Roosevelt and Bowman conceived that they were discharging their duty by indulging in frivolous and disgusting jocularity over it. The public will accept this explanation for what it is worth. If any one shall have the temerity to suggest that something more than jokes are demanded of the men charged by the State with the care of its game interests he should remember that Commissioner Roosevelt has had so much experience in game protection that his official foolings are to be treated with respect. The more reverence is due this present deer hounding idiosyncracy because the recommendation over which they cracked their joke was made by Gen. Sherman, who, as Mr. Roosevelt tells us, "is as well informed as any one" on the effect of hounding, while, as is quite clear from Mr. Roosevelt's letter, he himself is not informed about it at all.

THE ROCK CLIMBERS.

I.—BY ST. MARY'S LAKES.

LAND of the Blackfoot, the Kootenay and the Stony! Once more my foot presses thy stubborn soil; once more I breast the steeps of thy beetling mountains; once more sounds in my ear the roar of the blasts which rush forth from thy storm-breeding gorges. Again I gaze upon thy narrow wind-swept lakes, thy walls of rock, thy glacier-bearing basins; again look up to the peaks where dwell mid ice and snow and storm the agile sheep, the slow-moving goat and the white-tailed ptarmigan; again listen to the cries of the fowl that float upon thy waters or soar above them. The trumpet tones of the swans, the clangor of the geese, the whistling of the wild ducks' wings, the wailing note of the sea gull and the wild shriek of the loon are sweet music to my ears.

Since last I beheld thee many the moons that have waxed and waned. Snows have fallen and melted, but at length I am here once more.

Well has the image of this land dwelt in my memory. Mountain and valley, aspen-clad ridge and wooded point, lake and stream—I recognize ye all.

———

How often, in dreams of the night or day, have I revisited these scenes during the years that have passed since last I left these happy shores. How often, in fancy, have I seated myself on some rock on the point of old Singleshot and gazed over the beautiful scene! The two great lakes, the rocky walls of the sky-reaching mountains which inclose them, the gray slide rock at my feet, the brown expanse of level prairie at the Inlet, the dark pine-clad foothills and the yellow grass of the little parks, the matchless blue of the unclouded sky were all present to my view as though they had been realities. From far down the gorge at my feet I would seem to hear the faint roll of the ruffed grouse, as he summoned—in vain at this season—his harem to his side, and then, at first indistinct, but each moment more plainly heard and calling all my senses into alertness, would come the rattle of the shale which told me that a sheep was picking its way with dainty step over the slide rock, or was bounding with nervous leaps from rock to rock up or down the mountainside. But always before the crucial moment came when the noble game should present itself to my eye, the vision faded and I found that the St. Mary's Lakes were far away.

I have dreamed too of Swift Current; have viewed from the crest of the Show Mountain that straight narrow valley lying between frowning black precipices, patched here and there with snow; have looked upon its many lakes and seen upon its mountain sides the white goats feeding; have longed to reach its glaciers, hitherto inaccessible to me, and have awakened to find that the duties of a busy working world must be taken up.

Now all is changed. I dream no longer. Before me are the familiar scenes so often thought of. From where I sit, I can see the lakes, the mountains, the peaks of Swift Current with their white banks of snow and their blue-tinted glaciers; can see where the stream debouches into the valley of the St. Mary's River; know that within ten miles of the camp are sheep and goats; that in the lakes, into which from my seat I can cast a pebble, are lurking the great sullen trout; know in fine that all the opportunities of which I have so often dreamed and for which I have so longed are now before me. And this knowledge gives me a thrill of delight so keen that its pleasure is almost a pain, a delight of which I cannot speak without seeming to exaggerate, and which will be comprehended only by him to whom long association with the grandest things in nature has given a love for them which he can never put into words.

———

Land of the Blackfoot, the Kootenay, and the Stony, well do I love thee. I love thy pleasant valleys, thy deep blue lakes, thy rushing streams, but above all thy frowning mountains.

And first of all, to thee, the Chief Mountain, salutation and reverence. Wonderful, sublime, unchanging, thy dark head rises above the clouds, and overlooks the land. Grim thou art and frowning; stern and forbidding when the black storm clouds cluster about thy summit and settle down over thy precipitous sides, yet canst thou smile kindly beneath a calm blue sky or when the rays of the rising or setting sun softly kiss thy peak and lend a benignity to thy majestic grandeur.

And beyond are other mountains; those about Swift Current, Show Mountain and Appekunny's Mountain, and a score of others. Then Flat Top and old Singleshot, and Otu Kómi and Goat Mountain, and Going to the Sun, and across the lake Red Eagle and Little Chief, Kootenay and Divide. To all of you salutation and reverence. Ye stand as ye have ever stood and shall ever stand, firm and immutable. Upon what scenes have ye looked? What changes have gone on under your solemn eyes.

Speak to us. Tell us of the past. Portray to us one of the incidents that ye have beheld since the time when, with fierce groanings and with labor that seemed like the end of all things, our common mother bringing forth fire and smoke gave birth to you, mighty ones. Speak to us of those earlier days when strange beasts known to us only from their bones, browsed upon your foothills, or clambered over the steeps which we now traverse. Or tell us of later times when the people covered the prairie and the buffalo gave food for all, when the smoke from the lodges rose by every stream, and there was plenty in the land, before the report of a gun had awakened ill-omened echoes, and when the white face was unknown.

Tell us of the people, whence they came and how the tribes were divided; what was their life in the ancient days, how did they hunt, with whom warred they? Ye have seen it all. Ye know, and if ye would reply, could solve these mysteries, but ye are silent, or if ye speak, our ears are too dull to comprehend your answer. Of your own history our eyes tell us something. We know that those peaks now exalted to heaven were once the bottom of the deepest ocean, and to-day, fastened in your rocks we see the forms of strange dwellers in those ancient seas, perfect as they were in life. And on your slopes portions of the shores of bays and estuaries are preserved, and the marks of the ripples on the quiet beaches and the cracks in the sun-dried mud still show the spot where once the salt tide ebbed and flowed. But we would know more than your history. We would know what ye have seen, what has gone on before ye. We ask in vain.

———

About a glowing camp-fire on the shores of the St. Mary's Lakes are seated three persons well known to the readers. They are H. G. Dulog, the Rhymer, Appekunny, the Piegan, and Old Yo. Their camp is pitched in a little grove of aspens close to a brook of clear water. Behind them rise sharply the grass-covered hills, and before them is the broad lake with the shadowy mountains beyond. The flickering firelight plays on the white tent and casts curious shadows among the trees about it. It is very quiet; even the soft lipping of the water on the pebbly beach, a sound seldom wanting in this wind-swept valley, is stilled to-night. At intervals the footfall of one of the horses is heard from the darkness without the circle of firelight, or the swishing sound of a picket rope dragged over the grass as one of them shifts his position. The men are silent. It is the magic hour after dinner, when, tired after a long day's march, their appetites satisfied, they are content to sit still and be lazy.

The trip that has just begun has long been in the minds of all of them, and now that what has been so often talked and written about is before them, they are pondering over it, and one of them, at least, is wondering whether their glowing anticipations are to be realized.

To behold once more the beauties of these mountains, to live over again for a little while, and in good company, the old free life of other days, to take some of the myriad trout that swarm here, to kill a few wildfowl and grouse, to clamber to the summits of these towering peaks in pursuit of sheep and goats, and thus to regain lost vigor—these are some of the motives that have brought together this little company in their camp by the St. Mary's Lakes.

One face is missing that should be brightened by this camp-fire; one eye keen to read the secrets of mountain and plain does not gleam here; one arm, steady to hold the rifle, casts no shadow. Where is that Skeedee chief? Where is La-shar-u-kittibutz? Far away on the banks of the Loup Fork, in the ancient home of his people, he sits in his lodge alone.

Some of the men had traveled far to reach this camp. The Rhymer came from the west, from California, by way of British Columbia, over the Canadian Pacific Railroad. From the south came Appekunny, that Piegan, traveling on horseback over the yellow prairie, dotted here and there with white buffalo skulls, headstones that mark the resting places of a race once numerous, now gone forever. Yo had come furthest of all, from the Atlantic coast, by way of Montreal, over the Canadian Pacific. Traveling nowadays is made so easy that, if one but knows where he wants to go, his journey is a pleasure rather than a fatigue. So even the railroad journey had been delightful. The road, though it has only been in operation two years, rides more smoothly and easily than many an older one, and the comfortable sleeping cars are fitted up with all the most modern conveniences, among which a bathroom is especially deserving of mention. The excellent dining cars furnish capital meals, and the service throughout is very good.

The travelers by rail had met Appekunny at Lethbridge, in Alberta, Northwest Territory, and there had left civilization for their camp on the lakes. How delightful it was to escape from the confinement of the cars, to assist in packing the wagon, and at last to spring on the back of a good horse—no matter if he does give occasionally a spring to one side, as if he wished to get rid of his rider—to round up the loose horses and mules and to send them dashing along the road, away from the town, down the valley, up the hill, and then out on the broad prairie, while the slow wagon followed far behind. The swift swinging gallop sends the blood coursing through the veins with the speed of years ago, and the hurrying herd in front calls up in one mind memories of other days, when on a prairie far to the south and east two men rode for a day and a half behind a band of horses, recovered from the cunning Sioux by a craft that matched their own. And then the lodges pitched among the willows along the stream, the barking Indian dogs, the herds of ponies, the little parties of Bloods which they passed, and whose red or blue leggings and blankets brightened the landscape, made the travelers forget for a moment the changes that had taken place in twenty years. For a moment they were young again.

"Ha! Penuk-wi-um, are you there?" shouts Appekunny, as they pass a lodge pitched close to the road, and a cry, half a growl and half a roar, tells them that the fat chief is within. They laugh merrily as they sweep on. They have not forgotten how Penuk-wi-um killed the elk.*

Five or six days' travel brought them to the lakes, and now that their goal is reached, on this first night, before they have fished or hunted, they recline at ease about the fire, and this camp calls up memories of a hundred others, which in past days have been pitched anywhere over this broad continent from the ice-bound north, south to the tablelands of Mexico, and from the Atlantic on the one side to the Pacific on the other. For these three men are "old-timers" in the mountains. They have borne their part in the development of the wonderful new West, and the foot of one or other of the three has been the first to penetrate into more than one corner of the land up to that time unexplored. If the story of their wanderings could be fitly told it would form an interesting volume.

The fire is burning low, and Appekunny rising throws two or three sticks upon it, and the loose bark of the dry aspen logs catches like tinder, burns up and makes a cheerful light, which rouses the others from their dreaming and the Rhymer asks: "What Indians besides the Blackfoot nation are found here, Yo?"

"In old times," he replied, "the Blackfeet claimed only the prairie, and as long as there were plenty of buffalo they hunted not at all or very little in the mountains. The Kootenays, who are true mountain Indians, have always hunted more or less here, and so have the Stonies, whose agency now is north of Calgarry, but the Blackfeet and the Sarcees are true plains Indians and always depended on the buffalo. When they went into the mountains it was only to cross them when they went over west to steal horses from the Kootenays or the Kallispells."

"What or who are the Sarcees?" said the Rhymer, "I have often heard of them and of the Stonies, but I have no idea what their relationships are, nor where they live."

"The Sarcees," said Appekunny, "are a small tribe of Athabaskan stock, like the Apaches, who have always lived with the Blackfeet and under their protection. They are prairie Indians, buffalo hunters. The Blackfeet call them Săk-sé-po-yĕt, short or heavy talkers, and this name has been contracted to Săk-sé, and by the whites corrupted to Sarcee. The Stonies are called by the Blackfeet Ok'-wĭ-tŏk-sŭ-ĭ-tŭp'-ĭ, which means literally Rock afoot persons, or those who walk on the rocks. They are great mountain hunters, beating even the Kootenays. They are a band of the Assinaboine Sioux, and speak essentially their language."

"Have you ever heard that the Stonies had climbed to the summit of Chief Mountain?" said Yo.

"No," was the reply, "I have never heard any Indians claim to have done that. The most I have ever heard on that point was what old Back-in-sight, the Kootenay chief, told us two years ago, when he said that many years ago some of the Kootenays climbed it. But I fancy that was only tradition, and may have been nothing more than boasting."

"By the way," he continued, "I have never told you of that prayer to Chief Mountain that I heard old Eagle Head make last winter."

"No, give it to us by all means" said Yo.

"Eagle Head," began Appekunny, "is an old warrior of the E-nŭk'-siks or "Small" band of the Piegans. He is old, blind and tottering. Last winter I saw him sitting outside of his lodge one warm pleasant day, looking toward Chief Mountain, which, as you know, the Piegans regard as one of the minor gods. After a little while he began to pray, and the prayer seemed to me so forcible and pathetic that I wrote it out. This is what he said:

" 'Hear now, you Chief of Mountains, you who stand foremost; listen, I say, to the mourning of the people. Now are the days truly become evil and are not as they were in ancient times. But you know. You have seen the days. Under your fallen garments the years are buried. Then were the days full of joy, for the buffalo covered the prairie, and the people were content. Warm dwellings had they then, soft robes for coverings, and the feasting was without end.

" 'Hear now, you Mountain Chief. Listen, I say, to the mourning of the people. Their dwellings and their raiment now are made of strange thin stuff, and the long days come and go without the feast, for our buffalo are gone. Useless, indeed, the drum, for who would sing and dance while hunger gnawed within him.

" 'Like an old blind man your people feel their way along, falling over unseen things, for the gods are angry. In vain the usual offering to the Sun. Where now the hundred tongues, the snow white robes which always

were his share? And because we cannot find them he turns away his eyes, making our medicine useless. So then we fall and die, even as an old blind man who cannot see the way.

"'Hear, now, you who stand among the clouds. Pity, I say, your starving people. Give back those happy days. Cover once more the prairies with our real food that your children may live again. Hear, I say, the prayer of your unhappy people. Bring back those ancient days. Then will our medicine again be strong, then will you be happy and the aged die content.'"

"A wonderful prayer, full of poetry," said the Rhymer.

"And how much more full of pathos," added Yo, and for a short space there was silence. Then more logs were piled on the fire, the horses were looked after and those most likely to wander tied up, and then all hands turned in.

Yo.

THE GRAY PINE.

PART TWO.

THE deserted farm at the head of the valley was once owned by Amos Brown, a shiftless and thriftless farmer and as unsuccessful a hunter, for though he was a good shot and much fonder of ranging the woods with his gun and sad-faced hound than of tilling his sterile acres, he "never hed no luck." Fonder yet of the social glass, he spent many and more unprofitable hours in "Bell's tavern," and Bell had a mortgage on his farm and a lien on his scanty stock every cent they were worth.

In spite of the disheartening unthrift of the farm, the old man's only daughter kept the house neat and comfortable and strove bravely against the tide of ill-fortune that soon or late seemed certain to overwhelm them. Her mother had died when she was but a child, and she had to take a woman's place in the little household, when the girls of her age "down the river" were set to no heavier tasks than baby tending and berry picking.

She was such a notable housekeeper and so handsome withal, that she had many admirers and had only to say the word to become the wife of the only son of the most well-to-do farmer in the valley, but for some reason she had not yet been persuaded to say the word. She was very patient with her father, and always kind and thoughtful of his comfort, humoring and caring for him as tenderly as if he had been a child when he came home almost helplessly drunk from his visits to the tavern, and he was so proud and fond of her that it was a wonder he did not mend his ways for her sake.

One summer brought them great luck, so Amos thought. An artist discovered the valley and came to board with them for a week or two while he sketched some of the striking and picturesque bits of the wild scenery. He found enough close at hand to keep his eye and pencil busy for a much longer time, and his stay lengthened to a month. Then he fitted up a rough studio in the old barn, and settled down to summer's work, paying for his board and privileges what seemed a windfall of wealth to Amos and his daughter, though it was no more a week than one must pay now for a day's entertainment at one of the summer resorts of the region.

Credit was restored at Bell's, and the old man's convivial evenings there became more frequent. But not all the ready money went that way. Some of it brought more comfortable furnishings and some simple adornments to the house, and a becoming new dress and smart bonnet made Polly so much handsomer than ever that poor Hiram Hull's heart grew sorer every day with the pain of misprised love.

Walter White, the artist, painted for love of art and an ambition to make a name that he would be prouder of than that of a rich man's only son. He cared nothing for the gay life that most young men of fortune lived, and unaccountably to them chose to spend the summer days painting in this out of the way nook of the world rather than take the foremost place he might among the votaries of fashion.

He was a man of pleasant speech and kindly ways, and so unassuming of any superiority to these humble but sensitive people among whom he was sojourning that they almost all liked him, though some said afterward that they had always thought they saw a lurking devil in his eye and a marked hardness in his face. He treated Polly with a respectful politeness so different from the awkward courtesy, always bashful or rude, though always well meant, of her accustomed male associates, that it was a revelation to her of a life far removed from hers; his speech and manners so unlike those of any one she had ever met, made him seem like some superior being from another world, and she could not but feel that they were very far apart. As the summer wore away, marking its decline with golden-rod along the waysides and with dull white patches of everlasting in the stony pasture, this feeling of wide separation began to be very painful to her, and she became aware that too often for her peace of mind in the days to come, thoughts of their guest were constantly recurring. In a little while he would be gone, and her old weary life would be resumed, and go on and on, tending whither? she vaguely wondered. Its few possible ways were narrow and rough at best. And worst of all to think of was that she and her life would soon pass out of his and be forgotten, and she could never forget him. She grew so sad and moping that her father noticed how changed she was, and dimly seeing through the thin disguise of pretended gaiety she at times put on, guessed at what she strove to hide. Some sense of parental duty faintly illumined his befogged soul, and one afternoon as they sat on the doorstep in the eastern shadow of the house, he smoking and stealthily noting how while she knitted her frequent expectant glances were cast across the fields, he was impelled to give her a gentle admonition.

"Polly," he began, with a sudden effort, "it's dreffle foolish 'n' onprofitable for folks tu git the' hearts sot on folks 'at don't keer nothin' for 'em, haint it naow, Polly?"

"Course it is, father," she answered, blushing as red as the blossoms of the "posy bean" that she had trained over the door. "Why?" with a forced little laugh, "It's a hopesin' you haint a ben settin' your heart on—le' me see—wal, that rich Widder Harmern 't owns all the iron works daown t' Ironton; hev ye, father?"

"Oh, you git aout wi' yer nonsense, Polly," the old man cried, laughing at the absurdity of the idea. "No, no, little gal, I haint a foolin'. It *is* dreffle foolish. But I hev knowed them 'at got a notiern 'at 'cause somebuddy er nuther was kinder sosherble an' friendly tu 'em, 'at they sot a heap by 'em, and mebby wanted to marry 'em, when they raly didn't keer a soo markee for 'em, no, not one single soo markee! You 'n' I wouldn't git no sech a notiern int' aour heads, little gal, but the' be them 'at 'ould, an' does. S'posin' now 'at—wal, s'posin' 'at one o' them 're Stinson gals daown yunder," pointing down the valley with his pipe, "got a notiern 'at 'cause, Mr. White, f'r instance, spoke perlite tu her, an' thanked her more fer a dipper o' water 'n' I would for a drink o' ol' Medferd 'r Perishville whisky"—the names of these liquors made his mouth so watery that he paused to wipe it with the back of his hand—"at he was smit with her, an' she took tu sort o' pinin' arter him, haow tur'ble foolish an' onsenseless it 'ould be? Naow, Polly, I ben a thinkin' 'baout it 'cause I seen him a prattlin' long wi' that 'ere lanky Stinson gal t'other day"—Polly winced—"an' I ben a thinkin' 'at like 'nough you hed orter tell her better 'n tu git any sech a idee, seein' 'at she 'n' you is toll'able thick."

"Pshaw! father," she burst out contemptuously, "he don't care no more for M'ri Stinson 'n he does for you!"

"Course he don't. I haint none worried 'baout him! I know 'em, them high duck city folks, smooth and putty tu us here 's long we're usefle tu 'em, but when they god done with us, we haint no more o' 'caount tu 'em 'n the parin's o' the' nails! They'd be 'shamed tu be seen a speakin' tu us 'mongst their toppin' folks t' hum! It's her 'at I'm worried 'bout! You jist give her a kinder p'misc'ous hint, Polly."

Feeling that he had performed his duty with great tact and delicacy, the old man knocked the ashes from his pipe and went straggling off to some pottering task. Polly ran indoors lest, if he looked back, he should see her crying.

A mile away in a wild gorge, where a mountain brook poured its shattered current over a ledge into a pool whose checkered wavelets tossed the rafts of foam bells to wreckage on the stony margin and in the swift rapids, and wrinkled into fantastic crookedness the reflections of birch and balsam and mossy rock, Walter White sat painting. He was in bad humor, vexed with himself for thinking so often of Polly. He was troubled with the revelation lately come to him, that the poor girl loved him. But why should he be so constantly thinking that she was good and handsome, and how would he miss her when he went away? Why should he be very sad with the thought of her wasting her life and goodness and beauty on the besotted old father, or at best, on a clod-dish husband? Could it be that at the suggestion of this possibility a flame of jealousy burned his heart? Then came a vague wish for impossible things, that he were only a hunter or a hill farmer as poor and humble as any of her kind, with her to keep his cabin or be mistress of his little farmhouse. Why not quite forsake the world he cared so little for? His pictures might go to it and win fame for him, while he stayed here. Why not build an artist's ideal home in the midst of the woods and mountains that had been waiting for centuries to be put on canvas—and, what? marry Polly?

A cold shiver ran through him as he contrasted her uncultivated ways, her uncouth pronunciation and unmodulated drawl with the high bred elegance of his mother's and sisters' manners and speech. And he shuddered with disgust at the thought of drunken old Amos Brown as a father-in-law.

Then suddenly a wicked thought thrust itself upon him, a thought that made him feel a horror of himself. He strove to cast it from him, but it would return and hold argument with all the good that was in him. No, he would not be a villain, he would go away to-morrow out of the reach of temptation. One wrench of the girl's heart, another wrench of his—was it his heart, or only his fancy?—and then after a few weeks' or months' ache it would all be over, the heart-wounds healed and both be safe and whole, and if with sad, yet with not unpleasant memories of one another. But how could he have pleasant memories of her, and she dragging out a sunless life with a besotted father, or a clod of a husband? Was not any life better for her than either of these? No; to bear through all her days her heavy burdens and live a good and honorable life where her humble lot was cast, was better a thousand times than—. He shuddered at the thought of what she might become if this devil conquered him. He would go to-morrow; and with this resolve his heart grew lighter, and he hastened to finish his sketch of the waterfalls. "If I could paint those foam bells as they are," he said, "every one with the picture it floats, and not have to content myself with the thin half circle and dot of white that stand for bubbles, then I might call myself a painter! Sail to me, little bubble, and let me try." When as if obeying his call one drifted toward him, a sudden foolish fancy took him to let its fate decide his action. If it came safely to shore, he would stay a fortnight longer, if it burst before it reached the shore he would go at once. He watched it intently as it danced over the translucent crinkles of the pool, then joined itself to a dancing mate, and the pair came whirling in an eddy into harbor, touched the pebbled shore at his feet and burst in one sparkle. Alas for poor Polly!

He staid till the maples along the riverside were blood red, and the shivering poplars shone like flickering flames of yellow light among the dark balsams. Then one day he packed his trunk and went away. If at dusk the next evening Polly was at a certain evergreen tree that stood beside the road, so different from all the other evergreens that they had often noticed it, she would see a light wagon driven there. If the driver alighted, plucked a sprig of this tree and gave it to her, she might know he had come to take her to the little lake-port where her lover was waiting.

After fidgeting about uneasily all the morning of that fateful day Amos Brown "kinder guessed he'd go a-huntin' for a leetle spell," and taking down his gun and waking the old deaf hound wandered off into the woods. His daughter knew that his hunting was almost certain to take him in a roundabout way to Bell's, and that he would not come home till after nightfall. She longed to kiss him and bid him farewell, for she might never see him again, but she dared not even say good-bye, for she was choking with tears held back. So she only gave the old hound a parting caress and said in a broken voice, "Ta' care o' yerself, father."

The shadows of the great western mountain wall had fallen across the valley and half way up the sides of the eastern range as Polly busied herself with her last household tasks. With more than usual care she laid the linen cloth her mother had woven and set her father's supper for him, preparing a favorite dish, and brewing the pot of strong tea that he always craved when he came home from a visit at Bell's. She had not realized till now how desolate home would be for him without her. How could she leave him so forlorn even for her lover's sake? And an undefined dread oppressed her, as if the shadows of the mountains had fallen on her heart. She wondered why the shadows ran so swiftly up the mountain sides, chasing the sunshine toward the peaks, and the hours flew fast as those of one condemned to death, not dragging slow as when they bring some great anticipated joy. A voice that would not be stilled iterated that duty must overbear love, that she must stay with her father. And at last when the lingering touch of the sunset was lifted from the highest peak to the clouds, a great peace and rest came over her soul, for she had made her final decision. By the fading light she wrote in a cramped hand an ill-spelled note for the messenger to take back to Walter White, telling him that she had even so late repented of her foolish promise and would stay with her father. She blushed with shame to think that perhaps her lover would laugh at its blundering awkwardness, but it comforted her to feel that he must respect her the more for writing it.

She had put on a dress of light-colored stuff that he had praised, and when mountains and woods and clearings were blurred together in the dark, she went out to the appointed place. The river sent up its constant murmur of many voices, changing their cadence with every waft of the light breeze, yet monotonous, and always sad as the sighs and mysterious whispers of the dark forests. The crickets creaked with mournful monotony their autumnal chant, and the night air was scented with the odor of late blossoms and withering herbs and dead leaves as she stood waiting in the black shadow of the gnarled and scraggy evergreen. The tree seemed to infuse a grave-like chill into the atmosphere beneath and about it that made her shiver, and cower and hug herself for warmth.

Amos Brown had an uncommonly jolly afternoon at the tavern with half a dozen boon companions, who generously gave their time to the drinking of the old Medford rum that he paid for; and when toward nightfall he got upon his unstable legs and went tacking along the road, the landlord watching him and critically and professionally considering his case, doubted whether such legs would of themselves be able to take their owner home. Just then a stout, good-natured looking young man came sauntering past. "Look a here, Hi," said Bell, accosting him, "'F you're a goin' up the rud, why don't ye kinder keep Uncle Amos comp'ny? Seems 's 'ough he's a makin' consid'able rail fence fur tu git hum by airly bedtime."

After a moment's consideration Hiram Hall saw an opportunity of doing Polly a friendly service, and the certainty of a few minutes' speech with her that he had long been wishing for, and he answered with a cheerful alacrity, "Wal, I snum! I d' know but what I will!" The plump little publican felt his conscience at ease when he saw the strong young fellow hook his arm into the limp elbow of the elder, and the pair disappeared in the bend of the road.

Amos was a light weight notwithstanding the load he carried, and Hiram towed him steadily along in spite of the unsteady movement of his legs, and the surge of his body. He humored him with assent to his maudlin gabble, and when he halted, balancing himself for a prolonged drunken argument, he was coaxed onward by telling him that his daughter "'ould be a waitin' up for him, an' a gettin' oneasy 'baout him."

So they fared homeward till they came to the turn of the road below the old man's house, when it had grown so dark that the drab tracks of infrequent wheels were indistinct before them, and were quite blotted out where the shadows of the wayside trees fell thickest.

Hiram stopped suddenly, clutching his companion's arm, and pointing to a dim whiteness that slowly uprose in the shadow of an evergreen, gasped in a scared whisper, "What's that?"

"By the Lord, it's a sperit, Hirum, er less a witch!" the old man said in a low voice when the mysterious form became apparent to his foggy vision. "Le' go my arm 'n' I'll show ye 'at a bullit 'ont hurt it!"

The words were hardly spoken before the rifle was at his shoulder and spit forth its slender stream of fire toward the ghostly figure, and so quickly following its spiteful crack that it seemed a prolongation of it, came a sharp cry of mortal agony, and the white shape sank to the earth. The two men stood blankly staring toward each other through the gloaming in the sudden silence that ensued, when the frightened crickets ceased their melancholy creak, and the night wind held it breath, and no sound was heard but the far away sighing rush of the river. Then the full "hunter's moon" came pulsing up behind the mountain crest and slanted its rays upon them. The old man went forward into the shadows with an undefined horror upon him, and when presently the younger came to him he was kneeling on the ground with the lifeless body of his daughter in his arms. "She was a waitin' for me, Hi," was all he said. A little later Hiram was half aware of some one parting the branches and of a face looking at them for an instant blank with wonder, then as white with horror as he knew his own must be, and then vanishing. He afterward remembered some dim recognition of the sound of wheels clattering away along the road.

"Jest help me kerry the little gal up t' the house," the old man said at last, very calmly, and spoke no more till they had laid her on her bed and he had lighted a candle with a steady hand. "I got one more favor to ask on ye, my boy. Go daown an' ask some o' the women folks t' come up soon 's they kin, er in the mornin' 's jest as well." Then with the innate hospitality of a mountaineer, "Hev

a bite o' suthin', Hirum; o' the last she ever set for her mis'able ol' father! There's the tea on the stove h'ath a waitin' for me 'at killed her! Oh, my God!" After a little the heart-broken old man raised his bowed head from his hands and looked about for something. "Where's my gun? Oh, I know. I'll go 'long daown wi' ye an' git it," and they went out together. The last that Hiram saw of him as he cast a glance behind, he was standing in the moonlit road carefully loading his rifle. "What's he feared on 'at a bullit could hurt?" the young man bitterly asked himself, and then a fire of wrath flamed up in his slow soul against the lonely man who had wrought as great desolation to his own heart as to his.

The daylight had scarcely scaled the mountain tops and the stars above the quiet valley were just beginning to fade into the gray sky when the horror-stricken neighbors came up to the little house. There was no sign of life about it but the old hound crouching sad and silent on the doorstep. Entering, they saw by the faint light of the coming day and the candle with a "winding sheet" dropping from its spluttering wick, old Amos Brown lying dead upon the kitchen floor with his empty rifle cast away from him, and in the bedroom poor Polly, with her hands folded across her breast, and so peaceful a look upon her pale, beautiful face, that at first they thought her only asleep. ROWLAND E. ROBINSON.

DALE ANDREWS.

LAST week some of the people began to miss from the vicinity of the West End one of the most familiar figures. Many will now for the first time be shocked at the announcement that he will be seen among them no more; although many children must have hurried home with sobs in their hearts if not in their voices to say that Dale Andrews is dead. He was only a lemon and white pointer who carried his tail thrust out behind him, as a Cossack soldier wears his sabre, but he was a dog of such high degree, such fine intelligence and such polished manners that his acquaintance—and they were legion—soon lost sight of his species and made him their friend. He did not speak their language, and they did not understand his: but his gentlemanly tact never allowed him to betray his ignorance of their kindly salutations, nor did it occur to them that his overflowing geniality had not been expressed in the plainest of spoken words.

His masters were four grown boys who kept house in a flat, and who sometimes facetiously spoke of him as "the children" or "the menagerie," and whose rotund and turbaned housekeeper often lectured to him soberly about how he "to' 'round the neighborhood," all of which was indicative that he was the only thing in all the bachelor household, from the bric-a-brac to the shotguns, that called for any tenderness or solicitude. And perhaps it is in this humanizing influence which he thus exerted in that little corner of the world that is to be found the secret of that nobility which made him famous and gave him friends.

What must have been one of the divine purposes of the brute creation comes near to being realized when it appeals to the tender emotions of humanity; it is more than realized where it supplies food for them. It is therefore in accordance with the eternal fitness that this dog who so approached to the performance of this ideal function should have been blessed with an ideal home, an ideal life and perfect friendship. He had the first of these, an ideal home, because he was a fair sharer in all its benefits and pleasures. He sometimes put his paws on the edge of the table and anxiously observed the progress of some game of cards, or lifted up his voice to heaven in righteous protest against an overworked violin, or awakened some one in the small hours of the night to ask him to get him a drink of water.

The night before his death he came home from a gallop through the residence portion of the city, just as his masters came home from their work, and threw him down before the fire to dry his feet; his contented eyes strayed lazily from the shovel to the fender, and from the fender to the fire. And Mary, in her turban, came and looked down on him severely, and said: "Yo' rascal, where yo' been?" And he wagged his tail just once and let it drop, and glanced at her with that look which expressed pleasure, but was canine and therefore not to be defined as a smile; whereat his sable proconsulator chuckled, and he dropped off to sleep dreaming, I suppose, retrospectively of his ramble; prospectively of his supper.

To speak of his accomplishments would be but to tell the story of a well trained dog. How, of an evening, he would go to the closet and fetch his master's slippers, picking them out from among the others by a sense finer than men possess, even in respect of slippers; or how, at such delightful times as when he and the family and the shotguns went hunting, he would find and point the live birds and retrieve the dead. But to speak of his affection is another matter.

One afternoon last week one of his masters came home tired and went to bed to rest, and directly when he heard a scratchy push at his bedroom door he knew it was Dale come to welcome him. But when the dog crossed the darkened threshold and thus knew he was in the atmosphere of sleep, no sleeping person could have known that shortly thereafter a cautious, sober dog, placed first one foot and then the other upon the bed, and in a brief moment reached his head over the man's shoulder, licked his nose, as if to say, "Though not classical 'tis my master's," and believing he was asleep laid his head for a moment tenderly upon his master's face and then softly and carefully climbed down.

But on Thursday in the middle of the night, as he slept on the landing at the kitchen door, he must have dreamed that the Laocoon was an allegory for dogs, and that by the serpents who are coiled about it were meant those who poison dogs; and he must have awakened shortly thereafter with a horrible pain, for, to the shame of humanity be it spoken, some foul fiend had poisoned him.

The mystery of death is a severe tax upon the understanding and composure of men whose hands are held and whose last hours are soothed by the best of helpers and the most loving of friends. With this dog—his straining intelligence appalled by an impending evil he could not avoid, shut in by the door below, locked out by the door above from light, from help, from the comfort of a familiar voice—what must he have thought of men to leave him thus. Where, since his masters had forgotton him, could be that sweet little girl who looked into his yard on her way to school to talk to him and stroke his head? Where was Mary? And then, when the poison tore out his very vitals until, instead of the air which should never have been denied him, he breathed blood, when the horrible torture wore upon him until he could ask of the sphinx of this life but one more question, what answer did he receive when he asked what he, a dog, had done to be condemned to such a death?

It may be a sign of weakness for grown people to grieve over the death of a dog, but they may at least hope that on the other side of this life there is a sunny upland where dogs do wait until the time at the Final Assizes whence the murderers of dogs shall go to their reward, and the friends of dogs be once more restored unto them.

To those assembled to hear this tribute of love and respect for our friend it were useless to remark that if the meanest traits of mankind were scaled no further below the meanest traits of dogs than the best intelligence of dogs is scaled below the lowest intelligence of men; then this crime would never have been committed, and the world would not have to blush with renewed shame at the thought that some one has been born into the world with a spirit too low for a brute, a heart too small for an insect, and a nature too malicious for a serpent. The murderer in this case has not been brought to justice. But there is an eternal justice in the workings of the universe which relentlessly pursues all murderers, and so surely as a wicked person has killed a noble dog, and so surely as the universe moves on, his murder will come back to him in that his sleep will be murdered; likewise his pleasure in himself, until at length there will come into his nature that full knowledge of his smallness of stature which will make itself felt by others, and when men despise a man his crimes are well on the way to expiation.

NOTES OF THE FIELDS AND WOODS.

IV.—SNAILS AND THEIR WAYS.

ANIMALS have a great variety of ways of defending themselves against their enemies. In general they are provided with definite organs—often organs of offense as well as defense. Familiar examples are the stings of insects, the talons of birds and the horns of cattle. The study of the development of these organs of attack and defense forms some of the most interesting and significant chapters in the story of evolution. It need not be said that the task is a great one and yet far from being finished. In many cases it is evident enough that the organs arose by modifications of parts already present; thus the claws of birds of prey are modified toenails, the stings of bees modified reproductive organs, and the poison-glands of spiders are probably modified salivary glands. But many animal weapons cannot be accounted for in this way. A single instance may be cited, the curious ink-bag of the cuttlefish, whereby they discharge a pitch-black ink into the water and so hide from their pursuers.

Commonly animals find protection against their enemies in their habits, or to put the case on an evolution basis, they have acquired habits which give them more

or less security against their foes. For example, both on land and in water many animals hide under stones and rocks, others dig burrows in the ground, others live in remote and inaccessible places, etc., etc. Then there is the remarkable principle of mimicry by which animals come to resemble the medium in which they live either in form or color. Every angler knows that many fishes are almost exactly similar in color to the bottom of the stream in which they live, and there are a number of marine animals which are hardly distinguishable from the water itself, the jelly-fishes being the most familiar examples. It is needless to multiply examples. It is plain that nature is abundant in resources for the safety of her creatures. If she gives them instincts by which they fight and devour one another, she also gives them protection against the unrestrained exercise of these instincts.

No class of animals possesses a more perfect protective armor than the gasteropod molluscs, examples of which are the common land and pond snails. Let us allow Charles Lamb to tell the story for us:

> The frugal snail with forecast of repose,
> Carries his house with him where'er he goes;
> Peeps out, and if there comes a shower of rain,
> Retreats to his small domicile again.
> Touch but a tip of him, a horn, 'tis well,
> He creeps up in his sanctuary shell.
> He's his own landlord, his own tenant; stay
> Long as he will, he dreads no Quarter Day.
> Himself he boards and lodges; both invites
> And feasts himself; sleeps with himself o' nights.
> He spares the upholsterer trouble to procure
> Chattels; himself is his own furniture,
> And his sole riches. Wheresoe'er he roam,
> Knock when you will, he's sure to be at home.

chamber, which functions as the lung. This would make the process essentially the same as that which takes place in fishes in respect to their swim bladders. The snails appear to raise the opening of the lung cavity above the surface of the water, thus filling it with air; a supply thus gained, they sink to the bottom and remain a considerable time before getting in a fresh store.

The snails feed upon some water plants contained in the aquarium. A favorite position is with their long, creeping disk clinging to a stem and the shell hanging downward, as sketched in the figure. They appear to feed upon the soft green exterior of the stem, and to slowly creep along, eating the stem clean as they go. These snails have only one pair of tentacles, differing in this respect from the common land snails, which have two pairs. The tentacles of the water snails are organs of touch; the second pair pair possessed by the land snails bear the eyes at the ends, and, as is well known, are retractile.

In the early part of the summer I noticed a number of egg masses produced by the snails. They were attached to the sides of the jar, and consisted of small white particles surrounded and held together by a thick layer of transparent jelly. Examining a portion of the mass with the microscope a few weeks later, I found that the eggs had hatched into tiny shell-covered snails. It is an interesting fact that in all snails the young already possess a shell when they emerge from the egg. This would indicate that the shell appeared very early in the development of the class, and adds emphasis to the observation made above, that the shell has had much to do in the preservation of this tribe of animals.

The shell is formed by secretion from a portion of the integument called the mantle, receiving this name from the fact that it surrounds the internal organs. The shell grows by additions at the mouth, so that the oldest part is at the summit or apex of the spiral. If the shell becomes broken the snail mends it by a fresh secretion. At the approach of winter the animals creep into the mud at the bottom of the pond, and having drawn their bodies into the shell, secrete a thick fluid which hardens into a firm crust that closes the mouth of the shell. This crust is doubtless permeable to air, so that the animals carry on a reduced respiration during the winter.

The land snails are to be found during the day in moist situations hiding under leaves, decaying wood, etc. At night they come out for food, feeding upon vegetable matter. Our common American species, the largest of which is *Helix albolabris*, do little damage, being comparatively small and few in numbers. But in some parts of Europe the land snails are a great pest, often making considerable depredations in gardens. If one examines the mouth of a snail it is easily seen how the tender leaves are seized and reduced. The mouth-cavity is quite large, and just within the lips and forming the roof of the mouth, is a strong ridged plate composed, like the shell, of carbonate of lime. This plate works backward and forward, like a chain saw, over a hard gristly cushion which forms the floor of the mouth. In this way the food is made ready for passage into the alimentary canal—a membranous tube which extends a considerable distance into the spiral cavity of the shell and then turns upon itself and opens upon the upper side of the body not far from the orifice of the lung cavity. Connected with the digestive canal and extending into the narrowest portion of the shell cavitiy is a large liver.

An interesting fact about snails is that they are hermaphroditic, each animal being provided with both male and female reproductive organs. Sexual copulation is, however, necessary. Pairing takes place early in the summer. Soon after copulation the snails discharge their eggs through the aperture at the side of the neck. They are considerable in number and adhere together in jelly-like masses, looking much like the egg-masses of frogs, except that they are smaller. The eggs are laid in moist places under leaves, etc., and hatch by heat from the sun; that is, their incubation is dependent upon solar heat.

A living snail can always be made to crawl out of its shell by placing it in water which has been boiled, and thus deprived of the air contained in it. The jar containing the water should be covered, otherwise the snails will simply crawl to the surface and get air there. If it is desired to study the structure of the body of the snail, it should be quickly taken from the water and plunged into boiling water. The snail will be killed almost instantaneously and with body extended. The shell can then easily be removed. A number of interesting points can easily be made out. The eyes will be found at the end of the upper pair of tentacles, and by dissection the muscles by which these tentacles are retracted within the head can be found. The mouth will be seen at the anterior end of the creeping disk. The opening of the lung is on the upper side; it is covered by a fold of the skin, and in the living snail is opened at intervals for taking in air. The lung consists simply of a chamber, the walls of which are ramified by blood vessels. By dissection the heart, nervous system, alimentary canal and other organs are to be found. Thus it will be seen that the snail has quite a high structure. In the scale of animal life it occupies a place about intermediate between the lowest and highest forms. Its position in systematic zoölogy is

The advantages possessed by his snailship, which the man of wit and expression sets forth so pleasantly, suggests to one who studies nature from a different standpoint, an explanation of the extraordinary number of species of these animals and their wide range of distribution. The story of the rocks shows that most of the great tribes of animals reached their culmination in respect to number of species in days long gone by. The molluscs, with the others, have suffered a diminution in numbers; yet, owing to the protection of their shells, they have been able to hold a front place in the race for existence, and an immense number of species, about 20,000, are still persistent.

I have had a number of the common pond snails in an aquarium the past summer and fall, and now and then have spent odd moments in watching them and noting their habits. One of the first things noted was that the snails occasionally come to the surface of the water, indicating that they are air breathers. Usually they ascend by creeping along the sides of the aquarium in their slow, dragging way, but sometimes they use a much more expeditious method; they rise to the surface by floating, ascending in a straight line. Doubtless they are enabled to change their specific gravity by enlarging or contracting, by means of muscular action, the size of the air

expressed as follows: Sub-kingdom, *Mollusca*: class, *Gasteropoda*; order, *Pulmonata*; family, *Helicidæ*; genera, *Helix*; species, *Helix albolabris*.

Of what use are snails? Charles Dickens has told us of the delights of a meal of boiled periwinkles, the meat being hooked from the shell by means of a bent pin. But the diminutive periwinkle is not the only snail used for food. In Germany, and doubtless also in other European countries, snails are one of the regular items in the bills of fare at the restaurants. It is probable, however, that as an article of food to man, they are of little value except to the epicure. Many species are doubtless both palatable and nutritious, but they are not abundant enough to come into general use as an article of food.

S.

NOTES OF A PASTURE LOT.

Editor Forest and Stream:

I have written you something concerning a pasture of about 300 acres which lies a little back of my residence. Although this pasture has long been infested by a Jersey bull of very fierce aspect, his eyes blazing with a peculiar look of devil-may-care from his shaggy front, making it not altogether comfortable to wander therein on foot, yet it was my habit in the spring to stroll through it occasionally, considering nature in her fresh and playful moods. The bull seemed to understand and respect my business, for though he often cast a sinister look at me, as if meditating that I would be an excellent object to toss up on his horns, yet he never offered to disturb my studies. And here I will remark that while the Jersey cow is the most gentle and amiable of all brutes, loving to lick your hands and to be caressed by them, the bull of that species is a devil, who must be guarded against with much care. He has killed and injured, I dare say, more men and women than all other bulls combined. A marked feature of these is that there is no telling when their devil may rise within them, they being liable to make their onslaughts on the sudden, without any provocation. Therefore, while I love the Jersey cow tenderly for her sweetness even more than for her rich milk, I regard her rugged consort with harsh feelings, and could wish that she had a better mate.

Till the other day I had not entered this pasture since June. The scene in the meantime had been greatly changed. The trees had lost their leaves and stood naked and black; the rich green of the prairie had changed to dead-brown, and the myriads of flowers had all gone. But the change in respect to the fauna was even more marked. Then the air was full of song and merriment from thousands of happy throats; now the silence of the tomb reigned. Of the merry singers and chatterers which were then seen in troops on every hand, the mockingbird alone was left, and he flitted from dark recess to dark recess in the bushes, mute, and as if wishing to hide himself in his sorrow. Not so did he behave when I was in the pasture before; for then he sought the most conspicuous perches on the trees, pouring forth his melody in continuous streams, as if he was so full of joy that he would burst if he let it not forth. Those songs and all other songs that I heard, were of love. The love was now gone, and hence the pasture was silent. The other birds that had assisted the mockingbird in this musical medley were from the far South, and had returned thither. The few that had come to take their places were silent and sober fellows from the North, who come merely to eat and keep warm. We have very few birds here which stay all the year; only the mockingbird, the dove, a few sparrows, a few hawks, a few owls, the raven and the quail. All others come and go with the seasons.

The bareness of the trees disclosed to me a great many nests which I had vainly looked for in the spring and summer concealed as they were in the thick foliage. Among these I found several of the same sort, which amused me greatly by their wonderful architecture. These were invariably in china trees which, though entirely leafless in winter, are the most umbrageous of all our trees in summer. Invariably they were built on slender twigs, far out near the ends of the branches, so light and pliable that no prowling animal or snake could reach them. They were in shape like the cone of the pine tree and not larger than these cones often grow in Texas. They were always built at the fork of a twig, the upper edge or rim of the nests being firmly bound to the twig on three sides. The binding material was cobweb or some substance so like it that I could distinguish no difference. So much of this material had been used in the binding that the nests could not be taken except by cutting the twig above the fork. The rest of the nest was formed in part of this material, but mostly of blades of grass, so ingeniously woven together that no weaver could weave them better. The nest was in all respects precisely like that of the Baltimore oriole, which also abounds here, save that the latter bird employs horse hair and thread and strips of cloth for his binding and throughout his nest, while this present bird employs none of these; also his nest is scarcely a fourth as large as the oriole's. In skill of architecture, while the oriole is very remarkable, this little bird excels him very much.

The builder of these nests perplexed me very much in my spring and summer walks in the pasture; for I am sure I do not mistake him. He seemed a spirit rather than a bird. His fellows were numerous in the trees of thickest shade, and his extremely little, piping voice was constantly heard among the leaves, but he himself was never visible above a second at a time, and this only when he was flitting like lightning from leaf to leaf. I often endeavored to force them from the trees, but they would not go. They would sometimes dart out a foot or two from the tree, only to dart back immediately at another place; so that I am totally at loss to give his markings, his shape, or anything that is his except his nest. He is a will-o'-the-wisp, a very Dutchman's flea, which now is there and now is not there.

However, there is no mystery which can always be hidden from him who sincerely wills to know it. We shall one day know the mystery of the stars, if we sincerely will it and are good. And having learned now the habits of this little creature, I can rob his nest next spring and doubtless by strategy secure a sample of himself. In the meantime, who can tell us of this little spirit whose architecture is so wonderful? What school of architecture did he attend, and who was his master? How wise was that master who could put such excellent knowedge in so small a head!

I have two little boys who are full of curiosity as to birds and all wild animals and reptiles, as most boys are. I questioned them regarding this little bird, and they replied that he was a "little oriole," but could say nothing more definite. N. A. T.

ABILENE, Tex., December.

EGG OF THE GREAT AUK.—At Mr. J. C. Stevens's auction rooms, this week, a large number of ornithologists assembled to witness the sale of an egg of the great auk. Before offering the lot Mr. Stevens remarked that in 1880 two eggs of this bird, both of which had been broken, were sold by him, and that they fetched 100 and 102 guineas, respectively. Of the recorded eggs, 25 were in 18 museums and 41 in 19 private collections—43 out of the 66 being in Great Britain. The first bid of 50 guineas was made by a well-known ornithologist, and this was followed by 60 guineas from Mr. L. Field, to whom the egg was eventually knocked down at 160 guineas ($840). —*London Times.*

AN ALBINO BLUEBIRD.—Waverly, Va., Dec. 18.—An hour or so of spare time let me out of the office Saturday, and after bagging a nice bunch of quail, I shot this small bird in the edge of some small pines, in company with some other small birds, and I believe it to be of the family of bluebirds. It is a rare specimen and I mail it to you to mount and name. Quail are very plentiful along our line and I notice few gunners.—J. W. SCHOOLEY. [The bird came safely to hand. It is unmistakably an albino bluebird.]

DEATH OF JOHN W. NEWTON.

Editor Forest and Stream:

Mine was the sad misfortune to be in company last week with that true gentleman and ardent sportsman, John W. Newton, of Westhampton, Long Island, when he met his instant death by the accidental discharge of his gun while reloading it.

Though not in sight when the report of the gun came to my hearing, the way in which the accident occurred is plainly to be seen when the nature of the ground is understood and we remember the deplorable habit, known by all who have hunted with him, of leaning the piece against his body while reaching for wads, shot, etc.—an entire exception to his otherwise extreme care in the handling of his gun to avoid injury to himself or others.

While my spirit is too sore for impartial judgment, my conscience bids me say to all those gentlemen of the old school who use a muzzleloader in preference to a breechloader, take warning—cast them aside, however prized by you, before another valuable life be lost by a similar accident. F. F. R.

NEW YORK, Dec. 27, 1887.

FIFTY-FOUR GEESE.

WALLA WALLA, Wash. Ter., Dec. 15.—*Editor Forest and Stream:* In this part of Washington Territory we fare badly for game, in fact, we have no shooting worth mentioning excepting doves in August and geese on Eureka Flat, 20 to 30 miles from here, during the winter. Eureka Flat is a tract of land bordering on the Snake River, and upon it thousands of bushels of wheat are harvested every season. It is one series of wheat stubbles from end to end, and here the geese congregate. The inhabitants of the region kill quite a good many by stalking, but so open is the ground and wily are the geese that it is extremely difficult to get within killing distance. The better plan, therefore, is to dig pits, taking great care to cover all traces of the hole by dextrously fringing it with stubble, weeds, sage brush, etc. Then place the decoys at a convenient distance and patiently await results. On one point the sportsman, or Jack-in-the-box, as it were, will never be disappointed—he will be chilled to the marrow; geese or no geese, but that is a very small affair and not to be taken into consideration, for the very first *honk-honk-a-honk* of an approaching skein, will send the blood coursing through his veins and entirely dispel any chilly feeling which may have been stealing on. The proper thing to do then is to crouch even lower, remain perfectly still, so immovable in fact as to make a dead man appear affected with St. Lazarus's dance in comparison, and bide the time until the flapping of the wings is distinctly heard directly over head, wheel round as you rise and give them both barrels. It is easy enough to hit a goose when under 40 to 50yds., and if you are provided with a good shooting gun, properly loaded, the bird may be killed in the air; but my word for it, it's deuced hard to wait and determine when they are just in the proper position to afford the best target; and many a probable double has been ruthlessly converted into a double goose-egg from over-anxiety or undue tardiness, brought about in either event by a clear case of being rattled.

The fact of the matter is this, a goose is a pretty big bird but yet small enough to be an infinitesimal atom as compared to the space that surrounds him. So although he looms up as big as a pumpkin, to say nothing of his neck and outstreched wings, yet when 60yds. away he appears only 40, and although apparently not moving very fast, yet it is no uncommon thing to shoot at one, miss him clear, and kill the one directly in his wake, clearly missing the leader by 3ft. or more. Add to this the tenacity of life possessed by wildfowl in general and it can clearly be seen that there's no unpardonable disgrace in missing one now and then, while many good shots fail "to connect" quite as often as they kill.

In view, then, of the great uncertainty of things in goose shooting as in other affairs of life, I deem it a very creditable performance that two of our gunners killed in one morning last week 30 geese in 40 shots—a feat that has no parallel so far as known in this vicinity. The next morning these men (whose names are W. A. Eberly and John Foster, both of Walla Walla) killed 34, making a grand total of 54 geese in about four hours work, from daylight until 9 o'clock A. M., on 7th and 8th inst.

It may be of interest to know that both men used their 10-bore full choked Parker guns loaded with 4½drs. of powder, 1¼oz. No. 1 and some No. 4 shot. They are both fine shots afield or at the trap, Foster now holding the individual championship badge of the Southwest, won at Seattle last summer, while Eberly has proved himself a masterly shot and awkward stayer on many fields.

So little shooting is done here that we trust it pardonable to make record of this unprecedented bag. GAUCHO.

THE BIG BUCK OF HIGH ISLAND.

THIS summer I was hunting deer on High Island, when one of the largest bucks I ever saw in Louisiana was leveled by Robert Poole, a very small boy eleven years old. His father and I were standing not far from him when two shots in rapid succession were fired. The hounds had separated into two packs, one pursuing a doe and two fawns by Mr. Poole, who fired without effect. The other pack ran three bucks by Master Robert. It was his first shot at a deer, and he was wonderfully excited when we rode to him. "What did you shoot at?" said his father. "Oh, papa, I shot at the biggest buck you ever saw, and then I shot at a small one. There were three of them, and I just know I killed one, because I saw him stagger as I shot."

The dogs were in full cry when we rode to him, but only two dogs were then in hearing.

"You must have killed the buck, Robert," said I, "because I heard old Coallie stop a short distance after he passed you, and then I heard him baying about a quarter of a mile from my stand. He has caught your deer no doubt, as he is not with the other hounds."

"How far was the deer from you?" asked his father. "I was standing there by the side of that post oak, and the buck was on the bank of the bayou," he replied. Mr. Poole stepped the ground and found it was 26 steps. Some shot struck a sapling the right height for killing a deer. "Where was the other deer when you shot?" he asked of his little boy. He replied "he was jumping down the bank when I shot the big buck." Mr. Poole said to me, "Let us examine for blood; if the deer is wounded, we ought to remain until the driver comes out in order to get some hounds and follow it."

On examination we found a large pool of blood, not 100yds. from where the little fellow shot. It was frothy, showing the deer was shot through the lungs, and indicated that he could not run very far before he would fall dead. Mr. Poole wanted to follow the direction the dogs took, to which I objected, as I declared I heard Coallie baying the opposite of the course he desired to search. He finally consented to let me lead. The two dogs were still or hearing, but evidently had crossed the Lake Bistereau and were running the high hills of Bienville Parish. Proceeding about a quarter to where I thought I heard the baying, my pony began snorting and plunging. "The deer is not far from us," I said to Mr. Poole, "for he always snorts when he smells blood." I blew my horn, and immediately old Coallie ran to us. We followed him about 50yds., and there lay the biggest buck I ever saw in this State, and the fattest it ever was my fortune to view when butchered. The deer was running quartering to the little boy as he shot, and was struck with fourteen shot in the head, neck and side. Instead of shooting at a second deer he shot at the same one as it jumped down the bank of the bayou, and hit it with twenty shot in both hams and flank.

Taking into consideration the age and small stature of the boy, together with the fact that he was shooting an 8lb. No. 12 gun, the stock of which had been shortened to 12½in. to fit his arms, I consider it remarkable shooting. But few old hunters would have done as well on the second shot.

I gave the little fellow a good baptizing of blood for his initiation into deer slaying, and told him to tell his mamma to have a big plum pudding made for him the next day, and to say to his beautiful sisters to be sure and sit up with him that night, as I was certain his sleep would be feverish and he would see those big horns peeping through the bushes many times in his fitful dreams, ere the sun shone shone through his window the next morning. G. D. A.

KNOX POINT, La.

A WIRE FENCE ACCIDENT.—In passing from one piece of woods to another, while hunting partridges with a friend, I came to a barb wire fence, which as usual was difficult to pass. By crawling under where the wire stretched across two cradle knolls, I thought I could find a passage way. My gun was still cocked. Placing myself on hands and knees, I first carefully, as I thought, attempted to push my gun in under the fence. The trigger must have touched a stone or twig, and one barrel instantly discharged; the recoil forced the gun back from my hand, and as it struck the ground the hammer of the other barrel came in contact with a stone, breaking the dog of the lock; it was instantly discharged; the charge, pointed directly toward my body, was fortunately intercepted by a large stone, which was shivered and scattered in all directions. My first thought was, from the stunning effects of noise and flying stones and gravel, that it was all over with me; and I recall it to mind now with a shudder and a thankful heart that I escaped the frightful death that threatened me.—MIG.

NEBRASKA.—Louisville, Dec. 11.—Along the Platte River this fall the geese have been more numerous than for the past few seasons. Only a few, however, have been bagged in this vicinity, as they chiefly stay on bars in the middle of the river, and one cannot get at them with a boat on account of the shallowness of the water, nor wade with safety on account of the quicksands. Quail are quite numerous, but the deep snows of '85 and '86 thinned them out badly. The coveys are small in numbers compared to those of a few years ago. Chickens are very scarce; I cannot account for it, as they had a good hatching season. Rabbits are quite numerous, and a good many large bags have been made.—SNAP SHOT.

HUNTING THE COUGAR IN TEXAS.

JANUARY 12, 1882, found me in Fort Davis, Texas, where I had come in the interest of a land company, who owned a large tract of land a few miles from that place. Fort Davis is pleasantly situated in Presidio county, about forty miles from the Rio Grande, and has an elevation of about 4,000ft. above sea level. In 1882 El Paso was the nearest railroad station. The post was garrisoned by several companies of the First Infantry and two companies of the Tenth Cavalry, colored—"buffalo soldiers" the Indians called them. My companion was Clark M., a civil engineer, and as keen a sportsman as ever stood in shoe leather. We had nothing to do, and used to spend considerable time looking at guard mounting and the various drills and parades that make up a soldier's existence. Time was hanging heavily on our hands, and Clark declared that he would stagnate entirely if something exciting did not turn up before long.

One morning while we were eating breakfast, I called Clark's attention to two pack mules that had just passed our adobe hut completely loaded down with venison. Without waiting to swallow his coffee he put out after the man who was driving the mule. In the course of the forenoon he came back and said he had interviewed the owner of the pack outfit and found out that his name was Hank Brown, that he was a professional hunter and had helped to exterminate the last big herd of buffalo that ever entered Texas. He also said that the venison we had seen was of blacktail deer, and had been killed at a place called the Pinery, about fifty miles from Fort Davis, and that the deer were thick there; black bear were plenty also in season. Old Hank told him that there was a Mexican lion there which left a track as large as a frying-pan.

At the word lion I was all attention, for if there was anything that I had an itching desire to kill it was a cougar. I had been in Texas over a year and had spent about three months of that time hunting, but as yet I had never been able to set my eyes on a Mexican lion. I had hunted over ground on which they were supposed to be plenty and had seen any number of fresh signs and tracks, but never a cougar. I started out to interview Brown at once. He proved to be a pleasant plain-spoken man. He said that judging from signs there were quite a number of cougars at the Pinery, but that one of them left the largest track that he had ever seen, and added that he spent forty years in Texas and Mexico. If my friend and I wished to go out there and hunt he would be glad to share his camp with us, and he expected to start back next morning. "It is fifty-four miles from here to Pinery by the wagon road, but I can take you there in twenty-two miles across a mountain trail that I know," he said. "I don't say you can get a shot at one of those cougars, but they are plenty out there and you might try your luck. I don't know of a better place."

Now, I had nothing in particular to keep me at Fort Davis, and my only reason for staying there was because of the daily mail and the consideration that fresh beef could always be had, and so I concluded to go out for a week and try my luck. The next morning at 9 o'clock found us lashing the last box on one of Brown's mules, who stood quietly enough while the operation was going on, but as soon as it was finished and his blinds were taken off he laid down and tried to roll his load off. A few hard kicks from Brown soon brought him to all-fours again. There is something very peculiar about a pack mule; try to pack one without putting on blinds and he will kick twenty feet high; put on the blinds and he is as gentle as Mary's lamb.

When I first began to camp out on hunting trips (that was in '71), I thought the proper thing was to work hard, live plainly and rough it all around, but I have changed since then, and while I do not believe in carrying a full-length mirror, as Gen. Sheridan and the late President Arthur did on their Yellowstone trip, I believe in taking everything that will conduce to your comfort if you can carry it, even then you can rough it to your heart's content, if you are far from civilization. My camp mattress was the result of several experiments. A bed of pine-needles or fir is all right, if you have time to make it (it takes an artist to make a good one) and have no objection to having your blankets spoiled by pitch; but a good camp mattress is all ready to receive your frame as soon as you unpack it. I had a bed sack made of stout ticking, 32in. wide and 76in. long. In this I put 10lbs. of cotton batting and then had it tied the same as a regular mattress. I then had a piece of canvas stitched on the bottom, the full length of the bed, to protect it from arrow-grass, sand-burrs and cuts. The result was a comfortable bed, one on which I have slept for three months at a time in perfect comfort. All you have to do is sun it now and then and pound it with a club if it gets hard.

In these days of canned fruits and preserved comestibles, there is no need of any one going hungry in camp. I have lived on rusty bacon, hard bread and coffee for a month at a time, but I confess to a weakness for a well-supplied table and good living in camp and elsewhere. All points of the compass contribute to satisfy a camper's appetite. We had canned fruit from San Francisco, tomatoes from Baltimore, corn from Portland, Me., flour from St. Paul, maple syrup from Saxons River, Vt., chocolate from Boston, canned salmon from Oregon, and last but not least, Borden's "caw" from New York; and what a boon that same "caw" has been to the pioneer, the hunter, the camper and the ranchman. I verily believe that if all of Borden's empty milk cans west of the Mississippi were collected in one pile it would form a mountain higher than Mount Washington.

Clark rode his black broncho Nap, I my mule Rose. I have tried both mules and horses since I have been in Texas, and have found the mule to be superior at every point for roughing it. They will travel further in a day than a horse in this warm climate, are surer footed, will do longer without water, will thrive where a horse would grow thin, and are easier to ride as a general thing.

I have always made it a point on all my hunting trips to carry two rifles if possible, and on this expedition I took my Winchester, model of 1876 (.45-75-350), and my Borchardt Sharps (.45-100-550). It is not very pleasant to be hunting 50 or 100 miles from nowhere with only one gun, and have that one break. I was told when I bought my Winchester that the .75-350 model was "no good," that the bottle-necked cartridges could not be depended upon, and that they would explode and ruin both myself and gun; and there were lots of other direful predictions, none of which came to pass. I bought my gun in 1877 and used it until 1883. In that time I fired over 8,000 shots from it, and never met with a single mishap, not even a miss-fire, nor did I ever spend a single cent for repairs on the gun. I placed it in honorable retirement some four years ago, and there are memories and associations connected with it that I would not exchange for a dozen cases of any guns manufactured. I never used a re-loaded shell, nor would I use one under any circumstances in a magazine gun; better spend a few dollars for ammunition and be on the safe side. It is a very easy thing to lose an eye or a hand, but it cannot be replaced again. When carrying two guns I carry my Sharps in a scabbard slung under my right leg, and my Winchester across the pommel of the saddle.

We finally got started about 10 o'clock; and a beautiful day it was, just warm enough to comfortable, the sun shining brightly, and not a single cloud in the sky, one even tinted vast dome of light blue. "Good luck to you!" shouted Capt. Bates, of the First Infanty, as we rode away. He was a keen sportsman as well as a genial companion, and has since crossed over the dark and silent river that has few terrors for the good. We found a fair road for about ten miles; then we took the trail, Brown first, then the two pack mules, Clark next, and I brought up the rear. Clark was jubilant and put in the time singing and trying to get on a wager with me that he would kill the first deer. Fourteen miles from the post we came in sight of some pine timber, as fine as I have ever seen. We rode three miles further—and very rough riding it was—when I noticed something moving about in a deep ravine to my right. It only required a second look to resolve that something into a deer. A low hist to Rose, who stopped in her tracks and never moved a muscle, and I was off, Winchester in hand. The deer was below me and between three and four hundred yards away. I kept well up on the side of the ravine and worked my way slowly along, now slipping from bush to bush, now crawling along on all-fours where there was no underbrush, keeping an eye on the deer all the while.

Here we are at last behind a small tree and within a hundred and fifty yards of the deer, which, all unconscious of his danger, is quietly feeding. The Winchester is quickly brought up—and what a thrill of expectation passes through the body of the true sportsman when he commences to sight—a coarse sight is taken, and crash goes the bullet. Too high, for the dust rises above the deer, which is looking wildly around for the occasion of all this disturbance. A finer sight next time. Too low, and the deer having caught sight of the smoke is off up the side of the ravine. The rifle speaks again, but on goes the deer. Once more we look through the sights, for the gun has never left our shoulder since the first shot, and after aiming carefully, let her go. One mighty bound, two or three short leaps, and the deer totters and falls. The game is ours at last. I crossed over to where it lay and found a fine buck. I had just finished cutting his throat when Clark came up, or rather down, on a run. "By Jove! you did it in fine shape. I thought by the way you were shooting that there was a whole drove of them, and thought I might get a shot," he said. "Let me dress him." And whipping out his knife he had him dressed in about three minutes. "Any fool can kill a deer, but it takes a wise man to dress one. Well, here, take my gun, and I will carry him up to the trail;" and with no exertion at all he threw the deer on his back and started up the hill. Brown had come back with the mules, and we tied the deer on top of one of the packs and started on.

"This is the Pinery," said Brown, as we rode in sight of a soldier's camp two hours later, "and that is the camp of Company C of the First Infantry. They are out here getting out logs and running a sawmill, and they seem to like it first-rate." As we rode by the camp, a fine-looking sergeant asked us if we had come out to hunt. "If you have, you have struck the right spot," he said, "I have been all over the West and I never saw deer so plenty and tame as they are here. I am in charge of the choppers, and we were felling a big pine up on the side of the mountain a few days ago when five deer came up within ten rods of us and watched us until the tree fell, when they broke and ran."

We rode on about three miles and came to Brown's camp. It consisted of a single wall tent, pitched on a small flat spot on the hillside, within 40ft. of a spring of the best water I ever tasted in the Southwest. The view was grand, and a finer spot for a camp I had never seen. I had brought my own wall tent, and Clark and I proceeded to pitch it.

I know there are hundreds of readers of FOREST AND STREAM who can give me any number of points about camping out and camping equipage; but the number of campers increases with every year, and for their benefit I am going to describe my tent and offer a few suggestions. When I first came to Texas I bought an ordinary wall tent, with a 3ft. wall and two flies, all made of 12oz. ducking. The tent was 7x9ft. One of the flies we used over the tent; the other was used as an awning in front. Never buy an A-tent if you can afford to get a wall. The wall will be more comfortable, more roomy, cooler in summer, drier in wet weather, and better in every respect. To put my poles in shape to pack, I had both of the uprights and the ridge pole sawed apart in the center. In one piece I had a blacksmith bore a hole and drive in an iron pin 6in., the pin being a foot long and just under a half inch in diameter. In the other part I had a hole bored and a piece of gas pipe 6in. long driven in, thus forming a socket for the iron pin of the other part. Then I had a heavy iron ferrule put on each part of the uprights, but none on the ridge pole. My tent pins were of iron, six 14in. pins for the bottom and six 2ft. pins for the wall guys. Wooden pins are a delusion and a snare; it is not a pleasant thing to have them break one after the other when you are trying to drive them in the rocky ground, while the heavens are the color of an ink bottle and the first big drops are splashing down. Then, again, a wooden pin is twice as hard as an iron one to pull up, which counts when you change camp often. I had made another shelter or dog tent, which, I think, was much superior to the shelter tent used by the U. S. Cavalry. To pitch a soldier's shelter tent you must have a ridge pole or a rope to support the center. I bought a piece of canvas, (8oz.) 8ft. long and 6ft. wide, and sewed an iron ring in each corner, in each ring I tied a piece of rope 2ft. long. I then had two iron pins 24in. long and two 16in. long made, with a ring on top of each one. To pitch the tent, drive pins the proper distance apart, long ones at head, short ones at foot; tie canvas to them, draw tight and ditch, and there you are. It is a simple thing to pitch a tent properly, but few can do it. Spread tent on ground, draw out corners, put in the ridge pole and and put the uprights in place, then drive the center pin in front and put both loops over it, then drive the corner pins, stretching the tent tight before each one. Then let one man crawl in under tent and raise the near upright, the other one stay out in front and raise the front one, and presto! the tent is pitched, though the wind be blowing a gale.

We pitched our tent, and after supper I tried to draw Brown out in regard to himself, but he might have posed for the model silent hunter. He said he had fought under Houston in Texas, and his life had been a roving one. I asked him if he did not feel sorry that the buffalo were nearly all gone, but he said no, that the cattle would have driven them from their feeding grounds, and that it was better to kill them than have them starve to death. "I have seen hundreds of thousands of them in my time and have killed thousands of them for their skins, and I would do it again if I had a chance, but the most reckless killing that I ever saw done was by sportsmen from the East. They would not even take off the skins. I can tell you one thing about the buffalo, that is that one of them would destroy more pasture than four cows. Come, let us hang up that deer, and if Mr. Cougar finds it he will eat his fill and drag the rest off and bury it, then he will be your meat."

We hung the deer on a small tree in a ravine about sixty rods from camp. Brown's idea was to let the cougar drag the deer and cover it up; he would trail the beast to where he had hid it, we would then take turns in watching the spot and would stand a fair show of getting his highness.

I was up bright and early next morning and visited the deer, but it had not been touched. Clark went out and killed two deer in the forenoon and I laid around camp all day and read in Emerson's "Essays" and Whitman's "Leaves of Grass." "What do you do with all your venison?" I asked Brown. "I sell the forequarters to the Mexicans at Fort Davis; the hindquarters I smoke and dry and sell in San Antonio; there is a good demand for them."

I took my Winchester in the evening and traveled around for cougar signs, but I only found a few tracks several days old near a small stream a mile from camp.

The next morning we were up bright and early. Clark intended to hunt and I wanted to visit a high peak four miles away. Capt. Livermore, U.S. Engineers, and his men were said to be the only party that had ever been on top of it. I had a hard climb, but finally reached the top and was amply repaid, for I had one of the finest views that I have ever seen. Mt. Quitman, over eighty miles away, looked as if it was not thirty. I had a good field glass but it seemed to me that I could see it almost as distinctly with my naked eye. On my way back I ran across a coyote. I had nothing but a Colts army pistol, and he was fully 150yds. away, but I gave him a few shots which increased his pace wonderfully. They are so sneaking that I always give them a shot, no matter how far away they may be.

Clark came limping into camp about an hour after me, his clothes were all torn and bloody and his face all cut and scratched. "What the nation have you been doing?" I said to him. "I shot at a deer's head over on the other side of the mountain and as he fell I supposed I had killed him; but when I got to him he was trying to get up. Instead of shooting him again I caught him by the hind leg, like a fool, and was trying to hold him until I got a chance to cut his throat. My grabbing him seemed to be just the stimulant the thing needed, for he gave me a blow that made me see stars, and then he started down the mountain with me clinging to him. First I was on top then the deer; then we would both be on the ground at the same time; sometimes we got so tangled up that there seemed to be three or four deer and men mixed together. I hung on to that fellow until I lost the last bit of breath that I had, and then I was forced to let him go. I weigh 190lbs. and am called a strong man. I would have laughed at any one if they had told me that I could not hold down a badly wounded deer, but I have changed my mind."

During the night I was awakened by hearing some strange noise, and stepped out of the tent to learn what it was. I could find nothing, but if I shall live to be 100 years old the beauty of that night will not fade from my memory. Not a breath of air was stirring, and it was light enough to read a newspaper, while that light-blue dome overhead was so thickly studded with stars tha they seemed to crowd each other. Not a sound broke the silence of the midnight air, and as I stood there and drank in the beauty of the quiet scene those superb lines of "Byron's Siege of Corinth" came running through my mind:

> 'Tis midnight on the mountains brown;
> The cold round moon shines deeply down,
> Blue roll the waters, blue the sky
> Spreads like an ocean hung on high,
> Bespangled with those isles of light,
> So mildly spiritually bright.
> Who ever gazed upon them shining
> And turned to earth without repining,
> Nor wished for wings to flee away
> And mix with their eternal ray?

Who is there with a spark of real manhood in his breast that does not like to camp in the woods and enjoy nature in all her moods? If you wish to know her thoroughly you must get close to her. I recollect one time when I was hunting in Arizona, not far from the San Carlos reservation, with that wily and savage chief Bonita. We had succeeded in reaching the top of a high mountain after a stiff climb, and a scene of remarkable beauty lay spread before us. The swift running, winding Gila River flowed almost at our feet, and its course could be traced for miles, though we lost sight of the stream itself, by the green cottonwoods that lined its banks. The valley below us was filled with bright-colored flowers, and the soft June breeze wafted their perfume to us; and there came, too, the drowsy hum of thousands of bees and insects feeding on them. Bonita looked for a moment and then said, "Me like it." This shows that a beautiful landscape impresses the savage as well as the civilized being.

I hunted but little, though Clark and Brown were out every day, Clark after deer, Brown looking for cougar

signs. I preferred to lie around camp and dream and read. I could lie under a big pine near our camp and count fourteen distinct ranges of mountains.

"Boys," said Brown to us one morning, "it is a week to-day since you came here, Clark has killed so many deer that I must pack them in to Ft. Davis, but I would be glad to have you stay with me all winter if you can."

I had despaired of getting a shot at a cougar, and Clark said he was tired hunting, so we concluded to go next day. I wanted to go back by way of the road, and Brown readily consented. We made an early start, as we intended to camp that night at an abandoned stage station, about half way to Ft. Davis, on the El Paso road. Clark stopped and looked back at our camp, just before a turn in the road hid it from sight for the last time, and spoke thus: "Will, we have had a week of perfect happiness. I think that an annual camp and hunt in the wilderness is just the thing that our overworked professional and business men need. Let them camp out three or four weeks every year and forget business and everything, even the days of the week. It is just the medicine that they need."

We rode up to the deserted stage station about five o'clock in the evening and camped. Brown set to work to cook supper, Clark went to sketching, and I took up a camp kettle and started for a spring about twenty rods away for some water, picking up my Winchester as I passed where it lay. I had quite a steep little hill to climb before I came in sight of the spring, which lay in a little ravine directly in front of me when I reached the top. I looked down at the spring, and there, lapping up water, not more than 50yds. away, was a big cougar. He looked to me to be about 20ft. long. My heart jumped up in my throat and thumped like a trip hammer; and I dropped the camp kettle with a bang, which attracted the attention of the cougar. When he saw me, his ears went back and he gave a low growl, and crouched closer to the ground just like a cat, but he showed no disposition to run, looking at me as much as to say, what are you going to do about it? I had begun to get my senses again, and brought up my gun to give him a shot, but it was strange how that front sight would bob around. First it would strike the ground about 6ft. this side of the game, then it would give a bound and be 2ft. over him. Finally I clenched my teeth, got a kind of a sight on his shoulder, and let her go. I will always believe that I shut both eyes when I pulled the trigger. The cougar jumped up in the air about 10ft.—it looked as high as that to me anyhow—and commenced to claw and bite the ground when he came down. I thought I had only wounded him, and shot twice more, but I must have missed, for we only found one bullet hole. Brown and Clark both came running up to where I was, and after his highness ceased to struggle, we went down to where he lay. He was very poor, and was literally covered with old scars; several of his teeth were missing, and he must have been a veteran. We stretched him out as he lay and measured him. It was just 8ft. from the tip of his nose to the end of his tail; his hair was much lighter in color than that on the various pelts I had seen. Brown said this was because he was very old. Clark stripped his skin off, and the next day we rode into Fort Davis well satisfied with our week's sport.

VERITAS.

DUCK SHOOTING ON THE CHESAPEAKE

THE duck shooting was poor everywhere this fall, as you probably know; but when an invitation came from a friend in Delaware to come down and go with him to his shooting shore on the Chesapeake, I could not resist. The eve of Monday, Nov. 21, found me in the town of N., some twelve miles below Wilmington. What a pleasure there was in the preparations made that night. My host's three daughters busily and carefully filled the baskets and boxes with good things of their own putting up; and how the fire did roar as it cooked the meat sufficiently to eat with a bare heating over down at the shanty. Mr. W., his nephew A. and myself meanwhile loaded shells, and plenty of them. It was really useless work, but more anon.

Something unforeseen detained us a little next morning, but we were off in good time, old Steve Jones, the darky, having preceded us fully an hour with a wagon containing the guns and boards with which to fix one of the blinds. Down past Elkton on the P. W. & B. R. R., past Chesapeake City, across the canal, over the Bahamia, an inlet from the Chesapeake; still on, until at 3 o'clock I jumped out from under the buffalo robe, which was tightly bundled about me, to open the gate of the lane which leads up to the farmhouse in which lived the tenant. We only stayed long enough at the house to get some water and the blankets, keeping right on across a large field which separated us from the shanty. This is a board structure 15x30ft. and 20ft. high. It contains a large bunk, 4ft. from the floor, stretching the width of the house, and 7ft. wide, a large stove, table, cupboard, chairs, and really all the necessaries of a well-regulated shooting box. A line of trees stretches along the shore, which shelters the house at the back and sides. The icy water ran some 50ft. from the door, in its course to the sea, for we were just at the mouth of Elk River as it empties into the bay, and fifteen miles from Havre de Grace in a straight line across the flats and over Turkey Point.

Having reached our goal and carried the necessary articles, A. and I hustled, as the Westerners say, around for driftwood, of which there was an abundance on the shore. A red hot fire was soon at work taking the chill off the room, for it was very cold then, if you remember that cold snap. Catching up whatever was most convenient we fell to with a hearty appetite gained by the long ride. Darkness began to fall before we knew it. So quickly loading the bier—I don't know what else to call it—with decoys, we made three trips of 100yds. to an adjacent point, where we deposited them. Then the boat was shoved off, and with a lantern, for it was then dark, the wooden enticers were so arranged as to look most natural, the furthest being 40yds. from the blind. We walked around in the marsh for a while after supper, having the farmer's dog, but the coons were scarce, it being, perhaps, too cold for them. Riding makes one sleepy, so in preparation for next day I was early abunk. Old Steve slept on a little place at the end and tried to keep me awake by repeating a lot of superstitious tales such as fill most negroes' heads. He had been a slave and worked for a while aboard ship during the war, so many of his tales were really of interest.

I awoke at 3 A. M. and jumped up as if I were shot, turned up the light, lit the fire, meanwhile calling to the rest to get up for the daylight shooting. They, sensible ones they were, lay still, telling me it would not be daylight for hours. Nevertheless I made the coffee, cut bread, got out the meat and had everything ready. Steve, the kind old fellow, got up to keep me company. The coffee boiled, I put it aside. The fire burned low, I replenished it. I got tired talking, so did Mr. Jones. The door grew weary with my incessant openings looking for dawn, so at last in sheer despair I threw myself down on the blankets and waited to see if it was going to be a day of darkness. Presently some one said, "It's about time you were thinking of getting up." I had fallen asleep. It was nearly 7 o'clock and dawn was fast coming on. New coffee had been prepared, the table reset, and nothing prevented us from eating. This I did, but soon left for the blind, to get rid of the question, "What time did you say the sun got up?"

A. soon followed me, and with his advent came a bunch of blackhead ducks. The blind held two, I watching up stream and he down. My "mark coming down" put him on the lookout, and just as the ducks were about to make a beautiful dart into the decoys, I having let them pass me on purpose, A. blazed away, so filling the air with smoke that I could not see to shoot. Two fell, but we only got one. The other having made a dive, came up away out. As daylight came on A. gave place to Mr. W., who made a very pretty shot with a wire cartridge, knocking two out of a bunch fully 80yds. off.

Hundreds passed over our heads on the way to the feeding grounds in the flats by Havre de Grace, where an incessant boom was kept up by the market gunners from their sink-boxes. From these they are only allowed to shoot on Mondays, Wednesdays and Fridays upon paying a license of forty dollars. The boxes are in the shape of a coffin, perfectly flat in the water, and are kept from sinking by projecting boards, these being held flat on the water by iron decoys. Around the box are from fifty to one hundred other decoys. I was told that in the early season one of these boxes, which must be taken in half an hour after sundown, and must not be put out before 3 A. M., was rented for $300. The hunters kill a hundred or two hundred some days.

To follow a right calculation the ducks should have been driven out of the flats into the river, but the calculation was out of joint, as the Keely motor seems to be. We were successful in killing one cripple after rowing about a mile for him.

Thanksgiving was rainy and a fog hung over us most of the day. I went out into the other blind a mile down shore, but it was chilly and most disagreeable. No game coming, I started to whittle, a favorite amusement, but was no sooner under way when along came a beautiful shot, for which I was totally unprepared. I put aside my knife and started again to watch. I had one fine shot. It is sad, but true, I missed. I do not mean to infer I had not established a precedent. Later, along came Mr. W. We sat watching a bunch feeding just out of gunshot for over an hour. Have you ever watched and waited for ducks to swim in near enough to be shot at? No doubt you have, and perhaps I strike a chord of sympathy when I say that. Waiting as I did for over an hour, cheered at times by their coming in a little, and scarcely daring to breathe or wink for fear of being seen or heard, patience at last gave way. I ran down to the edge of the water just as they all dove, and as they rose I fired one barrel at them in the water, and the other just as they got up. Water is very deceptive, and I must wrongly have judged the killing distance of my gun, for the shot struck all around, but stopped none in their swift flight. Thoroughly disgusted I went back to the shanty, warmed up, ate up what was lying around handy, and receiving with the warmth new vim, I went back to the blind.

It is a wee bit lonesome sitting cramped up hour after hour as I did, from 12 until 4, the rain meanwhile coming down slowly but surely. Luck of A. M. and P. M. ditto. Friday would be shooting day on the flats and there would be ducks in the river, so with this thought we consoled ourselves, and without any narcotic we were soon dreaming.

The day dawned, or rather just came, a trifle late, having had great difficulty in finding its way through the dense fog. Standing looking out into the grayish mist, a sound like that of thunder came upon us. Guess what it was. Nothing less than thousands, yes thousands, of ducks disturbed by something as they were bedded in the middle of the river. How I did wish for a shot into the midst of them. I went back of the house for an hour or so and shot a couple of gray squirrels, but seeing the sun trying hard to get out I returned. As I came down the shore I could see away out into the river, and in places the water was just black with ducks. None were flying, however, and so we hitched up and drove back home with the intention of leaving on Tuesday for the Gunpowder River, fifteen miles north of Baltimore.

Tuesday came around in the usual rotation of days, and boarding a train on the B. & O. we got off at B., where Miss D. met us. How warm the fire did feel in the parlor of the old Southern home, and what a welcome sound was the tinkle of the supper bell when we were thoroughly warmed. My father in youth had gone to school with Mr. D., and although I had never seen them, I really felt right at home as soon as I crossed his threshold. The knowledge of true hospitality and the art of making one at home seems to be breathed in the Southern air.

The evening slipped away in telling the whereabouts of old friends and in examining the old flint-locks used by an ancestor, or in trying to get a toot out of the bugle which would call the hounds together. Why my eyelids grew heavy in the warm room, and a feeling of sleepiness came over me I can hardly tell.

We arose with the dawn, but waited quite a while, even knowing we had a five-mile drive down to the ducking point on the river. We were none too late in the day, but a little too late in the season, for upon reaching the river found it was partly frozen over. Let me explain the ground. A point one-quarter of a mile long juts out into the water, and at high tide it is almost submerged in the middle, while at the end old oak trees are growing. Where the water overflows is built a sort of stone causeway of numerous stepping stones thrown there by the wagon load. On the shore side are three blinds, 100ft. apart, and on the further side three, one being at the end of the point. The blinds are 5ft. high and hold two men. There is a shelf for each gun, a place to put cartridges so as to be handy, a seat, and the whole wooden box being covered on the outside with marsh grass rising two or three inches above the top. To hide the blinds from ducks coming up the river a fence of brush stretches along, which can also be utilized as a toling blind. Toling for ducks is done this way: A bunch may be feeding a couple of hundred yards out from shore; and having a bright little dog, you make him play up and down before the blind, throwing sticks and stones for him to run after, or if he be well trained he will play by himself. Ducks are very curious, and with heads erect will come in to see what is going on. When near enough, let them have both barrels, and if in a big bunch you don't knock over a dozen, your sight, gun or load is defective. I think I understood Mr. D. to say he had killed thirty in a shot that way. He got eleven at a shot the day before we arrived.

The big Chesapeake Bay dogs were glad to see us. After getting well warmed through, and changing my black coat and hat for light colored ones, we went down to see if we could get a few shots. Some ducks came at intervals, coming quite low, but when nearing the bar they would rise and go over us like a flash. Shooting had to be done when they were just overhead, it being then the nearest shot and then about 150ft. high. Passing us they would sail down into the cove, made by the bar, which covers twenty-five acres. The building of the P. W. & B. bridge, which is only a mile below, started the filling up of the cove which used to be 10ft. deep and is now only five. Canvasbacks and redheads were then as plentiful as the mallards and teal of to-day. I had some good sport. I rode back to Green Oaks on horseback that night while the others rode in the carriage. Next day when we reached the Mount, as the shore is called, the river was frozen over tight, which of course prevented any shooting. We started a bunch of quail on the point and gave them a barrel of No. 2 and BB, with no effect. Still persevering I tried it Friday from 11:30 A. M. until 2 P. M., but the ice still staid. That day after much coaxing I got Camp, the old dog, to come part way with me to the blind, but when he discovered the direction I was taking, he turned tail and went back. Those at the house saw him and teased me a good deal about it. Saturday I sat in the blind from 8:30 A. M. until 3:30 P. M., waiting for the ice to break, with only Camp for company. I knocked one duck out of a bunch all the way to the water, when he again took flight. Camp seeing him drop cleared the side of the blind in a bound, and was down by the side of the ice when the duck went on.

They say "all comes to him who waits," but I have lost faith in that saying, for I truly think I did a deal of waiting. I only got one duck Saturday, and that I bought, although I did not tell them all down there that. I could not go up to the house again without anything to show, so I bought the duck from a fellow going by. At 4 P. M. I had dinner and drove to meet Mr. D. at the station, he having gone to Baltimore in the morning. He took the team, and saying good-by I jumped on the train he had come out on, bound north. I did not go empty-handed, for two pair of ducks having been given me.

Earlier in the season there is no better spot for shooting, as one can place decoys just inside the cove, and instead of rising to go overhead they dart from away outside, giving one a magnificent shot as they pass the opening. Memberships in a club across the river cost $25. The last time my friend Mr. W. was down there it was earlier in the season and in two days they killed forty-two pair. Mr. D. himself has killed as many as seventy-five pair in a day. That is shooting and one has to be quick as a flash.

Sunday morning I was again in the town of N., but only until 9:30, when having put some provisions in the carriage we were off again for Elk River, reaching there about 3 P. M.

I disliked to return to New York with no big story to tell, so thought I would give the fates a chance to cut off the lives of some dozen pair of ducks, and place the deed to my credit. In the evening we put out the decoys, and after eating a light supper of beefsteak, several slices of bread, half a dozen rolls, some sweet pickle, pumpkin pie, cranberry jelly and cups of tea, I retired. About 1 o'clock I opened the door and looked out. All was dark, and the rain was trickling down off the roof on to my neck, which sent a cold chill over me. I climbed back to bed and tried to sleep, but the falling rain worried me until the saying "Rain before seven clear before eleven" came into my head; and then being comforted, I slept. The calendar says the sun should rise at 7:09 the 8th of December, but it must have had a previous engagement, for it did not appear. However, I did, and after some vain and patient waiting a breeze came and it cleared up. Guns boomed incessantly over the flats until the breeze came, and then it suddenly ceased, the hunters being driven out of the sinkboxes by the high waves. I moved up to Lady Finger Point, and there waited under blind cover for some redheads to swim closer. I tried experiments to bring them nearer, such as flying a white handkerchief and other innocent amusements, but (I use the word but a good deal) the wind won the day for the ducks by driving out the market gunner and thus allowing them to feed in the flats. To speak plainly I was provoked at my bad luck, so we returned that day, and I to New York the following. The 150 odd miles I drove were of themselves a pleasure, besides the experience. If you want to have a good time, know the Ws. as I do and visit them.

G. F. B.

OREGON CHINESE PHEASANTS.—About six years ago the experiment of stocking Oregon with Chinese pheasants was tried. A number of these beautiful birds were imported from China, and they were turned out in Lane county. At the same time a law was passed protecting foreign game for a term of ten years. The success of the venture now appears to be unprecedented. The hen birds raise two big broods every year and never lose a chick. The result has been that the birds have increased to marvelous numbers. It is said that there are thousands of them in Willamette valley, and that they destroy so much wheat that the farmers will attempt to have the protective law repealed this winter. The farmers say that one pheasant will destroy more wheat than four lively wild geese.—*Virginia City (Nev.) Chronicle.*

PELEG'S EXPERIENCES.

I.—HE MANAGES TO BECOME THE OWNER OF A GUN.

THEY were sitting around the camp-fire after supper, rubbing up their guns preparatory for the morrow's hunt. A skein of Indian summer was woven into the weather web just before the close of the open quail season, and it had lured them out to Grinder's sugar camp, where they had pitched their tent and were having a sort of half-holiday hunt. Ere the tent pegs were driven, their boyhood nicknames were spoken, Peleg, Jap and Sang—names that some if not all of them had not answered to for years. Just how these old names happened to come up, I am sure I do not know. They had better ones, at least ones they preferred answering to at their homes, engaged in the serious business of life, but out there in Grinder's woods the old names claimed remembrance and got it.

It was the evening of their second day out, and as nice a bunch of quail was hung to the limb of a little beech close by as one would wish to see. Of course they had famous appetites and equally as famous broiled quail, for I do think that in the matter of broiling game by the camp-fire Jap was hard to beat. Take it all in all, they were a trio of as well-contented mortals as could have been found in a day's journey. Why shouldn't they have been? It was not every day nor every week, nor, for that matter, every month when they could leave their places of business and go to Grinder's woods and camp out for three or four days. No indeed! Their outings were usually limited to half days in the well-hunted fields close to town, and so it is no wonder that on this occasion they were a trio of happy mortals. I am sure they would have been even with badly broiled birds, let alone the famous ones of Jap's broiling.

"Drat the dog! Durn his blamed picter!"

"Why, what's the matter, Peleg?" Jap asked.

"O, this fool dog," was the answer. "He's gone and licked my cigar—licked it all over. He always was the blamedest fool to lick. Get out!" And old Jab, a sore-eyed cross between a mongrel setter and a mongrel pointer, tucked his tail between his legs and retired in disgrace to his master's side of the tent.

Peleg was a sort of model man, or at least had been. He had no vices worth mentioning, unless a fondness for dog and gun be classed as such. He was strictly temperate, both at home and abroad; he never used language "more forcible than elegant," except when he went hunting, and then confined himself to such mild and meaningless expletives as "drat" and "durn" and the like on great provocation. He couldn't chew, and smoked only when hunting, and was so inexpert with the weed that he was unable to keep the mildest cigar between his lips or teeth, whichever it is the smoker does, above four consecutive puffs at a time. After the third or fourth puff he invariably took his cigar between the two middle fingers of his left hand, and more than once have I seen him inadvertently and awkwardly stick the ashy and firy end into his mouth, which act was followed by a spitting and sputtering that can better be imagined than described. Being engaged on his gun, Peleg had between puffs laid his cigar on the log beside him, and Jab not having been brought up to cigars and presuming on the good terms usually existing between himself and master, had licked the cigar all over and thereby brought down upon him the foregoing anathemas. Had the cigar been the nice tidbit the poor dog no doubt imagined it to be, and had he swallowed it down, their covenant of affection would have run on unbroken. But to lick his master's cigar—lick it all over with his dog's tongue—that was another thing.

As the humiliated dog disappeared under the tent, Sang, looking up from his work, asked, "How did you come by that ugly dog anyway, Peleg?"

Now Peleg is one of the tenderest of hearted men and a very loving, and Sang's question at once aroused his sympathy for his dog. His anger was momentary, and he at once replied, "Why, I don't think he is so very ugly," and after a moment's hesitation he added, "Why, I've seen just lots of dogs that were a great deal uglier than Jab. Come here, poor fellow!"

And with that Jab bounded out from his place of banishment, scattering more joy than a dozen undisgraced dogs could have done, while Peleg, who always drank freely after smoking, went to the water-jug and swallowed a full pint.

"No, I don't think he is so very ugly, and then he is such a good hunter."

"Yes, for rabbits and cats," said Sang ironically.

Now Jab would run rabbits, that is, when they provoked him to it, and that very day had started a cat in a bramble thicket, though I must say he was not to blame for that, for the cat was where it ought not to have been, and pretending great fright at the dog, had, after making a great ado, spitting and flaring its tail, run like a streak for the nearest house. But it answered Sang's purpose to make the folly of the cat serve as an excuse for maligning the dog. After a moment he continued:

"How did you come by that dog, anyhow?"

By this time the guns were in order for the next day, and the fire, on which a great pile of brush and sticks and poplar and hickory bark had been thrown, was sending its great red, swirling tongue of flame nearly to the tops of the maples, while the black shadows from their grim and sturdy trunks lay in every direction from the fire, like spokes from the blazing center of a great wheel. Peleg was one of your reminiscent men, and it seldom, at any time or place, required much persuasion to launch him into a story, but before a genial camp-fire the slightest touch was enough to set him going. Sang's question had been asked, and it was not for Peleg to stop to inquire whether it was asked in earnest or not.

"You see," he began, "I lived till I was blamed near forty before I took it."

"Took what?" queried Jap.

"Why, the hunting fever, and I have had it bad ever since. I don't know whatever could have brought it on, for as I now remember I didn't care much for a gun when a boy, and still less after I grew up to be a man. I've tried to remember what particular thing it was, what book or magazine article that set me a going."

"O, bother the book and magazine. Go on with the story," put in Sang, who is not much of a book man.

"Very well, then," answered the story teller. "The first I remember I took a notion to buy a gun. It's strange whatever possessed me! I'm sure I can't imagine whatever put it into my head."

"Never mind your head!" said the irrepressible Sang.

"I was about forty then," Peleg went on, "and Nancy and I had been married going on sixteen years, and during all that time there had never been a gun in the house, and I don't believe I had fired one off. Just how to get one introduced was more than I could see, for I do suppose there never was a woman who is more set against having what she thinks are useless things around a house than Nancy."

"So I've heard," said Sang.

"Go on," Jap said gently to Peleg.

"I thought over the matter for some time," continued he, "and even tried to forget it, and then to reason myself out of it, but the more I tried to forget and to reason, the more I wanted the gun. It was real downright curious, wasn't it?" said the story teller, addressing Jap, to which the latter answered, "Yes, very."

"One day, however, I hit on a plan which I thought would work, and so in a careless-like way I said, 'Nancy, I believe I'll buy a gun.' 'A gun,' says she. 'Why, Mordecai Jones, are you crazy?' 'No,' I answered without blushing. 'And the last year's coal bill unpaid,' she went on as if not noticing my little 'No,' 'and me a-wearing a worked overdress, and you too poor to buy a decent hat, and the stair carpet in rags, and—and—gracious me!' and down she sat at the door step and began fanning herself with her hat. But I was prepared for her. I had anticipated something of the sort, and so I said, 'The tramps are getting a little too numerous for me in this country. It was only the other night our neighbor Stryker's house was broken into, and some night it will be our turn, and like as not the last one of us will be killed, for there isn't as much as a popgun on the whole place. I don't believe it is safe.' I had calculated the effect of that speech with tolerable exactness. If there is one thing my wife fears more than fire or mad dogs, it is the breaking in of burglars. For sixteen years she had personally seen to the fastening of the doors every night, and had carefully looked under every bed and peeked in every closet in search of a burglar before retiring, and notwithstanding she had never found one, she confidently expected one to turn up at every search. Sometimes, and especially of particularly cold and disagreeable nights, she would forget whether she had bolted a particular door or fastened down a certain window, and about the time I would get snug and warm between the blankets and be dropping off into a doze, she would begin to wonder whether she had bolted that particular door or fastened down that certain window, and it would always end by me going down-stairs to shiver with cold and knock my shins against the chair rockers and half wish that a burglar would get in just once for the sake of variety. It was no use to try to reason Nancy out of it when she got to doubting about a door or a window, as I sometimes tried to do. The more I reasoned the more she was certain she had forgotten, and when all other arguments failed she was sure to fall back on a feeling or a presentiment—something that I could not argue against—and the upshot was sure to be a tramp down-stairs. One night she wakened me up with a start, and told me that burglars were sawing at the parlor window. I listened, and sure enough there was the sound of a saw. 'What are we to do?' she exclaimed. 'If I only had a gun!' I said. 'No, but you have none,' she sorrowfully replied. Our burglar turned out to be a peach tree limb sawing back and forth in the wind against the house, but it was a good enough burglar for my purpose, and the more so as our neighbor Stryker's house had been so recently feloniously entered; therefore, when I backed my wish to have a gun by urging the propriety of having it as a defensive weapon against burglars, she saw its use at once, and agreed that if I would get one that wouldn't be dangerous and that wouldn't cost too much, it might be a handy thing to have in the house. The next day I bought this gun, and then for the first time in my life I wanted a dog. Now if there is one thing that Nancy dislikes more than—"

"O, bother Nancy," exclaimed Sang. "Let's go to bed." And with that he disappeared in the tent, and his comrades were not far behind him. Jab was curled up in his master's place, sleeping the sleep of the honest hunter, which place he exchanged for a comfortable one at his master's feet. The blazing brands flickered and wavered in the night outside; from afar came the "youp, youp" of farm dogs, and on the wings of the silent wind was borne the far distant crow of a dreaming cock; but our hunters, wearied with the day's tramp, saw not the light nor heard youp nor crow, but gently dozed off into a dreamless, restful sleep.

D. D. BANTA.

ADIRONDACK DEER HOUNDING.

Editor Forest and Stream:

The last two issues of your paper have been abusing Mr. Bowman and myself in reference to the proposed report of the Fishery Commission and our supposed views concerning deer hounding. As the last issue was sent to me marked, I suppose it calls for an answer. I should have imagined that if you had put your thinking cap on and sat down and thought right hard it might have occurred to you that one who had devoted as many years and as much time and work to the preservation and propagation of the game, birds and fish of our State as I have would most likely have opinions worthy of respect and probably as well founded as those of any editor, however brilliant. Under such a contingency you might have sought more carefully for the facts. These were simply, that when General Sherman read his very strong denunciation of deer hounding, Mr. Bowman inquired whether he thought it well to commit the Commission so decidedly on a subject about which men as well informed as ourselves and as honest in their desire to preserve the deer differed totally. Then I suggested further, whether if hounding were prohibited, visiting sportsmen would not be wholly deprived of killing deer, and whether one killed in that way was not more profitable to the residents of the Adirondacks than a dozen killed for food. Neither of us committed himself in the least as to the abstract proposition of the best protective statute on the subject. General Sherman seemed impressed with this latter view, but said that running deer with dogs when they were heavy with young was wrong. To this Mr. Bowman replied jocosely that the medical men advised gentle exercise during such periods. At this we all laughed, but your reporter seems to have taken the joke for the argument. For this he is probably not to blame; some people are by nature incapable of seeing jokes and when men report matters with which they are unfamiliar they often make the oddest mistakes. What I did object to very decidedly in the proposed report was the use of extreme language in certain connections, for instance, that of classing the guides and poachers together in these words, "the guides rather have fraternized with the law breakers." This I think too strong a statement. Some of them have, but I believe the great body of the Adirondack guides to be honest, honorable, law-abiding men. I have never found that abusing men who honestly differed with me in opinion was the best way of converting them from their errors. I make this confession subject to correction, for I know it is so contrary to the opinion and practice of the FOREST AND STREAM. To this and some other sweeping charges I desired a modification. But as to the hounding matter, if Gen. Sherman, who is as well informed as to its effects as any one, maintained his conclusions after thinking the matter over, I should probably not have objected. In my opinion the only sportsmanlike way of killing deer is still-hunting, although the most romantic is floating for them. But when it comes to turning them into profit there is nothing to compare with the visiting sportsman, who pays a hundred dollars for every shot and who never gets a shot without a hound to help him.

ROBERT BARNWELL ROOSEVELT.

THE TAKING OF CHATFIELD.

THE capture of the game butcher Chatfield was noticed in FOREST AND STREAM some time since, but the details of the occurrence have only just come to hand. Chatfield came into the Park as guide for the Stewart-Nevin party from the Sunlight Basin. He had previously been a guide for the Rev. W. S. Rainsford.

After Messrs. Stewart and Nevin had left, Chatfield went to the Superintendent and asked his permission to take his guns, traps, etc., through the Park to the Teton country, where he proposed to trap some live animals for the Zoological Gardens in Philadelphia. He was questioned as to his knowledge of the southern boundary of the Park, and, his answers not being satisfactory, was shown a map of the reservation, and had pointed out to him the features of the country that would enable him to know the south line of the Park. The location of Heart Lake and Mount Sheridan were particularly explained to him. He finally said that he understood perfectly the southern boundary of the Park, and would be careful not to hunt or trap anywhere near the line. He was given permission to take his outfit through, and started off, accompanied by one Bill Whitworth, a well-known Park hunter, and a woman, whom he called his wife.

A few days later, on the 2d of October, he was arrested by a scouting party from Camp Sheridan, near the western shore of Heart Lake, and between the lake and Mt. Sheridan, for killing an elk. The party, which was led by Ed. Wilson, scout, heard firing, and going in the direction of the shots, found Chatfield with a fresh scalp of an elk tied to his saddle, and a few yards further on found the carcass of the elk still warm. Chatfield acknowledged that he killed the elk, but pretended to believe that he was outside of the Park. He was brought in to the office of the Superintendent and having no defense, except that he did not think he was in the Park, was expelled, his hunting outfit and pony retained subject to the orders of the Interior Department.

In FOREST AND STREAM of Sept. 22, the Rev. Dr. Rainsford states that "Heart Lake is not anywhere near the center of the Yellowstone Park, but eight miles from its southern border." He does not say that the lake is not in the Park, but the language of the latter might be construed to mean that it is eight miles outside of the Park. The Montana papers in publishing an account of this affair state that Chatfield was arrested eight miles outside of the Park. They do not cite Dr. Rainsford as authority for the statement, but an obvious connection appears between the two statements. Heart Lake is of course in the Park.

A CHOICE GIFT.—The Batavia, N. Y., *Spirit of the Times* records: "This morning, by the courtesy of a member of the Batavia Club, we were accorded the privilege of inspecting the most beautiful specimen of the taxidermist's art ever exhibited in Batavia. It consists of the head and antlers of a gigantic bull moose, which when killed weighed 1,600lbs., and is one of the finest mounted game heads ever imported from Canada. It was purchased in that country by Mr. Edward Todd, of Owen Sound, Ontario, and his brother Henry of Batavia, and is intended as a present to Mr. Richard Willan of Darlington, England, brother-in-law of the Messrs. H. and E. Todd, who in the summer of 1886 made an extended visit to the States and Canada, and who during his sojourn in Batavia made many warm and genial friends, who gave him a fraternal and hearty welcome to American hospitality. In remembrance of his pleasant visit the brothers Todd will next week express to Mr. Willan in England this novel and remarkable present. The antlers measure over 3ft. 6in. from tip to tip, the head being mounted on a large shield. On the brow just below where the antlers protrude rests a massive silver inscription plate also in the form of a shield, 3½x4½in., suspended from the antlers by a silver chain, and bears the following inscription: 'Presented to Richard Willan of Darlington, England, by Henry Todd of Batavia, N. Y., and Edward Todd of Owen Sound, Ontario, Xmas, 1887.' The head will be securely boxed, and is to be forwarded to Mr. Willan from New York on Wednesday next by the White Star steamer Adriatic."

CHOICE OF GUNS.—Santa Rosa, Dec. 10.—In your issue of Dec. 1 a subscriber suggests a No. 10 bore with two sets of barrels, one set choke and the other cylinder, as an all round gun. I, like him, have used most all kinds of guns, and I have a 10-bore fitted as above which works quite satisfactorily, but if I had to choose over again I would have a 12-gauge, as a 10 is quite heavy for tramping after quail. For one who can afford two guns I would suggest a No. 12, 28in., 8lb.; left barrel modified choke, and the other cylinder, and a No. 10, 30in., 9lb., full choke, for ducks. Ducks are coming in fine here now, and quail, though scarce in the valley, are plenty in the hills and vineyards.—C. B. W.

A VIRGINIA EXPERIENCE.—For the benefit and consolation of the readers of FOREST AND STREAM who wanted to but couldn't get away for a hunt in Virginia this fall, I send a brief account of my experience there. From Nov. 12 to 17 inclusive I stayed at Samuel Burke's, about seven miles north of Burkeville, Nottaway county, right in the midst of game in plenty. The weather was frosty at night but oppressively warm all day, and very dry. Quail, though abundant, were hard to find, and men and dogs suffered from the heat. Bagged only thirty birds to a gun in five days. Rode right into a gang of wild turkeys with empty guns. (——!) Next day jumped a deer within 25yds., with No. 8 shot in both barrels. (——! ——!!) Oh, the poverty of the English language! Was at Petersburg from Nov. 18 to Dec. 15. Weather hotter and dryer than ever. Managed to stand six hunts of about five hours each, and bagged thirty-eight birds and a few hares. Ought to do that in two hunts. On the 9th and 13th inst. I gunned in Anderson Brown's battery (or sinkbox) on the James River, near City Point. Weather too warm and still, and nothing but broadbills flying. Killed twenty-four. Ducking has been poor since middle of November. Had enough, and came home. *Verbum sap.*—J. L. K. (Perth Amboy, N. J.).

NEW HAMPSHIRE TROUT LAW.

THE following extract from the laws of New Hampshire might profitably be adopted by other States. At the June session, 1887, the following amendment was made to the trout law: "It shall not be lawful at any season of the year for any person to take, catch, kill, or have in possession at any one time more than 10lbs. of the fish known as brook or speckled trout, nor shall any such be transported except in the possession of the owner thereof, under a penalty of $50 for the offense and $5 for every pound of brook or speckled trout so taken, caught, killed, in possession, or transported in excess of 10lbs. by any one person; and all such fish transported or in possession in violation of this section may be seized on complaint and shall be forfeited to the prosecutor. Any person having in his possession more than 10lbs. of such fish shall be deemed to have taken them in violation of the law."

The New Hampshire law forbids taking trout, salmon, bass, and other game fish "with any other device than in the ordinary way of angling with a single hook and line with bait, artificial fly or spoon." This clause forbids more than one fly on the leader, and our readers who contemplate angling in New Hampshire will do well to bear this in mind. We do not see the particular use in the restriction to a single hook, and in fact think it unwise, still it is the law, and those who violate it must be liable to the penalty, "not exceeding thirty dollars for each offense or by imprisonment not less than thirty days, or both." This is severe for using two hooks and it is doubtful if this clause will meet the views of anglers, in whose interest the law is made.

FISH PROTECTION IN OHIO.

THERE is no uncertain tone in the following letter from Hon. Emory D. Potter, of the Ohio Fish Commission, to the Toledo *Blade*. The venerable judge is on the warpath for illegal fishermen, and there is a true ring about his language that there is no mistaking. He says: "Since my appointment as one of the Fish and Game Commissioners of the State, my official acts have been the subject of much adverse criticism from various quarters, and in some of the journals that claim to be respectable. My oath of office was no meaningless paraphrase. I subscribed it with a full understanding of its obligations and of the responsibilities I took upon myself by that act; and with a determination to see that the fish and game laws of the State were enforced. Personally, I care nothing for these criticisms, and I am not in the habit of noticing newspaper comments on my official acts in the line of duty; but when a journal, claiming to be respectable, encourages resistance to the constituted authorities of the State, and counsels violation of its laws, as a law-abiding citizen I feel it my duty to enter my earnest protest against such teachings, and in behalf of a wholesome public sentiment to caution the people against the consequences of following such advice.

"The journal or the men who counsel resistance to the law are not the people's friends. Our liberties and our rights rest upon the maintenance of the law; and although these advocates of defiance would, perhaps, scorn to be called anarchists, the result of following just such teachings as they uphold has recently brought four men to the gallows, sent two to prison for life, and caused one to commit suicide to avoid the gallows. Beware, Mr. Journalist, how you put into the hands of the desperate a weapon that may be turned upon yourself, and lead to a flame that can only be extinguished by blood. Law breakers, under your indorsement, take courage to commit their thefts and murders.

"An unjust law is better kept than broken, and in this country no unjust law can long resist public opinion, upon which our government and laws are founded. If our fish and game laws are defective, take measures to have them modified or repealed. We all have a voice in the selection of our law makers, and, as in our system of government the majority must rule, it is the duty of the minority to submit and seek redress by constitutional means, and never by resistance.

"I am not sitting in judgment on the fish and game laws; I have no power to change or modify them; I have but one course to pursue, and that is to see that the laws are enforced, and this duty I am going to perform.

"The law makes it the duty of the fish and game wardens to pull up all nets found in forbidden waters. In a recent attempt to pull some contraband nets in Sandusky the owners of the nets were present, and declared, in language more forcible than polite, that they would nail the skull of the first man that laid hands on a net to the bow of their boat. The nets, however, were pulled without bloodshed, and no human skulls at present appear as figureheads upon any of the fishing boats on the shoals or bays of Lake Erie. Yet these men only needed the encouragement of a Fielden, or the stirring eloquence of a leading journalist, to carry their threats into execution.

"We have five fish and game commissioners in the State. For convenience the State has been divided into five districts, each commissioner being responsible for the management of the several counties in his district. Mine is composed of Lucas, Williams, Erie, Huron, Richland, Crawford, Seneca, Sandusky, Ottawa, Wood, Hancock, Knox, Morrow, Wyandotte, Fulton and Defiance. The State has expended in the neighborhood of $100,000 in propagating the lake whitefish, which can only be taken in nets, and distributing the smaller fishes in the waters in the interior of the State. The success of this system of propagation is evident from the fact that more whitefish, which is called the commercial fish, have been taken in nets this year than in any other year for the last ten years. To guard this interest, and that the benefits of the outlay shall be secured to all classes of citizens, the Legislature has deemed it wise to throw certain safeguards around this enterprise to prevent the undue destruction of commercial as well as the inland and less numerous class of fishes, and to maintain the supply of all. As this interest has been taken under the fostering care of the State; she has provided officers to see that these safeguards are enforced. She expects them to do their duty, and I am happy to say that at our late meeting of the commissioners at Dayton, each member manifested a determination to energetically enforce the laws as they are, and everything that I have done has been in accordance with that determination, and I have no doubt it will meet the approval of my brother commissioners. E. D. POTTER, Fish Commissioner."

TOLEDO, Nov. 29.

CANADIAN LOBSTERS.—Ottawa, Dec. 21.—Since the Hon. Mr. Foster, Minister of Marine and Fisheries, returned from Washington, he has examined the report of the lobster commission, which shows that the business is being overdone, and recommends an immediate remedy. As a result an order in council has been passed, which places the limit of the lobster fishery season in the Atlantic, Bay of Fundy, from Cape Canso westward, at the 1st of July, and in the waters of Nova Scotia, New Brunswick, Prince Edward Island and Quebec, including Anticosta and Magdalen Islands, at July 15. This shortens the length of the fishing season in Nova Scotia and Prince Edward Island by 35 days, and in other portions by 31 days.

THE EASTERN FIELD TRIALS.

JERSEY CITY, N.J., Dec. 16.—*Editor Forest and Stream:* Since my letter refusing to accept awards of the E. F. T. C. to my dog Nick of Naso I have had the pleasure of reading the report of the heats in the several sporting papers. Please permit me to call the attention of sportsmen to the same. One report says:

"At 4:07 Tammany and Nick of Naso were put down in a cornfield. Nick soon pointed, and Tammany, ranging down wind flushed the birds. The bevy was marked down and going up wind each dog got a separate point on the scattered birds. Two were flushed before Nick and a single bird in front of Tammany, which Whyte shot and the dog retrieved. In sedge grass Tammany pointed another bird, which was flushed by the spectators. Moving on Tammany pointed again in weeds and Nick backed well, Tammany was unsteady to shot. After a long cast Tammany made a point on a single bird and Nick backed. White flushed the bird, but did not shoot. A point was claimed soon after for Nick, but the dog did not establish his point, though several birds were flushed among the treetops. Tammany pointed a bird in the pines, the bird flushed wild and Tammany dropped to wing. At 4:40 the dogs were ordered up and the heat awarded to Tammany. Down 33m."

Now we find by this report that Nick pointed a bevy, which were flushed by Tammany. That Nick backed Tammany twice. That Tammany did not back during the race. That out of the four points made by Tammany once the birds were flushed by the spectators, and once the birds flushed wild. That Tammany was unsteady to shot. That Nick made three points, once he did not establish his point, though several birds were flushed among the trees, and that the dogs were down thirty-three minutes, with the heat awarded to Tammany.

Your own report reads: "Nick of Naso and Tammany were put down at 4:13. In pace, range and style Tammany had the advantage. In style on point they are nearly equal. Both pointed and backed in first-class style, and both behaved well, except Tammany was at one time a trifle unsteady to wing, Tammany got in some very good work among scattered birds, and won with something to spare in twenty-eight minutes. During the heat Tammany whirled on a gamy point, and a second later Nick also whirled and backed him in capital style, making a very pretty picture."

By this report we find that in pace, range and style Tammany had the advantage. That both in style on point nearly equal. Both pointed and backed in first-class style. That both dogs behaved well, except that at one time Tammany was a trifle unsteady. That Tammany won with something to spare in twenty-eight minutes.

Still a third report says: "Tammany—Nick of Naso.—At 4:16 they were started in a cornfield. Soon after starting Nick pointed a bevy in sedge grass in a bottom, and held his point well. Tammany flushed the bevy. It was marked down in sedge grass on top of a hill. Nick stopped to a flush on a single, then pointed, and Lewis flushed several more. At the same time Tammany, a few yards to the right, pointed a bird and it flushed wild; he retrieved the bird fairly well. Tammany stopped to a point near the judges' horses and two birds flushed a few yards to one side. Tammany stopped on a stylish point on a single marked down in an open field; Nick backed; both were steady to shot. Tammany soon pointed again on a bird; good point. A bevy was flushed by the judges and marked down in pines close by. Tammany pointed a single bird, and Nick, 40yds. to the rear, backed. Tammany was a little unsteady to wing. Soon after going on he pointed another bird well. The dogs were ordered up at 4:41, and Tammany won. Both were stylish. Tammany had better speed and range."

Now, we find by this report that Nick did not make a single mistake; that Tammany and flushes were very close together; that he did not back Nick once during the race, and that Tammany was a little unsteady to wing and that he must have won on speed and range.

I was not present at the trials, yet I have so much confidence in the speed and range of Nick of Naso, that I am willing to wager $500 that Nick of Naso can beat Tammany in from one to six hours' heat. The owner of Tammany to select time he wants to run. The trial to be managed by and under the auspices of the American Field Trials Club. That if Nick of Naso wins, the amount so won to be given to the American Kennel Club and by them to be awarded as special prizes to pointers at the spring shows.

If the owner of Tammany is not satisfied to have the A. F. T. Club manage it, then he can select any club that is a member of the American Kennel Club, excepting the clubs which he and I belong to. C. J. PESHALL.

[Knowing Mr. Peshall to be an earnest seeker after the bottom facts in any case in which he is intrusted, we append a full description of the heat in question as we saw it, in order that he may know upon what grounds we formed an opinion as to the relative merits of the dogs.]

The dogs were put down in a cornfield at 4:13 (Waterbury time) and worked through to the Worth place where we turned up a small branch. Nick crossed the branch and made a nice point and Tammany backed him in good style. Lewis went ahead and Nick drew on after him. Tammany then went in and flushed the bevy which was down wind from him. Following the birds to some open sedge on top of a hill, Nick flushed one and stopped to wing and then pointed and Lewis put up one or two more near him. Meantime Tam made a nice point to a single that White flushed to order but did not shoot at. One or two more then flushed just ahead of the dog and White killed one and Tammany retrieved it well. He then turned partly toward the horses and made a point to a brace that White put up to order. When sent on Tammany, while going at speed partly down wind, caught scent of a single and whirled on a beautiful point, and a second later Nick also whirled and backed him in elegant style. White put up the bird and scored a miss. The judges had marked down a bird near by and the handlers were ordered to work their dogs in that direction, and nearly every foot of the ground was tramped over before the bird was found. Finally Tammany got wind of it and made a point to the bird that White declared flushed from under a chip. A little further on Nick made a nice point but no bird was found. Soon after the spectators flushed a bevy that settled in some pines and the dogs were ordered in that direction. Tammany got there first and made a nice point to a single and was backed by Nick in good style. White put up the bird and Tammany was a trifle unsteady to wing. A short distance further on Tammany had another one fast that flushed as White came up and then several others went. This ended the heat in favor of Tammany with something to spare according to our idea of field trial work, to say nothing of his superiority in pace, range and style of going.

FOX-TERRIER CLUB STAKES.

Editor Forest and Stream:

Attention is called to the following stakes, opened by the American Fox-Terrier Club:

The new rule of the Kennel Club, compelling registration in the stud book, involves an outlay of 50 cents. The Fox-Terrier Club indorses the same fully, but will take upon itself the expense of such registration in the case of any entries to the following stakes where terriers have not been registered.

The Fox-Terrier Club has extended the time for the closing of entries from Jan. 1 to Feb. 1, 1888.

The Tomboy Stakes of 1888.—For a silver cup presented by the president of the American Fox-Terrier Club, added to a sweepstake of $5 each, p. p., for fox-terrier bitches whelped after Jan. 1, 1887, and to be competed for at one of the important spring shows in 1888. Entries close Feb. 1, 1888.

The Apollo Stakes of 1888.—For a silver cup presented by the secretary of the American Fox-Terrier Club, added to a sweepstake of $5, p. p., for fox-terrier dogs whelped after Jan. 1, 1887, and to be competed for at one of the important spring shows in 1887. Entries close Feb. 1, 1888.

The Home Bred Puppy Stakes.—For a silver cup presented by John E. Thayer, Esq., added to a sweepstake of $5, p. p., for best fox-terrier puppy whelped after April 1, 1887, and to be competed for at one of the important spring shows in 1888. Entries close Feb. 1, 1888.

The Fox-Terrier Club's Yankee Stakes.—An open sweepstake for litters of puppies born between March 1 of one year to March 1 of the succeeding year, at 50 cents each p.p. One or more of the litters to compete singly, irrespective of sex, 70 per cent. of the stake shall go to the winner, 20 to second and 10 to third. The entire number of the litters as born alive must be entered, otherwise the entry shall not be valid. Entries must be made prior to the puppies attaining the age of six weeks. The stake shall be judged for the class entered during the entire stake year at the first Fox-Terrier Club show following the closing of the stakes for such current year. No additional entrance fee shall be collected when the stake is competed for, provided the terrier competing shall be already entered in one of the regular classes of the show, otherwise the entrance fee shall be the same as that of the regular classes. A terrier entered in this stake having changed ownership shall be eligible to compete upon registry with the secretary of the original nominator's certificate, transferring the nomination to the new owner. The Yankee Stake renews itself from year to year without additional notice thereof having to be given by the secretary of the club.

During Mr. Fred Hoey's absence in Europe Mr. August Belmont, Jr., was appointed to act as secretary. AUGUST BELMONT, JR.

No. 36 WALL STREET, New York, Dec. 23.

ST. BERNARD PUPPY WEIGHTS.—Caumsett Kennels, Dec. 20.—Our rough-coated St. Bernard Charlemagne, whelped May 15, 1887 (Ilse—Duke of Leeds), weighs 98lbs. To me this seems an unusual weight for a puppy 7mos. old. The dog bids fair to rival in size his famous sire.—DAVID PETTIGREW.

SANDYCROFT BURLY.—Milford, Del., Dec. 21.—In giving the weight of Dr. J. P. Thompson's English mastiff dog Sandcroft Burly, I made a mistake of a month. He was eight months old when he weighed 143½lbs.—VICTOR M. HALDEMAN.

THE AMERICAN FIELD TRIALS.

[From a Special Reporter.]

THE DERBY.

THE competition in the Derby commenced Monday, Dec. 12, and ended Thursday, Dec. 15. The judges were Messrs. I. M. Brumby, of Marietta, Ga.; J. H. Whitman, of Chicago, Ill.; and H. M. Markley, of Eaton, Ohio. They were good judges of dogs' work and the club may well be congratulated in securing the services of such attentive, wideawake gentlemen. After the drawing all were ready to drive to the hunting ground, which commenced within two miles of town. The grounds were well chosen, being several thousand acres of cleared land, all under one fence, by far the best field trial grounds it was ever our pleasure to see. The only drawback was the scarcity of birds. Yet we are of the opinion that birds were more plentiful than they were at Grand Junction last year. Take it all in all, the meeting was an unqualified success, and the lovers of sport and breeders of bird dogs in this country, owe to Gen. Shattuc, the president, and his able co-operators in this association, praise warm and unstinted.

There were twenty-six starters in this stake. The quality of the work was good and at times very brilliant for youngsters. It was certainly a decided improvement on the work done in the first series at the Eastern trials, where half of the entries showed a decided lack of breaking and want of experience on game.

The stake was won by Dave R., owned by R. M. Dudley and James Fisher, of Nashville, Tenn. Dave R. is by Gath's Hope out of Daisy F.; he was bred, broken and handled by D. E. Rose; he is a lemon and white, medium-sized dog, strong and compactly built, and looks to be a remarkable stayer for a puppy. He won on his merit, and no one who saw the work questioned that he was the best puppy in the stake. Second was won by Memphis & Avent Kennels' black, white and tan dog Joey B., the winner of this year's Derby at the Eastern trials. Third was divided between Laddie, Jacobin, Ollie S. and Jack Modoc, the judges selecting them.

MAY AND MISS THOMPSON.

The weather was clear and cool, being a good day for scent. This was not a very good brace. May moved as if she had been cramped from being cooped, and seemed to take very little interest in the hunt; in the only point we saw her on she displayed fine style. Miss Thompson was decidedly the best in range, speed and style of going and won easily, having three points to her credit to May's one. May was handled by Dr. Maclin and Miss Thompson by Col. Merriman. Down 30m.

COUNT PARIS AND OLLIE S.

This was a lively brace, both going off at a rattling gait and in good style, Ollie particularly showing herself to be a good one. Worked up a sedge knoll, Ollie made game, roaded and pointed in fine style, well backed by Count. When birds were put up both dogs showed they were steady to wing and shot. Worked on scattered birds, each made some good points and each excusable flushes. After a short but good heat Ollie won, having the advantage on points. Ollie was handled by Stevenson and Count by Nelson.

QUEEN NOBLE AND LATONIA.

This was a very poor brace, neither doing any work of merit. They were worked over a good deal of country, and displayed very little bird sense. Latonia did get in one very good point on a bevy, but nether one had any particular merit. They were put down later in the afternoon for another test. Latonia had the best in style and range and won; she was handled by Tucker, Queen by Barker. Down in all, 1h. 35m.

OSSIAN AND JACOBIN.

This was a remarkably good brace. They were put down where the last brace was taken up to be worked toward the lunch stand. Jacobin moves easily, but carries his head too low; he displays a good deal of bird sense for a puppy, and his work on singles was very good. He is a little unsteady to wing and shot, his handler showing a fear to risk a shot over him; he goes at his birds in a gamy way; he won this heat on points; he was handled by Titus. Ossian is a fine-looking, medium-sized pointer, hunts with good style, points well and drops promptly to wing and to shot. After fifteen minutes' work Ossian was found on point where spectators had seen birds fly from. Jack backed to order. After this each dog did some nice roading, where birds had been seen to fly from. Ordered up for lunch they were again put down. Working around a sedge hill Jack got in a good point on a bevy, that was handsomely honored by Ossian. Sent on, each got in some good work on singles. After being down 1h. 32m. they were ordered up and the heat given to Jacobin. During this heat there came very near being a serious accident. Rose was handling Ossian, and shooting over one of his points did not see a spectator who was on a hill about 75yds. away, directly in line with the bird, and three of the shot struck him on the cheek, going in under the skin, causing some pain but doing no serious harm, as he was on the ground the next day.

HECTOR AND LITTLE GIFT.

Hector is nearly white with one black ear, is a little above the medium size, points with fine style and backs well, yet seems to need work on game. Little Gift is a small bitch, well marked and of good style and speed. They ran a short heat with little work, Hector getting in a good stylish point on a bevy. They were down 43m. Tucker handled Hector, Nesbitt Little Gift.

SIRIUS AND KING'S MARK.

This brace was put down late in the afternoon and ran a very fair short heat. Mark had the advantage in range and speed, yet both went well, and both were stylish on point. Sirius is a very large, long, liver and white dog, he is by Sportsman out of Sweetheart, and has exactly the head of his sire; he is owned in the far West, and was sent East to capture the Derbies. Mark is a well-made, handsome dog of good size and has a fine, gamy way of going. In color he is white, black and tan. Mark won, having outpointed Sirius, yet it was a close heat and he did not have much to spare. Tucker ran Sirius, Barker Mark.

Tuesday morning, weather clear and cool.

CINCH AND TRINKET'S CASH.

This was rather an uninteresting brace. Cinch is a well-made black, white and tan dog, the black largely predominating; he is a good goer and cut out the work for Cash, yet he had no advantage in style, either in going or on point. Cash was under the best control and showed steady to wing and shot. They did some pointing on birds, in which Cinch had the best of it, and were ordered up. Cinch won. Down 43m. Avent handled Cinch, Morgan Cash.

SAMUEL S. AND JACK MODOC.

This brace was put down in open, where the last brace was taken up. Neither did very much work. Modoc showed the best style, range and speed. Sam backed very indifferently and worked as if he would point if he could find a bird. Modoc had three points to his credit and won. Stevenson handled Sam, Rose handled Jack Modoc.

DAVE R. AND LADY W.

We have already given a description of Dave R. Lady W. was the amusement of the crowd. She was the smallest pointer any one ever saw entered in a trial, yet she was as keen as brier and full of pluck and go. She pointed and backed in good style, and had several nice points to her credit. In style, range and speed Dave R. had decidedly the advantage of her, yet he did not come up to the expectation of his friends in this heat, partly, we think, from the error of the judges, which seemed to make the dog lose confidence. When Lady made her first point it was on a single; the judges ordered Dave brought up to back; about the time the order was given Dave pointed in edge of grass. Rose made an effort to call Dave off point, but he wouldn't move until taken by the collar and pulled away; he was brought up and backed; as soon as Lady's bird was put up Dave went back and pointed where he had been pulled away; no bird was found to the point, but spectators had seen the bird fly when the bird was put up to Lady's point. Each dog did some pointing and flushing after this, but nothing worthy of note. After 45m. they were ordered up and the heat given to Dave. Rose handled Dave R., Porter Lady W.

SUNSHINE AND TRINKET'S COUNT.

This brace was a setter against a pointer. Sunshine is a nice trim made little bitch with plenty of speed but no style in going. Count had the better of her in style but showed poorly on game. They were only down 32m., Sunshine making one point to Count's none, when the heat was given to Sunshine. Nelson handled her; Morgan handled Count.

LILLIE B. AND CLAUDE.

This brace was put down to work toward the lunch stand. Lillie is a very nice little black, white and tan bitch, an easy, cheerful worker, with good style. Claude is a medium sized black, white and tan dog, with plenty of range and speed, having decidedly the advantage of Lillie in these respects; yet he seemed to be off his nose, for Lillie displayed much the best nose and outpointed him. After a run of 40m., they were ordered up to be put down again later in the day. At 3:55 they were again put down and sent on to where birds had been marked down. Lillie did a very nice piece of work in locating and pointing the birds and they were ordered up and the heat awarded to Lillie. Titus ran Lillie and Avent Claude.

LADDIE AND BILLY B.

This was a very pretty brace of dogs, Laddy being a very prettily marked black, white and tan, and Billy being about the same size, in color a rich orange and white. They went off at a good gait, and promised to do good work. Billy B. showed the best style and range, speed being about equal, Laddy showed best on game, though they found very little. Merriman handled Laddy, Nelson Billy B.

JOEY B. AND BLUE CHIEF.

This was the last brace in the first series. Every one was anxious to see Joey B. as he came with the honors of the Eastern Derby hanging over him. He is a well-made little dog, running with ease and style with his head well up. He is black, white and tan, has plenty of dash and go, and at times handles his birds with the judgment of an old dog, yet at times he gets rattled and is very unsteady, both to wing and to shot. Blue Chief is a very handsome blue belton dog, and showed good style and speed. Yet on birds he seemed to be over-broken, and did not take interest in the work, which gave him the appearance of having a very poor nose. The company was too good for Chief, and after 40m. they were ordered up and heat given to Joey B. Avent handled Joey, Barker Blue Chief. This ended the first series. Following is the result:

First Series.

Miss Thompson beat May.
Ollie S. beat Count Paris.
Latonia beat Queen Noble.
Jacobin beat Ossian.
Hector beat Little Gift.
King's Mark beat Sirius.
Cinch beat Trinket's Cash.
Jack Modoc beat Samuel S.
Dave R. beat Lady W.
Sunshine beat Trinket's Count.
Lillie B. beat Claude.
Laddy beat Billy B.
Joey B. beat Blue Chief.

Second Series.

OLLIE S. AND MISS THOMPSON

were the first brace in the second series. They were put down at 4:10. Each one seemed to be on her mettle and determined to win. They ran a very interesting and at times brilliant heat. Ollie was handled by Stevenson and Miss Thompson by Merriman. They both pointed and backed in good style; both had good range and speed. A good deal of the work was done in pine thicket on singles. They pinned their birds with rare skill, and ran the best heat that had been run up to that time. After 40m. they were ordered up and the heat given to Ollie S.

LATONIA AND JACOBIN.

This was the first brace on Wednesday morning. The morning was damp, with an occasional shower. Birds were not very plentiful and were inclined to run. Working out an old sedge field Jacobin pointed a bevy. Latonia to order honored the point. Birds went into woods, where Jacobin had decidedly the best of the work, scoring several points to his credit to Latonia's one and a flush and bad chase. Latonia had the best of range and style, while neither was very steady to wing and shot. It was a short heat, but a very good on the part of Jacobin.

HECTOR AND KING'S MARK.

This brace was put down at 9:45 in a drizzling rain. They went off at a merry gait, but the grass was so wet that it was not long before handlers and dogs were drenching wet, and no good work could be hoped for. Tucker handled Hector; Barker, King's Mark. They had not been down long before Hector began to draw in sedge grass, but failed to locate the birds; after he went on birds were flushed near by. Being sent on in willows and briers, Mark pointed a bird in good style, which was put up. He then flushed and dropped to wing; he then pointed and birds flushed wild. Birds were running and hard to locate. Both pointed several times on foot scent. After 30m. they were ordered up. Mark won. In range and speed Mark was best; in style Hector had the advantage. This was a very ordinary heat.

JACK MODOC AND CINCH.

By this time the rain had ceased and the sun was shining. Dogs were put down at 11:09. After drawing several fields blank Cinch made a fine point on a bevy in sedge and was well backed by Jack. Both were steady to wing and shot. Sent on Jack pointed a single and was stylishly backed by Cinch. Both dogs got in several points on scattered birds. Ordered on to hunt for scattered birds Jack made a wide cast over a knoll where he was lost to sight; not coming back his handler found him on point on top of hill in thin cover. Not finding anything to the point he was ordered on. After drawing about he commenced roading down wind, going sixty yards with great care; he roaded too near an outlying bird, which ran away; at the sight of the bird Jack dropped and his handler went in front of him and put up a large bevy. This was a beautiful piece of work. Sent on down the hill in edge of sedge Cinch flushed a single, lost his head and chased. This gave Modock the heat. Down 1h. 21m. In speed and range they were equal; on birds Jack displayed the most judgment.

DAVE R. AND SUNSHINE.

This brace was put down at 12:35 to be worked toward lunch. Going at a rattling gait through stubble Dave wheeled into a stylish point. Sunshine backed well. Rose put up a large bevy, shot and killed. Both dogs behaved well to wing and shot. Sent on, Dave soon pointed a single. Soon after Sunshine pointed a single. On in sedge, Dave R. pointed, drew and located the rest of the bevy, which were flushed by handler. Ordered up, Dave won. Down 20m. In style, range and speed Dave had decidedly the advantage, on point Sunshine had good style.

LILLIE B. AND LADDY.

At 1:35, after lunch, this brace was put down in open country to test range and speed. In both Laddy had the advantage. They were worked toward some oak woods in briers, where Laddy pointed in good style, and a nice bevy was put up to his point. Both dogs behaved well to wing. Sent on, Lillie false pointed. She then made a good point on three birds. Each then made game on foot scent where birds had evidently ran from, but no birds found. Ordered out in open Laddy soon made a nice point. They were then ordered up and the heat was given to Laddy. Down 55m.

This was the last heat in the second series, Joey B. having a bye. Following is the result:

Ollie S. beat Miss Thompson.
Jacobin beat Latonia.
King's Mark beat Hector.
Jack Modoc beat Cinch.
Dave R. beat Sunshine.
Laddy beat Lillie B.
Joey B. a bye.

Third Series.

JOEY B. AND OLLIE S.

This was the first brace in the third series. In this heat, as in their former ones, both showed good style, range and speed. After being down 10m. both dogs pointed in woods on the same bevy. Sent on in woods both dogs made flushes, birds seemed wild and would not lie well. Ollie then pointed a bird in corn. Joey, not seeing her, ran too near and the bird flushed. Joey then pointed in sedge on hillside and a bird was put up to his point. Ordered up at 3:30 and the heat given to Joey. This was a very close decision and there had not been work enough done to determine between two good dogs.

DAVE R. AND KING'S MARK

were put down at 3:17 in open country near where the last brace was taken up. Both dogs went off at lightning speed, running over the point of a knoll Dave wheeled into a point. Mark, following him very close, ran between him and the birds and also pointed. The judges saw the work, and although Barker claimed that his dog was nearer the birds, Rose was ordered to flush. A fine bevy was put up to the point, both dogs behaving well. Sent on over hill where the birds had gone Dave soon pointed in a corn patch where there was no cover, Mark honoring him with a good back and a bird was put up. Sent on Dave soon pointed another. Both dogs then roaded out into some sedge, but birds flushed wild. Going over a hill Mark pointed and was well backed by Dave, but no bird was found to the point. Mark had good style on point, but was outworked and outclassed by Dave. This was one of the shortest and most brilliant heats of the Derby. Down 19m. Dave won.

JACK MODOC AND JACOBIN

were cast off at 3:43 and worked over a good deal of country. Modoc was scouring and was not up to his form in this heat. After being down some time Jacobin pointed a nice bevy, which was put up and marked down in a thicket. Sent on, Modoc soon pointed. Rose shot and he was steady. He made another point which the judges did not see, as the bird flushed wild. Sent on in a swamp Jacobin got three points and Modoc one, when the dogs were ordered up and the heat given to Jacobin. This was a very close heat, Jacobin having the most points, but Modoc having decidedly the best of range, speed and style, both on point and way of going.

This was the last brace in the third series, Laddy having a bye. Following is the result:

Joey B. beat Ollie S.
Dave R. beat King's Mark.
Jacobin beat Jack Modoc.
Laddy a bye.

Fourth Series.

DAVE R. AND LADDY.

Thursday morning was cloudy and threatened rain, toward 10 o'clock, however, the clouds passed away and the sun shone out bright and warm; there was a pretty high west wind blowing, but the scent was good. Soon after the brace was put down Dave made game in a hollow by a brier patch, roaded down branch and down wind. Laddy coming around caught the scent where Dave commenced roading and pointed in briers, but his handler failed to find. In the meantime Dave for fear he would road them to a flush made a little cast, caught the wind and made a fine point. Rose put up the bevy and Dave acted well to shot and wing. Sent on in woods Laddy nailed a single and was well backed by Dave. Sent on both dogs flushed in dry leaves. Ordered back in field Dave soon made game on another bevy, was roading them and just as he came to a point the birds went. Sent on after the scattered birds Dave got two points and Laddy one. Dogs ordered up and heat give to Dave R. Down 54m. In style, range and speed Dave had the advantage. On point Laddy showed good style.

JOEY B. AND JACOBIN.

This brace was put down at 9:50. Both went off at a good pace. On side of hill Joey was seen to come to a point. On going around, Jack was found in front of him pointing a bevy. The birds were put up. Avent shot and Jacobin was steady. Sent on in woods, Joey pointed and Jack backed. Joey then flushed and was steady to wing. Both then false pointed. Jacobin then ran over some birds and put out after them, which left him no show in the heat. Joey then got in a good point on a single and was well backed by Jacobin. Ordered up and the heat was given to Joey. Down 37m. In speed they were both good. In range and style Joey was much the best. In this heat Jacobin showed his want of breaking. This was the last brace in the fourth series, with the following result:

Dave R. beat Laddy.
Joey B. beat Jacobin.

Final for First Place.

DAVE R. AND JOEY B.

were left in to run for first money. They were put down in a large open field after Joey's twenty minutes' rest. Both had bowled their competitors down in good style and had fairly earned the place to the fore. Joey had the advantage of a bye in one of his series, while Dave had run all of his out. Both dogs had many friends on the grounds that were anxious for their success, and from the way they went off they seemed to realize that much depended on their efforts. They were cast off at 10:50. Both had good speed, range and style of going. After 35m. Dave was found on a stylish point in corn, standing with his forefeet on a corn row and hind feet in the furrow, head high and tail straight; he would have made a fine picture. Joey, coming in from a cast, honored the point in fine style, Rose put up two birds, shot and both dogs were steady. After working some distance the dogs were taken up for water. Rose seemed anxious to push on, probably thinking that Dave had set the pace too fast for Joey and hoping to get the better of his wind. Sent on, on side of hill Dave challenged, roaded into sedge, and just as he stopped to point Joey came down the hill very fast into the bevy and put them up. Joey was a little unsteady to wing. Sent on in oak bushes and sedge Dave commenced to draw on birds, when Joey swung in ahead and pointed for a moment, when birds flushed wild and flying over Joey he started to chase but stopped to order. Working dogs down the hill into open, Dave working to the

right, Joey to left. Dave commenced ranging on bare ground, drew up an old ditch and just at the head of it he pointed with his nose over the embankment. Rose called a point, went in front and put up a fine bevy. Avent had lost Joey for a moment and found him on a stylish point to a single. They were ordered up and the heat was awarded to Dave R., and he was declared the winner of first prize. Down 1h. 5m. It was remarked and was a fact that no dog found and pointed a bevy while in competition with Dave R. ahead of him in any of his heats. The decision gave perfect satisfaction.

Tie for Second Place.

JOEY B. AND LADDIE

were put down to run a short heat for second money. Both dogs belong to the Memphis and Avent Kennel. After being down 5m. they were ordered up and the heat and second money was given to Joey B.

The judges selected as the best beaten dogs, Laddy, Jacobin, Ollie S. and Modoc to divide third.

Take it all in all, this club may well be proud of its first Derby. It was a great improvement on the Eastern Derby of this year, both in the quality of the work and the opportunities given a dog to show what was in him. Following is the

SUMMARY.

American Field Trials Derby for 1887, for all setter or pointer puppies whelped after Jan. 1, 1886. Three purses. First prize, $350. Second, $250. Third, $150. Forfeit $10, and $15 additional to fill.

First Series.

Miss Thompson beat May.
Ollie S. beat Count Paris.
Latonia beat Queen Noble.
Jacobin beat Ossian.
Hector beat Little Gift.
King's Mark beat Sirius.
Cinch beat Trinket's Cash.
Jack Modoc beat Samuel S.
Dave R. beat Lady W.
Sunshine beat Trinket's Count.
Lillie B. beat Claude.
Laddy beat Billy B.
Joey B. beat Blue Chief.

Second Series.

Ollie S. beat Miss Thompson.
Jacobin beat Latonia.
King's Mark beat Hector.
Jack Modoc beat Cinch.
Dave R. beat Sunshine.
Laddie beat Lillie B.
Joey B. a bye.

Third Series.

Joey B. beat Ollie S.
Dave R. beat King's Mark.
Jacobin beat Jack Modoc.
Laddy a bye.

Fourth Series.

Dave R. beat Laddy.
Joey B. beat Jacobin.

Final for First Place.

Dave R. beat Joey B. and won first prize.

Ties for Second Place.

Joey B. beat Laddy and won second prize.
Laddy, Jacobin, Ollie S. and Jack Modoc equal third.

RULE NO. 2.

Editor Forest and Stream:

In your issue of Dec. 15 I notice a few words from Mr. J. A. Nickerson. Present my compliments to Mr. Nickerson and gently whisper to him that both Mr. Winslow and myself are quite competent to present our bills to bench show managers should we need or wish any remuneration, but at the same time thank him for me, and I have no doubt but that Mr. Winslow joins me, for his charitable act in saying "Bench show managers should see to it at once that Messrs. Cugle and Winslow are substantially remembered for their effort to swell the number of entries at coming shows." The new Rule 2 will not affect entries at shows in the least, provided special attention is called to it. Did Mr. Nickerson commune with Mr. Grosvenor before he mailed that bit of sarcasm? Evidently not, for Mr. Grosvenor knew perfectly well what he was doing at the A. K. C. meeting, and if he did not get scared at the outlook why should Mr. Nickerson? The Boston bench show managers are all right; if any one is to get scared and kick, Hartford should. Speak your mind, Mr. Nickerson, but don't, don't use sarcasm, it don't sound nice. CHAS. D. CUGLE.

HARTFORD, Dec. 16.

Editor Forest and Stream:

It was with feelings of disgust that I read in your issue of three weeks ago of the new rule laid down by the A. K. C. requiring compulsory registration of dogs in the A. K. C. S. B., in order to show them at shows held under their rules.

Now I have not had quite as bitter a feeling against the A. K. C. as some breeders have, believing that they would in time get straightened out; but this straw breaks my back, and I hope the best breeders in the country will refuse to show their dogs, and will teach the A. K. C. that they cannot cram their stud book down our throats in that manner. Let the stud book thrive on its merits, and if it has not merit enough to thrive it had better die.

The *American Kennel Register* has steadily grown on its merits and is good enough, and I have yet to learn of any fault with it except the small amount of reading matter it contains; but I believe we get our money's worth and more too. Wish it could be enlarged and would gladly pay for it.

CHAS. E. SHAW.

CLINTON, Mass., Dec. 22.

Editor Forest and Stream:

The following is an extract from a note of an old friend, long a dog lover and exhibitor, but who has never engaged in any controversy as to the A. K. C., its stud book, or anything connected with it. He is thoroughly an impartial outsider, and, I am convinced, voices the sentiments of ninety-nine out of one hundred of the class, when he writes me: "Are you going to the New York show? It will be a poor one, I guess, owing to that idiotic rule about the stud book entries. What on earth got into them?" W. WADE.

HULTON, Pa., Dec. 24.

Editor Forest and Stream:

The editorial in last FOREST AND STREAM commenting on the action of the A. K. C. in regard to rule compelling the registering of all dogs in their stud book is about right, and hits the nail on the head. Such ruling is a great imposition on exhibitors, to say the least, and certainly will decrease the attendance at shows under A. K. C. rules.

ORTON GIFFORD.

WAUPETON, Kan., Dec. 19.

Editor Forest and Stream:

The Utica show will not enforce rule two, as they do not think it is a just rule to exhibitors.

J. OTIS FELLOWS, Supt.

HORNELLSVILLE, N. Y., Dec. 25.

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the December number of the *American Kennel Register:*

BEAGLES.

5583. Goodwood Beauty, J. C. Hoge.
5584. Goodwood King, J. C. Hoge.
5585. Laick's Rattler, G. Laick.
5586. Tenor, Arthur S. Aborn.

BULLDOGS.

5587. Beatrice, Chas. D. Cugle.
5588. Bellissima Regina, John E. Thayer.
5589. Merry Monarch, C. Cugle.
5590. Soudan, Chas. D. Cugle.

CHESAPEAKE BAY DOGS.

5591. Bell's Spatter, E. A. Buck.
5592. Bell's Spray, E. A. Buck.
5593. Dash's Trump, E. A. Buck.
5594. Gowrie's Bell, E. A. Buck.

COLLIES.

5595. Black Bess, F. S. Tucker.
5596. Bonnie Scotland II., J. G. Curry.
5597. Buckingham, E. E. Ling.

ENGLISH DOG CHAT.—II.

[From an English Correspondent.]

(Concluded from Page 410.)

HANLEY was the next fixture of any importance, and was chiefly remarkable for a scene between Little Smith and Mrs. King-Patten, the owner of the St. Bernard Prince Battenberg. The storm had been brewing for some time, and the owner of Plinlimmon was in a red rage when he heard that Mrs. Patten had been saying something about Plinlimmon's puppies. With his hat back on his head and glaring over those spectacles of his, the little man nearly jumped down the lady's throat, and clearly laid down the law on the matter. Then, of course, there was the usual scene, and tears fell fast and furious, and as the dogs, Plinlimmon and Battenberg, were benched side by side, things were just amusing, but the game was at its height when Mrs. Smith arrived and learned of the row. Both ladies had a chair opposite their dogs, and if they didn't look like eating one another, well, what price cannibals? Then there was another barney at Hanley. This time Jimmy Hinks, of Birmingham, was the offender. The Birmingham man claimed a dog in the selling class, had his receipt from the office, took the dog off the bench, and showing the fellow at the turnstile the piece of paper, pretending it was a removal order, and out he went with the dog. This was done so that no one else should claim the dog. Of course, somebody made it his business to inform the secretary and then there was high jinks, but the sequel was, perhaps, as amusing as anything we have had this season. Now, mark you, there is another gentleman in our kennel world with a name just the same, only spelled differently, viz., Mr. James Hincks, of Leicester, a well-known Clumber fancier, and a lawyer to boot. He was also an exhibitor at Hanley, and Mr. Indefatigable Secretary, of course, to make himself as busy as possible in his high and mighty office, wrote to the Kennel Club in regard to the conduct of Mr. James Hincks, of Leicester, and that august body wrote that gentleman for an explanation of his conduct at a show held under their rules. Of course, Mr. Secretary had made a mistake, and Jimmy Hinks, of Birmingham, was laughing in his sleeve, while Jimmy Hincks, of Leicester, was fuming with rage and wanting to know "what the devil they meant." The end of this fiasco was Mr. Robson, the Hanley secretary, had to apologize publicly or become amenable to the law of slander, and in all the fuss and flutter Jimmy Hinks got off scot free, and as the matter was not explained in time, Mr. James Hincks, of Leicester, could not send his team of spaniels to the jubilee show.

A goodly number of English exhibitors turned up at Brussels, and won nearly every franc they went in for, although, generally speaking, only "second strings" were sent. There were lots of purchases made, and Mr. Edwin Nichols, the old and wary, got "done" for two. A mysterious Mr. Balcombe appeared on the scene of show life. He was reputed to have won a lot of money over some racing event. He then went in for dogs and tick, and rushed several who ought to have known better.

The English contingent enjoyed themselves immensely in Brussels, and a well-known collie man could relate some peculiar experiences of what he did and saw and where his guide took him and whom he met. Mr. Shirley took the sporting, and another of our Kennel Club men, Mr. Jackson, the non-sporting lot, and so far from favoring their own countrymen, in some cases really went out of their way to give the "furriners" the benefit of the doubt. The show was visited by the Queen of the Belgians and the Duke of Flanders, and it would have done your eyes good to watch the manners the Britons tried to catch the great ones' eyes. There was "Papa" Nichols letting the Newfoundland Lord Nelson jump up against his new brown velvet coat, while Charley Lawrence, one of our "downey" exhibitors, did his level best to sell the Duke a Blenheim spaniel with a face as long as a fiddle. "Ah," said Charley, "titles they certainly have got, but I'm blowed if I think they have much blooming money." It never entered Charley's head that even a swell might "know a bit" too. Captain Thomas sent about a score entries from South Wales to this show, and won just as many prizes.

The Newport show passed off well, although the executive was a few pounds out of pocket, but they did up the thing well. The Dudley show was not the success that it might have been and the hat had to be sent round, and had it not been for a few fellows, Mr. Astley, who was the secretary, would have been in a fix, although this show was promised to be a model of management and what not, and we were told that if we wanted to see management to visit Dudley. I found nothing to speak of. Paris show wasn't up to much, and one would think from the dogs to be seen on their benches that they had eaten all the pillars of their kennel stud book during the siege. Zurich show passed off well and old King-Patten journeyed there with Prince Battenberg, as Mr. H. B. Betterton was judging, for it was that gentleman who had put him over Plinlimmon at last Birmingham show. So off started Mr. Patten cock sure of the valuable special prize, but had to return crestfallen, as Dr. Künzli's Young Barry was too much for him. Never was a child more tenderly nursed than Prince Battenberg, and the attendance even goes as far as his owner sitting for hours in his kennel reading aloud—whether it is for the dog's benefit or not I don't know, but the others in the kennel get more kicks than ha'pence. Mr. King-Patten describes the defeat of his dog Prince Battenberg at Zurich as a "swindle" and threatens one day to make some disclosures upon the subject. More than one continental celebrity shared the opinion of the "disappointed exhibitor." The latest rumor about Prince Battenberg is that he can't get pups, but this I know to be a cowardly, malicious lie.

Chelmsford was a fair show, and it was a day out for Dear & Co., who benched and fed the show. Rumor was rife that Spratts had hired a lot of men to upset the arrangements, etc. There at one time could be seen running about little Dr. Seelig and Capt. Urquhart (Dear's agents) after a medical man, as it was alleged that Spratts' hirelings had drugged Dear's keepers. A bottle containing some stuff was found on one of the suspected men, and there was a fine hullabaloo. It was corked and sealed in the presence of the committee and forwarded to an analyst; but we never heard more of the matter. All concerned acted more like a parcel of children than men of mature age. Small shows now came thick and fast and entries ran low, and no show suffered more than Norwich, and the consequence was that the committee had to pay through the nose for running their fixture so close to the K. C. Jubilee Show, at Barnes, London. Of course you have heard all about that great show and how some of your dogs succeeded. The continental fellows showed a poor lot of dogs even in such a breed as Great Danes, which they ought to excel in, indeed they must have felt very small to find how the Britishers had beaten them in breeding.

Spratts' lunch was a great affair, and the liberality of it in some way or other got up the back of the mighty K. C., and the next evening the Spratts' marquee was ordered to be taken down. At all the shows I have been at I never heard such an unceasing popping of champagne corks.

Perhaps as successful a show as any held was the Newcastle-on-Tyne one—in fact they took £240 at the gate, so that sum speaks for itself. Again did Darlington keep up its reputation, although on a wet day it is one of the most miserable shows in the world, and that is saying much.

Then Strabane, Pontefract, Ashby de la Zouch, Tyneside, Bradford, Ormskirk, Horncastle, Todmorden, Perth and Hexham shows were all on in the same week, and survived the ordeal, and Cirencester, Ryde and Bromley followed suit. Heath was a fair show for Wales, but a nasty bit of snarling was on at one time about a special—the same old story, and committeemen trying to influence the judging in favor of their dog. There is one man named Jenkins who shows a toy of a pointer now and then—and I believe hails from Heath—is about the most persistent man for siding up to judges I ever saw. I trust some day he may get hold of the wrong man.

A new show at Trowbridge passed off well, and then small shows followed on by the dozen. Cardiff was the next big event, and the greatest attraction in the show was the champion fighting dog Spring. The show in connection with the Royal Jubilee Exhibition at Saltane was spoiled because of the greedy manner in which the management catered for the dogs. Fancy nothing but stakes driven into the ground in such a central doggy place. The exhibits were up to the average, but the first night was enough to disgust one. Bangor proved a fine show for Welsh terriers, which as I before remarked, are finding many friends, and Birkenhead and Edinburgh were also very successful in their fixtures.

MONARCH'S WINNINGS.—Boston, Dec. 20.—*Editor Forest and Stream:* Kindly allow me to answer Mr. Moore's criticisms, in reference to the special prize credited Monarch in my ad. It was a misunderstanding on my part with the man of whom I purchased the dog, and as soon as I knew of the mistake I wrote you (even before I knew of Mr. Moore's action) to take it from the ad. I suppose the letter was received too late to take it from last week's paper. The dog business with me is a hobby and I have no desire to try to deceive and will cheerfully thank Mr. Moore or any other gentleman to point out any wrong that may be found in my kennels.—E. B. SEARS.

CALIFORNIA KENNEL CLUB.—*Editor Forest and Stream:* The California Kennel Club held its meeting Dec. 14 and elected the following members: John Kerrigan, the champion quail shot of the Pacific Coast; A. E. Post, Frank Merrifield, Chas. Gudzinsky, Henry Kuchmeister. President G. A. Case reported that he had lost his English setter dog Scott, and was satisfied that he had been stolen. W. G. Cue, the secretary, moved that the matter take its usual course and that the club offer a reward of $100 for the arrest and conviction of the thief. So ordered. J. M. Crane thought it would be a good idea to give a free exhibition, to give the public an opportunity to see the dogs owned by the members of the club, and favored the hiring of a hall suitable for that purpose for two days. President Case believed that such an exhibition every six months would meet with great favor and be for the interest of the club, as well as advancing the interest in dogs. On motion of Mr. T. Higgs the matter was laid over till the next meeting, when more of the members will be present, and he is satisfied that it will be adopted unanimously. A. B. Truman offered the following resolution, which was adopted: "Resolved, That this club having confidence in ability and integrity of Mr. John Davidson, of Monroe, Mich., and James Watson, of New York, note with pleasure their selection as judges of the anticipated bench show of the Pacific Kennel Club." The secretary reported that the finances of the club were in a flourishing condition. Five members were expelled for non-compliance with the rules of the club. Joseph King made a motion that hereafter all the names of expelled members be given to the press.—W. G. CUE, Secretary.

MASSACHUSETTS FOX HUNTING DECISION.—The decision handed down by the Supreme Judicial Court of Massachusetts, on a case prosecuted by the Massachusetts S. F. P. C. A., reads as follows: "A rescript has been sent down in the case of Commonwealth vs. Elmer Turner from Plymouth county. This was a complaint made under Public Statutes, ch. 207, sec. 53, and alleged that the defendant at a certain time and place was the person having charge of a fox, and did then and there knowingly and wilfully permit such fox to be subjected to unnecessary suffering by turning it loose to be hunted by dogs, whereby it was hunted and subjected to unnecessary suffering. At the trial in the Superior Court, the court refused to rule as requested by the defendant, that the evidence was not sufficient to warrant a conviction. The evidence tended to prove that the defendant let a fox loose from his custody in the presence of several dogs, that the fox ran into a thicket wood and disappeared; that about five minutes afterward the dogs were let loose and pursued the fox, and caught it and tore it to pieces. The evidence as found by the court was sufficient to prove that the fox was let loose by the defendant to be hunted by the dogs, and that the dogs were procured by him and were let loose by his direction in order that they should hunt the fox. The court now hold that these facts constitute an offense described in the statute; that the statute includes noxious animals; that there was evidence that the fox was subjected to unnecessary suffering, and that there was evidence that it was subjected to suffering by the defendant, or while it was in his charge or custody. The defendant's exceptions were accordingly overruled."

DEATH OF MASTIFFS.—Two celebrated mastiffs have recently died in England. Victor Joseph, says the *Stock-Keeper*, "was the heaviest show dog ever benched, his weight on several occasions exceeded 224lbs." And now comes news of Maximilian, the sire of Mr. Moore's Minting. He died recently from the same trouble that carried off Victor Joseph, inflammation of the lungs.

COLUMBUS DOG SHOW.—Columbus, O., Dec. 23.—*Editor Forest and Stream:* Please announce that sporting dogs will not be penalized for shortness of coat and feather, at our coming show, Jan. 10 to 13, 1888. A letter from our judge, Major Taylor, says: "I will gladly make all allowances for coat of sporting dogs."—H. A. BRIDGE.

THE AMERICAN KENNEL REGISTER for December contains the pedigree records of 126 dogs, bringing the total entry up to 5708. The *Register* is month by month growing in value as a reliable book of reference.

WINSTED SHOW.—Manchester, Dec. 24.—Tippoo, the Grasmere Kennels' champion bulldog, did not arrive in time to compete for the special for the best bulldog in the show.—T. R. VARICK.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Fog Obo. By Starkey & Keating, Fitchburg, Mass, for black cocker spaniel dog, whelped November, by Obo II. (A.K.R. 432) out of Gipsey (Tip—Flossey).

Lady Teazel. By Contoocook Kennels, Peterboro, N. H., for orange and white St. Bernard bitch, whelped Sept. 7, 1887, by Victor Joseph (Beauchief—Bertha) out of Orgar (Starkey's Hector II.—Nires II.

Ripple Dash, Spot Dash, Jr., and Jet Dash. By Robert Leslie, Lynn, Mass., for black and white, white and liver ticked, and black and mottled breast pointer dogs, whelped Oct. 22, 1887, by Spot Dash (Sir Philip Sydney—Topsy) out of Rush (Sam—Nell).

Langhorne Kennels. By Lewis A. Berger, Langhorne, Pa., for his kennels of mastiffs, St. Bernards and Irish setters.

Wachusett Kennels. By Starkey & Keating, Fitchburg, Mass.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Daisy—Foreman, Jr. C. G. Kimberly's (New Haven, Conn.) English setter bitch Daisy (King—Vic) to A. J. Callahan's Foreman, Jr. (Foreman—Jolly Nell), Nov. 27.

Blonde II.—Planet. C. G. Kimberly's (New Haven, Conn.) English setter bitch Blonde II. (Belton—Blonde) to Jos. Pierce's Planet (Plantagenet—Forest Dora), Nov. 2.

Stub—Regent Vox. Warham Whitney's (Rochester, N. Y.) fox-terrier bitch Stub (Tip—Spot) to Blemton Kennels' Regent Vox (Tackler—Sandy Vic), Dec. 12.

Fandango—Lucifer (as in præsenti). Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Fandango (Hampton Joe—Rose) to their Lucifer (as in præsenti) (Splinter—Kohinoor), Dec. 10.

Verdict—Raby Mixer. Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Verdict (Result—Diadem) to J. E. Thayer's Raby Mixer (Raby Mixture—Richmond Olive Bud), Dec. 4.

Bang Bang. The following have been bred to Westminster Kennel Club's Bang Bang:

Dec. 1—C. W. Winship's (Bar Harbor, Me.) Boski.
Dec. 3—F. T. L. Lane's (Newark, N. J.) Belle of Jersey.
Dec. 10—Westminster Kennel Club's Glauca.
Dec. 15—Geo. H. Bailey's (Portland, Me.) Countess.
Dec. 16—John C. Vail's (Warwick, N. Y.) Belle.
Dec. 18—Geo. F. Gray's (Alfred, N. Y.) Christmas Vic.
Dec. 20—E. C. Freeman's (Cornwall, Pa.) Bessie Bravo.

Naso of Kippen. The following have been bred to the Westminster Kennel Club's Naso of Kippen:

Dec. 10—Westminster Kennel Club's Luckystone.
Dec. 12—Westminster Kennel Club's Moonstone.
Dec. 15—Arthur Brock's (Lebanon, Pa.) Virginia.
Dec. 20—Thos. H. Terry's (Hempstead, L. I.) Modesty.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Blemton Gingerbread, Blemton Kennels' (Hempstead, L. I.) fox-terrier bitch Blemton Gingerbread (Spice—Blemton Arrow), Dec. 10, four (two dogs), by their Lucifer (as in præsenti) (Splinter—Kohinoor).

Judy Obo. Geo. E. Browne's (Dedham, Mass.) cocker spaniel bitch Judy Obo (Obo II.—Daisy Zulu), Dec. 19, eight (six dogs), by F. H. Perrin's Shady (Obo II.—Darkie).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Nettie May W. Black, white and tan ticked beagle bitch, whelped Oct. 14, 1887, by Cameron's Racket out of Pussie, by Harmony Kennels, Covert, N. Y., to A. C. Krueger, Wrightsville, Pa.

Velda W. Black, white and tan ticked beagle bitch, whelped Oct. 14, 1887, by Cameron's Racket out of Pussie, by Harmony Kennels, Covert, N. Y., to F. M. Shelley, Sheridan, N. Y.

Sanroy, Jr. Black, white and tan English setter dog, whelped March 26, 1885, by Sanroy out of Cora, by W. Lunsford, Roanoke, Va., to F. Pitzer, Washington, D. C., and resold by him to Dr. G. G. Davis and F. G. Taylor, Philadelphia, Pa.

Dashing Rover II. Color and age not given, English setter dog, by Druid's Boy out of Victoria, by F. Pitzer, Washington, D. C., to W. Lunsford, Roanoke, Va.

Black Joker. Black cocker spaniel dog, whelped July 12, 1887, by Black Pete out of Phyllis (A.K.R. 5293), by H. D. Brown, Waterbury, Vt., to Dr. W. V. Balch, Galway, N. Y.

Minnie B. Black cocker spaniel bitch, whelped Oct. 30, 1887, by Black Pete, Jr., out of Althea (A.K.R. 842), by H. D. Brown, Waterbury, Vt., to J. M. Shepherd, Trenton, N. J.

Royal George. Black, white breast, Newfoundland dog, whelped Oct. 20, 1887, by Brown's Follie out of Fanny B., by H. D. Brown, Waterbury, Vt., to Geo. T. Howard, Little Compton, R. I.

Ripple Dash. Black and white pointer dog, whelped Oct. 22, 1887, by Spot Dash out of Rush, by Robt. Leslie, Lynn, Mass., to R. H. Chandler, same place.

Jet Dash. Black and mottled breast pointer dog, whelped Oct. 22, 1887, by Spot Dash out of Rush, by Robt. Leslie, Lynn, Mass., to F. A. Widger, same place.

Spot Dash, Jr. White and liver ticked pointer dog, whelped Oct. 22, 1887, by Spot Dash out of Rush, by Robt. Leslie, Lynn, Mass., to J. C. Baker, Boston, Mass.

King of Ashmont. Fawn mastiff dog, age and pedigree not given, by Ashmont Kennels, Boston, Mass., to Lewis A. Berger, Langhorne, Pa.

St. Maur. Black and white greyhound dog, whelped July 27, 1887, by Custer out of Harmony, by Harmony Kennels, Covert, N. Y., to E. A. Bean, Knoxville, Pa.

Daisy Bright. Black, white and tan English setter bitch, whelped April 22, 1887, by Gun out of Lady Bright, by F. Pitzer, Washington, D. C., to Lewen Tugwell, Philadelphia, Pa.

Young Gath—Belle Starlight whelp. Blue belton English setter bitch, whelped July 12, 1887, by Chas. York, Bangor, Me., to H. W. Durgin, same place.

Smash II.—Romp II. whelp. Lemon and white Clumber spaniel, whelped Oct. 3, 1887, by Geo. Piers, Halifax, N. S., to Clumber Kennels, Ottawa, Can.

Gun (A.K.R. 1538)—Morning Star (A.K.R. 1541) whelp. Black, white and tan English setter bitch, whelped July 8, 1887, by Chas. York, Bangor, Me., to W. F. Penniman, North Woodstock, Conn.

Ross W.—Zephyr whelps. Black, white and tan beagles, whelped July 24, 1887, by Harmony Kennels, Covert, N. Y., a dog to D. C. Wheeler, Farmer Village, N. Y., and a bitch to H. Gregg, Trumansburg, N. Y.

Custer—Harmony whelps. Greyhounds, whelped July 27, 1887, by Harmony Kennels, Covert, N. Y., one fawn and white dog each to F. E. Brandt and F. J. Hobson, and one fawn dog to H. M. Hibbard, all of Ithaca, N. Y.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. B. V., Ukiah, Cal.—1. In distemper when high fever is present give tincture of aconite, 3 drops in water every hour. Give also 5grs. quinine morning and evening. In great weakness give brandy, 1 teaspoonful every 3 hours. 2. Eight to ten months.

G. S. T., Portland.—My St. Bernard puppy, 7mos. old, has distemper, but seems much better and eats, but for the last few days he has passed a great deal of blood with his urine. Ans. Give a teaspoonful of sweet spirits of nitre morning and evening in a little water.

C. D. P., Lowell.—A spaniel about 18mos. old had distemper when about 4mos. old, and was treated for same. His eyes and nose have stopped running, but his shoulders and forelegs twitch and jerk all the time. Ans. See answer to G. E. S. Give 10 drops of tinct. nux vomica morning and evening.

B. P. B., Cleveland, O.—About a month ago my Newfoundland pup, eight months old, was taken with a weakness in his hindlegs. A few days after he was taken sick he got so bad that he could not stand up. I rubbed him with Kendall's spavin cure and he appeared to get better; in fact, he did get better. That was about three weeks ago. Now when he stands firm on his feet his hindlegs give way from under him; he does not come all the way down, only about half way; at other times he only comes down a very little way. He eats well, and otherwise is all right. A short time before he was taken sick a tramp hit him over the hindquarters with a club. Ans. Press your fingers along spine from shoulders to tail and notice if there is a tender spot. If so, shave hair from this point and apply a "fly blister." Later he may need applications of electricity. Give 10 drops of tincture of nux vomica three times daily. You would have received this reply six weeks ago if you had given your address so that it would have reached you by mail instead of going astray. People who write to us about sick dogs ought to give correct name and address—just for the dog's sake, to say nothing of courtesy.

G. E. S., Burlington, Vt.—I have a very close bred cocker pup 10 months old. Six weeks ago I noticed white discharge from his eyes, they grew worse but he kept about. Sixteen days ago I was assured he had distemper, for he had a convulsion. Applied cold water to his head and relieved him. He has not stood up since, but lies in an almost unconscious condition. He has not had any discharge from his nose, except for one or two days. He wasted from a strong dog to a limp skeleton in three days. Have for two weeks given Humphrey's Homeopathic Specifics AA and CC I think that broke the distemper. Have fed him whisky and quinine, beef, wine and iron, and beef broth, also lactated food (baby food). For five days his bowels did not move, for he had not strength to void it. His kidneys have passed water a few times. Two days since I gave water injection, also a hot bath, which passed a large quantity. He has moved every day since, and I see him often raise his head as though he would clean his parts, but cannot. He is resting a good deal and often utters a low yelp, but when spoken to or patted is again quiet. Ans. We are inclined to the belief that your dog has worms. Watch the passages for them. If you discover any, give the puppy a teaspoonful of castor oil with 10 drops of turpentine. Keep up the general treatment you are following. Stop the Humphrey medicines.

Rifle and Trap Shooting.

Address all communications to the Forest and Stream Pub. Co

RANGE AND GALLERY.

ST. LOUIS.—The Pistol Club is keeping up its winter tournament with vigor. The conditions are: The club donates a handsome gold medal, for which all participants shoot on an even footing. The shoot will be a handicap, each member receiving a certain number of points for each score of 10 shots, with the exception of Perret and Lard, who shoot from scratch. All new members (on account of not having a record) must also shoot from scratch. The tournament will be 21 shoots, each member must attend not less than 15 scores to obtain an average. The scores for the past week stand as follows, in a possible 120:

G W Alexander	118	W E Field	110
W Bauer	117	A E Bengel	101
E C Mohrstadt	116	M C Billmeyer	100
O Neuhaus	116	W Clark	100
W H Hittel	115	W C Mackwitz	97
L V D Perret	114	J Sieminskie	91
W J Lard	114	J G Schaaf	87
M Summerfield	110		

At the election of the club Mr. Perret was elected president; W. Bauer, vice-president, and W. Lard, secretary. Messrs. Mohrstadt, Alexander, J. G. Schaaf, the board of directors.

THE PISTOL CHAMPIONS.

PROVIDENCE, Dec. 21.—At the request of Chevalier Ira A. Paine, Mr. A. C. Gould, editor of the *Rifle*, to-day visited Providence with the object of verifying the scores which Mr. Paine made with his revolver at the shooting ground of the Narragansett Gun Club. He also visited the office of the Chief of Police, who was one of the most interested spectators of the match; Mr. Tinker, president of the club, and the official scorer. The range was measured and the testimony of the scorer accepted as correct. Mr. Paine volunteered to fire 100 shots with his .44-cal. Smith & Wesson army revolver, with the object of showing his capability to average his last week's shooting. It proved to be an exhibition of the finest revolver shooting on record. His score surpassed any previous attempt. He secured in 100 shots, 50yds., on a standard American target, an aggregate of 904 points, which is 133 points higher than has ever before been made out of the 100 shots; 90 were bullseyes. Four clean scores of 10 shots, all bullseyes, were made, and he made 23 consecutive bullseyes. The wildest shot in the shooting was 5¼in. from the exact center of the bullseye. The score in detail is as follows:

1	8	8	10	10	8	9	10	10	9	9—91
2	9	9	7	10	9	9	9	7	7	10—87
3	10	10	8	7	9	8	10	10	9	8—89
4	10	9	8	10	10	10	9	10	9	9—92
5	7	9	10	10	8	9	8	8	7	10—86
6	10	7	8	9	10	10	10	9	10	9—92
7	10	8	10	10	10	10	8	9	9	10—94
8	8	9	10	10	10	7	10	9	10	10—93
9	10	8	9	9	10	8	10	8	7	10—89
10	10	8	8	9	10	10	9	8	9	10—91—904

BOSTON.—The *Herald* of Dec. 21 publishes the following card:

To the Editor of the Herald: Mr. A. C. Gould has not attempted to disprove the charges I made (and sent you $500 to substantiate them) that many of his reports concerning the late so-called record shooting of Mr. Bennett were false and misleading. Mr. Bennett has in no instance offered to cover my money when I offered to beat his record, number of bulls or beat him, thereby leaving me no alternative but to go out and beat his record, which I did with ease, all the scores being properly verified by the Providence daily papers. All my shooting was done in the most public manner possible, and witnessed daily by the best members of the Rhode Island Club, as well as reporters of Providence. Therefore, as I see that it will do me no good to keep posted any longer the money I sent, you will please return it to me, as I leave next Thursday night for an engagement in the West.

DEC. 21, 1887. CHEVALIER IRA PAINE.

BOSTON, Dec. 23.—At Walnut Hill range, this afternoon, Mr. W. W. Bennett (brother of Mr. F. E. Bennett, who has been trying conclusions with the pistol, and endeavoring to beat Ira Paine's record in various ways) fired 100 shots from a Smith & Wesson Russian model, army revolver .44-cal., factory ammunition, at a bullseye, American standard target, 50yds. distance, and made the score subjoined, certified to by the official scorer of the range, the rangekeeper and others:

1	9	10	10	10	10	8	9	10	10	10—96
2	8	10	10	9	9	9	9	10	8	7—90
3	8	9	10	10	9	9	10	8	9	10—92
4	8	9	10	9	10	7	10	9	9	10—90
5	10	9	9	10	10	10	10	10	10	8—96
6	9	10	8	10	7	10	9	10	10	9—92
7	10	10	9	7	10	7	9	9	10	8—89
8	8	7	8	9	10	10	9	10	7	8—86
9	9	8	10	8	10	9	10	10	10	9—93
10	10	7	9	10	9	9	9	10	9	8—90—914

An analysis of the score of 10 consecutive strings, shot in about 1¼ hours—100 shots in say 90 minutes—shows just this: That Mr. Bennett made 92 bullseyes in 100 shots; that on the first, third, fifth and ninth strings of 10 shots each, he made "clean scores"—that is, a bullseye for every shot; that from the first to the nineteenth shot (both inclusive) he made 19 consecutive bullseyes, and that on the first and fifth strings of 10 shots each he aggregated 96 points—thus equaling Chevalier Paine's two best strings made in Rhode Island last Wednesday. Mr. F. E. Bennett's best aggregate in 100 shots was made Dec. 5 last. It was 886 in a possible 1,000, and beat all previous records. Mr. Paine's best aggregate in 100 shots was made at Narragansett, R. I., last Wednesday. It was 904 points in a possible 1,000 (with 90 bullseyes), thus beating F. E. Bennett's best score by 18 points. To-day, as the above table shows, Mr. W. W. Bennett made a total of 914 points in a possible 1,000—thus beating Mr. Paine's last and best record by 10 points in the aggregate of one score of 100 shots. Next!

TOPEKA VS. GARDNER.—Below will be found the score of a friendly match between four members of the Topeka (Kas.) Rifle Club and same number of the West Gardner (Mass.) Rifle Club, shot on Dec. 16, 50 shots to each man, 200yds., off-hand, standard American target. The Topeka team accomplished something rather unusual, making two full scores of bullseyes in the match. Mr. George Morrison's third score of 87 is his first full score. Mr. Minkler's fifth score was also a full score, making 91 points; this makes the second full score for the professor:

Topeka Rifle Team.

G E Morrison	9	6	6	8	9	10	9	9	8	9—83

A MUZZLELOADER CHALLENGE.—*Editor Forest and Stream:* We see that Messrs. Warner & Lowe, of Syracuse, are out with a handbill in which they say: "We claim to be able to make a better shooting rifle than can be obtained elsewhere." We question their statement when they say "a better shooting rifle," and we propose to make them prove that their statement is correct, if they can. We, the undersigned, challenge any three men of Syracuse to shoot a match, distance 40 rods, string measure, the guns to be held to the shoulder. Each man shall put in $50, to make up a purse of $300. We then will commence shooting and each man shall fire a string of 10 shots, and the 30 shots so fired by the three contestants on each side shall be measured together, and the side making the shortest aggregate string of the 30 shots shall draw out of the purse $200, and so continue to do until each party of three has fired 10 strings of 30 shots each string. The Syracuse men shall shoot Warner & Lowe's make of guns, and we, the undersigned, agree to shoot H. V. Perry's make of guns. In regard to weight of guns we will adopt the present rules of the old National Rifle Club, which meets at Vernon, Vt., making a 20lb. gun as fired a standard in weight, and adding ½in. to each string of 10 shots for each pound over 20lbs. If the Syracuse men will come to Falconer Crossing to shoot the match we will furnish a good warm shooting house and will pay one-half their railroad fare.—J. ROBERT MOORE, BENJ. GARFIELD, H. V. PERRY (Jamestown, N. Y.).

BOSTON, Dec. 24.—There was a good attendance at the Walnut Hill range to-day and some fine scores were made. Chase made a clean count of 103 points. Captain H. N. Conn and W. P. Dickson each won the bronze military badge.

	8	7	6	9	7	8	5	3	9	6	5–73	–140

F. B. Edgell used a military rifle, William Austin shot two strings at rest, making a total of 84 in each. Mr. Austin is nearly 80 years old. He has been a member of the club since it was organized.

BOSTON, Dec. 26.—There was a large attendance of riflemen at the Walnut Hill Range to-day. The wind blew stiffly all day, and the sky was overcast, causing poor light and keeping the scores down below the average. Following are the scores:

Decimal Off-Hand Match.

C E Berry	9	8	7	10	9	9	9	8	7	7	–83

SAN FRANCISCO, Dec. 18.—The members of the California Schuetzen Club assembled to-day in strong force before the ranges at Harbor View. The occasion was the final shoot of the season, and a more propitious day for rifle shooting could not be wished for. The day's shooting, as a whole, was far above the average. The contests were at the 200yds. ring targets, and terminated with the following results: Champion prize, won by A. Strecker, 407 rings. The first class prize was won by John Dornbierer, with 396 rings; second class by A. T. Field, 380 rings; third class by R. Finking, 575 rings; fourth class by M. Renbold, 371 rings. Each of the above prize winners will be the recipient of a $25 prize. The next contest was between members of the California Schuetzen Club cadet class. The medal for members of the first class making the highest record during the year was won by Albert Ehrenpfort. The second class medal was won by Wertheimer, Jr., he having scored the seven best strings of 20 shots each during the season. His last score registered 357 rings. A fine gold medal, especially made for the member making the highest string during the season of 1887, was taken by F. O. Young. This celebrated rifle shot made, at a club meeting in June last, a total of 434 rings, which score has not been equaled up to the present time. The medal for the first best Turner sharpshooters' prize was won by J. Utschig with 24 rings, and the medal for the last best shot was captured by the same gentleman. This ended the season's shooting, a very pleasant day's sport.

MALDEN, Dec. 26.—There was a large number of militiamen from the different companies throughout the State present at the shoot at the Bear's Den range to-day, which was under the auspices of Co. L, 8th Regt., Malden rifles. The first match was open to all members of the militia who have qualified as sharpshooters or first-class marksmen. There were three prizes in this class, the first a solid gold medal, and the second and third a gold and a silver medal. They were won as follow: First medal, E. L. Dorr, Jr., 1st Cadets; second medal, Sergt. Morrill, 2d Brigade; third medal, J. W. Blake, Co. H, 5th Regt. The second match was open to all second-class marksmen, there being two prizes, of gold and silver medals, which were run as follows: First medal, F. A. Shaw, 1st Cadets; second medal, B. L. Knapp, 1st corps Cadets. The third match was open to all third-class and unqualified marksmen. There were two prizes, of gold and silver medals, and were won as follows: First medal, W. P. Dickson, Co. H, 5th Regt.; second by E. H. Eldridge, 1st corps Cadets. In the State medal match, bronze badges were won by G. H. Dickson and H. F. Lynde. The conditions of the matches were 200yds., Massachusetts Springfield rifles. This range has been refitted, new bells put in, and otherwise improved, so that it is one of the finest ranges in this vicinity.

SPRINGFIELD, Mass.—The Rod and Gun Club opened their range at Lake Lookout this morning at 9 o'clock, and among those present were a number of promising marksmen who took their first lesson in rifle practice at 200yds. F. D. Frost, McGarrett and Rayner made very creditable scores for the first time. Hiram Engle, the crack shot of Chicopee Falls, started a fine score, but unfortunately his rifle gave out, and being obliged to use Mr. Stephens's piece, to which he was not used, and he was unable to do his best. T. B. Wilson used a Springfield military rifle, and his score of 80 is very good. The scores were as follows, 10 shots, possible 100: E. T. Stephens 85, A. K. Cooley 82, T. B. Wilson 80, J. Allen 73, J. W. Russell 72.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

SPRINGFIELD, N. J., Dec. 20.—The two days' tournament and the shoot for the State championship diamond trophy offered by the Union Gun Club, of New Jersey, was commenced this morning at this snow-covered place. The attendance was small, owing to bad condition of the weather. However, eight good ones got together for the main event of the meeting. These were Enoch D. Miller, of Springfield; "W. Hunt" and R. Herber Brientnall, of Zewark; Lindsley, of Jersey City; Collins, of West Hoboken; Tom Dukes, of Harrison; "Conover," of Milburn, and G. Sunderman, of Bayonne. There were four events scheduled on the programme These and a number of sweepstakes were shot under the rules o the National Gun Association. The following are the scores of the first day:

Fifteen Lockport bats:

Miller	111010111001111—11	Brientnall	111111111001111—13
Hunt	111111111111111—15	Reno	001101111001001— 8
Lindsley	101111010111012—11	Cadwell	010100010100111— 7

Hunt first, Brientnall second, Miller and Lindsley divided third.

Five pairs Ligowsky clays:

Miller	11 10 11 11 11—9	Lindsley	11 10 00 11 10—6
Reno	10 11 10 10 11—7	Hunt	11 11 11 10 11—9
Brietnall	11 11 10 11 10—8		

Miller and Hund divided first, Brientnall second, Reno third.

Nine single Ligowsky and 6 American clays:

Brientnall	101100111011111—11	Reno	011111001001100— 8
Hunt	111101101111111—13	Cadwell	001001010000000— 3
Miller	111011111111111—14	Roll	101011110111111—12
Lindsley	101110101111111—12		

Miller first, Hunt second, Roll and Lindsley divided third.

The badge is a handsome gold one studded with diamonds. On the bar is inscribed "Champion of New Jersey, 1887." Below are two guns crossed, the pendant is circular in shape, on it a towering pigeon surrounded by ivy leaves. When this shoot commenced the light was bad, the sky leaden and the snow-covered sides of Orange Mountain for a background. Miller, who won, did grand shooting. So did Brientnall. The latter killed his 30 singles straight and led until the 44th round, when Miller tied him. Then the locks of Brientnall's gun got out of order and both barrels went off in his hands at the score. This jarred and upset him and he missed his three last pairs:

Thirty single bats and 10 pair Ligowsky clays. Open to shooters resident of New Jersey. Single bats:

Miller	111111111111101111111111111111—29
Hunt	111111111111101111111111010111—27
Brientnall	111111111111111111111111111111—30
Lindsley	011001111111110111011111001111—23
Collins	111101011010111011111011111011—23
Dukes	111011111111111111111111100111—27
Conover	111101011110101011011111011011—22
Sunderman	010111101011010100110100001011—16

Double clays:

Miller	11 11 10 11 10 11 11 11 11 00—16
Hunt	10 11 01 11 11 11 10 10 10 11—15
Brientnall	00 11 11 11 11 01 10 00 00 00—10
Lindsley	11 11 10 10 10 00 10 00 00 10— 9
Collins	00 10 10 10 10 10 11 11 00 11—11
Dukes	00 10 01 00 11 11 11 00 11 10—11
Conover	00 11 10 11 11 00 01 11 10 10—12
Sunderman	10 11 10 10 11 10 01 10 00 11—12

E. D. Miller, of Springfield, won with 45 out of 50; second, "W. Hunt" 42, R. Heber Brientnall 40, T. Dukes 38, Collins 34, "Conover" 34, Lindsley 32 and Sunderman 28.

Sweepstakes No. 1—Ten single clays:

Miller	1011111111—9	Conover	1111110001—7
Smith	1110101111—8		

Ten single clays:

Sweepstake, 10 singles, ties divided: Hunt 9, Brientnall 10, Miller 9, Lindsley 7, Quinn 7.

Five pairs, ties divided: Hunt 7, Brientnall 0, Miller 8, Lindsley 8, Quinn 7.

Five pairs, ties divided: Hunt 10, Brientnall 8, Miller 8, Lindsley 4.

Ten singles, ties divided: Hunt 9, Brientnall 8, Miller 10, Lindsley 5, Quinn 9.

Fifteen singles, ties divided: Williams 13, Chetwood 5, Roll 7, Saunders 10, Haines 10.

Ten singles, ties divided: Miller 10, Brientnall 9, Lindsley 10, Quinn 7, Hunt 10, Conover 7, Lightipe 4, Bryant 7.

Ten singles: Brientnall 9, Hunt 10, Miller 7.

Ten singles, ties divided: Hunt 9, Brientnall 9, Quinn 5, Miller 6.

Ten singles, ties divided: Miller 8, Hunt 8, Brientnall 6, Lindsley 5, Quinlan 3.

Ten singles: Miller 8, Hunt 10, Brientnall 9, Lindsley 5, Quinn 6.

OAK POINT, Dec. 24.—The first of the Saturday afternoon shoots, which will occur at the Oak Point shooting grounds during the winter, took place to-day under very favorable circumstances. There was a fairly good attendance of shooters hailing from Brooklyn, Jersey, New Rochelle, Washington Heights, Fordham, Yonkers, Mount Vernon and New York. A large crowd of speculators was also present, 5 pigeons, Hurlingham rules, ties divided:

First Sweep.

A Ward	11101—4	J Jarvis	11010—3
J Elliott	11011—4	J Pilkington	10110—3
H Thompson	11001—3	J Hide	01111—4

Second Sweep.

A Ward	11001—3	J Jarvis	10011—3
J Elliott	10111—4	H Thompson	11111—5
J Trott	01111—4	J Pilkington	11111—5
I Hide	11111—5		

Ward third on shoot off.

Third Sweep.

A Ward	10111—3	H Thompson	11011—4
J Elliott	11111—5	J Pilkington	11101—4
J Trott	10101—3	I Hide	10111—4

WHIRLPOOL GUN CLUB.—Niagara Falls, Dec. 17.—Below please find scores of a very interesting live pigeon and artificial blackbird shoot, which was held yesterday on the grounds of the Whirlpool Gun Club. The pigeons were the liveliest lot ever seen on these grounds. First shoot, 9 Niagara Falls blackbirds:

J Wayper	111111111—9	E M Moody	111111111—9
G Briggs	10000 000—2	G Margetts	110110010—5
W H Case	010100111—5	M Wright	110111111—8
W Hines	110110111—7	E H Smith	101111111—8
A Westbrook	010110100—4	W Gombert	100111100—5
J Bampfield	010010010—3	G Stauber	010101010—4
J Smith	111111100—7	Storey	001100101—4
C Milloy	110001110—6		

Wayper and Moody divided first; Smith second, Hines third, Milloy fourth. Ten live pigeons. Dominion rules, miss 8 and retire:

G Briggs	8	T Lansing	8
C Adams	8	E M Moody	8

Thirteen retired. The eights divided the whole. Match for purse of $200, trap and handle, 21 birds:

G Briggs	110101111110001111110—15	Bishop	110100010111101010000—11

Seven live pigeons, $60 purse, Dominion rules, miss 2 and retire:

J Storer	6	T Lansing	6
J Wayper	6	C Milloy	7
E Moody	6	G Rogers	7
W H Case	7	Otto Besser	6
E H Smith	6	C Forsyth	7

Forsyth and Rogers divided first and second, Milloy third, Case fourth, seven retired.

Nine Niagara Falls blackbirds:

W Gombert	111011100—6	Minton	111110101—7
J Smith	100011000—3	J Wayper	111111111—9
O Besser	110001111—6	Moody	110110111—7
G Margetts	101011111—7	Storey	010001111—5
C Forsyth	111000111—6	J Bampfield	011011010—6
Claridge	001110010—5	W H Case	111010111—7

Wayper first, second divided, Bampfield third, Claridge fourth.

Six Niagara Falls blackbirds, sweepstakes:

Moody	110111—5	Besser	100101—3
Wayper	111111—6	Case	101111—5
E H Smith	111011—5	Hill	010111—4
Margetts	111100—4	Claridge	100001—2
Gombert	111101—5	J Bampfield	111111—6
Forsyth	111101—5		

First divided, Smith second, Margetts third, Besser fourth.

TORONTO, Dec. 20.—A shoot at live birds and Peoria blackbirds opened yesterday at D. Beldam's, Malvern. It was well attended, there being about sixteen representatives from Toronto, and a number from Hamilton, St. Catharines, Hespeler and Winnipeg. The pigeons were an extra good lot. Owing to the number of entries the shoots could not be finished. No. 2 pigeon match was commenced, but only a few shot; it will be finished to-day. Each of the matches are for a purse of $75, divided as follows: First, $25; second, $20; third, $15; fourth, $10; fifth, $5.

Ten live pigeons, 25yds.:

D Blea	1111111111—10	C Forsyth	1110001110w—5
J Townson	1111101111— 9	H Miller	1111101010w—6
J Wayper	1101011111— 8	J Wilson	1011111000w—6
C Colborne	1011111110— 8	C Ayre	0110111101w—6
J Stroud	1111000111— 7	J Bell	1010111110w—6
G Fearsall	1110011110— 6		

Sweepstakes; six blackbirds; $1 entry; divided 50, 30 and 20 per cent.; ties divided:

W Williams	111111—6	J Cline	101011—4
W McDowall	101111—5	Riggs	000111—3
L Hipkins	110111—5	Pearsall	110010—3

Sweepstakes; nine blackbirds; ties divided:

W Felstead	111111111—9	Ormrod	100010101—4
Jones	111111111—9	Lowrie	000111100—3
Riggs	111001111—7	J Hobbs	000001110—3
Walton	001101111—6	Pearsall	000110100—3
Hetherington	111000111—6		

Sweepstakes; nine blackbirds; ties divided:

W Felstead	101111111—8	L Hipkins	111101011—7
Clark	111110111—8	Wilson	101010111—6
Riggs	101111101—7	Hobbs	111110100—6
W McDowell	111110011—7	Lowrie	100011011—5

Dec. 21.—The Malvern shooting tournament was concluded today. The shoot was in every way very successful and Mr. Beldam was very glad to meet so many of his friends and made things as pleasant as possible for them. The scores are as follows: Ten live birds, 26yds. rise; $25 to first, $20 to second, $15 to third, $10 to fourth and $5 to fifth:

C Colburn	1111111111—10	W Hood	1110001111— 7
C Forsyth	1111011111— 9	J Townson	1110011010— 6
J Wayper	1001111111— 8	J Stroud	1010110110w 5
C Ayre	0101111111— 8	Hemingway	0111110w— 5
G Carruthers	0111100111— 7	H Miller	1101101100w 5
J Bell	0111101011— 7	J Jobbitt	1010101110w 5
G Briggs	1111001011— 7		

The team shoot was very close and exciting between the two first teams—the second team was one bird ahead twice, and there was also a tie twice, but the first team pulled themselves well together and finished three birds ahead.

Team shoot at 7 live birds, $30, entry $10 per team:

First Team.

G A Briggs	1101110—5	J Townson	1011101—5
J Wayper	1101111—6	J Hood	1010111—5—28
C Colburn	1111111—7		

Second Team.

W McDowell	1111110—6	C Ayre	0011110—4
W Carruthers	1101111—6	Lewis	1001101—4—25
W Hetherington	0101111—5		

Third Team.

Beldam	0101101—4	Walton	0010111—4
Ormrod	0101111—4	Lowrie	1010110—4—21
Miller	1011011—5		

Sweepstakes at 9 blackbirds,

Lewis	111111111—9	J Hood	111111001—7
J Stroud	111101111—8	McDowell	110011111—7
G H Briggs	101111111—8	Miller	001110111—6
C Colburn	111011101—7	Felstead	101011001—5
J Wayper	111110011—7		

On the shoot for fourth place Wayper and Colburn killed three straight and then divided, Hood and McDowell having dropped out.

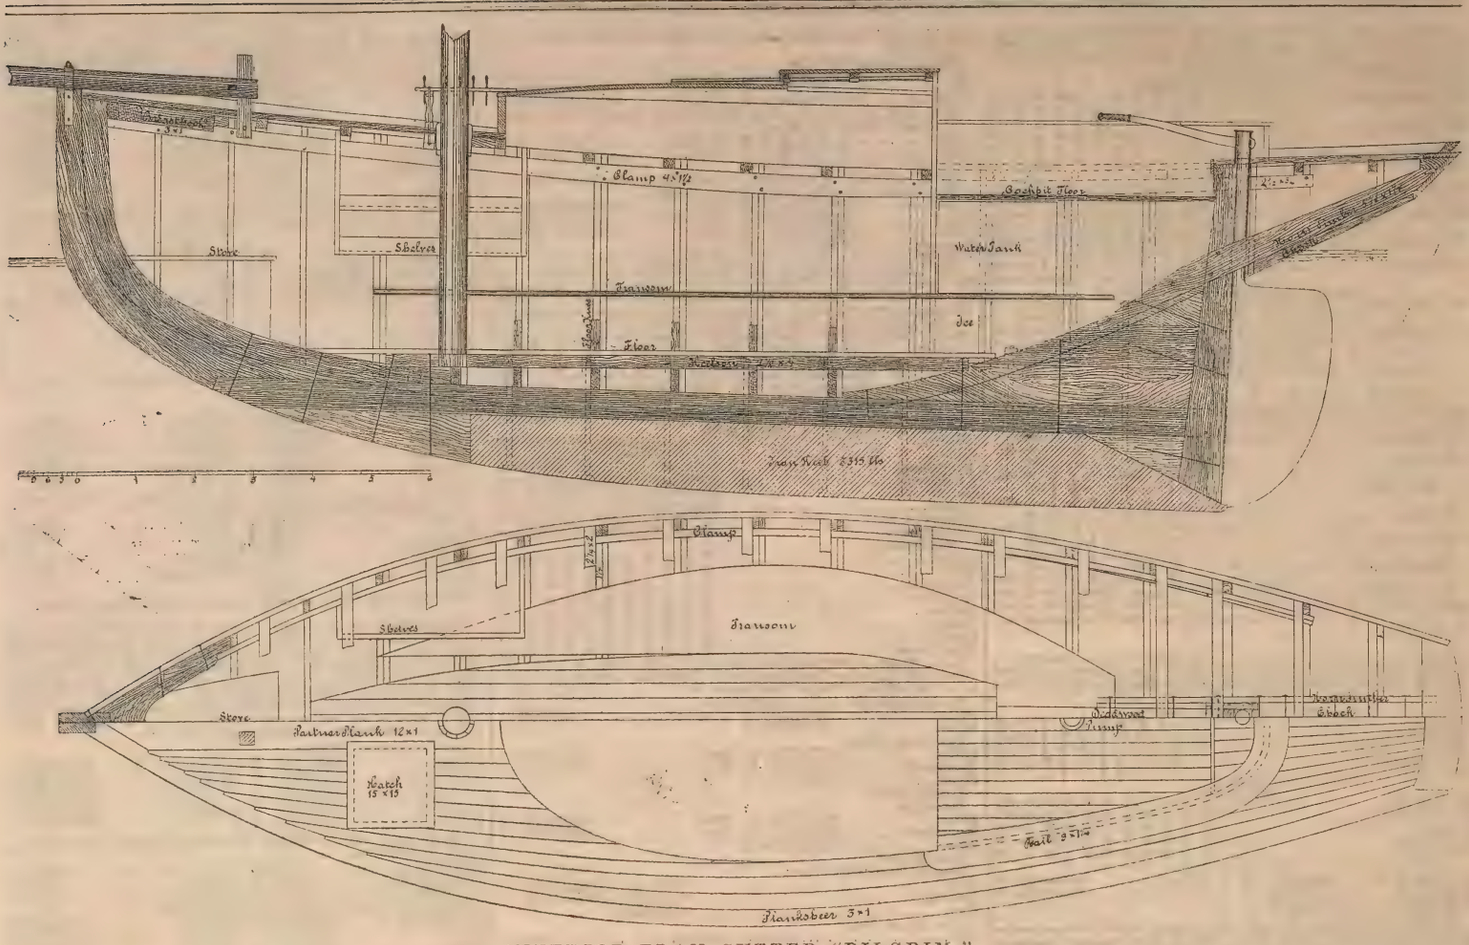
RYE BEACH, Dec. 22.—A series of sweepstake shoots took place at Rye Beach to-day, and were witnessed by a large crowd of people. The rules shot under called for 5 birds from 5 traps, at 25 and 28yds. rise, two barrels, with gun below elbow. The birds were pretty lively ones and were generally good flyers. Fair shooting was done. Elliot, Pilkington and Odell, 28yds., rest 25yds. Appended are the scores:

First Sweep.

Pilkington	01110—3	McCoud	00101—2
Odell	11111—5	Jarvis	01001—2
Secord	11111—5	Elliott	11010—3

Second Sweep.

Elliott	01100—2	Jarvis	11100—3
Pilkington	11010—3	Stuber	00110—2
Odell	11101—4	McCoud	10111—4
Secord	01111—4		



Third Sweep.

Elliott	10100—2	Jarvis	10100—2
Pilkington	10110—3	McCoud	11011—4
Secord	01101—2	Stuber	11101—4
Odell	11111—5	Trott	10111—4

When the sweepstake shooting was concluded a match was made between young Trutt, the boy shooter of Yonkers, and J. Odell, of New Rochelle, for $100 a side, to be decided on Saturday, Dec. 31, on the Oak Point shooting grounds. Fifty birds each will be shot at, and Hurlingham rules will govern the contest.

WELLINGTON, Mass., Dec. 24.—There was a fair attendance at the grounds of the Wellington Club to-day. In the merchandise match Swift was first with 18 in Class A, Snow and Perry second with 17 in Class B, and Sanborn third with 16 in Class C. The winners in the sweepstake matches were as follows: Six pigeons, Swift and Snow first; 6 blackbirds, Snow first; 6 blackbirds, Wild first; 6 pigeons, Swift first; 6 blackbirds, Wild and Swift first; 6 pigeons, Perry first; 6 blackbirds, Sanborn first; 6 pigeons, Swift and Snow first; 10 blackbirds, merchandise match, Snow first; 10 pigeons, merchandise match, Swift first; 6 pigeons, Swift, Wild and Snow first; 6 blue rocks, Maguire and Perry first; 6 pigeons, Sanborn first; 6 pigeons, Sanborn and Maguire first.

Dec. 26.—The annual Christmas shoot of the Wellington Gun Club at their range was largely attended, and some excellent shooting done. The winners of the various events follow: 6 pigeons, Sanborn first; 6 blackbirds, Dickey, Snow and Wheeler first; 6 pigeons, Maguire first; 3 pair pigeons, Maguire first; 6 blackbirds, Melcher and Sanborn first; 6 pigeons, Sampson and Dickey first; 6 pigeons, straightaway, Nichols, Lawson, Perry and Snow first; 6 blackbirds, Perry, Lamb and Maguire first; 6 pigeons, Perry first; 6 blackbirds, Snow, Wild and Lawson first; 6 pigeons,

INTERIOR PLAN CUTTER "PILGRIM."

Lawson, Wild and Rogers first; 3 pair blackbirds, Snow and Wild first.

The annual meeting of the Wellington Gun Club was held on Dec. 19, at the range at Wellington, and it was attended by a large number of members. During the day members indulged in a grand shoot. The treasurer's report showed the club to be out of debt and and with a large balance in the treasury. After the business meeting supper was served by Caterer J. A. Dill. The following officers were elected: President, Herman Strater; Vice-President, H. C. Warren; Secretary, R. F. Schaefer; Treasurer, J. S. Sawyer; Executive Committee, William E. Perry.

NEW JERSEY.—The Flemington Trap-Shooting Tournament Association will hold a big tournament on the Fair Grounds, in Flemington, on Jan. 10, 11, 12 and 13. The matches and sweepstakes will be open to all comers, and special inducements will be offered that will draw expert snap shots from all over the country.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

THE CRUISING CUTTER PILGRIM.

IN ANY yacht that may be properly called a "single-hander" the question of room is always of the first importance, and the division and arrangement of the interior so as best to utilize the necessarily limited space, is a serious problem. The cabin plan must depend on the size of the boat, the number of the crew, and the class of work they are fitting out for, and must vary in each case, but as a general rule the fewer bulkheads and divisions in a boat under 30ft. l.w.l. the more room will be obtained. Many small boats of this class have been fitted up after plans which look very well on paper, but with the result that there was no room for the crew after the furniture was in place. If the boat is to be sailed absolutely single-handed, only one on board, there will be in all probability room enough, but certain special arrangements will be necessary. The crew of one, who is cook as well as steersman, must be able to reach everything he is likely to need when under way without leaving the cockpit for a moment longer than necessary. To this end the water faucet, stores and cooking apparatus will be placed just within the cabin, at the after end of course, so that cooking may go on with the crew ready to glance about through the open hatch, or to gain the deck in a moment. The bed or hammock will be forward, well under deck and away from the companion, which is open more or less in wet weather, but oilcoats, spare gear, lamps and oil and similar stuff will be stowed either under deck about the cockpit or in the after end of the cabin.

There are few singlehanders of over 20ft., however, which are constantly used alone, the owner usually having one or two friends with him, in which case a different arrangement is desirable. The lockers or transoms must be used to sleep two or more of the crew, while the galley will be in the usual place, forward of the mast. A curtain may be used to shut off this part at night, but no standing bulkheads are necessary, and they should be avoided as subdividing the already limited space too much. In the Pilgrim the space was very small even for the regular crew, a man and three boys, and when two men were added, as at times was the case, one is apt to wonder where they were stowed. The general arrangement below is shown in the accompanying plans, and is described as follows by Dr. Winslow in the opening chapter of his first cruise:

"The cabin was arranged according to a plan I hit upon in cogitating over how I could make more sleeping room, and is somewhat unique and just adapted to a small cruiser. The whole interior of the boat was left open from the eyes to the run. An oil stove was fitted upon a shelf in the fore peak; a shelf above and a cross piece below furnished two good storage places. A series of divided and railed shelves for dishes and stores was built upon the starboard side as far as the transom, yet leaving room for passage between them and the foremast. The port transom was lengthened when necessary by a grating seat that reached past the foremast and furnished a seat for the cook, and bedroom, but when not in use was buttoned back against the sheathing. A small hatch was placed in the deck over this for ventilation and cooling off. The transoms were 18in. wide, a foot high, and extended from just abaft the foremast clear into the run. Their inside space made four large lockers, their tops were covered by 4in. thick cushions for seats, and being 12ft. in length, they made two good beds on each side, end on.

"A bulkhead only a foot deep formed the finish of the forward part of the cockpit inside and the after limit of the cabin proper, and, being cut through at each end, it gave a long locker for guns, etc., upon each side of the cockpit, beneath the deck proper. Just below this, close up to the cockpit floor, the square 24gal. water tank was cased in, having a faucet in its anterior face. There was room beneath the tank and between the transoms for a goodly sized ice-box, and the gangway steps covered all. The remaining space under the cockpit behind the tank was cased up and made a good locker upon each side, leaving a passage upon each transom alongside of the tank and locker, about 2ft. square, clear into the run, which was lighted by two bullseyes set in the deck. This admirable arrangement not only afforded lots of snug and warm leg room for the two after beds, but left the whole run open to the cabin for stores, sails, etc., without cutting an after hatch. The value of these lateral passages for storing bedclothes and oversoats, etc., temporarily during the day was incalculable, and the amount of camp equipage and stores that little Jack stowed in the run loaded a down-east truck team.

"The stern was narrow and the overhang of cutter type, therefore the room behind the rudder post was tongue-shaped. At the extreme stern lay a rolled shelter tent which Jack had packed in closely, yet I, a 5ft. 9in. man, weighing 165lbs., and a little stiff from rheumatism, crawled back upon the port transom with arm extended, and succeeded in getting two fingers hold of the cloth and pulled it out.

"The head room was 4ft. 6in., enough for any one to dress in, and one could also push back the gangway slide and extend his length and caput to the gale if he so desired. More would have been preferable, but when one reflects that it necessitates in such a singlehand yacht a higher trunk and more surface exposed to the wind and sea, and elevation of the main boom and sails, and an excursion barge style, one will prefer a little genuflexion.

"The store room, kitchen and reception room having been considered, it only remains to describe the latter when fitted up as a bedroom. The cushioned transoms were covered with bed clothes, hauled out of the run, two pillows were placed side by side across their middle, so that the sleepers should lie head to head; a short mattress was laid upon the floor, 2ft. 6in. wide, from foremast aft, and another bed made upon it. This still left room at its foot for undressing, and the clothes were placed under the pillows to make them higher. Thus this little 25ft. vessel afforded complete and comfortable hotel accommodations for five persons, and when one was kept on watch, for six—unprecedented in so small a craft. There was a 26lb. working anchor with 20 fathoms of riding rope and a 42lbs. anchor with 30 fathoms of rope for heavy weather, and this latter saved us from going ashore and let us sleep in confidence many nights, for winds and currents are treacherous. A light 12ft. cedar boat towing astern completed our outfit."

The height mentioned, 4ft. 6in., is under companion slide; the head room under center of trunk is 4ft. 2in.

The details of construction are not all from actual measurements, but are given as examples of the general practice in this class of boat. Many small craft have been built from the lines previously published in the FOREST AND STREAM, in parts of the country remote from yachting centers, and as the construction differs from that of the small beamy sloop or open catboat, the following specifications will be useful to builders familiar only with the latter: The keel will be sided 6in., moulded 6in. The stem will be of an oak or even hackmatack knee, if one can be obtained, otherwise it will be built up from three or more pieces of plank. The siding will be 3in., moulding at head 10in. No apron will be needed, but a breast hook, also a knee, will be worked forward, and well bolted through stem and wales. Filling pieces as thick as the frames will be required in the two frame spaces on each side covered by the ends of the breast hook. The sternpost will be sided 3in., moulded about 8in. at head and 9in. at the heel. The keel in this case is tenoned into it. The deadwoods, keel and stem are bolted, as shown, with ⅝in. galvanized iron bolts, clinched over rings. The floors will be oak knees, sided 2in., bolted to the keel with two ⅝in. bolts.

The weight of the lead or iron keel is carried mainly by a keelson worked over the throats of the floors, as shown, the keel bolts, 1in., setting up on top of it. The keelson as shown is of oak or yellow pine, 2½x4in. One objection to a keelson is that, while strengthening the boat very much, it prevents the stowage of any large amount of inside ballast, as is sometimes desirable. To overcome this difficulty the keelson itself is sometimes of cast-iron, giving weight low down as well as strength. In cases like the present the keelson may be cast of such shape as to fit over the floors, and at the same time to project down between them to the keel, giving still greater weight. The only point to look out for in such an arrangement is the passage of all water to the pump well, good limber holes in the heels of the timbers and a slight descent to the keel when afloat in proper trim, so that all water may be removed by the pump. The latter is placed in the cockpit floor, the pipe running to bilge not being shown.

All frames are sided 1¼in. and moulded 2½in. at heels and 1½in. at heads. In the middle of the boat they are double, as shown, but forward of the mast and abaft the post they are single. The heels are boxed or mortised into the stem and deadwoods and bolted fast. The spacing of the single frames is about 16in., of the double frames 16in. The stern construction is clearly shown, the counter is carried by two horn timbers, 1¼x5½in., bolted to the sternpost and after deadwood. The space between the horn timbers is sufficient to admit the two sides of the rudder-trunk, in addition to the sternpost, chocks or filling pieces being fastened to the deadwoods just forward of the sternpost to bring them to the required thickness. The rudder trunk is of clear and well seasoned white pine, the sides being 1¼in. thick. The sternpost forms the fore side of the trunk and a third piece of pine the after side, space being left below, as shown, to ship the rudder. After the trunk is built up, canton flannel and whitelead being used in all joints, the horn timbers are bolted in place, and a chock is worked between their after ends, filling the space between them. The angle between this chock and each horn timber forms the rabbet for after end of plank. The planking is of 1in. plank, dressed on both sides before working and finally planed off after the seams are caulked, leaving it about ⅞in. thick all over. The clamps are of yellow pine in one length each, the size amidships being 4x1¼, diminishing to 3x1in. at fore end and 2½x¾ at after end. A bilge clamp 4x1¼in. and tapering toward the ends, is also worked on each side, inside the frames just over the heads of the floor knees. The deck beams are sided 2¼in. and moulded 2in., spaced the same as the frames wherever possible. The pair next the mast are joined by a filling of 2in. plank, making the partners.

The sole piece or partner plank is 1in. thick and 12in. wide, running from the stem to the cabin trunk, the hole for the mast being cut through it. The mast will step in a mortise 2x4in. in the keelson. The bitts, of oak or locust, will be bolted below deck, not running down to keel. The partner plank is strengthened by a filling piece between the beams, where the bitts pass through. The planksheer is of oak, 1x3in., in one length and bent to shape. The deck plank is 1in. thick. The usual manner of decking small yachts in this country is to make the planks very narrow, but 1 or 1½in. wide, bending them all to the curve of the sideline. This method makes a large number of seams, and is apt to result in leaky decks, though it looks well in a very wide boat with a large cockpit and narrow waterways, like the ordinary skimming dish. Another and better method is to make the planking 2 or 2¼in. wide, running exactly fore and aft, the ends being stepped into the planksheer, as shown, so as to avoid feather edges. Perhaps the neatest way as well as the best is as in the drawing, the planks about 3in. wide at the middle, diminishing in width toward the end to correspond with the lessened breadth of the boat. In this plan the many small pieces and the fine ends that are difficult to caulk are avoided. In the drawing the cabin ceiling is not shown, but it will be ⅜in. white pine, running as far fore and aft as possible. The lockers and shelving will be of ⅞in. white pine.

REPAIRS AND ALTERATIONS.—At Smith & Terry's yard, Greenport, the steamer Empress is receiving a thorough overhauling. New cabins and fittings, repairs to engine and a new sail plan with square yards on foremast. She will leave New York early in April for cruise in Chesapeake Bay. The steam yacht Fra Diavolo is also at Smith & Terry's, where she will be lengthened 15ft. amidships and a new boiler put in. The steam yacht Magnet is also being lengthened 3ft. at the bow. . . . At McGehan's yard, Pamrapo, the centerboard sloop Genia has been hauled out and converted into a keel yacht. An oak keel 18in. deep has been bolted on, with lead blocks cast in it. The centerboard and trunk have been removed.

BEVERLEY Y. C. FIXTURES FOR 1888.—July 4, Monument Beach, first Buzzard's Bay championship. July 7, Swampscott, first championship. July 14, Marblehead, first open sweepstakes; Monument Beach, second open sweepstakes. July 21, Monument Beach, third open sweepstakes. July 28, Monument Beach, second Buzzard's Bay championship. Aug. 4, Nahant, second championship. Aug. 11, Monument Beach, third Buzzard's Bay championship. Aug. 25, Marblehead, first open race. Sept. 1, Monument Beach, second open race. Sept. 3, Marblehead, third championship. Sept. 15, Monument Beach, fourth open sweepstakes.

NO MORE CHALLENGES FROM SCOTLAND.—One of the gentlemen chiefly interested in Thistle writes us as follows: "I have received what is called the deed of gift, but what should properly be named the deed of retention, and feel sure that none of the yachting men in Scotland will have another try for it until the conditions are very much modified. Surely you Americans are good enough now to fight us fairly at least. I know that we are not good enough to fight you with one hand tied behind our back and giving you ten months' notice of where we are going to hit you."

GERDA.—This is the name chosen by Dr. C. K. Clarke for his new cutter now in frame at Kingston, Ont. Gerda, according to Scandinavian mythology, was the most beautiful woman in the world, and the wife of the god who presided over rain and sunshine. The cutter is 50ft. waterline, and has received 9,500lbs. of lead on her keel, almost the entire amount of her ballast. She will be out early in spring, and her performance will be watched with much interest, as she is a new departure in Kingston yachting customs.

A NEW CRUISING CUTTER.—W. K. Pryor, of South Boston, will soon begin a new cutter for C. H. Taylor, Jr., from a design by J. Borden, Jr., of the Boston Yacht Agency. She will be 38ft. over all, with clipper stem; 28ft. l.w.l., 10ft. 6in. beam, and 7ft. draft, with 6 tons of lead on keel. There will be 6ft. headroom, with a flush deck. The cabins will be finished with mahogany and cherry, and the spars will be hollow, made after Mansfield's method.

A NEW COMPOSITE YACHT.—Mr. Burgess has designed a cutter of 28ft. l.w.l., which will be built after a new method devised by James McIntyre, inventor of the companion slide and revolving skylight. The keel will be a hollow cast-iron box, open on top, the angle-iron frames being rivetted to its sides, after which melted lead will be poured in. The wooden skin will be bolted to the frames in the usual manner.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON..... } Albany, N. Y.
Secretary-Treasurer: F. L. MIX, }

Vice-Com. Rear-Com. Purser.

Central Div., Henry Stanton...R. W. Bailey.....E.W. Brown, 146 B'way, N.Y.
Eastern Div., L. Q. Jones.....Geo. M. Barney...W. B. Davidson, Hartford.
N'thern Div., A. D. T. McGachen. W. G. McKendrick, S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

CRUISING CANOES AT THE MEET.

Editor Forest and Stream:

When I picked up the FOREST AND STREAM of Dec. 15 and read the articles from "Cruiser" and Mr. R. W. Gibson, it reminded me of the time—I was much younger than at present—when I undertook to rout out the bee's nest with a long pole and got the bees about my ears in a most lively manner. As "Cruiser's" article is the shorter I will attempt to answer it first. After reading the letter which I wrote on A.C.A. cruisers, "Cruiser" does not know what I want anyway, and then immediately agrees with me on several things which I wanted, namely, that the A. C. A. should give prizes for the best kit, tent, cruising sails, etc., to stimulate that other class of canoes and canoeists which every one admits to be the best and yet which is not looked after at all by the Association, which was organized to look after the interests of the canoe and canoeing in general.

"Cruiser" wants to know what I would substitute for the 75ft. limit race. Well, I think we could substitute almost anything without giving the cruising man a worse show than he has at present, and it is possible that the regatta committee might hit on a race that could be won by a wholesome cruiser. Probably the rule they suggested this spring, viz., to sit inside the cockpits, would be a good one; for then a craft would have to have enough initial stability to hold up a certain amount of sail, which in this case should not be limited, because a steady cruiser would be able to carry much more than the narrow, deep racers; or there are half a dozen ways out of the difficulty. The first thing is to throw out the 75ft.-limit race, which places a premium on small, narrow, shallow, cranky craft, and then try something else. There is no advantage in hanging on to a thing that has outlived the usefulness which some doubt it ever possessed. With regard to Pecowsic failing to win the A. C. A. trophy in '86 and '87, "Cruiser" could not have been present at Grindstone, where any one could see that Pecowsic was the fastest craft there, she having beaten Vesper in the 75ft.-limit race, also the unlimited race and the international event. The same, I believe, is true of this year's races in the 75ft. limit. Pecowsic won also the unlimited, where the time of the Notus is not given, but the third man was about five minutes behind, and Notus evidently was some distance behind him. And the A. C. A. trophy was again lost to Pecowsic, this time by stress of weather. I therefore think I am quite within the mark when I said that one had to own a Pecowsic or similar model to win our sailing races.

"Cruiser" doubts that a squadron cruise can be made as pleasant as a small club event. Well, "Cruiser," just try it and see, because after having tried it in England this summer for two weeks under the able guidance of that well known racing canoeist Mr. E. B. Tredwen, I am of the opinion that it has been and can again be successfully carried out here or there. There it will be tried again next year, and I see nothing detrimental in our cruising grounds to hinder us from at least trying it. We tried it last year in our division at Stony lake with success and will have more of it next year, so that "Cruiser" would do well to give it a trial before doubting and butting his head against what are now established facts. I admit that some would not enjoy it, a racing chap for instance who has his centerboard in the middle of his narrow, shallow canoe, who, when he has his duffle aboard, finds there is not room for himself to sit, let alone be comfortable, or the chap who starts out with standing sails for a day's cruise and encounters a squall on the way, his duffle would hinder him from crawling forward to get down his perfect racing sail, and if he did get it down he would have no place to stow it. Oh, no! these men would sooner be back in camp, and racing against those who, when getting a sail, think of something but the "get that" quality of it; but I ask is this fair that we have everything to suit the "get; thar" man alone and nothing to encourage the good wholesome general purpose canoe and good reefable, safe cruising sails? This last question should be well rolled under the tongues of the '88 regatta committee, as it points the compass in the direction in which we have been heading these last few years, and will still head unless they luff up and go on the other tack.

From the fact that only 44 out of 150 members raced at the meet, I would judge that the other 106 were waiting for something for which they could compete on even terms or to go on a cruise, or probably they spent the time talking about the good old times when the Vesper and similar cruising canoes had a show of winning a race at our meet. "Cruiser," I know, draws another deduction from the above figures, to which I cannot say amen. However, I am pleased to shake with him when he finishes up by saying we should have good prizes for cruising gear and boats.

With reference to Commodore Gibson's letter I am very much pleased that the hot shot I fired into the camp had the desired effect of calling the attention of the officers to what some of us consider their duty, and the way the Commodore dons the cruiser's shirt and takes his place among the ranks as a full-fledged cruiser is a pleasure to see.

As Mr. Gibson suggests, I do write as an irresponsible critic inasmuch as I do not speak for any division, club or clique, but simply what I believe to be facts that should be brought to the surface and quietly and kindly discussed for the general good, and I must say it is a most thankless task, for you are immediately tackled and your article headed "A Growl," and the next one wants to know if "he will work as well as writ." (I think any one who would undertake to write up such an unpopular thing as this is entitled to the A. C. A. officers and racers, would, in future, think work nice fun when compared to it), and so on, you get roasted if you take hold of the end of what appears to be an unpopular stick.

However, that is away from the point at present. Mr. Gibson kindly offers me a position which I would be pleased to accept were I going to attend the general meet next summer, but as my vacation only lasts ten days, I will have to spend my time looking after the cruises of our Canadian division, so I beg to decline with thanks. However, I have no doubt that there are dozens of cruisers who could fill the position more ably, and who will be present, as the ground is such a good cruising one, and Mr. Gibson should select three or five of these now, so as to get trophies gathered, etc., just the same as the racing or regatta committee do, and let it be known early what they intend to give prizes for, where they intend to cruise, and on what date and where the competition for kits, tents, etc., will be held. If this be done I think the success of the trial will be assured, and after it is once inaugurated I do not think any one will want to see it abolished.

I would suggest to Mr. Gibson that instead of asking myself or any other individual cruiser to get a prize and give it, and also offer to let us lug around any other canoeists who wanted to follow us on a cruise or camp, that he take the usual rational course of appointing a committee with authority for such work now, and if they could not secure enough trophies for the events by the usual method, let the committee draw on the treasury for funds to provide them.

How would our races come off if our commodore was to say, "Well, if any of you chaps want to race just get something to race for and I'll give the necessary authority to let them follow you around the course." I'm afraid our racing would soon be like what our cruising is now.

I, too, doff my cap and say I am a racer, and unlike the commodore I have not given it up. I go in for every race that I can, whether my chance is best for the tail end or to lead the fleet, and I enjoy a keen race as well as any one who ever hung his toes under the lee coaming while the seas played hob with his coat tails, and I take the ground that we can have just as much fun and excitement in racing in canoes that are fit to cruise in as in racing the crankiest craft that was ever built.

If this be so, then what we should do is to encourage the class of craft that when the race day is over can be used to take a comfortable afternoon sail or a cruise for a day or two. First, will any one deny that we can have just as good a time sailing cruising canoes as in racing cranky machines, provided we all have the cruising canoes. Second, will anyone deny that it would not be better for our sport were it the case that we all owned canoes that could be used comfortably for something besides match sailing. If the above is true then why cannot we have it so? We made the rules we now have, and if we find they do not encourage the proper thing we can change them so that they do encourage a desirable all-round craft, as we have the advantage of years of experience to do it with.

Com. Gibson suggests that because there are some few out of 600 who probably prefer undisguised racing with lean hulls and acrobatic deportment, we should let them run our entire show into machines or wherever they want to; to all of which I beg to enter a loud, long and emphatic "not much."

We may not turn them out or suppress their heresies, but we can legitimately encourage a better canoe while still leaving a race for that class. In this as everything else just what is encouraged will grow best and flourish, and if we want to get a better canoe and still retain all the enjoyment, interest and excitement in our races we can do it, simply by encouraging it and making our regulations so that it has an advantage in the majority of our races just as the so-called machines have now.

For instance, we have a rule which says the depth shall not be over 16in. and yet no one would ever think of going that high, while many build very low craft just for racing that have no room or height in them. Well! we said they should not be over 16 deep and we can just as well say they must be of a certain depth, say 11 or 12in., and at once you have a craft that at least has height.

Then again we say, you must not build over such a width, and all the time people are trying to get as far under it as possible. We can just as well rule that a class shall be 30 or 31in. beam or waterline as that it shall not be over that, and shall not have over so much headrise to the foot, and as soon as you do those two things you will have room and stability. Oh, yes! we can do anything we want if we happen to get the right men in power, and there is a great responsibility on the officers and especially with the regatta committee that they use the power given them to encourage the best class of canoe that can be found, and if the rules do not encourage that class I take it that it is their duty to change them so that they do, while they could still retain a race or races for the small, narrow, shallow, cranky craft.

Mr. Gibson doubts whether the suggestion of having only one sail which would be reefable, would encourage the cruising canoe. It is possible that it might not, but it would most certainly help the cruising sail, and that, at least, is one step in the right direction, but why not go a little further and have a comfortable canoe as well as the sail, instead of saying that a canoe shall not be over such a depth, make the rule read that they "must be" a certain depth, and that they must be up to a certain beam for each class, and at once you have room and a craft that is safe and comfortable, which is more than we can say for many of our present craft.

TORONTO, Dec. 22. W. G. MACKENDRICK.

Editor Forest and Stream:

In a late issue of the FOREST AND STREAM I saw a letter from W. G. MacKendrick on cruising canoes, which I am much interested in.

Now, at the A. C. A. meet you compel a man to sail and paddle his own canoe, and each man one canoe only. You will allow him to have a car load of sails, but still you restrict him to one boat. Would it not be as fair to compel a person to use one set of sails, and allow him to have several boats to select from when he enters for a race?

What we want to do is to get the canoe with sails and camp outfit, such as tents, blankets, cooking utensils, etc., in the most compact and convenient form for cruising. If a man starts on a cruise he packs his craft with all his outfit. He does not send to various points on his route an assortment of sails, paddles, etc., to be exchanged for those he carries, to suit the exigencies of the next five miles of his cruise.

No. He has one complete outfit and has it with him all through. He has no team or barge to relieve him of his load, and is independent as he should be whether night, storm, sunshine, calm, a portage or meal time confronts him.

Now, I think a fair test for cruising canoes and men would be to allow any kind and size of sail, any kind and amount of cargo and rig, but allow neither addition to nor diminution from it either in sailing, paddling or combined races.

Thus if a contestant went into the paddling race with only a paddle and cushion, a paddle and cushion should be his sole equipment for all other events whatever.

Then by making only general record prizes you would get the best all-round man, boat and rig, and it seems to me that is what we want. This, of course, refers solely to cruisers and is not meant to apply to sailors or paddlers.

I am not objecting to the sailing racer or to the paddling racer as such, but believe each should be so classed and not allowed to compete in one special event against an all-round equipped boat.

LINDSAY, Ont., Dec. 17. S. BRITTON.

Editor Forest and Stream:

Now that our Commodore has opened a way we are sure of having a well conducted cruise at the Lake George meet, as Mac cannot fail to accept such an invitation. We all know Mac as a cruiser as well as a racer, and in his wake the cruising fleet need have no fear that the arrangements will not be perfect. As the cruise is a feature that will of course bring to the meet every one of the many who talk and write against racers and machines, I would suggest that Mac arrange and make public at once the full plan of the cruise, so that all cruisers may have ample time in which to make arrangements to spend a week at camp and join the party. With a week for the racers under a good regatta committee and a week for the cruisers under such a leader the A. C. A. meet should fill the wants of every canoeist. Let the pot-hunters and "five rig" men have their races but it is Mac and his "personally conducted" that will charm every CRUISER.

Editor Forest and Stream:

In reading the controversy over the big canoes, one thing has always struck me, that few seemed to consider that a canoe is built or should be built for the work it has to do. In Toronto Bay and Lake Ontario a big canoe is an advantage; in Canada we prefer the large canoes because we generally cruise two in a canoe, the long portages and the large and heavy supplies of food required in traveling through unsettled country necessitates the double crew. But that is no reason why others who, when at home, use rivers or small lakes in thickly settled communities, should use large and heavy canoes. I am sure if Mr. MacKendrick (as he seems to do in his late letter) stakes the reputation of big canoes on the success of a cruise at an A. C. A. meet, he will be grievously disappointed. The ordinary canoes will hold quite sufficient outfit for any short cruise. The large canoes are harder to paddle, they do not sail any better, they are not more seaworthy, if they have to be portaged the skipper will have to beg assistance from some friend, who, however, if will be difficult to induce to perform the same office again. Where is the big canoe's superiority on such an occasion?

Of course, an extreme type like the Pecowsic is ill-adapted for cruising, but she was never intended for it. She was designed for speed under canvas. I have no doubt, however, that as large a proportion of canoeists would get as much pleasure out of her as out of Mr. MacKendrick's favorite craft, and is not this the true test? The A. C. A. always seemed to me to endeavor impartially to promote canoeing in all its forms and canoes of all descriptions. Mr. MacKendrick perhaps was led to think otherwise, because the bulk of the members had no use for big canoes and said so (canoeists are always outspoken), while the extraordinary success of Pecowsic led to much praise and many prizes being bestowed on her. One suggestion of Mr. MacKendrick's, however, will commend itself to every one, viz., the giving of a prize for the best cruising outfit. I pity the judges, though; for the most experienced differ on this subject. I would suggest that the style of country and work the outfit is intended for should be laid down by the committee at as early a date as possible, cheapness and durability to be awarded many points. And let us saddle our pates designing contrivances to meet the want during the winter. Where is the "Canadian Division" of the A. C. A., mentioned by Mr. MacKendrick? I have never heard of it. Surely he can't arrogate that title to the Northern Division? ASTICOU.

OTTAWA, Can.

[From the replies which Mr. MacKendrick's letter have brought out it would seem that the interests of the cruisers are in no immediate danger, with so many at work to guard them. The question of balancing the two opposing interests of cruising and racing is and always must be a difficult as well as a most important one, but looking at canoeing in America to-day it does not appear that either side is much neglected in favor of the other. Racing claims and holds the first place from the fact that it is essentially public, it attracts spectators, excites an interest among yachting and boating men to a certain extent, as well as among canoeists and the friends of the various contestants. The races are widely talked over and do more than anything else to call attention to canoeing. At the same time they have a direct influence on the development and improvement of the fleet, the best and most active canoeists being the leading racers of the A. C. A., while the improvement in cruising as well as racing canoes has been coincident with the growth of the A. C. A. and its races. While the Association is for the promotion of cruising rather than racing, it is evident to all familiar with its history that the racing at the meets has been one great reason for their popularity, and that if this were absent and the meet solely for camping and cruising, it would lose half its charm. The two or three days devoted to racing really make the backbone of the meet, the framework on which is built up such a pleasant combination of camp life and social intercourse. Racing must be retained and actively encouraged, for it cannot flourish unless a reasonable scope for development be permitted. If the rules were such that only cruising canoes, with the sails and cargoes used in cruising were allowed, there would be no excitement or pleasure unless the races were sailed in a gale of wind. On the contrary, some limits must be prescribed, or the racing machine, as all experience proves, would soon kill racing. To confine the races to canoes with 50ft. of sail and 150lbs. of stores and luggage would be absurd; and again, if no limit be laid down the race must go to the practiced acrobat in a mere shell, to the exclusion of honest racers. Where to draw the line is the real question, and a most difficult one it is. The most sensible requirements seem to be that the hull shall be large enough to carry a fair cruising load and of a safe and seaworthy model, at the same time being light enough to be handled on the beach or in the house by one man. The sails should be as large as can be reasonably carried in racing, and in number such as a man would use in his ordinary racing at home. There is no reason for insisting that a man shall be able to stow his racing rig as he would a cruising suit, for in practice he never requires to. The rig is stepped at the boat house and removed on the return, and why he should be compelled to make it stowable no one can say. All racing canoes are now fitted with cruising rigs as well, and there is no reason in compelling a man to race with a cruising rig or to make his racing rig so that he can stow it in cruising. As to ballast, if a man needs any he should be allowed to carry what is best suited for racing. The practice of bringing 150 or 200lbs. of shot to camp has disappeared and is little likely to be revived, but it is no more absurd than to compel a man to load his kettles and pans and other bulky and topheavy weights into a boat in order to race her. With any rules Pecowsic is a stumbling block. Her owner claims that he can and does use her for work at home on the Connecticut other than racing, that her five sails, all small and compact, can be stowed below and set or shifted as required, and if this is so the talk about five racing rigs to one boat is simply absurd. Racing can be no test of cruising boats, nor can cruises for the racing fleet amount to anything. The races should be retained under such reasonable limits as may be proved necessary by trial, and if similar tests for *bona-fide* cruisers are demanded this might answer. The competitors to camp at a given point every night, to be called say at 6 A. M., each cook a regular breakfast, clean up and stow his stuff, sail and paddle a certain number of miles each, say 10 or 20 in all, then to land at a given point, pitch tent, make all snug and cook supper. Of course the wind may make some alteration necessary, but this programme in general plan should give as good a test of the cruiser and his outfit as can be had, far better than any races in cruising trim.]

CLUBS IN THE A. C. A.

Editor Forest and Stream:

I wish to second most heartily the proposal in your issue of Dec. 8, that clubs should join the A. C. A. as a whole and not piecemeal as heretofore. I can see no valid reason against the plan and every reason for it. Thus every person who claims to be a canoeist, if a club member, will from the very first have an interest in the Association. I know many club members who would have long since been actively interested had they found themselves, as it were, quietly annexed without the trouble of paying annual dues or making up their minds. The payment of small annual dues is really a nuisance. It may seem absurd but I for one would be glad to be relieved, as I have frequently wondered if I had not been dropped for non-payment.

The scheme seems to me an excellent one and I hope it will be carried into effect as early as possible. GALACTOPHAGIST.

NEW YORK, Dec. 17.

QUAKER CITY C. C.—*Editor Forest and Stream:* At the regular meeting of the Quaker City C. C., held on Dec. 3, three new members were elected, making the total membership 12, active. A discussion arose concerning the Southern Division, A. C. A., but no definite conclusion was arrived at, the matter being laid over for the semi-annual meeting, Dec. 30. The probabilities are that our members will be strongly represented in the ranks of a Southern Division. The club has just ended its most successful season, beginning as it did with the spring meet on the Delaware (our red-letter day) and continuing with several races and cruises, more of the latter than the former, and ending the latter part of November with a scrub race with the duckers. Fern has gone to another slip for repair and varnish. Caprice and Malta are at their skippers' home for new fittings and varnish. Scamp, (the defunct flagship), which changed owners in July from a commodore to an ex-commodore, will again be entered upon the roll, having been purchased by a new member (a graduate from a wide boat, by the way) who intends refitting and painting on such a scale as to astonish every one. Several new boats are now building by members; one a Pecowsic, or rather a canoe as near Pecowsic's lines as possible, is now building, and will carry the same number and cut of sails. Wignall, the ducker builder, is building a canoe yawl about 15×40 for a member. Another member, the owner of a Shadow, is undecided whether to build one of Stephens's design from Canoe Building, or a Notus.—J. A. BARTEN, Sec.-Treas.

SAILS AND CAMP FITTINGS.—We have received from Mr. S. Hemmenway his new catalogue of tents, sails and flags, giving prices of all sizes and patterns of canoe sails. Mr. Hemmenway also has in stock the flags for the new weather code of the Signal Service.

THE NEW DIVISION.—The meeting for the organization of the new division will be held on Tuesday next at 8 P. M., Harvard Rooms, 729 Sixth avenue, corner Forty-second street, New York. All canoeists are invited.

A. C. A.—Membership Applications to Date.—Central Division: Dr. O. F. Coe, Jersey City, N. J.; Chancey C. Foster, New York. Northern Division: R. J. Matchet, Lindsay, Ont.

HARVARD C. C. OFFICERS.—Com., H. E. Meeker, '89; Vice-Com., Arthur Amory, Jr., '90; Purser, R. E. Townsend, '89.

THE CANADIAN CANOE.

THE Canadian canoe floats alone among civilized craft that are sharp at both ends and are propelled by a paddle, in this that it was not invented but evolved by a process of natural selection, in strict accordance with its environment and several other things, from aboriginal types. The devout believers in the evolutionary theory can, in fact, find in the Canadian canoe, and its gradual growth from a simple log, not only the healthy recreation they, as a general rule, sadly require, but a direct proof by analogy, that mankind once wore tails as a permanent attachment to their immovable dress coats of fur, and if they pursue their studies in this direction with a devoutness of mind and singleness of purpose that prevents them from learning the tricks of their craft, they may come to the conclusion that webbed feet would be developed by that section of the descendants of the anthropoid ape who survived a protracted attempt to analyze this craft from a purely evolutionary standpoint. Not only has the Canadian canoe been deprived of all the advantages resulting from the efforts of a single inspired and gifted inventor, but it has never been blessed with a prophet. In this respect at least, it is far behind its compeer, the British-American canoe, which has been endowed with an abundance of prophets, who have not been at all backward in testifying in the most eloquent manner to the merits of the canoes of their heart. In fact it is undeniable that the pen, as much as the paddle, is responsible for the popularity of this type of canoe.

If Rob Roy McGregor had not been able to transform his no doubt very ordinary cruises on the Baltic, the Elbe, the Danube, the Rhine and the Jordan, into one of the most delightful series of books of travel in the English language, would his civilized kayak, by her own merits, have ever become the most famous of small boats, or produced the school of English canoeists?

If "Shadow" Alden had not enshrined the Shadow in words that, once read, will always be remembered with at least an inward smile, and decanted upon the charms of canoeing in a Shadow with mingled eloquence and humor, would there ever have been an American Canoe Association or a Pecowsic? Not only has the Canadian canoe been compelled to make its way under sail and paddle alone, but it has suffered not a little at the hands of the prophets of other types. Mr. Alden was particularly hard upon it in that widely read article in which he immortalized the Shadow, not through malice, but because he did not understand the craft. For instance, in that marvellous table wherein he proves, by figures, that the untried Shadow was the perfect canoe, he gives his invention forty points of superiority over the Herald, because she was decked, but he carefully omits to state that the Herald can be decked as easily as any other build of canoe, and that for hunting, fishing and general paddling an open canoe is much superior to a decked one. In spite of its lack of inventors who were prophets, and its bad treatment by those who were—as far as its true merits are concerned—false prophets, the Canadian canoe has attained a very considerable amount of popularity, and what is more important still, of perfection. It is not by any means the perfect canoe, but it is certainly the most perfect hunting canoe in existence, and as a paddling canoe it has few, if any, superiors. In the future the Canadian canoe may be expected to progress rather in the direction taken by the American canoe than in that which, in times past, it fixed for itself (was not every race at the last meet of the Canadian canoeists paddled with double blades, and what was the Ramona, the fastest Canadian canoe at Bow Arrow Point, but a mate to Vesper and Notus?) as the conditions under which it was developed have changed; but it may confidently be expected that the type will never entirely vanish.

The Canadian canoe is the victim of a goodly number of popular fallacies, and none are more popular, or have as little foundation in fact, as the assertions that it is merely an improved birch, and that as the Indian had perfected the white man had nothing to do but devise improved systems of construction. The original germ of the Canadian canoe was not the romantic birch bark canoe, but the decidedly commonplace and ugly dugout, which during the first half of this century was used as frequently on a southern bayou as a Canadian lake, and it was an Indian log at that. No Indian ever yet, except by accident, produced a shapely craft, and an Indian dugout is, generally speaking, as lopsided as a bean, and as misshaped as a grapevine joint. The development of this barbarous craft into the shapely, skilfully moulded and beautiful Canadian canoe is the most important feature of the history of the craft, and the one which entitles it to respect. The circumstances under which this development took place, marks in fact the great difference which exists between the history and the nature of the Canadian canoe and that of its compeer.

The English-American type of canoe was invented and has been improved upon by canoeists, that is by canoe-users who found their pleasure in the craft itself, and the Canadian canoe was developed in one locality, to provide a means by which the slaughter of wild things might be enjoyed. Indeed there never was a school of Canadian canoeists, in the modern sense of the word, until after the establishment of the American school. The birthplace and the true home of the Canadian canoe was and is the valley of Trent, the largest river in midland, Ontario, and in fact every improvement in either model or details of construction, was made on the banks of the Rice Lake—the largest body of water of the system—and its main feeder, the River Otonobee. During the first half of this century the waters of the Trent system, particularly of Rice Lake, where there are very large beds of wild rice, swarmed with all manner of finned and feathered game; and owing to the natural characteristics of the lake, the dugout was far superior to any skiff or shooting boat for the use of the gunner.

When the first white settlers reached this lake they found two bands of Mississaguas comfortably established on its shores. As far as I can learn these Indians never built birch bark canoes for use on Rice Lake, and there were several good reasons for this. In the first place the paper birch, the only tree yielding bark fit for canoe building, is somewhat scarce in that locality, and the proper material for building the bark canoe could only be obtained by the expenditure of a considerable amount of energy, something no Indian is disposed to waste. On the other hand, a magnificent pine forest covered the northern shore of the lake, and every swale was full of splendid white cedar. In the second place, many as are the virtues of the birch, handiness in a choppy sea is not among them, and a choppy sea that becomes something worse with the slightest encouragement from a squall is the normal condition of affairs on Rice Lake. The dugout was therefore not only much more easily constructed than the birch because the materials—a big pine log and plenty of time—was with these Indians in practically unlimited supply, but it was better suited for use on the waters in question than the birch.

Naturally, after learning to use the single paddle, the white gunners who had adopted the dugout set themselves the task of improving upon the Indians' ideas of what a dugout canoe should be. What they require in order to pursue ducks, which was the game principally sought, was a craft that while big enough to carry two men with their guns and game over broad stretches of rough water, would be small enough to penetrate with ease the narrow channels in the rice beds and swamps, and which would moreover be easily propelled by the paddle. One great defect of the Indian dugout is that in ninety-nine cases out of a hundred it is, when small enough to be of use to the gunner, too cranky to shoot out of, because its bottom is frequent round; and the flat-bottom, still a feature of the Canadian canoe, was one of the first improvements made by white Canadians. The introduction of the round-headed adze greatly facilitated the work of hollowing out the interior of the log, and by fits and starts other decided improvements were made, not only in the lines of the craft, but in the methods of construction.

The greatest improvement in the log canoe was made in the fifties, and as it was during this period that the model of the Canadian canoe was developed and the type fixed; and that too at a time when both the increase in the value of lumber and the growing scarcity of suitable logs, was driving the dugout from the waters of other localities; this is the most interesting period in the history of the craft. Unfortunately it is impossible to ascertain when or by whom the most important improvements were made. As early as 1855 the Stricklands, of Lakefield, a family of keen sportsmen and devoted canoe users, had produced some most beautiful butternut canoes, which were not only seaworthy and steady, but fast and highly finished; but there were many others who paddled fine canoes. Each canoe user and maker at that time worked out his own ideas, with little knowledge of what his neighbor was doing, and the peculiar lines of the Canadian canoes, giving as they do, speed with great steadiness, small dimensions with great seaworthiness and carrying capacity, was slowly evolved from many men's minds. Although strength, staunchness and seaworthiness can be secured in a canoe hollowed out of a single log, lightness cannot, and toward the end of this period some boat builders about the lake began to build light shooting skiffs, about 14ft. in length by 3ft. in width, in which the paddle was to be used. As these boats were built of very thin material, battens were nailed on to strengthen the weak lap-streak joints, and in time the planks were butted, not lapped, and the battens were depended on to make all tight.

The gradual improvement of the model of the log canoe and the invention of the rib and batten system of boat-building, prepared the way for the invention of the true Canadian canoe, and the two elements, the model and the system of construction, were brought together by a regatta. In 1857 a grand regatta was held at Little Lake—an enlargement of the Otonobee, near the town of Peterborough—and canoe paddling races which were all won by the Stricklands, formed the most interesting part of the programme. Mr. John Stevenson, a local boat builder, at this regatta conceived the idea of building a canoe on the rib and batten system, and the Canadian canoe was born, with not only a distinctive model, but a distinctive system of construction. Mr. Stevenson selected basswood as his material and a very suitable one it is, although soft and liable to decay if not well protected; it is a wood leathery in texture, and which bends easily. During the next two or three years quite a number of the rib and batten canoes were turned out, not only by the inventor, but by other builders, and they became very popular. They did not drive the log entirely out of favor among the gunners, however, for although they had many decided virtues they were not as well suited as the improved dugout for shooting from. For one thing they lacked strength, that is strength enough to satisfy those accustomed to use the log, they were rather cranky, and worse than all it was extremely hard to keep their interiors even moderately clean. Any boat into which game is thrown to die must soon become extremely dirty, and as the hunter has not access to a hydrant, a hose and an Irishman on every occasion that he finds it necessary to clean the inside of his canoe, it is a serious matter if this operation is a difficult one. As the log canoes the sportsmen were using were as smooth inside as out, and could therefore be cleaned out very easily, they were none too ready to adopt the lighter, prettier rib and batten, but demanded this virtue of the dugout in the built canoe.

About 1863 this demand was met by the construction of a canoe of two thicknesses of white cedar, which was not only as strong as the log, but was perfectly smooth inside as well as out, but owing to the fact that with the appliances then at the disposal of the builders these canoes were hard to build, and their lines were more a matter of chance than of cunning designing, very few of these canoes were built, and they did not become popular.

In 1865 a regatta was held at Gore's Landing, a village which was then the sporting center of Rice Lake, and the canoe races were the principal events. The Stricklands brought down a fine fleet of canoes, but on this occasion they did not carry off the honors. Whellor Armstrong, a Back Lake man, had several very fine log canoes at the regatta, and one of them, the Flying Cloud, won all the races. This canoe was as far as model goes the archetype of the Canadian canoe. She had the sharp lines, the broad flat floor, the slight tumble home of the topsides that are to this day the chief characteristics of the Canadian canoe. Mr. Dan Herald, an ingenious and skillful boatbuilder of Gore's Landing, who had built quite a number of canoes during the preceding five or six years, recognized the superiority of the Flying Cloud's lines, became the owner of the canoe, which by the way is still in his possession, and began building canoes after her model.

Since the adoption of the Flying Cloud model there has been but little change in the lines of the Canadian canoe. The Rice Lake model is in fact that of the Flying Cloud with some improvements dictated by experience and certain modifications of dimensions to adapt special sizes to special purposes. The Peterborough canoe builders have adopted finer lines, which make their canoes smaller for their inches than the Rice Lakers, pure and simple, and each builder has introduced certain modifications of sheer, spread of topsides, etc., that give their canoes a distinctive individuality, but the type is substantially the same. The Canadian canoe was therefore perfected, as far as lines go, about the same time that McGregor launched the first imperfect Rob Roy.

The next stage in the history of the Canadian canoe was the development and introduction of improved processes of construction. In 1871 Mr. Dan. Herald invented a process for building double skin cedar canoes true to any model, which greatly expedited their construction. The canoes, which bear his name, built by this system, are the strongest craft for their weight that float; they have a smooth skin inside and out, are perfectly tight under all circumstances, and their lasting powers are as great as their strength. I am personally aware of one double skin cedar which is now twenty years old, and which is as staunch as need be. It can be said of these canoes that they were and are the perfect hunting canoe, and they hold their own well with any of the modern types either under sail or paddle.

Some years after Mr. Herald had patented his invention, Mr. John Stevenson invented a process for building canoes out of narrow strips of tongued and grooved cedar. The Ontario canoes built on this system are of two descriptions, the cross rib in which the strips run athwartship, and the only fore and aft pieces in the boat are the keel and keelson, the gunwales and one or two braces on a side; and the longitudinal rib in which the tongued and grooved strips run fore and aft, and are made fast to internal ribs in the ordinary manner. These canoes are wonderfully pretty, and are much stronger than any other boat built of a single thickness of cedar.

In spite of the very decided structural advantages of the Herald and Ontario systems, the popular canoe in Canadian waters is still the rib and batten basswood canoe. If is as now built a cheap, strong, light and capable craft, which the average Canadian canoeist and canoe user evidently thinks is quite good enough for built on nature's daily paddle, and he is not far wrong.

The old school of Canadian canoe users, while not canoeists in the modern sense of the word, loved their canoes well, and although they used the sail little and the single paddle much, they were expert canoemen and could make their craft do anything but speak. I think it can be fairly claimed for them that they were the first of all canoe users to beat to windward in a canoe. The first recorded use of sail in a canoe is in connection with that mournful legend of the old Indian who had stuck a big bush in the bow of a small canoe and was caught in a gale. He dared not leave the stern to shorten sail for fear of broaching to, and so sped onward into the dim unknown, dolefully howling, "Too much bush, too much bush, too much bush for little canoe," a cry that many a modern canoeist even in these days of reefing gears has sadly re-echoed. When the first Canadian canoe user became dissatisfied with the primitive birch, and stole a sheet or used his blanket for a sail no man knoweth. Before the days of the board canoe, however, the double leeboard had been adopted in the log canoe from the skiff, and the spritsail was largely used as an auxiliary to the paddle. All sorts of jury rigs such as a piece of board lashed to gunwale and thwart, or a couple of paddles, one on each side, were used, however, much more commonly than the regular leeboards.

In 1865 Herald invented the "Rice Lake" or "pin and ring" lateen, which in those days had not a ring, a loop of leather being used to attach it to the mast, and the use of this sail became well nigh universal. A good Canadian canoeman with this sail did not need a leeboard or a keel to enable him to beat to windward. He jammed his paddle down to leeward about the center of his canoe, held on to it with one hand, while he held the sheet with the other or in his teeth, and hung out to windward like a man. I have been beaten, and that right well, in a thrash to windward, while sailing a lug-rigged decked canoe with a standing keel, rudder, deck tiller and all the rest of it, by a fellow who did not know the first principle of sailing, for he had nothing but a big canoe, a big lateen sail and a big single-bladed paddle.

The lateen sail was first introduced into the United States in 1879, when Mr. Nicholas Longworth, Mr. W. F. Dominick and other Cincinnati canoeists were furnished with an outfit thereof by Canadian canoe builders. They subsequently made it famous at a meet, and from this it got its American title of the "Cincinnati lateen." In England it is called the "Lord Ross lateen" perhaps for a somewhat similar reason. It is a singularly safe and handy sail as long as its spars are not more than nine or ten feet in length, but when that limit is passed the result is not unfrequently a wetting.

The typical Canadian canoe, such a craft as may be found on nearly every sheet of water in Canada, is a craft with about 30in. of beam and 12in. of depth, for 16ft. of length. She has a flat floor with a quick turn at the bilge, and her topsides generally fall in a little. Her lines are, while long, full enough to give her great carrying capacity, and she will rise to a choppy sea without waiting to be expostulated with. Decks she has none, excepting a pretense thereat, at bow and stern, which is purely ornamental, and her stem is peculiar to herself alone, as are the peculiar curves of her stem and stern face. Her internal fittings are of the simplest description. If she is a rib and batten, floor boards are fastened to her bottom, if she has a smooth interior, there is nothing but the thwarts, solid pieces of timber that not only prevent the whole craft from spreading, but that serve as kneeling rests. Her outfit consists of a pair of leeboards, that can be strapped to a thwart when in use and when idle fold into small compass, a lateen mainsail, occasionally a jigger, and a couple of single-bladed paddles.

The Canadian canoeist is a sociable mortal, and as his canoe will carry from two to half a dozen as easily as one, he generally is not without either a passenger or crew. The "one man one canoe" rule is in fact much more honored in the breach than the observance, by the Canadian canoeist. The Canadian canoeist can, and in fact does, do about as much hard sailing, paddling and cruising on all manner of waters from the Lachine rapids to Lake Ontario, with this simple outfit, which if he is content, as he generally is, with paint instead of varnish, costs him less than $35, as any other school of canoeists. The decked sailing canoe is, however, steadily gaining ground in Canada, and the racing mania has unfortunately caused the introduction of the double-bladed paddle.

Even if it be admitted that the double blade is faster for a mile spurt than the single, the latter has a sufficient number of points of superiority over its rival to at least justify its continued use in an open canoe. The single blade is in the first place lighter than the double, and it is infinitely drier, particularly in a seaway; it is a much handier instrument than its rival, the stroke with it is freer and more enjoyable, and the action of using it is much more graceful. As a portion of the outfit of the hunter's canoe, there can be no comparison between the two systems of paddling, as in the hands of an expert the single paddle can be so used as to produce not a single sound, and even the muskrat, the most wary of swimmers, can be paddled down by it.

Although it would be a hard matter to prove that it is the case, I believe that the single blade will go further in a long day's paddle than the double, with the same expenditure of force. There can be no doubt that there is less slip with the single blade, that the weight of the paddle is less, and the strain of the work is more evenly distributed over the whole body. Even the kneeling position, although very hard at first on the tender knee, has its advantages, particularly in running rapids, as it allows of a better lookout than a sitting position, and the command of the paddler over his craft is more complete. The virtues of the single paddle are, in fact, the virtues of the Canadian canoe, simplicity, strength and beauty; they are the natural complements of each other, and the racing mania should not be allowed to separate two such close allies. RETAW.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

A. R. V., Penn Yan.—For your rifle use Eaton's rust preventive.

E. L. M.—The address is A. F. Riddick, and that region is as good as any we know of.

INQUIRER.—You can import the rooks through the firm of Reiche & Bros., Park Row, New York.

C. E. B.—You can get the concentrators, if they are in market from any of the dealers in sportsmen's supplies.

G. E. L., Holmesville, N. Y.—We do not know what dealer would make the exchange, but you might address any of the firms whose names you will find in our columns.

D. M.—1. The gun is not too heavy. 2. Your only way to get a pedigree of your spaniel is by applying to the person from whom you obtained the dog. If you cannot get it of him, nor learn anything of it from him, send us names of sire and dam, and we may help you.

T. M. S., Dansville, N. Y.—Walking along a wooded ridge, Nov. 20, I scared a partridge from beneath a sumach (*Rus typhinum*), where it had been feeding on the crimson plume (or fruit) of this tree, and so hearty must have been its appetite for this fare that nothing remained on the stem; and only a few fragments were visible in the snow underneath. Is it an unusual occurrence for a partridge to feed on the fruit of the sumach? Ans. No.

ANONYMOUS, Brooklyn.—1 and a friend are to strike the wilds of the Northwest in the spring; are both tenderfeet but have plenty of sand. Please advise us: 1. How to treat skins, after taken from the animals, so that they will remain unspoiled for 60 days. 2. A good salve for healing wounds. 3. A friend advises me to get a "Nessmuk" hatchet (double-edged pocket axe). Please tell me where I can get one. Ans. 1. Just dry them thoroughly. 2. Vaseline. 3. We do not know.

CITIZENS' CLUB, Syracuse, N. Y.—Will you inform me through your paper, how Calcutta bamboo poles are colored, as we receive them in this country? How Japan poles are colored as used by bamboo furniture manufacturers? Ans. This subject was investigated by Mr. Henry P. Wells, in the preparation of his book on "Fly Rods." The reasons given him by various authorities were that the bamboos were burned (1) as a religious ceremony, (2) to kill the larvæ of insects, (3) for ornamental purposes, (4) to kill the matted and tenacious vines in the jungle, so that the poles could be cut out, (5) to burn off the leaves, (6) to strengthen the poles.

D. G. R., Kentucky.—I am a small man, weighing only 130lbs., with an unusually long neck, and I want to order a gun that will fit me. I have been experimenting with several guns in order to get the exact amount of drop which should be given to the stock. As it is impossible for me to find one crooked enough, I have measured the drop by taking a gun and loosening it at the breech and lowering the muzzle until the sight was on an exact line with my eye, when the gun was thrown to my shoulder in an easy, natural manner, and aimed on a level with my head. After trying the gun this way until I was fully satisfied that the drop was right, I took a straight-edge and laid it on the rib perfectly flat and level, and measured the distance accurately from the extreme end of the stock from the top edge, to the bottom edge of the straight-edge, and the distance of drop was 4½in. Now this is a very unusual amount of drop, but I have tried a number of guns with less drop and they don't fit me, all of them being too high at the muzzle when brought naturally to my shoulder, compelling me to drop my head several inches in order to get correct aim with them, which makes me feel cramped. Now, would you advise me to have a gun made with 4½in. drop? Ans. Yes, if you are certain that that is the drop that fits.

THE PILCHARD FISHERIES.—Falmouth and Penzance are the largest modern seaports; but even these, now that the railway and telegraph have come into operation, are beginning to decline. Yet the fisheries continue to flourish, though they are very fluctuating in their annual harvest. It is unnecessary to advert in detail to the capture of mackerel and other ordinary fish, but the delicate, luscious pilchard (*Clupea pilchardus*), which is almost essentially a Cornish fish, demands a few words, not only on account of the important bearing which it has upon the welfare of the poorer inhabitants, but also because of the mysterious habits of the fish itself, notwithstanding the many attempts which have been made by naturalists to investigate its history. It was known at least so long ago as Shakespeare's days, who, in his "Twelfth Night," thus aptly describes it: "And fools are as like husbands as pilchards are to herrings; the husband's the bigger." To this it may be added that the scales of the pilchard are much the larger, and its dorsal fin is placed much further forward than the herring's. The chief homes of the pilchard fishery are St. Ives, the Mount's Bay and Newquay. The fish make their appearance off the shore in the early autumn, and retire during the winter months to the deep, warm waters of the Atlantic. When they make their appearance (on one occasion, Mr. Couch tells us, in a shoal 100 miles long), there is joy on the Cornish cliffs. Oftimes the mines and fields are deserted by the laborers, who are now required to man the boats. An anxious interval of suspense occurs, lest the valuable fish should escape the nets of the seiners; but practice has made perfect. Directed by signs from experienced fishermen on the cliffs (called "huers"), the boatmen seldom fail in casting the long seine net round the "school," as it is termed, and then, unless indeed rough weather intervenes, it is an easy matter to remove the spoil from the sea by tuck nets, and carry it in smaller boats to the land. Here a busy scene ensues: some of the pilchards are carted off at once to the inland towns, villages and farms; others are pressed and dried for the Mediterranean market; hence the fish are sometimes called the Spanish capon, and the offal is used for manure; nay, sometimes the catch is so unmanageably large that the fish themselves are necessarily used in that capacity. It is said, for instance, that in one day, in the year 1846, 75,000,000, or 3,000 hogsheads (worth about £2 per hogshead) were caught off St. Ives. The capital invested in the Cornish fisheries may be roughly stated at about a quarter of a million sterling, and they afford employment for upward of 4,000 people. It is difficult to explain why the pilchard is scarcely ever met with far beyond the limits of the Cornish cost, but its most probable cause is its love for the high temperature of the waters of the Gulf Stream, which, after impinging upon our western shores, cool somewhat rapidly.—*Nineteenth Century.*

An excellent chance for men of moderate means to enjoy fine fishing at a minimum of expense. Application should be forwarded at once to Messrs. J. A. & W. VANWORT, Fredericton, New Brunswick. jy14,tf

THE AUDUBON BADGE

Is a brooch pin in coin silver with the motto and monogram of the Society.

Chaste in design and tasteful in execution, it presents an attractive appearance, and is protected from tarnishing by a beautiful satin finish on its surface.

We are now in a position to execute orders for these badges to any extent. Wherever they have been sent they have met general approval, and every member of the Audubon Society should wear one as a reminder of the pledge and an open declaration of principles.

PRICE 50 CENTS, POSTAGE FREE.

"SHOOTING."

The only English journal devoted exclusively to sport with gun and rifle is *Shooting*, edited by Sir Ralph P. Gallwey, Bart., author of the Badminton Library, and G. T. Teasdale-Buckell, Esq., who exported all the Llewellin setters to America and won the National Brace Stake and the Field Trial Derby four times each.

The most practical correspondence and the best selection of advertisements appear in *Shooting* weekly.

Few Americans ever heard the names of our best English gunmakers.

Price of *Shooting*, postpaid, $3.25 per annum. end post office order to the Publisher, 182, Strand, London, England.

SCREW PLATES, TAPS, DIES, ETC., FOR gunsmiths and amateurs. Send for illustrated catalogue to S. W. CARD & CO., Mansfield, Mass.

QUEENS SIGNAL — TOURISTS & SERVICE SPY GLASS — SEND FOR CATALOGUE

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1887 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representa tive of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1888 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1888 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportsmen, anglers and naturalists, make up these pages.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away. Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., New York.

HOLIDAY PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of holiday gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for the holidays. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Sport with Gun and Rod.

This superb volume contains a vast amount of matter of the highest interest to the sportsman. Almost all kinds of American game birds, mammals and fishes are treated in its pages, and it is profusely illustrated by some of the best American artists; 886 pp. Three styles are published: Embossed leather, $15; cloth, $10; cloth, on cheaper paper, $5.

Antelope and Deer of America.

By HON. J. D. CATON, LL.D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Rod and Gun in California.

By T. S. VAN DYKE. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By DR C. A. NEIDE. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. BOWYER VAUX ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In his book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and it is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual for boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1 50.

Hunting Trips of a Ranchman.

By THEODORE ROOSEVELT. A delightful book of hunting adventure in Dakota and Montana. Price $3 50.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Forest Runes.

Poems by "NESSMUK." With artotype portrait and autobiographical sketch of the author. Cloth, 208 pp. Price $1.50.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among American sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. WYNN, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

Uncle Lisha's Shop.

LIFE IN A CORNER OF YANKEELAND. By ROWLAND E. ROBINSON. See advertisement elsewhere.

Artotypes of Paintings.

By JOHN M. TRACY. Mr. Tracy has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. We have for sale a series of admirable artotypes of these paintings, which preserve with admirable fidelity the spirit of the originals. The artotypes are 15x20 inches. Price $1 each.

Book of the Black Bass.

By JAMES A. HENSHALL, M. D. Comprising its complete scientific and life history, with a practical treatise on angling and fly-fishing, and full descriptions of tools, tackle and implements. Illustrated. Cloth, 470 pages, Price $3.00.

The Still-Hunter.

By THEO. S. VAN DYKE. A practical treatise on deer-stalking. Extra cloth, beveled, 390 pages. Price $2 00.

Southern California.

By T. S. VAN DYKE. Its valleys, hills and streams; its animals, birds and fishes; its gardens, farms and climate; its insects and reptiles, with hints on going to California. Extra cloth, bevel edge, 235 pp. Price $1.50.

Cruises in Small Yachts and Big Canoes;

Or, Notes from the Log of the "Watersnake" in Holland and on the South Coast, the Logs of the "Water Rat" and "Viper" on the Thames and South Coast; with remarks on anchorages for small craft. By H. FIENNES SPEED. Cloth, 280 pp. Price $2 50.

Yachts, Boats and Canoes.

By C. STANSFIELD-HICKS. With special chapters on model yachts and singlehanded sailing. Numerous illustrations and diagrams and working drawings of model yachts and various small craft suitable for amateurs. Cloth. Price $3.50.

Camping and Cruising in Florida.

By JAS. A. HENSHALL. With a list of fishes and birds, 84 illustrations and maps. Cloth, 250 pages. Price $1.50.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. Cloth, 250 pages. Price $3.00.

The Diseases of Horses;

Their Pathology, Diagnosis and Treatment. To which is added a complete dictionary of equine materia medica. By HUGH DALZIEL.

A very complete, concise and intelligible treatise, conveniently arranged. Every horse owner should have such a book. Paper, 102 pages. 75c.

FOREST AND STREAM PUBLISHING CO.
40 Park Row, New York.

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson's poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actual canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. The upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channel outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scene is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17¾in. The pictures have the tint and tint border and the artist's remarque, and form artist's proofs, an édition de luxe.

The prices of these engravings are as follows: Singly, $3.00; any group of 4, $10.00; the complete set, $30.00. Any group of four may be ordered, but we beg to suggest the following groups as strong combinations:

Group A.	Group B. (Upland.)	Group C. (Duck).
Plate 1, The Reverie.	Plate 3, Snipe Shooting.	Plate 9, Duck Shooting—over Decoys.
" 2, The Dawn.	" 4, Woodcock Shooting.	" 10, Duck Shooting—Flight
" 7, Trout Fishing.	" 5, Quail Shooting.	" 11, Homeward.
" 8, Deer Hunting.	" 6, Grouse Shooting.	" 12, Home.

Agents, THE SPORTSMAN PUBLISHING CO., Detroit, Mich.

AUDUBON'S
Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1856, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories,

Aududon's Birds have never been equalled.

Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.

Forest and Stream Publishing Co., 39 Park Row, New York.

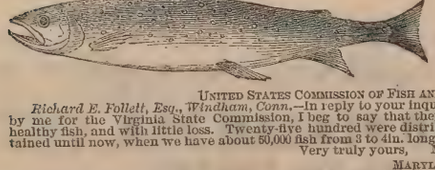
Open-Air Sports.

A Book Issued by the New York "Tribune."

500 Pages; 150 Illustrations. Price $1.50.

CHEAPEST BOOK IN THE MARKET FOR THE MONEY.

A year ago the New York *Tribune* employed a large number of accepted authorities to assemble in one volume all the facts of value and interest concerning the open-air amusements and athletic exercises of Ameriea. The work has been well done, and the book is a perfect mine of information concerning history, records, rules, and interesting data. The book is absolutely correct. Every sportsman can learn from it something he does not know.



1. "WHY WE WANT TO BE STRONG," by William Blaikie, the lecturer; a Treatise on the Needs of Business Men, and the Effects of Exercise on the Muscles, Nerves and Vital Organs.
2. "ARCHERY, OLD AND NEW," by Maurice Thompson, the champion archer; a Delightful chapter, full of Reminiscences and Practical Suggestions.
3. "HORSEMANSHIP," by a New Yorker; being an Exposition of the best Rules for Horseback Riding for both Sexos, with Contributions by the Cavalry Instructor at West Point; Frank Menzdorf, the Veteran Riding-master; Edgar B. Bronson, the Cattle Ranchman of El Paso, Texas, who describes Cowboy Riding; and John Gilpin, of Newport. "Hunting Across Country" in the North and South.
4. "GAMES OF BALL," with all the Rules for playing Base Ball, Foot Ball, Tennis, La Crosse, Racket and Cricket, by various *Tribune* reporters of those games.
5. "FISHING," by Yale Beach, with Instructions as to Fly-throwing, Bait and Rods, and a Full Description of the Game Fish of this country and the methods of taking them.
6. "TRAPPING," an amusing chapter for the Boys.
7. "AMATEUR PHOTOGRAPHY," by James Hall, of the *Tribune*, with full instructions.
8. "YACHTING," a chapter full of Records, Historical Data and Minute Instructions for Building and Sailing Small Yachts, making Knots and Calculations for Centers, etc., by Henry Hall, Special Agent of U. S. Census on Shipbuilding, with contributions by Thomas Clapham, David Kirby and John P. Kirk, Yacht Builders; Charles E. Emery, Ph. D., Expert in Steam Engineering; Henry E. Rhoades, Engineering Corps, U. S. N., and Captain Jones, U. S. Signal Service. Special chapters are devoted to the Catboat, Yawl, Sharpie, Canoes and Buckeyes, Sloops and Cutters, Schooners and Steam Yachts.
9. "SWIMMING," by W. S. Rossiter, of the *Tribune*, assisted by Sundstrom of the New York Athletic Club, the Champion Long Distance Swimmer of the United States. Full Instructions and Records. Rules of Resuscitation from Drowning.
10. "ROWING AND CANOEING," by Horace Townsend, with Records of the College Races, and Rules for Building Boats and Canoes.
11. "GYMNASTICS," by George Goldie, Director of Athletics of the New York Athletic Club.
12. "CAMPING OUT, by Yale Beach, with suggestions as to Tents, Camp Sites, Cooking, etc., etc.
13. "SHOTGUN AND RIFLE," by Charles B. Reynolds, of the FOREST AND STREAM; Henry Hall, of the *Tribune;* General Geo. W. Wingate, of New York; with Data Contributed by a Large Number of Private Sportsmen. This chapter teaches the Rule for Shooting, gives the Record of the International Rifle Matches, and Describes the Different Varieties of Game in November.
14. "CROQUET," by W. S. Rossiter, with Rules of the Scientific Game with Record of the Tournaments.
15. "CYCLING," by George D. Baird and others.
16. "THE SPORTS OF WINTER," with Instructions to Skaters, Ice Yachtsmen, and Descriptions of the Sled, Toboggan and Snow Shoes.
17. "USEFUL FACTS." Accidents; Chance, Rules of; Distances; Drinking; Expectation of Human Life; Eyesight, and Care of the, by John H. Payne, M.D., of Boston; Food; Fording of Streams; Good Manners; Smoking; Sound, Velocity of; Specific Gravity; Weather Phenomena; Work of Men and Animals.

Order from the *Tribune* by mail, or through any bookseller or newsdealer. Price $1.50 per copy.

Indian Hollow Brook Trout Hatchery.

WINDHAM, CONN.

R. E. FOLLETT, Proprietor.

Brook Trout of Superior Quality Furnished in Quantities to suit Purchasers.

UNITED STATES COMMISSION OF FISH AND FISHERIES, Washington, D. C., Sept. 7, 1887.

Richard E. Follett, Esq., Windham, Conn.—In reply to your inquiry as to the quality of the trout eggs purchased by me for the Virginia State Commission, I beg to say that they arrived in prime condition, hatched out good, healthy fish, and with little loss. Twenty-five hundred were distributed just after beginning to feed, the rest retained until now, when we have about 50,000 fish from 3 to 4in. long for distribution from this lot.

Very truly yours, M. McDONALD, Commissioner Fisheries, Va.

MARYLAND FISH COMMISSION, Oakland, Sept. 19, 1887.

R. E. Follett, Esq.—DEAR SIR—The trout eggs you sent me last winter were so well handled that our loss was nothing in transportation, and the count was rather over than under. In hatching we obtained 98 per cent. I shall favor you with more orders this coming season. Very truly yours, G. W. DELAWDER, Commissioner.

SPECIALTY MADE OF EGGS, YOUNG FRY AND YEARLINGS IN THEIR SEASON.

(Champ. Gath—Gem.) A grand field dog himself and litter brother to celebrated Gath's Mark and Hope; also the same blood as Joey B., Nat Goodwin and Chance. Fee $20; free service in case of failure. Address D. A. GOODWIN, JR., Newburyport, Mass.

Silver Shoe.

Imported pug dog; a grand sire. Weight 13lbs. Stud Fee, $25. (A.K.R. 3758). Pups for sale.
MIDGET PUG KENNELS,
sept1,tf Lansing, Mich.

CRICKET.

Smallest prize pug stud dog in this country; weight 9½lbs. (A.K.R. 3230), in the stud. Pedigree and full particulars. HENRY C. GURDICK, 150 Bridge st., Springfield, Mass.

STUD MASTIFFS. SEASON OF 1887-88.
Send for terms and pedigrees. C. C. RICHARDSON, Westfield, Mass. nov17,3mo

The Kennel.

MASTIFFS

For sale, very choice bred ones, of different ages, sired by **Boss,** *winner of special prize, the best mastiff bred in America,* New York, 1886). Also choice ones sired by **Pharaoh** (see *Harper's Monthly* of May, 1887, for pictures of both). From the best imported and prize winning bitches.
J. WINCHELL, Fair Haven, Vt.

FOR SALE.

Three fox-terrier dog pups, whelped Feb. 24, 1887, out of Warren Lady, (A.K.C.S.B. 4746), by Bacchanal (A.K.C.S.B. 5452). Address WM. T. McALEES, 22d & Callowhill sts., Phila., Pa. dec15,1mo

IRISH SETTERS.

Very choice lot of pups, by champion Bruce, winner of 24 prizes on the bench, not including specials, out of Little Nell (champion Elcho ex champion Rose), both field trial winners. Also by champion Bruce out of Daisy (Chief ex Leigh Doane), winner of 20 in the field; Chief and Leigh are also winners in the field. Every pup guaranteed to make a good worker with proper training. I. HENRY ROBERTS, Moorestown, Burlington Co., N. J. dec15,tf

COCKERS, ALL AGES, BLACK PETE AND Obo stock. Cockers at stud. *One-half express paid* on all bitches sent me. Address with stamp, H. D. BROWN, Waterbury, Vt. nov17,10t

FOREST AND STREAM

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JANUARY 5, 1888.

VOL. XXIX.—No. 24. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

Forest and Stream Publishing Co.

ANSWERS TO CORRESPONDENTS.

YOUR MONEY OR YOUR LIFE.

THIS is the age of "Trusts," of combinations by which the prices of necessary articles are raised for the benefit of those belonging to the "Trust." The people have to pay to enrich these combinations. They have to pay, perhaps each one only an insignificant sum, but they have to pay all the same. Whether it be for their oil or their rubber or their steel or the registration of their dogs, they have to pay.

Four men representing four kennel clubs recently voted that a kennel club trust should be formed. It was formed and promptly took the dog public of America by the throat, and clapping a figurative six-shooter to its collective ear, ordered it to register all dogs in the kennel club's "official" stud book before they can be exhibited at shows held under their rules. The prime mover in this highhanded piece of extortion has announced with a naïveté that is quite charming, that the "official" stud book must be made to pay, because the payment of the Kennel Club's bills depends on the success of the stud book. If the creditors of the A. K. C. have to wait for their money until the earnings of the stud book amount to enough to pay their bills, they will wait a long time. The dog men of America are not quite ready to submit to a tax levied in this dictatorial manner. They feel that ninety-nine one-hundredths of them know more about dogs and dog matters in a minute than Mr. Cugle knows in a year, and they are not at all prepared to put their hands in their pockets and pay up simply because certain individuals were foolish enough to guarantee the expenses of a venture which from the start had no prospects of success, and which has since been edited and managed with so little intelligence.

So the greater part of the public has laughed in the face of the Kennel Club Trust, and two of the most important kennel clubs have promptly dissolved all connection with it; a much smaller force is at present occupied in balancing itself on the fence, uncertain whether to come down on the side of the Independents or the "Trust," while a third still smaller remnant, so small that they can readily be counted, are sitting round cursing their stupidity in taking the dog men of America for a pack of weak-kneed fools, whom they could force by blows and threats to do their bidding. There is every indication that the attempt to force exhibitors into the so-called "official" will cause such a split in the dog world of America as has never been known.

It will vastly lessen the attendance and the entries at dog shows held under its rules, and will decrease the interest in dogs. Not only will such dog shows lose money, but the breeders of fine dogs will suffer. As the interest in dog shows falls off, so the demand for young stock will decrease. This will be followed by a fall in prices. Breeders who have invested considerable money in good stock and whose kennels have up to this time been self-supporting or have perhaps even paid a little profit will find themselves running behind. Puppies will accumulate on their hands and so expenses will be increased and breeders will be anxious to get out of a business that is so unprofitable.

From whatever standpoint it may be viewed the dictatorial rule 2, promises nothing but disaster to breeders and to the interests of all who love the dog. These interests it is the purpose of FOREST AND STREAM to defend. The jibes and sneers of baffled bulldozers, who see us standing in the way of their schemes for transferring money from the pockets of the public to their own, will not turn us from our course. We have heard such growls too often before. The FOREST AND STREAM has the confidence of the dog men of America, and these dog men know that its course is guided solely by what is for their best interests.

A SNOWSHOE TRIP IN WONDERLAND.

WHAT the Yellowstone Park is in winter has been told in FOREST AND STREAM. If to read about such a trip is delightful, how much more would the trip itself be enjoyed by any one who is fond of the exhilarating sport of snowshoeing?

It has been shown by the experience of the FOREST AND STREAM Special Commissioner, who went through the Yellowstone Park last winter, that there is neither danger nor hardship in the trip, and a number of gentlemen who are experts in snowshoe travel have expressed a wish to go through the Park, and have inquired as to the best means of doing so, the possibility of obtaining guides, the accommodations that might be expected at the hotels, and generally as to the outlook for a good time and a pleasant trip. We are glad to reply to such queries.

If a party of snowshoers should be made up to visit the Park this winter we can put them in the way of going under the most favorable auspices by engaging for them a guide who is well known to us not only as being thoroughly reliable, but as knowing the Park and the haunts of the game as well as any man that can be had; a man whom we ourselves, if we were fortunate enough to have the opportunately to make such a trip, would select as our companion if we could get him.

The assistants required by a party of snowshoers would of course depend on the number of individuals which composed it. The party would have to carry but little in the way of provisions, for most of their stopping places would be at the hotels, where they could obtain food—not of course delicacies, but good plain campers' "grub." Still, if they at all followed the route taken by the FOREST AND STREAM Commissioner last winter, there would be three or four nights to be spent in camp, perhaps two between the Upper Basin and the Falls and two between the Falls and Yanceys. Their bedding they would of course have to carry. They would need a cook, for the hotels during the winter are not open for the accomodation of visitors, and while they could purchase provisions and be sure of a roof to sleep under, they could expect nothing in the way of service.

The best time for making such a trip would be during the month of February. The snow effects and ice work are at their best during that month, and the snow is pretty well packed, so that the labor of snowshoeing is much lightened.

Of the attractions of a snowshoe trip through the Yellowstone little need be said here. The graphic letters of our special correspondent, printed last spring, are fresh in the minds of most of those who take special delight in one of the most delightful of our winter outdoor sports.

The marvels of the Wonderland in summer have become familiar to every one, but perhaps there are not half a dozen men alive who have beheld these wonders in winter, have seen the boiling geysers spouting through snow banks, and rivers of hot water cutting out channels through the ice. A trip of this kind too enables one to see the finest of America's large game in its home. Elk, antelope, mountain sheep, and rarest of all, buffalo, can be seen by those who might go through the Park on snowshoes.

Altogether the trip must appeal strongly to all those who are fond of ou door life and who are not afraid of a little "roughing it." No one, however, should contemplate the trip who is not prepared to take the rough with the smooth and to endure a certain amount of fatigue and cold in exchange for the pleasure of such an excursion.

If all those who would like to make the trip could get away from business for the length of time required we are sure that a long line of special trains would be needed to transport them over the Northern Pacific Railroad to the borders of the Park.

Some there may be who have the leisure to take a winter vacation of this kind, and to such we offer our services in making all necessary arrangements for the trip.

Any inquiries on points connected with this subject should be addressed to us without delay, as if a party starts, it should leave the East early in February.

THE CULTURE OF SEA FISH.

THE fishculturist having mastered the secrets of the fishes of fresh water now begins to turn his attention to the ocean as a broader field where more honors are to be won. Those states which have facilities for work in this field will soon fall into the line indicated by the U. S. Commission and count their eggs by hundreds of millions instead of by thousands. In salt water hatching there are new fishes to work with, whose eggs will require different methods. The inventive fishculturist will be stimulated to an endeavor to master the conditions necessary to reproduce the valuable food fishes which supply the markets and furnish cheap food; and thus the usefulness of his work which has to a great extent been confined to sporting and ornamental fishes, will be widened.

In addition to the salt water work at Woods Holl, the U. S. Commission has established a hatchery at Ten-Pound Island, off Cape Ann, and several millions of codfish eggs are now being hatched there. The schooner Grampus is now catching spawning fish for the station and it is also proposed to hatch haddock, lobsters, mackerel and halibut, if the eggs of the latter can be obtained. The State of New York has excellent facilities for this work at Cold Spring Harbor and much can be done there toward experimenting with the food fishes of Long Island Sound and the Great South Bay, if the Commissioners will go into it in earnest and devote a portion of their appropriation to this important work. So far, a few local salt water fishes, such as tomcods and lobsters have been turned out from the hatchery there and there is no reason why bluefish, Spanish mackerel, porgies, and perhaps sheepshead, should not be hatched also. Col. McDonald, Chief of the Division of Fishculture of the U. S. Commission, is strongly in favor of more extended salt water work but there seems to be need of awakening the dwellers by the sea, and the Fish Commissioners of the Atlantic States, to the needs of stocking the waters, much as there was among the fresh water fishermen twenty years ago. In the light of what has been done in the rivers and lakes it seems singular that there should be any doubt about the benefits of stocking the bays and harbors with the fishes that once were plenty there but which have decreased with the growth of population. Man is a factor in the destruction of sea fishes, the oft-quoted declaration of Prof. Huxley to the contrary notwithstanding, and he can be made a factor in their increase. Once lobsters were plentiful along the rocky shores of Connecticut and Long Island, but they have ceased to be caught there in numbers because of over-fishing. The water is as good as ever, and it only needs to be plentifully stocked. The same may be said of many fishes which once were plentiful in the bays, and fish culture will make a great advance when it is intelligently applied to reproducing the fishes which live in the salt waters.

THE LEGISLATURES now in session will have more or less to do with game laws. The New York Legislature may be expected to take the lead in volume of game law tinkering if not in intelligence of treatment. A game law, prepared by Mr. R. B. Roosevelt and others, will be presented at Albany. We have not been advised whether or not its provisions are to be regarded as intended seriously or as jokes. Ohio laws are to be amended, and a bill has been introduced to provide a State game warden to superintend the work of county wardens.

THE ROCK CLIMBERS.

II.—TWO DAYS AT DUNMORE.

THE last relic of a hard fight between Crees and Blackfeet, or other undesirable citizens whose ill wishes have practical value, had probably cursed the spot in dying and thus I became enveloped in misfortune.

The junction of a narrow-gauge coal road spread a due amount of dirt and confusion, which seemed only to add a deeper flavor of stagnation.

The prairie was clean, but not a dog even in sight. There were fabled mud-holes swarming with possible ducks not far off, but the inhabitant did not dream of taking his hand from the pulse of the telegraph and thus losing the last touch of a better world.

I do not quite do justice to the inhabitant. He was really plural or, to speak exactly, dual, but fifty per cent. of him was down with typhoid fever, leaving the scanty but important number one to face the world.

The Canadian Pacific road respects the Sabbath at one point. Trains, to be sure, run Sunday if they get going during the week, but at the terminus there prevails a holy calm on the blessed day. Now for through travel this is a small thing, but fancy taking a three days' journey to make a connection, landing nowhere, and then finding that the Sunday blank falls on Thursday (your existing day) at your stage of the line. Then imagine, too, that a telegram comes from the friend who was to meet you and share your sorrows, saying: "Detained; will be with you in two days."

Was it Sisyphus or Prometheus who was chained to a rock while vultures ate his liver? Would it not have comforted this spectator of his own sacrifice to have jotted down the character of the rock, made pen pictures of the wicked vultures, and held up to an indignant age all the minor accidents that accompanied or even preceded the traumatic interference with his hepatic function, as your doctor would say? It would have done so, and I to my notebook intrust certain memories, and so alleviate my trials.

If you start as far back as the San Francisco steamer you will see the faint beginnings of the gang that were on our train.

The elderly Canadian gentleman, short, well made, large-headed and mighty-bearded, skated over the decks with a quick, short shuffle that was superior to seasickness. His head was bald, his manner polite but decisive, if not obstinate, and he spoke with the full British twang. You did not at first suspect him of humor till he declared that the Victoria people, having never been abroad, were too English for a poor Canadian. Then with a warming breast you conversed with him openly, and were no longer astonished when he took off to perfection the ill-tempered American judge with the young wife, whom he, the judge, addressed with shameful rudeness, but who could well be trusted to get even with the bear in time, if the snap in her eyes was any sign.

The two young London globe-trotters got on at a way station. They had shot deer and sheep, and were as companionable as possible. Somebody says that reserve is really an American trait. Certainly these pleasant boys had no needless reticence about them, but bubbled over with their trip and its incidents; gave and took cigarettes and civilities, and possibly would have exchanged visiting cards if anybody had pressed them so far.

Then there was an old Englishman of snowy hair and beard, small and lithe, who told you all the facts about himself, and some of his imaginings on the same subject, as fast and as long as he could talk and you could listen. How he had been in mines twenty years; the true theory of earthquakes; how he softened a war party of hostile Cheyennes by an offering of tobacco, what his feelings then were, and all the rich experience of a poor man, for hat and clothes, alas, showed not so much the rough dress of voyage as the well-hid shabbiness of a sound economy.

The Canadian gentleman had told us how sternly his government enforced abstinence from liquor in the Territories. [Just here remember that Alberta, Assiniboia and Saskatchewan are the Northwest Territories, and that every other political unit in the Dominion is called a Province.] The red-jacketed mounted police would, he said, enter the cars, after dismounting, of course, and go through the hand bags of the passengers, pouring out their whiskies, raw or common; in short, wasting all their liquors.

Sure enough, one morning as we entered the dining car there sat a neat, square-built young fellow with scarlet jacket, spurred half-boots, tight breeches with yellow stripes, and one of those ridiculous muffin-rings that pass for cavalry caps balanced on the side of his head. A soldierly young man he looked, with his cheeks glowing red through the tan and his fine straw-colored mustache.

I had before tried to anticipate the action of the Dominion officials by lessening the amount of whisky subject to waste as speedily as I could, but at the sight of the soldier I trembled for the half bottle still left.

Breakfast over I awaited fate with attempted cheerfulness, still no police appeared. Medicine Hat was passed. Dunmore alone lay before me with its inhabitant, and perhaps, arrived there, I could evade the law. The train stopped, I climbed down to the ditch and walked toward the station. Before me stood the mounted police! He too was bound for Dunmore! "Out of the nettle danger we pluck the flower safety." The police was the best fellow in the world.

Do I know anything about ranching in Canada? Lay it to the police. Ascribe to the same source my knowledge of the intended fight between Smith and Kilrain; of the personal character and appearance of Hanlan; of the fastest time of professional sprinters.

Then on more even grounds of a common experience we discussed horses and fish, game, Indians, and then the Riel rebellion. Only at my request would he tell me how he got shot in a "scrap" (which meant a fight) on that occasion. The "breeds" (for the "half" of "half-breeds" is dropped in common speaking) planted their 350 men in a brushy gulch and some fifty police advanced and drove them. The "breeds" were armed with "trade" guns—singlebarreled shotguns carrying an ounce ball on occasions, and shooting with accuracy only about 50yds. The rifles of the police could keep the "breeds" at a distance and use them up were it not that the latter shrewdly neutralized this advantage by fighting in thick cover, where the soldiers had to come to close quarters.

While pressing forward through brush and snow my police, having dropped his overcoat owing to the heat, offered, in his red jacket, a shining mark to the enemy, and was accordingly potted. An ounce ball struck him in the chest and passed through without knocking him down, though he described the operation as painful. My curiosity was but whetted when my new friend invited me to take a temperance drink, saying that his uniform would frighten off more desirable treats; and it was with sincere grief that I finally saw him jump on the caboose of a coal train and depart. Englishman though he was, he spoke good pure United States, while the travelers on our train, even to the Canadians, had all the deformities of the British dialect.

Twenty-six hours gone and nearly as much more to be enjoyed before my friend arrives. Did I say two days at Dunmore? I exaggerated. I have long schooled myself to consider my own society the best in the world, but too much of even the best society grows monotonous. Another caboose draws near and I follow the police.

Out of the frying pan into the caboose! A missionary and a commercial—well a drummer—were my companions.

The missionary said that he had lived for eighteen years on buffalo meat, but that the buffalo had answered their purpose (of feeding him) and vanished. Wild meat made men barbarous. He had known a person of excellent parts converted into a lawless ruffian by three weeks of buffalo diet. This missionary was fitted to sympathize with savages of low intelligence. But the drummer was worse. Shaped like a drygoods box on end he seemed filled with some kind of self-acting, continuous fog horn. Through the mumble of the jolts you heard him sermonizing on subjects religious and political with excited howls, and when the train stopped his discourse assumed the importance of a bellow. At last night fell. The commercial accents boomed indistinct as an angry surf and I slept.

H. G. DULOG.

The Sportsman Tourist.

SAM LOVEL'S CAMPS.—III.

SOLON and Joseph fished off the rocks when they came to eligible places, and caught a few perch and rock bass, while they continually feasted their eyes with the wonderful sight of the lake, so immense a body of water that, it seemed to them, it gave them a fair idea of the immensity of the ocean. This was more impressed upon them when they had strolled to Bluff Point, and looking beyond the promontory of Thompson's Point, saw the blue lake and the blue sky meet far to the northward, with bluer dots of distant islands hung between them, and the white wings of sloops whose hulls were beyond the horizon. And there was the tall white tower of Split Rock Lighthouse, newly built, and now a pillar of cloud by day, a star by night to warn mariners off its perilous rocks, and giving these mountaineers a vivid realization of the dangers besetting those who go down to the sea in ships; perils and dangers that the waves seemed always whispering of as they hungrily lapped the rocks and chuckled wickedly in the water-worn caverns. By and bye they saw a smoke arising from the watery horizon, and after it a speck, which at last grew till it became a steamboat, a leviathan which soon wallowed ponderously past, close to the further shore, its gay flags and pennons flaunting bravely against the shadowed steeps of Split Rock Mountain, a wake of foam following the roaring paddlewheels. Some time after the majestic apparition had vanished behind the promontories to the west of them, the waves of its wake came in, beating the rocky shore with slow, sullen surges, like baffled foes retreating from the path of a conqueror. Strange woods set afloat far away came tossing ashore to the windrow of wave-worn logs, slabs, chips, and bits of painted boats that lined the shores. An old shoe suggested thoughts of drowned men, and white-winged gulls hovered like spirits over the distant waves. It was all very new and strange and mysterious. These two anglers bore back to camp but few visible trophies, when in the afternoon they followed thither their shadows, eluding guides that were now distinctly seen leading the way across broad patches of clean forest floor, now dancing in vague outline and confused dismemberment on tree trunks and low branches, and now disappeared in a throng of other shadows or a mass of shade. But the sights they had seen better repaid the time and travel spent than much bigger strings of fish than they carried would have done, and they were content.

Antoine prowled along the shore from the Slab Hole to the South Slang and to the rotting and displaced abutment of the old bridge that had just given up the weary task of spanning so much marsh and so little channel. He transfixed many unlucky bullpouts wriggling slowly in and out of their spawning holes, and tranferred them with great satisfaction from his rude spear to his string of elm bark; battle-scarred amazons, torn and stabbed by the horns of other amazons, and lean fathers of the race of bullpouts, as scarred and wounded as their warlike wives. To the Canadian a bullpout was a bullpout, to be taken at any time, by any means, and without regard to its condition. If he ever thought, as doubtless he never did, how the continuation of his most prized fish depended on procreation, doubtless he would not care, for what Canuck ever did? Apparently it is their belief that fish were created solely for them, and belong to them alone, and that they have a right to take in any manner, as they will if they can, the last one to-day, though there should be no fish for any one forever after.

Antoine discovered an old scow adrift in the marsh, water-logged, with red-painted square prow and stern and gunwales just above the water and over-lapped with clots of old weeds. By the help of a long pole, with a hook on the end of it, and by some wading, he succeeded in hauling it ashore, and after bailing it and overturning it found that with a little tinkering it would make a serviceable craft for those unsealegged mariners Solon and Joseph to go fishing in. A rusty fish hook, a bit of line with a hammered leaden sinker clasping its rotten strands, and a soggy pine float of a seine rope found lying in the bottom, the hole and step for a jack-staff and the charred marks of fallen embers on the bow showed that it was a boat accustomed to fishing in various ways, so saturated with experience that it seemed as if it might impart something of it to those novices.

"Bah gosh!" said Antoine as he sidled around his prize, inspecting it with intense satisfaction and burning incense of rank tobacco at bow and stern and sides, "dat was jes' de sloop for Solem an' Zhozeff! Dey ant worse a damn sight for go in can-noe, bose of it. Dey draownd evree boddee an' deysef dat go wid 'em in can-noe! W'en Ah'll gat dis feex up wid some nail, an' rag an' tuppytime, dey can' teep it board over, dey can' speel heesef off 'f he ant seet raght 'tween de middly of it. Bah gosh! dat was pooty good lucky for fan dat boats, me! He ant b'long for someboddee, Ah'll bet you head, an' 'f he was, he can' have it!"

So filled with the importance of great achievements he shouldered his spear and string of fish and trudged proudly toward camp, but before reaching it he made his fish more presentable by stripping off their torn skins.

As Sam with noiseless strokes paddled his canoe up the great bow of the channel where it winds through the lower end of the "wide ma'sh" and slowly trailed his lure of pork rind and red flannel along the border, marked by purple young lily-pads, unwittingly he crossed it, and a grating succession of tugs at his hook reminded him that he had been too contemplative in his recreation and had gone astray into the shallow and weedy false channel that runs straight lakeward from near the mouth of the South Slang. He hauled in his line, cleaned his hook of its burden of weeds and retraced his way to the true channel, which, having regained he paid more attention to his course and was presently rewarded by a sturdy tug that had in it the unmistakable viciousness of a pickerel's bite. Yet as he hauled in the line, hand over hand, the resistance was so sullen and sluggish that he was half inclined to think he was drawing in only another raft of weeds, till he saw the gaping jaws splitting the surface. He soon had a lusty pickerel boated, who beginning his fight too late to avail aught but annoyance of his captor, hammered the cedar lining of the canoe and snapped his jaws wickedly till he was knocked in the head with the paddle.

Moving forward again, Sam soon had a sharp bite that promised something better than the ambitious little perch that had attempted to gorge the alluring combination of pork and wool, and came skittering to hand with all the fight and conceit taken out of him. A little later the trolling bait was nibbled and then seized by a fish that proved to be of nobler metal. Swimming deep, he fought every inch of his unwilling way to the canoe, which when brought to he attempted to run under, but Sam foiled this device, got him alongside and skillfully lifted and swung him aboard. He was of handsome form, and his small, firm set scales were golden green on his sides and silver white on his belly. In every way he looked gamy and good, a fish created to afford both sport and toothsome food. Sam had never seen his like, but rightly guessed him to be the "pike," whose excellence Uncle Tyler has extolled. So trolling up stream to the then well defined mouth of the South Slang, now so disguised with mask of weeds that old voyagers may hardly recognize it, and a little way up the channel of this begrudging tributary, Sam got now and then a bite, and lost and saved some fish; another pike-perch and two or three pickerel. He had fish enough now, and paddled or drifted anywhere, hearing and seeing many things of interest to such a simple lover of nature. From far and near in the green expanse of marsh came strange outcries, laughter, yells, and more subdued jargon converse of unseen waterfowl, strange voices of birds who were strangers to him. He recognized the voices of some old acquaintances when occasionally a bittern boomed, and the blackbirds grated and gurgled out their notes, and when some old choir leader of the bullfrogs sang his short prelude and his brethren struck in and bellowed a grand chorus that made all the wooded shores resound. Once an old wood-duck convoyed her newly-launched fleet of callow ducklings out of the rushes into the channel just before him, and then in sudden panic at sight of his larger craft, took wing for cover of the woods, flying low and followed almost as swiftly by her brood, simulating flight with ineffectual plumeless wings, but actually making their way by running like water sprites over the water after her. Now and then a dusky duck would splash out of the weeds with a loud alarm of quacking, but her young always kept out of sight if they had yet ventured so far as the channel's edge from their birthplace. There was no signs of Sam's last spring's dear enemies the muskrats but the floating crumbs of their midnight feast, chips of the waterlily roots, and shreds of aquatic weeds. Their winter huts had all been

swept away by the high water of spring, and only shapeless rafts of rubbish grounded here and there among the rushes were left to show how industriously these little water folk had builded but a few months ago. Their homes were now in burrows in the banks, the occupancy of which was seldom indicated in daytime but by the roiling of the watery entrance, or the sluggish underwater wake of a silent incomer or outgoer.

Great blue herons sentineled the shallows, or fanned their slow way from one to another, and now and then a bittern made a startled ungainly flight from the densest beds of rushes, while kingfishers scolded and clattered along their jerky course, or hung over minnow-haunted shoals as if suspended by invisible threads, which presently were severed and let them fall into the brown water with a splashing upburst of spray. The scraggy tangles of button bushes were noisy and flashing with innumerable nesting redwings, sunfish and perch were incessantly snapping at the various insects resting on or hovering about the water plants, and great fish surged through the rushes in pursuit of prey or in swift retreat from the boat. The marshes were busy with the life of their thronging tenants in the happy summers of those days. Alas, that they are so silent and deserted now!

Over the tops of the rushes Sam caught occasional glimpses of Antoine stealing along the shore in his nefarious bullpout prodding, and mildly "dum'd him" in soliloquy "for a wus'n half Injin." In the afternoon he paddled to the mouth of the creek, and after looking at the dancing waves of the sunlit bay clasped in the arms of the green-clad June shores, and watching the majestic sweep of an eagle wheeling above the cliffs, he beached his canoe on the rushy shore of the landing and took his fare of fish to camp, whither his companions soon came. At nightfall they had their bountiful supper of fish, and then as they smoked their pipes about the dying embers, each told the story of his day's outing.

ROWLAND E. ROBINSON.

ON THE PATERA.

STARTING from the town of Santa Barbara, Cal., one morning early, I found myself spinning over the hard adobe behind two wiry mustangs. Approaching the desired goal, we heard the summons, "All out for the ducks!" and after tethering horses we got into boots and coats, and, with guns on shoulders and retrievers at heel, we started the day's shooting. Crouching in a small ravine by the lake, we waited. Whizzing by comes a flock of teal and the silence is broken by two reports, followed sharply by another from Grant, the native. Result, three teal. "Fetch 'em here, Brant," and the ducks are soon laid at our feet. The sun breaks through the mist and discloses at the far end of the lake a white and black mass of ducks. Grant starts after them, soon a puff of smoke stirs them up, and in a confused mass the ducks circle over with whistling wings and now and then a discordant quack. Ducks everywhere, over water, under water and in the air; and then with a last turn and quack they betake themselves to the waters of the Pacific, leaving behind five to my gun and eight to Grant's. One after another the fowl are laid at my feet by the spaniel, whose every nerve is quivering with excitement. Thirteen ducks, and plump ones too, conjure up before my eyes the inviting picture of a snowy table whose centerpiece is a savory redhead.

Ducks wheel by singly and in pairs. Plump little butterballs and spoonbills now and then beat the air with their whistling wings. Unaccountable misses afford me counteraction for brilliant shots; but nevertheless thirty-five ducks will make a man feel greater in importance than many another thing; and then comes the after pleasure of talking over the events of the day's sport, with my dog lying at my feet and occasionally looking up when he is called by name and praised for his obedience and skill in bringing a duck out of the tules (those banes of a retriever's life); amid the clouds of fragrant smoke arise the images of many a lusty duck who had beaten his last tattoo on the bosom of his mother water. Natural History.

UNUSUAL NESTING SITES.—II.

[A paper read Dec. 5, 1887, before the California Academy of Sciences, by Walter E. Bryant.]

THE entire material, with one exception, which comprises the present paper, has been received in brief notes or dictations from Messrs. W. Otto Emerson, A. M. Ingersoll and Chas. W. Knox, leaving the part taken by the author simply that of editor and compiler. The initials following the cases cited are those of the observers, to whom my thanks are due for communicating their interesting field observations.

Arkansas Flycatcher—*Tyrannus verticalis.*—A nest was found built upon a fence-post more than half a mile from the nearest tree. It was secured from observation on one side by a board nailed to the post and projecting above it. (A. M. I.)

Black Phœbe—*Sayornis nigricans.*—A pair built for two consecutive years in a well four feet below the surface. The first year a second nest was built after the first had been taken. (W. O. E.)

Baird's Flycatcher—*Epidonax difficilis.*—A nest was built at the bottom of a hole five inches deep, made by a red-shafted flicker in a live oak. (A. M. I.)

Blue-fronted Jay—*Cyanocitta stelleri frontalis.*—A strange departure from the usual habits of jays was noticed in Placer county, Cal., where they had persisted in building within the snowsheds in spite of the noise and smoke of passing trains. The destruction of their nests by the men employed on the water train, which makes two trips a week through the sheds during the summer, sprinkling the woodwork and tearing down the nests of jays and robins with a hook attached to a pole, seemed not to discourage them. So accustomed do the jays become to the passing of trains, that they will often remain on their nests undisturbed.

In one season more than two hundred nests of jays and robins were destroyed, so the trainmen say, between Cisco and Summit, a distance of thirteen miles. Some of the nests were but partially built, others contained eggs; these latter ones having probably been overlooked on previous trips.

The nesting of the jays within the snowsheds is, so Mr. Ingersoll supposes, to avoid the persecution of squirrels. None, he thinks, however, succeed in rearing a brood, for of more than thirty nests which he found, nearly all were uncompleted. (A. M. I.)

American Goldfinch—*Spinus tristis.*—In 1884 a grove of young willows that had been occupied the previous season by a colony of tricolored blackbirds was found deserted by them. Many of the blackbirds' nests still remained in forks of the willows from four to ten feet above the marsh. Six of these old nests were in possession of American goldfinches. The present tenants had loosely filled the nest about half full of cat-tail down and had formed only a slight hollow for the nest proper. Some were found with eggs and in others there were "birds in last year's nests." (A. M. I.)

Samuel's Song Sparrow—*Melospiza faciata samuelis.*—A nest containing three eggs was found in a round oyster can which had lodged sideways among some driftwood in a willow tree. (W. O. E.)

California Towhee—*Pipilo fuscus crissalis.*—A pair constructed a nest in a five-gallon kerosene oil-can that lay on its side in a shallow ditch. Part of one end of the can had been cut open, giving access to the birds. (W. O. E.)

Barn Swallow — *Chelidon erythrogaster.* — A kind-hearted postmaster in the country nailed a shelf-like board against the porch above the entrance to his office, intending to give the crimson house finches a place to build. A pair of barn swallows took possession of this arrangement and built on top of it a nest composed of straw and feathers. This is the only instance I have known where this species used no mud in the composition of its nest. The position of this nest was less remarkable than the peculiarity of its structure. (A. M. I.)

A barn swallow's nest was built a few feet below the surface of a well which was in daily use, water being raised by means of a windlass and bucket. The weight of the growing young became so great that it broke the nest from the moist ground, and the young were drowned. A second nest was speedily begun upon a shelf of rock, nearly thirty feet below the surface, and not high above the water. Unfortunately, the result of this second attempt was not learned, for it would be exceedingly interesting to know how, if at all, the young were brought to the surface from so great a depth. (C. W. K.)

The nesting of another pair of these swallows was illustrative as much of persistency in nest building as it was of the unusual site which they eventually chose, prompted by repeated molestation. Three nests were built in succession; the first, containing five eggs, was taken from a partially abandoned mining tunnel, ten feet from the entrance; later, a second nest and five eggs was found, and taken nearly twenty feet from the entrance of the same tunnel, but the third nest was happily not discovered until the eggs had hatched. This nest was about fifty feet from the entrance, and under cover of partial darkness the persevering pair had built and reared a brood. The finding of the last nest happened by chance. Mr. Knox had descended a shaft connected with the tunnel and was passing along the level with a lighted candle when he saw a bird fly from close before him, and aided by the light which he carried, the nest, with four large young, was found, but left undisturbed. (C. W. K.)

Tree Swallow—*Tachycineta bicolor.*—A few years ago I found a nest with young in a crevice under the projecting and decayed deck of a lumber lighter, moored in Oakland Harbor.

Hutton's Vireo—*Vireo huttoni.*—A pair of vireos built this year in the outer branches of a live oak, only a few feet above the exhaust pipe from a steam pump, where at times they were compelled to suspend work, owing to the dense vapor which enveloped them. Four eggs were laid in this nest. (C. W. K.)

Long-Billed Marsh Wren—*Cistothorus palustris.*—A conspicuous nest, containing eggs, was woven among the almost leafless branches of a young willow, five feet above a fresh water marsh. The false nests were built as usual, but in the coarse grass near by. (A. M. I.)

GROUSE AND MALLARD PLUMAGE.

Editor Forest and Stream:

I have been much interested in the articles in the last and preceding numbers of FOREST AND STREAM on the sex markings of grouse and plumage of the mallard drake, subjects to which I have myself paid considerable attention, and a few additional remarks may be not unacceptable to your readers.

The examination of a very large number of specimens of ruffed grouse from almost every part of North America (as far north as Labrador and the Yukon Valley in Alaska, south to Georgia and California) has shown me that while females are decidedly smaller than males, with the ruff much less developed, the markings somewhat less sharply defined and the colors not so strongly contrasted, specimens not unfrequently occur which it would be impossible to determine the sex of without dissection, there being considerable variation in both sexes, *i.e.*, some females (perhaps only very old or well fed birds) being larger, etc., than certain males (possibly younger or "runty" individuals). For example, I once examined, in the flesh, a very fine bird, killed at Laurel, Maryland, which I was sure was a male until dissection showed it to be a female.

As to the dark band across the tail, it is quite certain that no dependence whatever can be put in its continuity or interruption on the middle feathers as a sexual character. I cannot say that I have observed a perfectly continuous band in any female, but I have seen many fully adult and in every respect well developed males in which it was either more or less broken or else wholly interrupted on the middle feathers. This variation, I would remark, applies to all the local or geographical races into which the species is divided.*

Coming to the subject of the summer plumage of the mallard drake, it has long been known, in Europe at least, that the male not only of this species but of others also, assumed during a portion of the summer a plumage hardly to be distinguished from that of the female. The only question has been as to whether the changed plumage was "nuptial" or "post-nuptial;" that is, whether the male assumed it at the beginning of the breeding season or not until after the female had commenced incubating or the young had appeared. This summer plumage of the mallard drake, as well as of the male gadwall, pintail and old squaw, are described in the "Water Birds of North America" ("B. B. and R.," pp. 492, 506 and 512 of Vol. I., and 58 of Vol. II. respectively), although, except in case of the last, on account of not having specimens at hand, the descriptions are quoted from Dresser's "Birds of Europe." In my recently published "Manual of North American Birds" the summer plumage of the male of the following additional species is described (on pages 92, 93, 95, 102 and 107 respectively), mostly from specimens in the National Museum collection: Blue-winged teal, cinnamon teal, widgeon, blackhead and harlequin.

I am not prepared at present to state how nearly universal this change of plumage in the male may be among the ducks of North America, but I think it will be found universal among the river ducks, in which the plumage of the sexes differs at any time, and I also have strong reasons for suspecting it in certain others, as the broad-billed *Fuligulæ*, the golden-eyes, eiders and mergansers: but as to these the information which I have is simply suggestive. ROBERT RIDGWAY.

WASHINGTON, D. C., Dec. 26, 1887.

* I make this observation for the reason that, some years ago, when these races were considered distinct species, this feature was mentioned as a specific character.

A FAMILIAR GROUSE.

Editor Forest and Stream:

"Nor'east's" account of the "Queer Dick of a Woodcock," in FOREST AND STREAM of Dec. 15, calls to mind the capture, in a similar way, of a young grouse, about three-fourths grown, in September last. While walking along a wood road my spaniel flushed several grouse, one of which flew swiftly past within reach of my cane. It alighted near the path in some bushes, and endeavored to hide in a small pile of brush. Reaching through the dry twigs I drew it out, as perfect, apparently, as ever bird was. Holding it in my hand stroking its head and neck, it exhibited no fear except at the lively actions of the cocker, at whose behavior it showed considerable uneasiness, craning its neck to look over my arm at the excited dog. I sent the latter off into the woods, and then the bird became quiet enough, making no effort to regain its liberty, and seemed in no hurry to take its flight. Upon being gently urged it took wing, but immediately settled down again a few rods away, and quietly submitted to recapture and further caressing. I was strongly inclined to take the bird home and see what would become of it in confinement, but finally decided to release it to regain its companions. Placing it on the limb of a small tree, it flew thence to the ground, elevated its ruff, and, with head turning from side to side, it daintily lifted its feet high over the leaves and went its way, a veritable prince of the woods.

When a boy I occasionally caught grouse chicks in New Hampshire, trying, always unsuccessfully, to raise them in confinement, but never before have I caught, in my hands, a vigorous, nearly full-grown grouse, nor have I ever known of a like incident occurring elsewhere. The bird seemed little shyer than ordinary domestic fowls, and was a fair match for "Nor'east's" strange woodcock.

NORTH CHELMSFORD, Mass. L. H. S.

A SWIMMING RUFFED GROUSE.—Albany, N. Y., Dec. 18.—*Editor Forest and Stream:* A few weeks since at dusk, as I was passing through a railroad cut, accompanied by a collie, the familiar "whir-r" of a ruffed grouse attracted my attention. Quickly looking ahead, I saw the bird flutter along the ground. A word, and the dog had it under his paws. Examining it as well as the uncertain light would permit, no marks of a gun could be found. As a barbed wire fence is above the cut, and the telegraph lines are still higher, it is possible that in flying for a piece of woods across the track, the bird struck one of these. It being unhurt, save by the absence of feathers from the tail and wings, which hindered its flying, I carried it into the woods and set it down; with a peculiar cry it hid beneath the leaves. The next morning I returned to the woods and was entering a little gully preceded by the dog, when the grouse, with extended neck and wings, ran past, followed by the dog. Calling the dog I headed the bird off, and keeping a short distance behind, observed closely its movements. Running along the track a few yards it turned down the embankment, at the base of which runs a large creek. Pausing an instant, the bird deliberately jumped into the water and swam about six feet from shore; but, apparently finding the water too cold, or doubting its ability to reach the opposite bank, returned. Its swimming seemed not at all labored, and was quite as rapid as that of a duck. Catching it, I brought it deeper into the woods and freed it, when its actions of the previous evening were repeated.—NATURA.

THE WOODDUCK IN WINTER.—Cold Spring Harbor, N. Y., Dec. 28.—*Editor Forest and Stream:* In September a drake woodduck came among my flock of woodducks, teal, etc., and remains there yet. We can easily distinguish him by his flying from one pond to another, something that the pinioned birds cannot do. He is as tame as the rest of the flock, coming up to the grain box to feed with the others within 30ft. of where a gang of carpenters are at work on the new fish hatchery. At times the pond has been partly frozen over, and it is exposed to the cold storms coming across Long Island Sound. I had expected to miss the bird long before this, as I never knew of a "summer duck" remaining here through the winter, voluntarily. One peculiarity of these birds is their seeking shade on the coldest day. Often my flock can be seen under the south bank of the pond when a cold north wind is blowing, sitting in the shade. On cloudy days they will play on the water, diving and chasing each other, but on bright days they are seldom out in the sunshine. The probability is that this wild bird will now remain with the flock all winter.—FRED MATHER.

THE MUSKRAT IN DELAWARE.—The muskrat is naturally a wary animal, but when pressed by hunger it is quite venturesome and often vicious when disturbed. They seldom exceed 5lbs. in weight, in this State. They live in burrows or hollow logs, on the margin of streams, seldom venturing out for food until nightfall. On the marshes their towns resemble the famous "dog towns" of the western prairie. They are found both near salt and fresh water. They subsist chiefly on water mollusks. They are most numerous in Kent county. Many persons living near the marshes bordering on the Delaware Bay, buy large quantities of marsh land and devote their time solely to muskrat farming. The sale of the hides when cured is quite remunerative, while the flesh finds a ready sale in the local markets.—DEL. A. WARE.

PELEG'S EXPERIENCES.

II.—HE INTRODUCES JAB TO HIS WIFE.

"COME, Peleg, let's have that dog story you didn't tell us last night," said Jap the morning of the second day, "I've thought about it a dozen times to-day I know."

"So have I," chimed in Sang. "I thought your gun story splendid, and I know the dog one will be better."

Peleg was putting the finishing touch to the broiler with a piece of newspaper, after which he hung that indispensable article upon a tree. Then he lighted his cigar and sat down by the fire. Evidently he had not forgotten the ungracious treatment accorded him by Sang the night before, but it was not in him to bear ill will, and besides, how could he, a born story teller, forego an opportunity? What story teller that ever lived, or who that ever imagined himself to be one, could not be wheedled at any time or place into a narrative, I would like to know. At any rate, Peleg, after a whiff or two, began as follows:

"Well, as I was a-saying last night, it had been a comparatively easy matter to get a gun into the family, but I knew to work a dog in would be the very deuce, and so I set my wits to working. Not that I couldn't have gone and got one without the asking if I had wanted to."

"P-h-i-e-w!" It was a long-drawn, incredulous whistle that Sang gave, at the same time looking up into the tree-tops as if in search of some mysterious object. But Peleg having once begun his narrative was not to be balked in that way, and so turning to his less demonstrative companion Jap, he went on:

"But I always wish for Nancy's approval in matters of this kind. Perhaps you know how it is yourself," to which Jap nodded an encouraging assent. "And so I set about trying to procure it. Nancy is one of those high spirited women who love to be consulted, and I very well knew that it would be better for the dog for him to come into the family with her free consent.

"Having a gun I hunted some, of course, and occasionally I borrowed a dog, and at those times I never failed to take home something wild, if I had to buy it at the restaurant. When I went without a dog I was equally careful never to take any game home, no matter what my luck had been. By so doing, you can see that I was enabled to present the advantages of having a dog more forcibly than in any other way. I could exhibit the fruits, so to speak.

"But my wife's antipathy to dogs was stronger than I had surmised. She 'despised them,' she said. Indeed, it seemed to be a sort of family affair with her to hate dogs. There was a tradition in her family that away back in the past a hundred years or so, some old steeple-crowned, psalm-singing ancestor of hers had been bitten by a dog and had died not long afterward, and from that circumstance the family had ever after been panicky over hydrophobia. I don't think that one of the name had ever owned a dog since, and in two branches of the family mad stones were held and treasured as heirlooms. I soon found that it amounted to nothing to show the fruits in our family, and had to try another tack.

"Men, it's shameful the way I treated that woman. I fairly cringe whenever I think of it, and I actually pretended that my health was failing me. I grew listless, complained a good deal, looked melancholy, pretended I had lost my appetite and complained of an illness that I declared myself unable to describe. It was a hard thing to keep up, but I did it, till I saw that Nancy was getting really uneasy, when I ventured to suggest that unless I had a turn for the better pretty soon I was going to make my will; and I gave certain unimportant directions about the management of my affairs in case of my death. Of course Nancy was now all sympathy, not to say badly alarmed. Women, you know, have a way of becoming terribly alarmed whenever their men are sick."

"Yes, the more worthless the men the greater the alarm," interposed Sang.

"I think that is so, too," answered Peleg. "But Nancy said she didn't believe I was going to die, anyway, soon, but said I ought to do something. I had before that suggested to her that most likely my trouble arose from too close application to business, and the truth is I had been overworking myself and was in need of some good, wholesome outdoor exercise. 'If,' said I to her one day after we had been looking at the gloomy side a suitable length of time, 'If I could only take plenty of outdoor exercise I believe I would come out all right.'

"'Then, why don't you take it,' said the dear, sympathetic little woman.

"'How? when? where?' asked I, as if exercise was a thing altogether out of the question.

"'Why, a thousand ways—now, all the time and everywhere.'

"I shook my head as if I failed to comprehend her meaning, when she went on:

"'Walk, ride, hoe in the garden, weed my flower beds.'

"But I explained to her how worse than useless that sort of exercise was to a man held as I was. That the exercise necessary to my recovery must so claim my attention that I would become completely absorbed in it, so much so as to become oblivious for the time being of any physical ailment whatever. Then I showed her that when I rode or hoed or walked I was painfully conscious all the time of my ailments and that the exercise only aggravated them.

"'Well, is there nothing else you could do?' she anxiously asked.

"'Well,' said I, 'I could travel, but I haven't the money for that. There is one thing I have noticed,' I added, 'when I go hunting I forget my sickness in my zeal for game. At least that was the case the one time I have been out.'

"'Well, then hunt,' said she, brightening up.

"'Hunt? How can I? I've no dog!'

"'Oh!' was all she said. A queer-looking expression came over her, and I am sure I must have shown in my face that I was a contemptible impostor. I think she had a revelation. I know I had. We talked of other things after that. The will subject was never mentioned between us again. She ceased making 'sick dishes' for me, and I tried to imagine myself a badly-used man. I think I would have welcomed a pretty severe spell of sickness about that time, but it didn't come. I was so chagrined and put out at the failure of my scheme, that whatever little ailment I might have had from overwork disappeared, and I was sound as a dollar.

"I do believe, men, if Nancy hadn't been the sensible woman she is, we could have quarreled. I was mad; unreasonable as it was in me; but she never said a word, went on in her old way, singing her old-time songs and making home as pleasant as could be.

"One evening the following spring Nancy had been out on the street, and when she came home her face was all flushed with excitement. She had been shopping a little, and was in the gayest mood I had seen her for a long time. I knew very well that something was up, but waited for her to make it known. I had months before given up all thought of a dog, and as the memory of my unfortunate little scheme began to fade away, I ceased to feel the hardship of being without one. I did not have to wait long to know what was in the mind on this occasion. Little by little it leaked out. She had been at Threadgill & Bolton's 'new store,' where they were 'selling below cost for thirty days,' and had seen the 'loveliest silk dress' M—m! It was *so* pretty, *so* fine, *so* cheap; and in her enthusiasm she came and stood beside me and combed my hair with her soft fingers, and said over all the adjectives that could be said about the dress pattern, and wound up by asking me for the $75 necessary to buy it. And what do you suppose I said?" Peleg asked his hearers, giving them a look that said as plain as could be, 'You'll never guess the smart thing I said as long as you live."

"You said you hadn't the money, I suppose," answered Sang indifferently.

"Or that she was suffering herself to be duped by a rascally store-keeper," suggested Jap.

"Maybe you told her that a calico was good enough for her," returned Sang.

"Most likely you said 'extravagance is what is ruining the country.'"

"Perhaps it was—"

"No, no. You would never guess it. All I said was 'Dog'!"

And the story-teller's eyes glistened in the light from the camp-fire, and he rubbed his hands over his knees and his body swayed back and forth, all of which indicated that he thought he had said a very smart thing indeed.

"Yes, gentlemen," he went on after a brief silence, "all I said was 'Dog'."

"And what did Nancy say?" queried both his friends.

"'It's a bargain!' That's it to a t-y-ty—the identical words, and the next day I bought a pup and she a silk dress.

"But lawsy me, getting was nothing to raising—"

"H-u-a-u-gh!"

Peleg was amazed to see that both his hearers had suddenly gone sound asleep. "Boys, let's go to bed," said he, and to bed the three happy hunters went.

D. D. BANTA.

ELK HUNTING IN MINNESOTA.

HALLOCK, Minn., Dec. 27. — *Editor Forest and Stream:* The season on big game has been remarkable this fall in this section. By the State law close time is restricted to the single month of November, but the citizens of Kittson county generally take a somewhat broader view, and extend the season both ways into October and December, some ten days each way. Nevertheless the spirit of the community is conservative and the destruction by no means wanton; and although the quantity of moose, elk, caribou and deer killed—especially of elk—is noteworty, in view of the growing scarcity of game the land over, still it may not be regarded as excessive, and not greater than can be annually supplied by reproduction in the ordinary course of nature. Should hunters so ravage the country at any future time as to threaten extermination, I believe the popular sentiment would improvise a check, irrespective of any mechanical attempt to enforce the written law. The exercise of common sense and obedience to its behests is the best safeguard; bad law can never be reconciled with it. If laws are arbitrary or absurd, they cannot be enforced. Unfortunately the game laws of the country are, as a rule, defective or inconsistent, and, therefore, they become inoperative. With the spread of population and the diminution of wild lands, legal restrictions increase; and, in view of the unremitting tinkering of legislative busybodies, I often feel as if I could be reconciled to an absence of all statutes, depending rather upon the instinct of self-preservation to protect the interests of a community as well as the game. Wherever the lawless element, which is conspicuous on frontier lines, becomes eliminated, conservatism prevails. Settlers are too busy with their pursuits to shoot for sport, and pot-hunters find neither encouragement nor a market. There is cessation from all shooting by common consent, with a universal tacit acquiescence in the propriety of close seasons. An idler with a gun in seed time or harvest is regarded as an interloper and suspicious character. Nevertheless, a hungry man will not hesitate to kill at all seasons, and popular opinion will justify him in keeping starvation from his house, or even in qualifying his interminable fare of sow belly and potatoes. There is no condemnation for him by a jury of his neighbors; close seasons are *dies non*.

One thing is certain, all the shooting which has been done in Kittson county during the eight years of its settlement has not sufficed to prevent our hunters from easily rolling up a score of some seventy elk alone during the six open weeks of the past autumn. Two hunters shot nineteen elk and two deer within six days, netting about $600 for the scant week's work. I doubt if this record can be duplicated anywhere in the Rockies now, and I dare say, from derived information, that this unusual levy will prove no drain upon the resources of the breeding paddocks. As far as the most reliable testimony goes we can spare a hundred elk each season and keep up the stock from year to year, if no other method than stalking is pursued, which is the only mode of hunting employed now by Indians or whites. Tenderfeet are not likely to take a hand in the sport. They had rather play euchre around a stove. Hunting big game is no child's play, with the mercury 30° below zero, especially if one's team strays off from camp, as has happened, and home is a hundred miles' tramp away. Skin-hunters would not be tolerated and the rigid enforcement of transportation laws interferes materially with their profitable employment. Hardship and inaccessibility are the chief conservators of the big game of Kittson county. The meat that is killed there is all utilized, every pound of it, the Indians curing the bulk of theirs, and the professional hunters disposing of what they shoot to the hotels and restaurants and local butchers. Sometimes an old-time Red River cart, drawn by an Indian pony, drags into town a load of meat, and anon a dog train with its quaint team tandem comes trotting into the suburbs with its quantum of full 600lbs.

Very arctic are some of the features of northern Minnesota in midwinter. Toboggans and snowshoes, tuques and capotes, gouty leggings and mantling furs which defy the frost constitute the prevailing and essential costumes while the days are short. The air is for the most part still, and the sky without a cloud. The stars shine with a white intensity in the frosty nights, and the wavering auroral light scintillates and flashes all around the horizon, and up to the zenith. Sometimes, in the gray of the morning, the sharp click of hoofs is heard on the crisp rime, and when the sun is up we can trace the track, only a fair gunshot off from the camp, where a big bull elk or moose has passed. The game is not shy, and it will be only a matter of perseverance and simple strategy to follow him to his death before the sun is on the meridian. Sometimes a whole family of elk, sire, dam and calf, are found together in the shelter of a tamarack thicket, and hunters have been known to bag the lot right in their tracks.

The country in the Roseau region is the finest in the land for stalking, being composed of alternate timber and open plains, which sometimes stretch in a snow white expanse as far as the eye can reach. Belts of tamarack, groves of oak, thickets of alder and willow, beds of watercourses, interminable swamps, these make up the landscape. It would be desolate but for the excitement of the chase, but the wild frontiersmen love it, and the experiences are those which only hardihood can indulge in and enjoy.

SHAGANAPPI.

A HUNT FOR BOB WHITE.

BEFORE I proceed to write anything of the hunt, I feel it due to myself that I should protest against your making me say, at any time, in your headings of my communications, that I had been in quest of quail. I have said, over and over again, that we have no quail in North Carolina—our bird far more resembling the partridge of Europe than the quail, which breeds in Spain and migrates to England during the autumn. It is not the partridge, I admit, but is far more similar to that bird in appearance and habit than it is to the quail. There is no good reason, therefore, why any one should apply a ridiculously absurd misnomer, and then cling to it with nervous tenacity. Please avoid making me apply that word to our little Bob White. I repudiate it.

Last week I took my son—who, having been to college and played the role of a gentleman loafer for about a year, thinks himself fully grown and an expert in most branches of knowledge—and my little bobtailed, unpedigreed Argo, to Pittsboro, in the county of Chatham, to join my friend G. T. L. on a visit to the estate of Edmund Atwater, Esq., where we expected to find an abundance of sport. My companion of many "a canty day" in the field, whom I have immortalized under the soubriquet Mud, was also along with that famous 16-bore Scott Premier, which he did not swap for a "cheap John" thing called a gun. When the train reached the station our friend was ready to meet us, having arrived the preceding night from New York. He carried us to his father's house, where we were greeted with a sincere welcome. After traveling over a very muddy road for about eight miles we came in sight of our destination. We stopped on the bank of a small stream which runs through the plantation, took out our guns and some shells, and sent the college matriculate with the luggage to the dwelling to announce our arrival.

Owing to the very heavy rains which had fallen the preceding week the ground was very wet and in some places miry. The birds were not moving about and hence we found but few. At night our entire bag was eighteen birds, and of them a young attorney who had visited Mr. A., killed four. We had plenty for a substantial bird breakfast. We found the family glad to see us. The following morning, after an early and substantial breakfast, we set off on our tramp, expecting to have far better success than we did the preceding day. G. T. L. and Mud with the bitch Corinne and a youngling called Guess went down the south side of the stream, while Mr. A. and I took the base of the hills on the north side. Ally B., the young attorney, and George, the recent student at the University, went between our line and the creek. They had an untrained black setter, called Fowle, who only needs a master, much practice and frequent castigations (breaking) to make a very respectable field dog. During the morning but few guns were heard, for but few birds were found. The plantation had them in abundance, but there was so much food and so much rank vegetation, which afforded shelter as well as food, that they did not run about much. At noon, when we met to take a bountiful lunch which had been sent from the dwelling, the entire party had but twenty-four birds. Just at this time the Rev. B. R. H. joined us, and while he and Mud were discussing ecclesiastical matters the others were spreading the repast upon two valuable tables, worth $45 each, which we found ready for us on the grounds selected for the midday meal. The tables were made of a well-known textile, much used for clothing, weighed over 400lbs. and is generally called a cotton bale.

At half past two we set out again, going homeward. The clergyman was placed under the guidance of G. T. L. and Mud, Mr. A. and myself thinking that the triumvirate would not be more than equal to us. The disciple of Coke and the late student, being regarded as hardly worth considering, were left to take their own course. Very soon the guns indicated that game had been found, but subsequent events showed that it was only an April shower. Just before night, and when but little time was left, our party got up several coveys, and kept shooting

until it became so dark that your correspondent was unable to distinguish the birds as they flew. His last shot was fired upon the assumed course of the bird, and the result showed that he guessed badly, for that bird is yet in all probabilities in the county of Chatham. The whole day's trophies amounted to just sixty-one birds, and of these I got seventeen, leading the list.

The following day, just after we started, the rain began to fall, and that forced us to return to the house and enjoy its shelter until the next morning. On Friday the sun rose bright and we concluded to spend the time until one o'clock in ranging the fields, so that if possible we could take a few to the family of Mr. L., at Pittsboro. At 12, when the vehicles came for us, we had about twenty; and after an early dinner, we bade adieu to the kind family with whom we had been sojourning, promising to come again whenever our convenience would allow, the host and hostess assuring us that they had enjoyed our brief visit, and would always welcome our entrance under their rafters.

On our way to Pittsboro we stopped at some pretty fields, and after finding two small coveys and some empty 10-bore shells, we knew that some one else had been on the same ground. We got four birds, and reached the hospitable dwelling we were seeking just after the sun had laid down in his rosy couch in the west. It was our purpose to have left for home that night, but the family urged us to remain another, and we consented. It was arranged that we should visit the fields of a large estate west of the town, for an afternoon hunt on Saturday, but soon after we got up from our beds we were told that a local sportsmen of much reputed skill, and a gentleman from the country lying toward the place "where sailors gang to fish for cod," had passed, at an early hour, and, no doubt, were at that very moment indulging in a cannonade with their 4 and 5drs. of black powder. We spent the morning in visiting around the town, and in the afternoon we tried some nice-looking fields lying adjacent. Somebody had been in them before we got there, and the birds will hatch again before those stubblefields will afford much sport. We got six birds—four of which fell before my little gun. WELLS.

ROCKINGHAM, N. C.

THE INDIAN LAKE COUNTRY.

FOR several years I have been one of a party of sportsmen who made the Adirondacks their headquarters, and I may safely say I have hunted in nearly every county there. This year our party consisted of four, and we decided to try the vicinity of Indian Lake, Hamilton county, which locality by reputation still remains favorable for deer, as no railroad comes within twenty-one miles of it.

Indian Lake is about three miles long, but a dam built at its outlet causes the water to rise so that at times it extends in length to nearly twelve miles. This sometimes proves to be quite a convenience to sportsmen, as it not only enables them to carry themselves and game to camp from nearly any point, but facilitates their reaching any of the surrounding smaller ponds by water.

We reached Indian Lake last September, and on the 15th of that month started on our first day's sport, each man anxious to bring down the first buck. We selected Crotchet Pond for our hunt. The view of the lake, situated among five large mountains studded with immense trees in their full beauty of autumn foliage, would delight even the most fastidious lover of nature. We were doomed to disappointment. The day was rainy and not a deer could be seen, so we had to content ourselves with three partridges, which we shot on our homeward tramp of about three miles along an old lumber road to the head of the lake.

On our second day we took station along Indian Lake, at a distance of about two miles from each other. The guides then went to work with their dogs; they struck a track, but gave it up after a hard trial without having made a start.

About two o'clock, getting tired on my watching point, and seeing two loons alight on the lake, I concluded to test my marksmanship and try and bag one of them, but knowing how difficult it is to shoot these birds, as they dive at the flash of a gun, I first replenished my stock of cartridges. I then slipped in a canoe and rowed toward the birds, and at the distance of about 200yds. I began to shoot at them. I fired twenty-five shots without any success, but the twenty-sixth bullet struck the bird under the tail, and (my rifle being a .38-cal. Bullard) the ball killed the bird instantly. It was a young female, and is now mounted among my collection of birds. I reached home about four o'clock, and surprised the rest of our party with my prize.

That evening, standing at the boat landing, commenting on the day's events, we came to the conclusion, that although the solitude and whole surroundings seemed to indicate the presence of plenty, deer must be rather scarce, and our chances of getting any rather slim; for the only game shot that day besides my loon were four gray teal and two swordbill ducks, one of which was completely shot to pieces and nothing but head and wings left, and curious to say the ball that killed it passed through the duck, struck a rock, glanced off and killed another.

The next day our guides persuaded us to try the same ground over again, but to start the dogs on the opposite side from that of the day previous. At about 10 o'clock the party who watched at the narrows saw a deer take the water in good rifle range, but having only a shotgun he was compelled to take his boat so as to pull within range. When within about 50yds. he was surprised to see the deer jump up a cut rock, about 14ft. high, at a bound and disappear. Half an hour later the deer again tried to cross the lake; two of us saw it, but as I was the nearest I had the first shot. I tried hard to get to my boat without making any noise, being afraid of drawing the attention of the game toward me. My boat lay in a little land-locked bay and I had some difficulty in reaching it. When I did I saw the deer in the shallow water making straight for the shore. I instantly took aim and fired, but the deer kept right on its path. I pulled up to where the deer had landed, and found that the bullet had struck a stump about 40in. from the ground, close to the tracks of the deer. No blood could be seen and I was convinced that I had missed. I returned to my post, but getting impatient, concluded to drift down the lake and try and catch some pickerel. I got there, and found myself among some driftwood, which is quite thick on this end of the lake. Suddenly I saw something that drew my attention among the floodwood. I looked at it through my field glass and could hardly believe my own eyes, to see a buck hiding in the water, his head resting on a log, but his body entirely under the water. I fired, and this time with better success; for when I reached the deer I found that the ball had entered the head about an inch over the left eye, shattering the skull to splinters; and on closer examination I found a bullet hole in the left ear; and I being the only one who shot at a deer that day, I don't think I was wrong in presuming that this was the same one I had shot at in the morning, and only missed it then by a hair's breadth. With considerable trouble I finally loaded my buck in the boat, and after battling for a while with the floodwood, reached the channel and made good speed for the landing, where I immediately began to dress my deer. It proved to be a young spike-buck, about three years of age. Some of our party were still trolling, and on their return were very much surprised, as were also some of the oldest settlers there, who said they had never heard of a deer being shot in such a peculiar place.

The next day we proposed to make an early start, so we had breakfast in good time, and each man, equipped with a lunch, was at his post by 6 o'clock in the morning. We covered the lake as nearly as we could, one man being stationed at Griffith's Landing, one at Moose Point, one at Beaver Meadow Brook, and one remaining at the head of the lake. At about half-past 8 we heard the baying of the dogs. They had found their deer. Nearer and nearer the baying was heard, and once I imagined that I saw the dog cross a clearing, when suddenly the deer changed its course and made for Crotchet Pond. We heard the baying for at least forty minutes, when it ceased. The next time the dogs were heard in a narrow hardwood ridge which runs along Moose Point Mountain. At that point there is a marsh three miles long and three-quarters of a mile wide. On came the dogs, howling louder and louder, when all at once the deer came breaking through the underbrush, making direct for the marsh. Our man proved to be on his post, the hounds were close to the deer, bawling at a fearful rate, when the .38-cal. Marlin rifle spoke, and again and again in quick succession. I felt certain that the deer had been shot, as the baying ceased and everything was quiet, and was confirmed by one of the guides whom I met some time afterward. I took my boat and pulled up to Moose Point to see the game, and there was one of the finest buck deer I have ever seen. It weighed 245lbs. after dressing. It was shot at a distance of about 125yds.; the first shot took effect in the shoulder, throwing it down; but regaining its feet immediately, it tried to make its escape, regardless of a broken shoulder. The second shot missed, but the third struck behind the ears, breaking the neck, and dropped it dead in its tracks. There was great rejoicing that evening, for we had secured as fine a piece of game as could be obtained in that section of the country.

For the next two days we gave the dogs a rest, and contented ourselves with shooting birds and fishing. We succeeded in bagging twenty-two partridges, three black ducks, one mink and thirty-six pickerel, some of which tipped the scale at nine pounds.

The following day we tried the deer again, the guides having to travel at least ten or twelve miles to make the start. We stayed fishing at the head of the lake for a while, and after catching six pickerel started toward our watching post by way of the old lumber road. We bagged three partridges, and were just stopping at a spring to get a drink of pure water, when we heard the dogs baying seemingly close to Crotchet Pond. We commenced running and soon were on our watch at the pond. After waiting about twenty minutes we saw a noble buck take the water, in straight line for a point where one of the party was stationed. He was up to the occasion. Of two shots one struck the neck, the second in the back of the head killing the game instantly. We towed it ashore; it was a three-year old and weighed 168lbs. We cut a sapling, strapped the deer to it and were soon on the way homeward, warming up pretty well under the weight and glad it was not heavier.

The day following we took a trip to Cedar River in quest of some more partridges. We bagged five on our way there, and returning took a different route. We secured one more grouse besides a large pileated woodpecker, which I shot near home. This was quite a treat; it was one I had often tried to get, the family of woodpeckers being pretty well represented in my collection, I naturally joyed to get another addition.

The day after, it being very foggy, we did not hunt, but set up a target and amused ourselves practicing. The target consisted of a board 9x4in. at a distance of 250yds. Our rifles were one Bullard, one Marlin and one Winchester, each of .38 caliber. The Bullard man started putting five shots out of six in the target, next came the Marlin man, drilling three holes out of twelve shots in the board, followed by the Winchester man, who did about the same as the Bullard. This lasted for several hours. After dinner we went fishing on the lake, and five pickerel, which together weighed 37¼lbs., were the result.

Sunday morning we all rested, so as to be in good trim to commence bright and early the new week. We started early Monday, Crotchet Pond being our destination. We had quite a time reaching the head of the lake on account of the fog, which was very thick. Three of us were to watch the pond, while one was to remain on the head of the lake. We waited for about an hour, loitering about the lake, while our guides went in search of the game. As we left for the lake the fog began to disperse, and about eight o'clock we were all ready at our posts. It was a beautiful morning. The fog rising and the sun piercing through the side of the mountains, spreading a crimson hue over the whole scenery, would have made a rare sketch for an artist, but is hardly to be described with words, and the quiet, only disturbed by an occasional bluejay, made me fully appreciate the grandeur of nature.

At about 11 o'clock we could hear the hounds at a distance, followed by a shot, but the baying continued for over an hour, getting fainter and fainter and at last ceased. Then one of the guides came and inquired if we had seen or heard the deer. The game, he said, at one time went in the direction of Johnny Mack's pond, but must have turned and made for Round Pond. But hark! the bawling could plainly be heard, the dogs were at it again. We were not slow in getting to our posts, four of us were at the pond, now including the guide. The dogs were driving the deer right toward us, as we could judge by the sound of their barking, when splash, splash, the deer jumped in the water at the point where our brother sportsman with his shotgun was posted. It was a doe, and the first doe we had seen this year. When within about 35yds. he fired. The deer merely shook his head and kept swimming for the shore, so he tried to head her off and to get another shot. He succeeded and fired two more shots, at a distance of about 50yds; but the deer reached the shore, and unfortunately just at the place where one of the dogs stood. Two of us saw it, but although we had rifles were too far off to shoot. On went the deer for the lake with the dog close to its heels, and was soon out of sight and hearing. The party who shot at the deer had a fine twelve-gauge Remington shotgun, loaded with five drams of powder and nine buckshot. He felt rather blue when we met and sorry he shot at all. He concluded right then and there never to use a shotgun for deer again. He ought to have driven the doe in range of the rifles, for the probability was that the deer would either be overtaken by the dog and torn to pieces, or would run until it dropped dead from its wounds and perhaps never be found.

We gave up the hunt and started for the lake, all of us disgusted with our day's work; on reaching the water we were greatly astonished to find the doe bagged by our solitary watcher at the head of the lake. The head had been literally riddled with buckshot, which proves that a rifle is the only arm for a deer; and I hope nobody who reads this will ever use anything else. Take a rifle and either kill or miss.

We all felt glad that the doe had been secured and we now, having each of us secured a deer, gave up the hunt for this season, being satisfied with three bucks, one doe, eighteen brace of partridges, and fifty-three pickerel, besides quite a lot of miscellaneous game. F. A. S.

BROOKLYN, N. Y.

GAME NEAR BISMARCK.

BISMARCK, Dak., Dec. 10.—Never before have the ducks and geese been known to leave the solitude of the beautiful lakes of the North so late in the season. The ducks came plenty enough for first-class sport in September, but the geese are still with us, and at no time in great numbers.

Away up in the British possessions, where their young first see the light of day, the old ones are convened (as reported by an eye witness) to talk over the dangers of their flight from their secluded home to the sunny South. The night is clear. The moon, full-orbed, floats over all, lighting up lakes, streams and forest till it seems day is not needed to make nature more beautiful, or this especial scene more charming. Thousands of geese are to be seen here and there, in clear deep water, in shallow water, in rushes wild and tangled. The young, the old, the white, the gray and the brant, chatter all together. The parents of this vast tribe are seen to quietly glide away to an island mid-lake of whitest sand. Here in solemn conclave met, they have left their young to sport and play, as fancy may guide. The meeting has been called to order by one of the oldest of the old, when yells of fear from a thousand throats set all the young to screaming. The president, no less a coward than the rest, but having descried the cause of fear, assumes an air of fearless courage, and with voice loud and clear demands, "Why all this commotion over a few mild-eyed elk, quietly quenching their thirst at the lake with no intent to harm? Now we will turn to business, and I trust we will have no more of this useless alarm, which only destroys the nerves of our darling young. And that more time be not wasted, I will state the object of the meeting. It is to determine the route we will take in our flight to where the waters never grow cold, and summer never ends. Last year we chose three different ways; and parting thus, thousands of our tribes never met us more. Now, my friends more fortunate, having proved your valor and endurance, as well as cunning, please tell your experience one year ago."

An old mother goose of many summers was first to speak. With bow profound and feet covering a space as large as the palm of a hand she said: "It was in the month of September that we parted from this safe retreat. My tribe grew impatient of wing. I had told them of 'No. 1 hard' grainfields as large as townships, of other lakes and streams in which to rest. They must go; and mother-like we consented too early by far. With many lectures on pits and things shaped to resemble us (called decoys), enjoining them not to go near these lakes, we started one bright morning at dawn. Our flocks numbered hundreds. With a leader at the head of each they formed. The flight was one of pleasure and delight. Our course lay by way of the lakes, which took us by way of Dawson, Dakota. My eyes grow dim with tears as I recall the sad history of those days. Every grainfield seemed to be full of pits; each pit had from one to two guns in it, with shapes resembling our form all around the pits. Our young, so full of life and inexperience, would take the lead, and with shouts easy to be heard a mile would fly straight into the jaws of death; and as it is regarded as being cowardly not to follow the leader, we all were thrust day after day into danger of having to bite the dust. In answer to your question, yes, there were guns of all kinds; the L. C. Smith and the Parker seemed to pierce my young through, and evey other pit seemed to have them in. I cannot advise my tribe to go that way."

"My course was by the Missouri River, our first stop near Bismarck, Dakota," spoke another. "Our experience was enough like that just related to need little comment. My tribe was robbed of half its number before we reached our home in the South. On reaching the grain belt the voyagers lost all fear, so greedy were they to fatten on the tempting grain. It seemed to me that behind every tumble weed, as well as in pits without number, I could see either the Greener, Scott, Lefever, Spencer, Charles Daly, Harrington & Richardson, Colt, Diana. Piepers, and many other guns, all pointing at us. My young darlings paid no attention to the danger, and day after day, week after week, they would leave the islands in the river and fly straight for these dangers, till we older ones, those left of us, put our heads together and by telling the young of grain fields for surpassing these in one day and night's flight, we landed them safe in our winter home. If we go this way again, I would most earnestly advise starting late in the season, with but a few days' stop on the way; for the few brave ones we sent down the river as spies returned with the report

that the country around Bismarck is cloudy with the smoke of guns, and our relatives, the ducks, both great and small, are falling by the hundreds. My advice is to remain where we are till it is too cold for all these different guns to be sitting behind every weed, and in a thousand pits."

Thus it happened that we have had but little shooting this fall compared with other falls. The geese usually get here about the first of October and stay into November.

The pass shooting in many of our sloughs was all any one could wish, and many were the evenings in September that, while standing in rushes reaching higher than my head, I have wished some of your many readers (all good fellows) could be by my side. After shooting and scoring a double drop, or go on, I would see other flocks of mallards and teal flying swift of wing straight for my new Parker. How a sportsman will tremble with excitement, and hold his breath for fear the game will hear him breathe. Often there would be eight or ten sportsmen in a line, and the strange part of it was that, the slough being not more than 150yds. wide and two miles long, the ducks would not change their course; but down the full length of that slough they would come; and were it not that the majority of sportsmen shoot about two to five feet behind their bird, few would have been left for the last man. As it was, we have sport which can be enjoyed here but not described. I have had the pleasure since writing my first letter for your paper of taking by the hand many of the Eastern boys, who thanked me most heartily for guiding them to the sportsman's paradise.

As to large game, we have it by our side, as I have told before. This week two friends of mine went up the river, about twenty minutes' ride, and letting their hounds loose in the brush in two minutes the most welcome sound on earth was heard coming from the throats of these two slow dogs. I can't tell how other hounds act, but these walk, and my friend who shot one of the four deer started told me he stood on a high log and could see the deer for nearly a mile coming toward him. He said they acted like rabbits; they would stand and wait till the dogs would get within ten rods of them; then they would skip off for 200yds., and just before stopping they would jump off sideways, till they got within 50yds. of him, when he killed one and the others took a circle and went back the same way they had come. This experience can be repeated each day. I have just heard from a friend who lives west of us a few hundred miles, who says he has just returned from a six days' hunt with fourteen deer, as many antelope, one mountain sheep, one bear and other game. W. H. WILLIAMSON.

MISCOU.

FREDERICTON, N. B.—Messrs. Allen, Babbitt, Seelye and Gillmore visited Miscou about the first of October last, remaining there a fortnight, during which time they got forty wild geese, besides a large number of ducks of various kinds, of which no account was kept.

Brant were just making their appearance on the island; as the sportsmen were leaving these fowls were then arriving in vast quantities. Plover, curlew and other birds of a similar character were leaving at the time of their arrival. They had been very plentiful during the earlier part of the season and Dr. Orne Green, of Boston, had some very good shooting on them as well as on black and gray ducks the whole of the early part of the season, that is to say for the whole month of September, which is the best time for these birds. Geese were more abundant than in former years, owing to the fact that this autumn for the first time they had been protected in their haunts by Charles Wilson, a resident of the island, who was assisted by his son.

Thirteen flocks of geese were reared on the island this year. Formerly geese bred there in large numbers. The protection offered them this year will probably cause the birds to again occupy the island as a breeding place. Foxes, which were numerous on Miscou, have been destroyed to a large extent. These animals have in former years proved very destructive to the young geese. Geese which breed on the coast of Labrador are said to select as nesting places, dry spots in the midst of floating bogs, where they are comparatively protected by the surrounding water from the attacks of many of their enemies; but their nests on Miscou had no such protection and could be reached by foxes, dogs and men.

Many acres of geese, mingled with black and gray ducks, were seen by these sportsmen on the feeding grounds of north and south Mal Bay. When the geese were not disturbed at all on their feeding grounds they rose in flocks of from five to thirty and made their way into the little fresh-water lake, which is situated between the two bays. When the weather was windy they flew low, when it was calm many of them would fly too high for the range of an ordinary fowling piece. The little fresh-water lake is not more than half a mile from either bay.

The position taken by sportsmen who shoot at the Miscou preserve is at some point along that part of the shore of the fresh-water lake which is most adjacent to the feeding grounds. The situation of this point is determined, for the time being, by the direction of the wind. Wilson, who has long been a resident of the island, can tell to within a few feet the spot where this point is, under any wind. In order to conceal one's self from the geese, which are leaving the feeding grounds for their resting place on the lake, the sportsmen take their place behind blinds about 4ft. high, dug down in the dry moss or made of the scrubby spruce bushes which are found growing in this dreary and barren country. Occasionally a tree answers the purpose of a place of concealment. When the geese, which are very wary, arise, the sportsman must remain perfectly motionless or move very slowly, quick movements attracting their attention at once and at surprising distances. The sportsman's clothes should be all dark, a dirty brown being the best color.

Brant shooting is done in a different manner. There is a long point between Mal Bay and the waters of the Gulf of St. Lawrence. On this the sportsman takes his position at daylight, concealing himself as well as possible, and here awaits the flight of the brant from their nocturnal feeding grounds at Mal Bay to their resting places on the waters of the gulf. Unlike the wild goose, the brant never visits the little fresh-water lake. The brant is killed more easily than the goose. Wilson and another man in one day's shooting at Miscou, using decoys, have killed ninety-six geese and brant. EDWARD JACK.

A MORNING WITH THE COOTS.

ONE day during the early part of November, while spending my vacation on the Jersey coast, not far from the site of one of its most fashionable and exclusive summer resorts, I chanced, for the want of something better to while away time, to drop into one of the life-saving stations, where I was well acquainted with the crew, and was always sure of a hearty welcome and equally sure of hearing all the current news of shooting or fishing. This day proved no exception to the rule. The captain said, "How would you like to have a chance at the coots? No. — [meaning the station below] are having great fun and killing lots of them. Would you like to go down and have a try, if I can arrange for a boat for you?" "Would I? Well, you just try me," was my answer; and visions of coots, single and in flocks, boats and decoys, flashed before my mind's eye. Leaving the station with the understanding that I would call in the afternoon, I started for home and the enjoyment of loading shells.

The sun was getting low in the west when I stepped once more within the station house door, and was greeted with a chorus of voices, saying, "It's all right, you are to go there to-morrow morning. Be here at 4, and we will have a horse and wagon ready to take you down. Bring lots of shells," was the parting injunction, an injunction which I fully intended to heed.

That evening, in spite of all the little details for the success of the to-morrow, which I managed to crowd into it, seemed to drag on leaden wheels. I was called next morning at three. Ugh! how I hated to get up out of my warm and comfortable bed into the cold air of the room. "Which way is the wind?" I asked, mentally hoping the answer would be unfavorable. "West, sir, and no surf." That settled it, and I had to get up. Twenty minutes afterward saw me wrapped up, carrying gun and shells, and hurrying in the clear moonlight. A quarter of an hour's sharp walk and the station opened its hospitable doors and disclosed the crew engaged in doing justice to Howard's cooking. "Come L., sit down and get something to eat, you should have been on your way down the beach by this time," said the Captain. Five minutes after the meal found me in the wagon with one of the men, being driven rapidly down the shore to our starting point, at the next station, where an hour later we arrived. "Well, I suppose you fellows are all ready," came the inquiry from our host. You take your friend off this morning, the more boats the better, and I think he will have better shooting alone in a boat than if he went with another shooter. You will find your boat there," pointing to a surf boat that lay a short distance from us. "Go to the south'rd about a quarter of a mile and anchor 300yds. from the shore," with which parting directions we pushed the boat into the surf, went over the bar, and in a few moments came to anchor and put our stools overboard. As we settled back in our seats, ready for the work of the day to commence, I took occasion to look around me and note the prospects and the preparations made in the other boats for the fun.

To the east the first rays of daylight were beginning to show themselves and dye the ocean a dark purple, interspersed with bars of light, that under the gentle west wind looked like beaten copper. In the distance shone the beacon of the Scotland Lightship, and further west on the Navesink hills the Highland lights were beginning to pale in the coming day. Down in the northeast a schooner could dimly be made out, standing with all sail set toward Sandy Hook. To the south the water was cold and leaden, while in shore it was breaking into ripples, and the western horizon looked as if it had plenty of wind in store and would shortly prove the fact to us. Around us on all sides could be made out a dozen or more boats riding at anchor, and to keen eyes each had its string of decoys close aboard. While I was enjoying the picture and watching the day break, half forgetting the purpose for which I had come, I was startled by hearing C. say, "Mark southeast." This dispelled all dreaming, and turning my eyes, I made out a single bird rapidly approaching the nearest boat to the south of us. On he came, his dusky wings seeming but barely to clear the ripples, heading a little to the south of our neighbor. Then, as if seeing the decoys for the first time, he swung swiftly in toward them and prepared to pitch. A flash, a dull boom of a heavily-loaded gun, a streak of white water under him, and a cloud of smoke rising from the innocent-looking fishing boat seemed to have convinced him that he had made a mistake and a narrow escape, and had better change his quarters, which he did in spite of the second invitation sent after him. Straight in shore the bird went, and in his haste and fright, miscalculating the danger distance from the in-shore boat, went down with a rush and splash before a charge of No. 2 sent at him.

"Look out, here comes one straight for you; and don't you miss the first bird for anything." "Where is he? Oh, I see him." Yes, there he came, swift and straight as an arrow, for our stools. Stooping low, to be as much out of sight as possible, I drew back the hammers of my little Parker, determined to make 3½drs. of powder and an ounce of No. 4 do all they could to stop this visitor. In an instant he was over the furthest stool. Now steady, was the mental command to my nerves, as the gun came to shoulder, and eye ranged down the barrels showed them to be about a foot ahead. Ah! now then. And there was instantly a transformation scene, with a bunch of feathers and a badly demoralized duck as the central figure; a splash in the water and a sigh of relief from C., whose "All right!" convinced me that the gun and myself had done our work well this time, at least.

During this little by-play of our own, the other boats had not been idle, as dull, muffled reports from all directions proved, and that they were meeting with more or less success the moving and anchored boats plainly showed. For an hour or so this continued. Then all of the birds seeming to have found a resting place further out at sea, where they were only occasionally disturbed by passing vessels, and, as a consequence, not giving the shooting that our neighbors seemed to think they should, a general movement for the new resting place of the ducks commenced. Our host called to us as he passed "to come out shore," an invitation we hesitated about accepting, as the wind had increased, and the gentle ripple of the morning had given place to a decided sea, which certainly must be much larger off shore. However, after talking the matter over, we decided to follow, and getting in our decoys, commenced going out shore. Our delay had given the other boats a long start, and before we got half way out they were among the birds, of which there seemed to be thousands. Looking over my shoulder I could see them flying in all directions, some scooting close along the water, barely clearing the seas, others high overhead, flying in a heedless fashion from one boat to another, or hesitating a moment over a bunch of stools, and paying for their curiosity by the loss of some of their number.

With the aid of the wind, now almost a gale, and our rapidly plied oars, we were soon in a position to drop anchor and place the stools. This done, we were prepared for all callers, and had not long to wait. "There he comes," C. remarked, and sure enough there he did come, straight toward our stern, regardless of both stools and boat, intent only upon getting to some quieter neighborhood. Head on, a bad way to shoot a duck, I hear some old shooter say? Yes, I grant you friend, but it was head on or nothing; you cannot turn around with any degree of comfort or safety in a surf boat with such a sea running. Accepting the inevitable, as he closed on our sternmost stool, the gun muzzle rested in a line with his breast, then was raised until the head disappeared, the trigger touched, and an ounce of No. 4 crushed him back, ragged and limp, as dead a duck as ever interviewed a choke-bore.

For an hour or more the shooting continued, bringing us our share of birds, and at the same time a fair share of misses, some of which brought with them the unqualified and plainly expressed disapproval of C. Then, the wind having increased, and the sea making shooting almost impossible, we boated our decoys and commenced our journey shoreward, which interesting point was at least two miles away in the teeth of the wind. An hour's hard work at the oars, sometimes only holding our own against the fierce flaws, which ever and anon, as if to show their power, would drive the spray clean over the boat; and again, as the force of the flaw passed, gaining a few yards, we finally reached the Bar. Here taking advantage of the first opportunity that the surf offered, we ran throught it, and once more had Jersey soil under our feet.

Hauling our boat up, we counted our victims, and found that twenty-four of them lay on the stern locker. Placing them in our wagon and thanking our host for his kindness, we were soon on the road home, thus closing a day of pleasure and excitement for C. and myself, if not for the coots. H. G. L.

NEW YORK.

FIELD, MARSH AND SCRUB.

AS the season for shooting partridges and quail is about over, I thought I would have one more good day's sport, so yesterday morning I shouldered my gun and started for the woods. Accompanied by my spaniel dog I set out for Spring Brook, and on reaching the stream Bruce soon flushed a covey of partridges, which took to some oak grubs a little way off. I followed them up and soon had two in my game coat pocket. I followed on down stream and got two more within ten minutes. I then turned back and followed up stream for some distance without finding any more birds, until I came to a large marsh, with here and there quite large thickets of willow and thorn bushes. In these places Bruce flushed several birds, but they were so wild I could not bag any. I crossed over a couple of fields and came to another brook about the same size as Spring Brook and started down stream. On my way down I shot three gray squirrels and five partridges, making nine birds and three squirrels the fruit of my day's hunt, which I thought was a day long to be remembered. If I could shoot birds on the wing as some men can I could have brought to bag more partridges than two strong men could carry, for I honestly think I saw between 150 and 200 partridges. If the winter continues mild as it is here now I think we shall have plenty of sport with the birds next season. All that I killed were very plump and fat. C. D. P.

LOWELL, Mich.

In this section and at this season of the year, night sports are favorite pastimes with many. Muskrat, raccoon and opossum hunts predominate. The muskrat hunter, seated in a canoe, with a lantern and a large tin or nickeled reflector fastened securely in the bow, paddles silently along the margin of the creeks and streams, and is armed with a shotgun or rifle, with the aid of which he kills the startled creatures as they come forward to inspect the occurrence of the light. By this means large quantities may be bagged in sections where they are numerous. The raccoon and opossum hunts are much more exciting. Recently a party of six, equipped with guns and axes and accompanied by seven good dogs, started on one of these hunts at 9 P. M., and after wading through streams and marshes, cutting their way through thickets of undergrowth, and stalking over acres of plowed ground and woodland, returned in the early hours of the morning, having captured but two raccoons and one opossum. DEL. A. WARE.

DOVER, Delaware.

Editor Forest and Stream:

Although somewhat prostrated by the scathing rebuke received at the hands of the *Breeder and Sportsman* for my temerity in having dared to address to FOREST AND STREAM the inquiry, supplemented by a modest expression of my own and published in your columns of the 3d ult., regarding the wildfowl of the vicinity adjacent to San Fraucisco as compared with the fowl of other portions of the coast, and although a trifle uncertain yet about the knees, I am still able to hold a pen, and with your permission would like to offer a few words in acknowledgment.

The "pity" the *Breeder and Sportsman* so gratuitously and lavishly dispenses is not what I was inquiring for at all, but such a method of charity is not altogether original, I have known it distributed unsolicited—and almost as gracefully—before.

The *Breeder and Sportsman* dilating painfully upon the singularity that one could be so silly as the querist quoted, goes on to say that "he must know that the merest moiety of birds marketed is brought from the salt marshes near Alvarado, Alameda, or anywhere else where marshes are salt," a statement I should readily believe from the number of guns in weekly array as against that of fowl.

Here, at the very outset, the *Breeder and Sportsman* has made a most over-liberal draft upon even its stock of

assumption, as this is precisely one of the many things I did not know, my knowledge of game not having been derived from market stalls, I never having purchased a head of any description in my life, and have my own opinion of those who do while professing to shoot it. The man buying powder and shot and with perhaps the equivalent of a comfortable annuity invested in guns and shooting paraphernalia, must be of uneasy conscience, and but an apology for a sportsman, if he buy game too. My former facilities for shooting as compared with my financial status have rendered it far easier for me to procure my game in the field than in the market.

"Pacific wildfowl" is too vast and comprehensive a term for me to grapple with of my own knowledge, further. Shades of Audubon! why not say "Fowl of the universe." So small and insignificant a slice of the continent as that embraced by the Pacific surely cannot contain all the fowl within the ken of the benevolent *Breeder and Sportsman.* J. G. B.

SAN FRANCISCO, Cal., Dec. 16.

This town, Hot Springs, N. C., is in Madison county, near the Tennessee line on the French Broad River, right in the heart of the Blue Ridge Mountains. These mountains seem to be fairly alive with deer and abound with turkey, quail, ruffed grouse and other game. A deer hunt in this region is started by sending out a man with a pack of foxhounds to act as driver. He climbs up the mountain, and turns his hounds loose. The dogs beat around until they strike the scent of a deer, when they are off in full cry. The deer when pursued makes for the river, along the banks of which are stands where the hunters are placed, and the animals are shot as they run by them or after they get into the water or while swimming the river, and it is very rarely that one is lost, unless in a case of buck fever. A friend of mine was on one of the stands when a fine buck came charging down the mountains, and passed within 10ft. of his stand. It was his first deer, and he was unable to shoot. Buck fever had him, and it was also expensive, as the law for a hunt is very rigid down here. Anybody failing to fire when a deer passes his stand has to pay all the expenses of the hunt. It is an excellent rule, and serves to keep everybody on the alert, for it does not pay to be caught napping. On our hunt everybody was on the lookout. A fine doe came charging down, and it was brought to bag without a bit of trouble; everybody was pleased, and we have been revelling in venison ever since. There are plenty of deer in the mountains and we never go out without getting two or three. SPORTSMAN.

HOT SPRINGS, N. C.

Our lakes are now closed, and the flight of ducks is over. We had some fine sport here during October, as ducks were more numerous than I have seen them for a long time. The open season closed Dec. 1 for deer and antelope, and as we have no snow few have been killed this fall. I was at my mountain ranch in November for a week, killed some nice fat grouse, and saw one deer, but there being no snow could not do much hunting. Mr. Foy, who has a cow ranch near me, has killed three. Our last Legislature stopped the sale of game, so there has been none on our market. I am informed that a great many elk were killed during October up in the Horn's Peak country, where I was last fall when we camped at Camp Coe. My old chum Bob, who was with me last fall, was out again this fall in North Park and got eleven antelope. My own business was such that I had to abandon my usual fall hunt and take revenge on the ducks in my lake.

Coyotes are very numerous here now, and make frequent raids on our hen roosts and turkeys, if not well guarded by a good dog. There is not a night we are not favored with their music. A few good greyhounds are needed to thin them out. A. A. K.

BERTHOUD, Colorado.

I have had many fine days among the cottontails, one of which I never shall forget. It was not nearly so successful as many other hunts that I had taken, having only brought two cottontails at full run and one Bob White on the wing to bag. While in search of more game I came across two pot-hunters, one with a gun the other carrying a mattock. They had nine rabbits to gun and mattock. They wanted to know which route I had come, so they could dig out the ones I had tracked to earth. Is this not as bad as taking them with a ferret?

CADIZ, Ohio. BUCKEYE.

SHOOTING NOTES.

WITH the outgoing year shooting ceased in this State, Connecticut, New Jersey and Pennsylvania. Generally throughout the West quail shooting stopped on Jan. 1. The sportsman must therefore go South for his sport. In some sections of Virginia until the 15th inst., North Carolina until April 1, and South Carolina until March 15.

Among those who have just returned from shooting in North Carolina are Dr. John A. Wells, of Englewood, N. J., and Howard W. Hayes, of Newark. The former, besides being an accomplished sportsman, is a most graceful writer on subjects pertaining to the field. One of the prettiest stories ever written of a quail is from his pen. These gentlemen spent a week among the birds and enjoyed good sport.

O. Von Lengerke, of Newark, and three friends are at present shooting quail in Maryland, where the law in several counties is not up until the 15th.

Benjamin Hilton, of East Orange, and twenty shooting friends, contemplate making a raid next Saturday on the Chelsea plantation, near Grahamsville, South Carolina. Among those of the party are: Chas. R. Hedden, M. L. Freeman, C. T. Wills, E. N. Booth, N. S. Smith, W. N. McCord and John Curtis. WISE ACRE.

NEW YORK, Jan. 2.

OHIO SEASONS.—A bill introduced into the Ohio Assembly names the following close seasons: Squirrel, Jan. 1 to July 1; woodcock, Oct. 1 to July 4; ruffed grouse, pinnated grouse, blue-winged teal, mallard, woodduck or other wild duck, Jan. 1 to Sept. 1; quail, turtle dove, rabbit, Jan. 1 to Nov. 10; wild turkey, Jan. to Oct. 1. Sunday shooting is forbidden. The meadow lark is, by another bill, placed among the birds which are protected at all times. The revision of the game warden system is noticed in our editorial columns.

HE SET OUT TO BUY A DOG.—Riverpoint, R. I.—*Editor Forest and Stream*: I realize how much pleasure I have lost by not taking FOREST AND STREAM years ago. I began taking it last March. It came about in this way. I wanted to buy a dog. I went to the local news store for a sporting paper and bought a copy of FOREST AND STREAM. The result is that it has continutd to come to me every week since, and it always will. But that is not all. My two boys of ten and twelve years noticed the *Audubon Magazine* advertisement. I bought them a copy. The consequence was that I had to buy all the back numbers; and now that comes regularly, and I am as much interested in its pages as the boys are. Birds are my hobby and have been for the past eighteen years. The FOREST AND STREAM lies close at hand and several times a day I go hunting or fishing in its pages and just about get through it as Friday night brings me a new copy and I hail it with pleasure.—C. E. B.

MICHIGAN SPORTSMEN'S ASSOCIATION.—The following gentlemen constitute the standing committees, whose duty it is to consider the subjects included in the several headings, and make full reports at the next annual session of the association to be held in Detroit, Mich., Tuesday and Wednesday, Jan. 24 and 25, 1888: Committee on laws, T. F. Shepard, Bay City; A. L. Lakey, Kalamazoo; Mark Norris, Grand Rapids. Committee on enforcement, Joel C. Parker, Grand Rapids; Wm. B. Mershon, East Saginaw; E. O. Lancaster, Flint. Committee on nomenclature, Dr. Morris Gibbs, Geo. H. Wynans, E. H. Ranney, Kalamazoo. Committee on publication, Mark Norris, T. Stewart White, F. E. Blakeley, Grand Rapids.—E. S. HOLMES, President M. S. A. (Grand Rapids, Mich.).

COLUMBUS, Ohio.—At a meeting of persons interested in the organization of an association for the protection of fish and game, the following officers and committees were selected: President, P. E. Fleck; Vice-President, James Kershaw; Secretary, Jonas Hedges; Treasurer, J. T. Gale; Executive Committee—C. H. Damsel, J. T. Harris, W. S. Ide, John H. Gugle, George F. Stone; Legislative Committee—Charles E. Burr, Horace Park, S. F. Marsh, W. F. Burdell, B. H. Brooks, A. W. Thurman, G. H. Bargar; Committee on By-Laws—J. T. Gale, I. E. Stevens, Geo. L. Graham. The association numbers 105. The organization will take up and press upon our Legislature the necessity of measures to prevent stream pollution in Ohio.—F.

DEER ON LONG ISLAND.—Oakdale. L. I., Dec. 28.—A three-year old buck chased bay hounds came down through Sayville, and was driven into the by half frightened to death, and would have been drowned, but was saved by some bay men.—ALFRED A. FRASER.

SALMON LAKE.

ON the morning of Tuesday, the 26th of July last, E. F. Milburn, my brother Herbert and I left Belleville by the Grand Trunk train passing west at 6:30, and arrived at Trenton at 7 o'clock, where we had to wait for the Central Ontario train, which left for the north at 11:55 A. M. We proceeded up this road 59 miles to St. Ola siding, where we arrived at 2:15 P. M. Having got all our traps off the train and loaded on to the wagon (ordered a few days previously) we started without loss of time for St. Ola Village, about four miles from the railway station. Our boat, canoe and camping traps were as much as we could put on the wagon, so we had to walk to St. Ola. The road was exceedingly dusty, and the day scorching. Although the road was a little rough, we managed to reach the water at St. Ola at 5:30 without damage to any of our goods. It took us quite a time to get the boat and canoe properly loaded, as we had a fair quantity of camp utensils with us. However, at 6:30 we bade adieu to the driver and made a start for Salmon Lake, about three miles north. First of all we passed through Little Gull Lake (about half a mile long) then Big Gull Lake (about one mile long) and then up Beaver Creek about a mile and a half.

We were delighted with the scenery on reaching Salmon Lake, the water of which was very cold and clear. The lake is surrounded by hills, many of them being quite high, and is about three and a half miles long by an average of half a mile wide. It is said to be very deep in some places, particularly near the outlet, where a line 600ft. long did not find bottom, and of this I have no doubt. We reached the island in the northeast portion of the lake about 7:30 o'clock, and at once put up the tent, got something to eat, and then made things as comfortable as possible for the first night. After that we sat around the camp-fire smoking and chatting till about 10 o'clock, when we turned in, feeling a little tired from our long day's work.

The next morning I was up bright and early with the hope of taking a black bass, which I did, not more than 100yds. from the camp. He was not a large bass (about 2lbs. I should judge) but he gave me some good sport. I was trolling with a large dark fly of my own make, in fact I always make my own bass flies. During the day Herbert and I tried to find a spring on the mainland, northwest of the island, that we had been told about, but were not successful. We spent most of the day in the canoe, paddling about, trolling, etc., but did not meet with much sport, as the bass did not appear to be on the feed, owing, no doubt, to the very calm and dry weather we were having at that time. Milburn spent the day chiefly on the island, arranging things about the tent, reading and sleeping, as he did not feel very well. During the evening we had a little music (flute and cornet), and Milburn sang some capital songs with his magnificent baritone voice—a voice of which any one might well feel proud.

What could be more enjoyable than an evening around the camp-fire after a good meal? The noise and smell of the pines and camp-fire, the occasional (I may say frequent in this region) cry of the loon, the rise or play of the fish and all the other kindred sounds tend to make one enjoy the serenity of the scene and camp life, while he often thinks of the loved ones at home.

On Thursday we did not get up early, as we found our hay bed (made the day previously from dry hay found on the island) so comfortable. After breakfast Herbert and I tried to find the spring northwest of the island and were this time successful, but we preferred the water from the lake, as the spring was very low. By sinking an empty bottle 60 or 70ft. in the lake near the camp we were able to obtain ice-cold water of an excellent quality and this was when the thermometer stood between 90° and 93° in the shade on the island. In the afternoon we shot with Milburn's revolver at a life-sized man which we drew on some boards. The range was 50yds. and we made some capital shooting, at least we thought so. Milburn, however, carried off the palm. Later on during the day Milburn and I rowed to St. Ola, got the mail matter and purchased a few necessary articles for the camp. We caught a few bass on the way, trolling in the creek, but they were not large (about 1½lbs. each). On our return to camp, about 7 o'clock, we found tea ready and were not long in disposing of a few luxuries received from home. During the evening I tried still-fishing in water for gray trout, but did not meet with any success.

We all got up early on Friday morning, and after breakfast I caught a beautiful bass, about 5 o'clock, with a small frog. I was alone in the canoe at the time, still-fishing, about 100yds. from the easterly point of the island. As we had been having such poor success with the bass (owing, we believed, to the calmness and dryness of the weather), I did not think it worth while to anchor the canoe, but simply held on to a stake in the water with my left hand and took the rod in my right. I, however, found on striking the bass that I could not manage him with one hand without the risk of breaking my light trout rod, and I had to let go the stake. For a time I had lively work, as there was a heavy wind blowing from the northeast, and the canoe drifted rapidly toward the rocks. I was, however, determined not to lose my fish, if I could help it. After a fight of about ten minutes I managed to get him well under control, and ventured to land him in the canoe, by no means an easy task, as I had no gaff or landing net with me at the time. He was, as near as we could judge, about 3½lbs. weight. Certainly he gave me more play than I ever experienced from a bass of the same size. We had often heard of the game qualities of the bass in Salmon Lake, but found them to be better fighters and more tenacious of life than we had anticipated.

Herbert was the first up on the following morning, and Milburn and I awakened by hearing him calling for us. He said he wanted the gaff, as there was an immense trout on the night line. We went out and were somewhat astonished at what we saw. There was, sure enough, a beauty on the line, but hooked in such a way that he might easily have torn the hook out unless carefully handled. He had, in some mysterious manner, hooked himself through the skin between the shoulders. Milburn gaffed him and we hauled him in. He certainly was a handsome fish. At the time we judged him to be 30lbs., and from actual weight at the St. Ola post office afterward we could not have been a pound out in our calculation. We got several trout on the line at the same time which we cleaned and salted. We also caught a number of ling (a disgusting looking fish, somewhat like an eel), these we threw away. Afterward we heard they were excellent eating if salted. Milburn took the trout to St. Ola to send to Belleville by train the next day as a present to our families. It weighed, on Monday morning at St. Ola, 24lbs., so that it must have been about 30lbs. when taken out of the water.

During the remaining days we were at Salmon Lake we did not capture many fish, owing, no doubt, to the extreme heat and to the dry weather. We enjoyed ourselves chiefly paddling, rowing and loitering about, shooting with the revolvers, admiring the beautiful scenery, reading, etc.

On Thursday Mr. Sargent, an intelligent farmer from near St. Ola, paid us a visit and kindly offered to pilot us to the Blue Lakes, about three miles east of Salmon Lake. We started about 10 o'clock in the morning, Milburn and Sargent in the boat, and Herbert and myself in the canoe. It was a lovely day for such an excursion, as it was not quite so hot as it had been during the past week. We went up a number of lovely creeks with trees overhanging, and through several pretty and wild-looking lakes, namely, Dark Lake and Dixon's Lake. On the edges of the creeks we put up quite a number of young partridges. When we got to the creek at the eastern end of Dixon's Lake we were much disappointed to find that we could not get up the creek, owing to the scarcity of water, and we were compelled to abandon our trip to the Blue Lakes in consequence. We had heard that these lakes were so named on account of the appearance of the water, which, we were told, looked as blue as the water used for blueing clothes when washing, and that they were simply full of bass of an immense size; that they were seldom visited or fished, and that there were no apparent outlets to some of them. There are, I believe, three in all.

We then paid a visit to Devil Lake (about half a mile south of the main creek), so called from its wild appearance and the difficulty frequently experienced in finding one's way out of it. This is a handsome sheet of water in which there are several small and pretty islands. We caught a few bass still-fishing with small chub, and saw hundreds of black bass about 3in. long in the lake. I took several of them with a small fly to satisfy myself what they were. Sargent told us it was a capital lake for trout. About 3 o'clock we returned to our island, and all of a sudden we made up our mind to strike camp this afternoon instead of the next day, as previously arranged, in order that we might have a little trout fishing at Springbrook on the way home. It did not take us long to pack up and stow the things in the boats. Having left Sargent near his farm, we proceeded down the creek to St. Ola, and having pitched our tent near the village, arranged with the carter to take our traps down to the station in the morning.

We turned in early and slept well until 4 o'clock, when we got up, loaded the wagon and started for the station, where we arrived about 6 o'clock. We took the train for the South at 6:40, and arrived at Springbrook at 9:15. We

carried what was necessary for the night's camp down to the creek, about three-quarters of a mile from the station (I should say railway track, as there is no station at Springbrook). Having pitched our tent near the creek, we fished during the rest of the day and part of the evening, till a heavy thunder and rain storm drove us into the tent. We got about thirty fine brook trout, small, however, as they generally are in this stream. I took nearly all of mine with a red-crow tag, an excellent fly for small stream trout fishing. At 8 o'clock on Saturday morning we packed up and left by the train going south at 9:15; reached Trenton on time and took the Grand Trunk train for Belleville, where we arrived about noon, and at home half an hour later, delighted to see our wives and families once more, and feeling much benefited by such an enjoyable trip.

I would advise any one who wants a good trip of the kind mentioned to pay a visit to Salmon Lake, Hastings county, Ontario. I am sure he would not be disappointed. Several gentlemen from the States have been there within the last year or two, and all expressed themselves as delighted with the sport. I believe among them I may mention Col. Strong, the popular United States consul at Belleville. The people in the neighborhood, and others from Belleville and Trenton, who had visited the lake at a more seasonable time of the year for sport, said that the fishing was excellent and that they had taken very large bass out of the lake both with fly and bait. In the season deer and partridges are said to be plentiful, as the country round about is poorly settled and not much disturbed. I may mention that the following bass flies take well in Salmon Lake during July and August: Professor, Canada, Parmacheene-belle, Montreal, queen-of-the-waters and ALEXANDRIA.

OTTAWA, Canada.

THE SUSQUEHANNA.

THIS glorious old river, extending from the Otsego Lake in New York to the Chesapeake Bay in Maryland, which winds its twisting figure over about four hundred miles of as fine sporting grounds as any river in the United States, possesses many advantages not found in the wilds of uncivilized sections of our "great and glorious" country. Here on this river one can float in a comfortable boat surrounded by fine fertile fields amid the refining influences of civilization, and in company with—if you so choose—your wife and family; and tempt the beautiful glass-eyed pike, and struggle with the untamed and plucky black bass; and here the struggle and fight will afford as great pleasure to the true sportsman as at any place, however remote it may be, and however far removed from home, where deprivations and cares of many kinds form a great factor of the whole. Here one can sit within a few hours of his own fireside and bring to net satisfactory numbers of from 1½ to 5lb. black bass, with an occasional 10lb. pike thrown in to keep up the interest. It was on this river that I landed with a medium light rod a 4½lb. small-mouth that gave me about twenty minutes of unalloyed pleasure, and brought our string up to about 40lbs. of as fine black bass as ever graced a platter.

Choose any point you may from Binghamton to Wilkesbarre, and take your wife, daughters and sons with you, if you are blessed thus, select any hotel convenient to the river—they are all good—while those at Binghamton, Owego, Waverly and many other points are excellent and will satisfy the needs of the whole family. Good boats and plenty of guides can be had nearly everywhere along its banks, and, unlike many other rivers, bait can be had in plenty. I remark this for the benefit of others who may have had similar experience with myself at times, when fish were plenty but no bait to be had for love or money, and the fish would not rise to a fly "not even to please a prince." On this river you will never be caught that way, as it affords abundance of bait which can be had for the trouble of getting it. "Dobsons" will be found in quantities on nearly all the rifts, while "shiners" can be caught at the mouth of nearly every inlet; and "lampreys" are abundant in most of the mud banks known to all guides, while grasshoppers and crickets can be had during the season, with plenty of "night walkers" on most of the fields, which makes up a good list of luring baits. These, with a few gaudy flies having a plenty of red in their make-up, will assure you luck at all times, and under nearly all circumstances, always excepting a heavy roil in the waters during the continuance of which you need not expect much luck, and it is better to patiently wait until the waters are again clear than to fish against hope and reason, which I believe to be quite demoralizing, as it gets one in the habit of holding the rod mechanically and induces carelessness, for who ever sat in a boat all day and kept up the deception of fishing when he knew that there was not a fish within five feet of his bait without feeling the demoralizing influence of it the next time he went out? So I say wait until the water is good and the wind encouraging, then go, and go early, and fish to a purpose; and if you get tired, rest during the middle of the day, and if you feel that you want another three or four-pounder, try for it later on toward night, and success will generally attend you.

While you do fish, attend strictly to it, earnestness of purpose is a prime rule in angling, and having everything in readiness is equally important. Never have your tackle in such shape that you cannot get to work at once, and be ready as soon as on the ground to put in your best work. I remember the past season of being put on the best ground on the river by Mr. S., our guide; my wife was in the stern of the boat with her light split-bamboo, which I had just put in readiness with a fine live lamprey on her hook, and, line in hand ready to cast in-shore the moment the boat swung into the eddy, before I could get a lamprey from our bait pail she had a strike and was toiling with a 2½lb. bass, which was giving her light rod a lively shaking up. I laid my bait back in the pail and stood by with landing net awaiting the arrival of the first fish of the morning; it came, slowly but surely to the music of my wife's reel, and it was landed equally sure, and placed in the hands of the guide while I put on another bait. The boat swung to the current, another cast was made, and another strike, and again the reel was telling of the spirited conflict going on between Mrs. B. and another black bass nearly as large as the first, then I felt like abandoning all hope of getting one of those slippery wriggling lampreys on my hook before all the fish were caught. Laying aside my rod I seized the landing-net and landed the beauty alongside of its brother in the bottom of the boat. The guide at the same time handing me another wriggling lamprey for Mrs. B.'s hook, which I soon secured to the bared hook and returned it to the waters.

Being again at liberty I attempted to secure a bait for my own hook that I might get in a little fine work while things were going that way; but before I could get the bait on, click-whiz! went that reel again, followed by a roar of laughter at my predicament, which was justly merited by not being in readiness. This time the fight, though sharp and decisive, was of shorter duration; I took the landing net and stood by, and at the proper time secured the largest and handsomest striped perch I ever saw. Its center stripe was equal to the brightest rainbow, with a dark stripe on either side, and all small fins were of the brightest scarlet, while the back fin and tail were nearly black, the belly being a bright gold and brown mix. Oh! such a beauty, and he turned the scales at 1lb. 7oz. "Another bait, if you please, Mr. B.," came from the victorious Mrs. B. in the stern of the boat, and another bait it was, but this time no strike until I had got a lamprey well attached to my hook, and by this the little eddy was well fished over, and I kept my bait well out, when I got my first strike, and landed my first bass of the morning.

As we crossed a small bar and made the deeper water beyond, Mrs. B. had struck and captured another bass just as I had released mine, and I was in readiness to assist the landing of her fish number three, and so we kept it up, first one then the other catching a fish, sometimes a bass, sometimes a pike, until a shower drove us under cover and put an end to our fishing until toward night, but I did not make up that day for not being in readiness as soon as on the ground.

It is seldom one goes on this river properly equipped during the season of fishing without getting a good catch, and every fish caught is of the finest flavor of its kind, and in the best possible condition, while of its sport among the wildfowl it holds a national reputation for the finest canvasbacks, redheads, broadbills, etc. I hope not to fail in calling attention to the many dangers besetting these sports, dangers which are calculated to destroy both the fine fishing and the shooting, and I hope the constable in whose hands we trust these interests will receive suitable support to bring to justice those market fishermen who practice setting night lines in "pike pools," and the stretched lines across the river baited with fifty or more hooks. Of such there are in Tioga county a few men who have immense luck in catching pike, but seldom capture a black bass, owing to the fact that their fishing is about over with at daylight, and if by chance are seen are generally busy working a trolling line on which they occasionally take a fish. It seems appropriate to look after these men, as their lines are about as destructive as seines. With a light grapple attached to a boat with a short line I have disturbed several such rigs, and I hope to enjoy displacing others if they continue in my course during future visits.

I am glad to read that the parties setting duck nets in the bay are to be looked after, and I hope the time will come when both ducks and fish can cruise the Susquehanna clear of nets and set lines. Should the time come when we can realize all this the Susquehanna will be the paradise of sport, as no river within many leagues of the metropolis can show the same class or quantity of natural feed as this river affords for both fowl and fish.

SID BROMLEY.

FISH DYING IN NEW HAMPSHIRE.—*Editor Forest and Stream:* What ails them? Joseph Young, who lives in a camp on the shores of Rocky Pond in New Hampshire, came into my office last evening and told me that he was at the outlet of the pond a few days ago and saw a large number of dead fish (mostly pickerel and perch) floating down stream. He also told me that the water in the pond is so bad that it is not fit for use, having a muddy appearance.—C. O. JUDKINS.

MESSRS. WM. S. KIMBALL & CO., of Rochester, N. Y., send us a Christmas box of their smoking product daintily done up in packages befitting the superior character of their famous tobacco.

RESTORING THE CLYDE FISHERIES.

NOVA SCOTIA, Dec. 8.—*Editor Forest and Stream:* As your numerous readers are much interested in every effort made to protect and increase the supply of anadromous fishes, and game fish particularly, will you kindly allow me space to lay before them as briefly as possible the results of an effort to restock one of our many depleted rivers in this Province?

The Clyde River, in Shelburne county, at the southern extremity of the Province—a small stream such as in your country would pass for a mere brook—abounded, from thirty to forty years ago, in salmon, trout and alewives, but as the country became settled a milldam was thrown across the stream at the head of tide-water, which had the effect in a very few years, of completely destroying the fish. Many attempts have since been made to pass fish over or by the dam, but all without success, until in the fall of 1880, one of the Rogers's patent fishways was put in the dam at a cost of but $280. Five years afterward 450lbs. of salmon were taken, and in the year following 2,600lbs., and this last year 3,070lbs. At an average of 12lbs. per fish this would give 37 fish for 1885, 216 for 1886, and 255 for 1887. The improvement in the alewive fishery has been still more marked, the catch having increased from almost nothing in 1880 to 125bbls. in 1887. The general increase already attained in this one small stream would pay the interest at 6 per cent. per annum on $20,000, while the entire outlay in bringing about this result has been but $280, and this is but one of the many streams which are rapidly coming up to their former productiveness in this Province by the aid of the fishway. There has been no aid given the Clyde by artificial culture, the success of the fishway being the only cause of the improvement. This being the case, how important that every dam thrown across the streams of your country as well as ours should be opened up by means of one of these structures as soon as possible. Public money cannot be expended in any other way that will show so unmistakably such substantial returns.

W. H. ROGERS.

SHAD HATCHING IN 1887.

TEN years ago six millions of shad was thought to be a remarkable production. The late James W. Milner, Supt. of the United States Fish Commission, made the following plants in 1877: New England rivers, 1,477,000; Susquehanna river, 1,910,800; Southern Atlantic rivers, 1,245,000; Mississippi river and tributaries, 1,158, 000; Rivers of the Gulf of Mexico, other than the Mississippi, 110,000; Sacremento river, 110,000; making a total of 6,010,800 shad fry. This was considered an immense output, but for the season of 1887 Col. M. McDonald, Chief of Division of Distribution of the Fish Commission, reports the total number of eggs taken to be over one hundred and forty-eight millions, and the fry actually planted, deducting loss of eggs and fry in transportation, as nearly one hundred and eight and a half millions. His report, as recorded in the Bulletin of the U. S. Fish Commission, says: "The number of shad produced for distribution the present season was unprecedented, and the season of active work being restricted to a comparatively short period, the capabilities both of the stations for production and of the means of distribution were taxed beyond their present capacity. To relieve the glut of eggs at Battery Station and Central Station shipments of eggs on trays were made both to the Cold Spring Harbor Station and to the hatching station of the Delaware State commission at Wilmington, an aggregate of 10,718,000 eggs during the season being forwarded to these stations. Further relief was obtained by recourse to the hatching arrangements aboard of car No. 8. The hatching *en route* proved uniformly successful and enabled us to triple the capacity of the car for the work of distribution, and at the same time to relieve somewhat the overcrowding of eggs at the stations.

SUMMARY BY RIVER BASINS OF SHAD FRY DISTRIBUTED DURING 1887.

Penobscot River	923,000
Kennebec River	1,047,000
Tributaries of Narragansett Bay	1,275,000
Hudson River and tributaries	2,185,000
Tributaries of Delaware Bay	5,099,000
Tributaries of Chesapeake Bay	70,199,000
Tributaries of Albemarle Sound	5,322,000
Tributaries of North Atlantic coast	3,596,000
Tributaries of Gulf of Mexico	7,048,000
Inland waters	1,014,000
Total planted by the U. S. Fish Com.	97,707,000
Shipped to Cold Spring Harbor to be hatched and turned into Hudson and tributaries	6,644,000
Shipped to Wilmington, Del., to be hatched and turned into tributaries of Delaware Bay	4,074,000
Total	108,425,000

The total production of eggs for the season was 148,008,000, of which there were lost during incubation and at hatchery 37,638,000 and during transportation 1,945,000, leaving the total number of fish and eggs for distribution for the season 108,425,000.

The most important experiment looking to the acclimatization of shad in new rivers was made in connection with the hydrographic basin of Great Salt Lake. This inland sea would seem to present all the conditions necessary for the reproduction of the shad under natural conditions. The value that would arise to the inhabitants of that section of the country from the introduction of some anadromous species like the shad in their waters was so evident, that it was determined by Prof. Baird, the Commissioner, to test by an exhaustive experiment the capabilities of these waters to supply the necessary conditions. Accordingly car No. 2, with 1,000,000 fry, was sent to Utah and the fish successfully planted. The deposit was made in the Jordan River, it being deemed better to concentrate all the fish in a single plant than to distribute them in smaller numbers to tributary streams of Utah Lake. It is in contemplation to repeat this work for two successive seasons.

From the rapid increase in the volume of the work of shad distribution it is evident that it will be necessary to increase the efficiency of our distributing service in order to meet the demands that will probably be made upon it next season. This may be accomplished in two ways: First, by the establishment of auxiliary field stations in those river basins which are to be stocked with shad. These stations should be properly equipped to give them a capacity of six or eight million eggs at one time. To these at the proper season a car can be dispatched carrying a full complement of eggs in shipment, in this way quadrupling the present capacity of the cars in the work of distribution and reducing the cost of distribution per million *pro tanto*. Second, to increase the capacity of the producing stations so as to enable us to take care of all eggs at these stations until hatched. This would necessitate an increase in the number of cars for distribution: one or two at least in addition would be needed to provide for the anticipated increase in the volume of this work."

Jan. 16.—Fifth Annual Field Trials of the Pacific Coast Field Trial Club, near Kingsburgh, Cal. N. P. Sheldon, Secretary, 320 Sansome street, San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5708.**

THE AMERICAN KENNEL REGISTER.

NEARLY five years ago the publication of the *American Kennel Register* was begun. The monthly was started to fill a vacancy, to supply a want, and its readers assure us that it has accomplished much good and has satisfactorily filled its field. It has been edited carefully and fearlessly, has bowed before no clique, has had at heart always the true interests of the *clientele* for whom it is published. It has spoken its mind freely and has commented favorably or unfavorably on the actions of people great and small.

Lately, however, it has not had much to say, it has seemed to be muzzled. Why?

The *American Kennel Register* was started for the registration of dog pedigrees, at a time when no such registration book existed in this country. It is a permanent record of pedigrees, and of doings in the dog world in this and other countries, but as the interest in dogs has increased, as more pedigrees had to be registered, and more prize lists of bench shows and field trials have had to go on record, the space for literary matter and for comment on passing events has necessarily been cut down.

It is true that the *American Kennel Register* is, first and always, a stud book, intelligently and carefully edited, and of the greatest possible value to breeders and to all persons interested in dogs; but it is believed that it should keep up the quota of good reading matter of a high class, dealing with subjects of special interest to dog men. Moreover, the number of entries seems to be constantly on the increase, and this indicates that even to make room for the pedigree registry, an increase in size would have to be made before long.

The publishers of the *Register* announce therefore that with the commencement of the new volume for 1888, the *American Kennel Register* will be permanently enlarged to twenty-four pages. Arrangements are being made to secure as contributors to its pages the most eminent specialists in all departments of dog lore on both sides of the Atlantic, and no effort will be spared to make the *Kennel Register* what it has always been, the only complete and accurate stud book published in America, and also to provide a fund of interesting and exhaustive information about all breeds of dogs. The publishers believe that with their facilities this can be done. They further believe that the dog men of America will appreciate and support such efforts. The *American Kennel Register* was not started as a money-making scheme, but because it was believed that such a publication was needed. It never has made any great amount of money, yet there has never been a year even from the start when its account did not show a balance on the right side of the ledger. Whatever money the publication has made has been devoted to making the *Register* better and more worthy of its constituency. This course, which has proved to be the wisest in the past, will be pursued in the future.

Dog men and dog matters in this country have fallen too much into the hands of cliques and rings, and there has been too much working for private ends, too much good fellowship, too much give and take, and not enough honesty, not enough regard for the public interest. The dog world needs two such fearless and independent journals as the FOREST AND STREAM and the *American Kennel Register* to protect its interests and to fight the jobbery that is now so rampant.

RULE NUMBER 2.

Editor Forest and Stream:

Please place the Wacouta Kennels squarely on the record as protesting against the recent action of the A. K. C. in seeking to filch from the pockets of exhibitors the 50 cents that they are to be compelled to pay or else keep their dogs at home, unless they have thought fit voluntarily to enter their dogs in the so-called "official" stud book. If entries are to be cut down, as they will be by the enforcement of this robbery rule, the future of dog shows in this country will be a pretty poor one for some time to come. The local exhibitor, the one Mr. Cugle says he wishes to lay tribute upon most particularly, is the one who helps out the show so far as the number of entries is concerned, and is the one least caring about a stud book; and the extra 50 cents is just sufficient to make him give up the idea of entering. It is, of course, a desirable thing that all good dogs should be entered in a stud book; but to force any one to patronize any one of the two that are published is going a little too far. It is an exercise of arbitrary authority that is repugnant to every free man. The only other reason that could have suggested the passage of such a rule, besides the desire to save the so-called official from the death by dry rot, would be the one that such a rule was in force in the English Kennel Club. Now the two institutions have very little in common. The English one is actually a club, with all that that implies. It was organized in the early days of dog shows in England, and had a limited authority at first. There was no stud book in existence, and it engaged in the praiseworthy work of issuing one, but unlike the A. K. C., it had the means to pay for any losses that might accrue from its enterprise. The compulsory feature of the English club came without the objectionable features of the recent ruling of the A. K. C. The English club's position as the high court of dogdom came about by degrees. Existing as an influential body, when societies for the holding of dog shows were organized, so when agricultural and other societies came to the conclusion that it would be well to hold a bench show in connection with their usual exhibition they appealed to this influential body for help and advice. As its sphere widened this body produced a code of laws, and promised its aid in the enforcement of them to clubs that would come under its authority. One of the *quid pro quos* for this help was that these societies should support the stud book of the club, by requiring exhibitors to register their dogs. When this was seen to be in a certain sense unjust the rule was waived in "local classes." In a small compact country like England the kennel club and the exhibitor had closer relations than is possible in this country, where distances and all the conditions of life are different. There the kennel club committees had frequent meetings, and an exhibitor could get his wrongs adjusted without having to wait months, as in this country. The exhibitor therefore had a feeling that by registering his dog in the Kennel Club's stud book he was advancing his own interests.

The American Kennel Club is not a club in the proper sense. It is not a body corporate, is not a responsible body, and is not, therefore, a proper institution to conduct the publication of a stud book. It is a mere association of clubs with a revenue depending upon the number of its constituent parts, and with no means of legally collecting its dues if its parts refuse to contribute. If its revenue is insufficient to meet its expenses that is no justification of its attempt to force a levy upon every one who wishes to show a dog, so as to make its stud book pay a profit which is required to help out the general expense of the A. K. C.

There is a question in my mind if the association known as the American Kennel Club can legitimately engage in the publication of a stud book without an amendment to the constitution, for there is no provision that I can see that gives it the power to contract the necessary debts incidental to the prosecution of such a work, and in the event of its utter pecuniary failure there can be no redress for the creditors, such as printers, paper dealers, etc.; they will merely have to whistle for their money, unless the laws of the State of New York permit them to bring suit against the Westminster Kennel Club as being the only part of the body that incurred the debt resident in New York State.

This rule must evidently have been voted upon in a hurry, without due consideration of its gravity, and it is to be hoped that steps will be immediately taken to revoke it before its effect upon the coming bench shows proves the folly of the rule so conclusively that the A. K. C. will be buried in the ruins of its officiality. WACOUTA.

ST. PAUL, Minn.

Editor Forest and Stream:

Every New Haven exhibitor with whom I have talked on the subject of the compulsory registration rule, agrees with me in most emphatically objecting to it. The only reason that the New Haven Kennel Club did not claim dates for a show this year was on account of the refusal of Col. Leavenworth to grant the club the use of the armory. All interested can rest assured that had the show been held it would not have been given under A. K. C. rules as long as the objectionable clause existed. E. SHEFFIELD PORTER.

NEW HAVEN, Conn., Dec. 30.

Editor Forest and Stream:

I observe that a number of "disinterested breeders," whose letters you publish, disapprove of the compulsory registration rule of the American Kennel Club. I desire to be recorded, being a "disinterested breeder," representing a kennel of some 60 fox-terriers, as fully indorsing the rule in question. The withdrawal of the New England Kennel Club from the American Kennel Club, which you so triumphantly quote in your paper, will in my humble opinion result very much like Birmingham's unsuccessful fight against the Kennel Club in England, and I venture to predict that for every entry gained of a moderate dog from local and dissatisfied owners, the New England Kennel Club will lose two from the owners of important kennels who believe in the rule and wish to support the Kennel Club. May I ask you, Mr. Editor, whether you are in favor of a kennel club at all? Do you approve of the principle of a central governing club, or am I and other breeders to understand that you simply consider the present Kennel Club badly managed, but a good institution? AUGUST BELMONT, JR.

NEW YORK, Dec. 27.

[Had the writer of the above letter diligently read the FOREST AND STREAM he would not have asked such foolish questions. If he or any one else is in doubt as to our attitude toward the club, it may be worth while to state the position always held by the FOREST AND STREAM. We do believe, then, and believe heartily, in the "principle of a central governing club," on the one condition that the club possess that wisdom which Coleridge defines as "common sense in an uncommon degree." Indeed, we will go further and say that we believe in such a club if it possess common sense only in a common degree.]

Editor Forest and Stream:

The Fort Schuyler Kennel Club at a regular meeting, Dec. 21, decided by a majority vote that it would be impossible to adhere to the new rule of the American Kennel Club, which says that all dogs must be registered in the A. K. C. stud book. This would deprive us of all local entries. Many valuable dogs are owned in this city and vicinity, of non-sporting varieties, and the loss of patronage of their owners and friends would be seriously felt by us. We do not question the wisdom displayed in making the new rule, but believe the time has not arrived for its enforcement. E. J. SPENCER, Sec.

UTICA, N. Y., Dec. 27.

Editor Forest and Stream:

I am pleased to see the action of the New England Kennel Club in regard to the article forcing exhibitors to register their dogs in the A.K.C.S.B. I hope other clubs will follow their example in withdrawing from the A. K. C. if it persists in being blind to the interests of breeders and exhibitors. DAVID S. COLLINS.

PROVIDENCE, R. I.

Editor Forest and Stream:

Rule No. 2 is, I think, a catch-penny for some one and I do not intend to be compelled to register my dogs. A. W. LUCY.

NEW YORK, Dec. 22.

Editor Forest and Stream:

You cannot say that the Hartford Kennel Club will not show under A. K. C. rules. I am under the impression that the Hartford Kennel Club will remain a member of the A. K. C. for some months yet. A. C. COLLINS.

HARTFORD, Conn., Dec. 25.

Editor Forest and Stream:

Rule 2 of the A. K. C. is going to do a great injury to the shows which will be held under its rules. Dog shows, taken collectively, do not pay. The ones that have paid are those which have had a good deal of popular support; what I mean by popular as distinguished from scientific (if I may use the term). The shows that have a great many exhibitors who never bred a dog, but by chance own one that they think a lot of, who enter their dogs and take all their friends to see their dogs on the bench are the ones that have paid. What do these exhibitors care whether their dogs have pedigrees or not? The large breeders as a rule live at considerable distance from the exhibition and may not have a friend in the place, and their dogs are there only in care of the kennel man. Also it is a well-known fact that breeders of really good dogs do as a rule have them registered in one or other of the stud books after they have exhibited them and found that they were worthy of being registered. What possible good is it to any one to register a worthless weed of a pup which can never win a prize?

Again, is it worth paying to enter several pups which may take a prize and die, as they usually do after a show, of distemper? I myself have three young spaniels that I intended to enter for the New York show next month, but I do not feel disposed to pay the A. K. C. fifty cents in order to have the privilege of entering them; they all can't take prizes, but I want to find out which is the best, which I no doubt would do if, as I hear, "Uncle Dick" is to judge spaniels there. Therefore I must show them at some show not held under the A. K. C. rules. What show in England was considered the hardest to win a prize at in years gone by? Birmingham. Why? Because that show was always held independent of all associations. More good dogs have been brought out at Birmingham than at any shows ever held in England, and to be a Birmingham cup winner placed a dog at the head of the list. If I am not correct in this statement I know friend "Porcupine" will correct it.

Let the A. K. C. modify their rule and maintain their place at the head of the dog world of America. It owes its power solely to public opinion, and if that is against it the sooner it closes its brief but turbulent career the better. It has done good work, and may do much more, but it must be careful not to step too hard on public opinion's corns, which it has done this time without the slightest remorse. J. S. NIVEN.

LONDON, Ontario.

Editor Forest and Stream:

I think the A. K. C. men have made a mistake; and I trust they will repeal the order, for you know Yankees don't like to be driven. I am much interested in their stud book, but it won't do to be too arbitrary—not at this season of the year. A. M. TUCKER.

CHARLESTOWN, N. H., Jan. 2.

Editor Forest and Stream:

I think the registration of dogs a very good thing; but again, I think it will deter a great many from entering at the bench shows. I have discussed the subject over with a great many, and the general opinion is against it. WM. PERRIE SANDERSON.

PHILADELPHIA, Pa.

Editor Forest and Stream:

It pleased me very much to see the manly stand the Boston and New Haven people took in regard to compulsory registration. Breeders will not have it. CLIFTON KENNEL.

JERSEY CITY, N. J., Dec. 30.

Editor Forest and Stream:

The Boston Kennel Club can rest assured that they have taken the proper view of compulsory registration. While I am in favor of having dogs registered, the compulsory clause should make a failure of any show showing under those rules. This is the view of four Canadian kennels. Boston can count on my entries for their coming show. It remains to be seen how other clubs will act on this matter. T. G. DAVEY.

LONDON, Ontario.

Editor Forest and Stream:

The compulsory registration rule adopted by the A. K. C. I consider a heavy tax levied on every kennel club a member of that body. Its effects will be a largely diminished entry at shows held under A. K. C. rules and therefore a diminished interest of the public in the matters which kennel clubs are striving to promote. Increase the interest and stud book entries will increase. W. O. PARTRIDGE.

BOSTON, Mass.

Editor Forest and Stream:

You may count me among those breeders who do not propose to be bulldozed into paying tribute to the A. K. C. charity fund. I fail to see how self-respecting owners can allow themselves to be coerced into paying this tax. WYOMING KENNEL.

MELROSE, Mass.

Editor Forest and Stream:

I send you copy of a letter sent to Mr. Fay of the New England Kennel Club Dec. 13. It was as follows: "The recent action of the American Kennel Club requiring every dog entered after Jan. 1, 1888, to be registered in the American Kennel Club Stud Book, has almost caused me to conclude not to enter a dog where the rule is to be enforced. If the Kennel Club is short of funds, or the publishers of the book need assistance, I do not mind giving them 50 cents for each dog I exhibit during the year as an act of charity, but to be compelled to enter my winning dogs on the same level with worthless curs which have neither pedigree nor record, I do not want to submit to.

"A register compiled in the interest of breeders for dogs that have competed and won two or more first and second prizes at recognized shows, and where names could be claimed and societies would not recognize duplication of names, would be supported without an arbitrary rule being made. In such a book all would be anxious to have their dogs entered.

"N. B.—Since writing the above, I see that your club has unanimously withdrawn from the A. K. C. on account of the new rule. Good. You can depend on my giving you all the support in my power, and it is more than likely that I will not encourage any show which enforces such an obnoxious clause as is added to Rule 2. I shall send you at least five entries for your coming show." M. H. CRYER.

PHILADELPHIA, Pa.

Editor Forest and Stream:

The old year dies and I trust with it the absurd measures of the A. K. C. anent Rule No. 2.

I will tell you what I will do. I have a lot of nice little puppies all getting ready to make their debut at certain spring bench shows. Now, if there is to be compulsory registration at any of those shows, I'll give all the aforesaid puppies to you. You can pay their registration if you like and show them there. If, however, that awe-inspiring Rule No. 2 becomes a dead letter you shall help me to spend the prize money I trust I shall win.

It is my firm opinion that Rule No. 2 is intended as a nasty smack for Mr. Jas. Watson. (By the way, is that esteemed gentleman Irish? Somebody whispered "Coercion," that's all)

I know of *toreadors* who have come to an untimely end, and I don't believe it is a wise thing always to take the bull by the horns.

Let us hope, you and I, Mr. Editor, that our pompous, purple-clad, tyrant Rule No. 2 may yet get lifted out of the arena stuck right through the ribs.

I'm sorry these are my last few months with you. I'm going back to the land of the one stud book and the club of compulsory registration in June, 1888. (Who said out of the frying-pan into the fire?) I wish you joy if the new code comes. RONALD H. BARLOW.

PHILADELPHIA, Pa., Dec. 31.

Editor Forest and Stream:

I thought my eyes played me false when they first conveyed to my mind the substance of the compulsory registration rule, and I read it over two or three times before being satisfied that they read aright. How sane men could make such a cut-throat rule I failed to see.

It would be a very nice little rule and help along the "official" venture swimmingly if American show managers and exhibitors were fools enough to permit themselves to be bulldozed in such a manner. But they "aint built that way," at least I fancy not. A man might do a thing of his own free will, but if he were told he must do it he would be inclined to consign the dictator to a warmer place than New York and then not do it. No man likes being dictated to, nor, if he can help himself, will he submit to it. In this case he can help it.

The promptitude of Boston and New Haven in leaving the A. K. C. must have startled the projectors of Rule Two. Boston held the best show ever held in America last spring, and I venture to prophesy will even surpass it in the coming

one. They are a live club and up to the times, (What a pity the A. K. C. is not.) New Haven also gives fine shows and knows what it is about. How many more will stay in? Pittsburg, Philadelphia and Hartford are pretty certain to. Judge Peshall is a leading light with Newark and may carry it through, unless the good sense of Mr. Wilmerding and others of the club overrule him. The decisions of the New York, Providence and Western clubs are still in abeyance; but most of the last named are pretty sure to go the right way. Things look blue for the A. K. C. already. Their plan is "ganging aglee." F. H. MERCER.

OTTAWA, Canada.

Editor Forest and Stream:

Compulsory registration—how absurd for the American Kennel Club to issue such a mandate, and then to say you must register in our book. This is going too far for their own or for the common good. I know it is a desirable thing to have a place to register our stock if we wish to, and it would be more convenient to have but one place to look for the facts, but it seems that others have rights if we don't feel bound to respect them. An old adage is that might makes right, but if we haven't the might then I suppose we haven't the right. Now I think there are things of more importance in this direction. If the A. K. C. would say that no pointer or setter should compete for a prize on the bench without it having a field record, a private one being admissible when vouched for by reliable and disinterested witnesses, then I should think it had done something that might prove of great value to the breeder and purchaser of the young stock. I do not think it was the best thing for the New England and other clubs to have withdrawn from the A. K. C., but like Supt. Fellows they might refuse to comply and then use their influence to purify the club within itself. I cannot imagine any reason for the A. K. C.'s action except that given in your editorial of last week.

E. K. SPERRY.

HARTFORD, Conn.

Editor Forest and Stream:

There is large body of dog owners who will not be bullied by rule two or any other coercive measure the A. K. C. may see fit to adopt. Philadelphia and New York, to secure entries for their approaching shows, will, I suppose, have to adopt the same plan as the Fox-Terrier Club, pay the registration fees themselves, or else pursue the wiser course of the Boston and New Haven clubs, which have withdrawn from the A. K. C. on account of this odious rule two. Lovers of liberty should this year send to Boston and New Haven all the entries they can in appreciation of the independent spirit shown by these clubs.

VICTOR M. HALDEMAN.

Editor Forest and Stream:

I am entirely opposed to compulsory registration which Rule 2, A. K. C., exacts of all who exhibit dogs at shows held under A. K. C. rules, for my own part, and I may add I echo the sentiments of a great number of Canadian as well as American exhibitors.

As an independent exhibitor I am disgusted at the idea of being compelled to register dogs already in the *A. K. R.*, which is, and has for the past five years, been recognized by the majority of breeders and exhibitors as an authentic, reliable and satisfactory authority.

I decline to ever exhibit at any show that is governed by A. K. C. Rule 2. I think the enforcement of that rule will prevent many others from exhibiting under such conditions, and to my mind will impair the usefulness of the club by this attempt at coercion.

It is a difficult matter at any time to make a show so attractive as to assure success, and I am quite sure the enforcement of any unnecessary restrictions will operate most prejudicially against the interests of any show.

JOHN F. CAMPBELL.

MONTREAL, Dec. 30.

Editor Forest and Stream;

I have a serious complaint against you. Your report of the A. K. C. meeting that enacted the bulldoze rule, states that Mr. Winslow seconded the motion for it, giving everybody to understand that he *supported* it; and the only obstacle to the general repudiation of the rule would be the support of the Philadelphia and Westminster clubs. Now, "Porcupine" says that Mr. Winslow seconded the motion only formally, just to bring it before the meeting, and voted against it! Your failure to note this, the very gist of the business, as far as Mr. Winslow and the Philadelphia Club are concerned, is nearly criminal. W. WADE.

HULTON, PA., Jan. 2.

Editor Forest and Stream:

The gentlemen who have registered their 6,000 dogs in the *A. K. R.* have done so entirely from choice, and I am sure will be unwilling to be compelled by the A. K. C. to register in their book in order to be able to exhibit at shows held under their rules. If the A. K. C. is in any financial difficulty let them pass the hat around and we will all "chip in," but to be compelled to do what we don't wish to will only result in opposition, which may do more than any of the previous rulings to hasten the fast approaching end.

H. W. HUNTINGTON, Master McGrath Kennels.

Editor Forest and Stream:

My views on the forced registration are similar to your own and those expressed by Messrs. Wade, Nickerson and Shaw. It is arbitrary and not in accordance with American ideas, and if enforced means the retirement of many exhibitors and a great loss in local entries. I am glad to see that the New England and New Haven clubs see the injustice of the rule and take action accordingly. If any clubs in the country can give successful shows under Rule 2 New Haven and New England are the ones, and how other clubs that have had such hard work in the past to get a sufficient number of entries to give a successful show are to succeed is a mystery to me. I hope in the interest of all parties concerned that the A. K. C. will have the common sense to rescind Rule 2. J. P. WILLEY.

Mr. Chas. D. Cugle is on record as writing that the FOREST AND STREAM "cut" a communication from Mr. A. C. Collins, "to suit their cause." If the punishment of lying were as swift, sure and severe now as in the days of Ananias and Sapphira, Mr. Cugle would find it extremely difficult to take out a life insurance policy in anything except a "graveyard" company.

COLLIE PUPPY SPECIAL.—*Editor Forest and Stream:* The Chestnut Hill Kennels offer a $50 cash prize to the breeder of the best dog and bitch puppies (one or more of each sex and from two or more bitches) sired by our advertised stud dogs and whelped in 1888. To be awarded at a show held under auspices of the A. K. C. in 1889, Philadelphia or New York preferred. Donors not to compete. Due notice will be given of the time and place.—MITCHELL HARRISON, Proprietor.

SECOND CHAMPION PRIZES.—*Editor Forest and Stream:* My letter on the above subject, which appeared in FOREST AND STREAM two or three weeks ago, has not yet elicited any response from either exhibitors or show managers. Second prizes are given in challenge classes in England, and the plan seems to work well. Why should America be behind? I should like to hear the views of others interested in the matter.—CEE.

AMERICAN FIELD TRIALS.

[From a Special Correspondent.]

ALL-AGED STAKE.

ON Thursday, Dec. 15, just after the close of the Derby, the running in the All-Aged Stake began. It was judged by Messrs. T. M. Brumby, H. M. Markley and John H. Gilbert. Of the fifty-one nominations thirty-one started. Of this number twenty-three were setters and eight pointers. They were drawn to run as follows:

CASSIO (Memphis & Avent Kennels), black, white and tan dog, April 28, 1885 (Count Noble—Lizzie Hopkins),

against

DAISEY F. (Dudley & Fisher, Nashville, Tenn.), lemon and white bitch, September, 1883 (Gleam—Dean).

DAD WILSON (J. Shelley Hudson, Covington, Ky.), black, white and tan dog, Aug. 9, 1884 (Cambridge—Dido II),

against

EFFIE HILL (A. L. Malone, Palo Alto, Miss.), black, white and tan bitch, Dec. 26, 1885 (Prince B.—Donna).

LAD OF BOW (Graphic Kennels), liver and white pointer dog, March 19, 1884 (Graphic—J. Price's Climax),

against

TASSO (Jerry Cockrell, Memphis, Tenn.), black, white and tan, October, 1883 (Startle—Nellie C.).

NELLIE CAMBRIDGE (Richard Dorman, Cincinnati, Ohio), black, white and tan bitch, June 18, 1885 (Ricket—Daisy Cambridge),

against

BESSIE B. (Leredo Kennels, Racine, Wis), blue belton bitch, July 25, 1885 (King Noble—Elsie Belton).

JOY OF PRINCE WILLIAM (J. A. Purcell, Hickory Grove, Va.), liver and white pointer bitch, Aug. 23, 1885 (Purcell's Flockfinder—Ion),

against

NOBLE C. (Walter H. Drain, Clarksville, Tenn.), black, white and tan dog, April 22, 1884 (Count Rapier—Belle of Hatchie).

SPOT (J. B. C. Lucas, St. Louis, Mo.), liver and white pointer dog, 1883 (Drake—Fan),

against

KING'S MARK (J. I. Case, Jr.), blue belton and white dog, April 12, 1886 (King Noble—Belle Belton).

LASS OF BOW (Graphic Kennels, Netherlands, N. J.), liver and white pointer bitch, March 19, 1884 (Graphic—J. Price's Climax),

against

RENA (Chas. F. Loudon, Cincinnati, O.), black and white bitch, Feb. 2, 1885 (Ben Hill—Joe W.).

ROD'S GEM (L. A. Boli, Hamilton, O.), black, white and tan dog, Oct. 18, 1885 (Roderigo—Gem),

against

BUN ROY (L. B. Saggs, Memphis, Tenn.), liver and white dog, March 30, 1885 (San Roy—Queen Bess).

CYCLONE (H. A. Renfroe, Cole City, Ga.), black, white and tan dog, Jan. 1, 1884 (Lightning—Dora Roval),

against

KEYSTONE (S. L. Boggs, Pittsburgh, Pa.), black, white and tan dog, June 27, 1885 (Gladstone—Sue).

JEAN VALJEAN (Memphis & Avent Kennels), black, white and tan dog, March 7, 1885 (Mingo—Twin Maud),

against

DAN (W. B. Shattuc, Cincinnati, O.), liver and white dog, Aug. 9, 1884 (Cambridge—Dido II.).

NAT GOODWIN (Memphis & Avent Kennel), black, white and tan dog, June 1, 1885 (Roderigo—Bo-Peep),

against

BEAU OF PORTLAND (H. E. Farnham, Portland, Me.), black, white and tan pointer dog, Nov. 18, 1885 (Graphic—Zitta).

CHANCE (Memphis & Avent Kennel), black, white and tan dog, June 1, 1883 (Roderigo—Bo-Peep),

against

KING NOBLE (J. I. Case, Jr., Racine, Wis.), blue belton and white dog, Aug. 28, 1883 (Count Noble—Rosalind).

KING'S DAN (J. I. Case, Jr.), blue belton dog, July 26, 1885 (King Noble—Elsie Belton),

against

PAP SMIZER (Chas. Wheaton and Gustave Sander, Dayton, O.), liver and white pointer dog, July 24, 1884 (Meteor—Diana).

BOHEMIAN GIRL (Leredo Kennel), black and white bitch (Count Noble—Mollie Belton),

against

GAY GLADSTONE (B. P. Holliday, Prairie Station, Miss.), orange and white bitch, Dec. 26, 1884 (Gladstone—Florence).

GRAPHIC III. (Graphic Kennels), liver and white dog, Feb. 18, 1886 (Graphic—Leach's Bloomo),

against

JOE PAPE (John Dress, Little Rock, Ark.), black pointer dog.

PRINCE MACK (D. E. Rose, Lawrenceburg, Tenn.), black and white dog (Jeff—May), a bye.

The morning was chilly and cold, but the sun came out bright and warm, and by 12 o'clock it was warm and pleasant. The first brace in this stake was

DAISY F. AND CASSIO.

At 12:30 Dudley & Fisher's lemon and white setter bitch Daisy F., handled by D. E. Rose, and Memphis & Avent Kennels' black, white and tan setter dog Cassio, handled by Avent, were cast off in the open field near where the Derby was finished. Daisy had the advantage in speed and range, although Cassio had good speed and range and a very stylish dashing way of going. They made a capital brace, and as they both enjoyed a reputation of being good ones, the large crowd took the deepest interest from start to finish. After drawing sedge and thicket blank, Daisy stopped to a point on a bevy in an oak swamp, where there was only leaves for cover. As Rose went up the birds flushed; he fired and broke a bird's wing. Dogs were steady to wing and shot. To order Daisy made a nice retrieve. Sent on, Daisy passed several birds, caught the scent and pointed. Sent on, Cassio stopped at edge of thicket and Daisy backed. Avent said he was pointing, went in to flush, but found no birds. After some hunting for scattered birds, in which each dog pointed rabbits, they were ordered up for lunch at 12:08. After lunch they were again put down in a large open country, both showing remarkable range, speed and hunting sense. After drawing a good deal of country blank Cassio, working far out to the right, was found pointing a bevy in a cornfield. Avent flushed and killed and Cassio retrieved. About the time Cassio pointed Daisy also pointed a bevy in an oak and sedge thicket, in the direction in which the judges had ordered the dogs worked. Rose held her on point until the judges came up, when he put up a fine bevy to the point. Worked over hill on scattered birds, Cassio scored one point and Daisy two. They were ordered up and Daisy given the heat. Down in all 1h. and 30m. A good heat.

DAD WILSON AND EFFIE HILL.

At 2:11 Dad Wilson, handled by Nelson, and Effie Hill, handled by Titus, were cast off where last brace were taken up. While both dogs seemed to be well broken this was not a very interesting brace, neither had much range or speed, yet both showed good style on point. After working them about 40m., each dog getting in a little work on birds they were ordered up and decision reserved until the following morning, when it was given to Dad Wilson.

LAD OF BOW AND TASSO.

At 2:03 Lad of Bow, handled by Bevan, and Tasso, by Stevenson, were cast off. They were worked a long tiresome heat, neither doing any work worthy of mention or showing any range or speed. At 4:32 they were ordered up to be put down again the following morning. Friday morning opened cloudy and rainy with a cool north wind. Toward noon the clouds disappeared and the sun made it quite pleasant. Lad of Bow and Tasso were put down at 9:15 to finish their heat. In sedge Lad made game, roaded down into a thicket 75yds., where Tasso slipped in ahead and pointed the bevy. This was a very interesting piece of work on the part of Lad, for he certainly roaded them in grand style. Sent on Stevenson wounded a bird to Tasso's point, but the dog failed to find it. Sent on Lad found and retrieved the wounded bird. The bird was then thrown and gun shot to test Tasso's retrieving. Tasso broke shot and retrieved. Ordered up and heat given to Lad. Neither dog displayed any range or speed. In style on point both were good.

NELLIE CAMBRIDGE AND BESSIE B.

Nellie Cambridge, handled by Nelson, and Bessie B. were cast off at 9:58. Both are below the medium size, with plenty of dash and vim, and they made a beautiful pair. Both were quick and decisive in their work, both had good style, backed well, and were steady to wing and shot. After drawing a good deal of country blank, Nellie pointed a bevy. Bessie swinging around caught scent and also pointed the same bevy. Nelson shot, killed, and Nellie made one of those grand, jolly retrieves that it does a sportsman good to see. They were sent on, and after some good work in sedge, in which Nellie had the best of it, they were ordered up and Nellie given the heat. Down 1h. 10m.

NOBLE C. AND JOY OF PRINCE WILLIAM.

Noble C., handled by Bevan, and Joy of Prince William, handled by owner, were cast off at 11:10. There was never more interest shown on a race course by spectators than was shown here; everybody was anxious to see it. The marshals were besieged to lay aside the distance flags for this heat and let them up to see the fun. With the crowd the great interest did not center with the dogs, but in the handlers. It was the long and excitable Englishman from Mississippi against the inimitable Major from Virginia, the man whom no sportsman dared intimate that he could walk down unless he had the staying powers of a camel. The dogs went off at a rattling gait, with handlers well up. In range and speed Noble C. had decidedly the advantage, he being a grand ranger, but he seemed to hunt with very little judgment or purpose. The first work done Noble flushed a bevy in an open corn patch. Sent on Joy pointed in briers. The Major put up bird but failed to shoot. Then a long extent of open country was drawn blank. At 1:25 the dogs were ordered up for lunch, to be put down again. During the race of handlers our jolly president gave the boys a little fun, trying to keep up with the procession. He was urging his horse over a gully, the horse slipping and staggering under his load in his efforts to regain his feet. The General performed some acrobatic feats in the air, finally came down shaking the earth. It took six men to catch the horse and put the General back on him; he rode away as if pleased with the idea of affording the crowd some fun. Noble C. and Joy were given two more opportunities in the afternoon to display their bird sense, but as neither did anything worthy of mention the heat was given to Noble C. The Major protested.

SPOT AND KING'S MARK.

Spot, handled by Nesbitt, and King's Mark, were cast off at 2:55. Just in this part of the country birds seemed to be very scarce and, although both dogs had good range, speed and were merry good workers, they had poor success in finding birds. Both backed well and were steady to wing and shot. Neither dog had an opportunity to retrieve, although handlers were very liberal with their shells whenever an opportunity was afforded to shoot. At the end of 1h. 5m. each dog had three points to his credit and Mark a flush. They were ordered up and Spot given the heat.

LASS OF BOW AND RENA.

Lass of Bow, handled by Bevan, and Rena, handled by Stevenson. This brace was put down at 3:20 in an open country. Lass showed good style, range and speed, and gave every indication of being a gamy, good-going pointer. Rena seemed to be off, not working at all. After being down 30m. they were ordered up with the intention of putting them down again, but Mr. Stevenson withdrew Rena, leaving Lass the winner.

ROD'S GEM AND BUN ROY.

At 3:55 Rod's Gem, handled by Titus, and Bun Roy, handled by Nesbitt, were cast off in open country. Rod's Gem is a very handsome young dog of medium size, rather too slender now, but when he fills out he will make just the right size dog; he has a nice easy movement, and behaves well on game, yet is not a good retriever. Bun Roy is a compact, heavy made little dog, with lots of dash and vim. When they were put down both went off at a rattling gait. Bun Roy bolted aud in a few minutes was out of sight. Titus was ordered to hold his dog until Nesbitt could lasso the wild dog. He returned with him in about 15m., Roy showing that he had been at business, as the briers had brought the blood from him in a good many places. In the mean time another brace had been put down, so the further running of Rod and Roy was put off until morning. Saturday morning they were again put down to finish the heat. Roy made another grand break, but finally came back and behaved well during the heat, which at the end of 1h. was given to Rod's Gem.

CYCLONE AND KEYSTONE.

Keystone, handled by Tucker, and Cyclone, handled by owner, were cast off at 4:25. Both dogs went off at a good gait, showing good range, speed and style. After a short time both dogs challenged, but Keystone gave it up and went off on a cast. Cyclone drawing about on scent, flushed a bird. Keystone coming in located and pointed the bevy—Tucker killed. Sent to retrieve, Key flushed a bird and started to chase but stopped to order, evidently thinking it was a wounded bird. He then made a nice retrieve. Keystone pointed again and dogs were ordered up; Keystone won. Keystone had decidedly the advantage on game. This was a very short yet a very interesting heat. Down 21m.

JEAN VAL JEAN AND DAN.

Jean Val Jean, handled by Avent, and Dan, handled by Nelson, were cast off quite late in the afternoon. Jean was well known both for his gamy style of going and for bird sense. Dan displayed good speed and style. After being down a short time Jean made one of his stylish points. Dan coming in flushed the bird and was very unsteady. After being down 30m. darkness came on, the dogs were ordered up, and everybody made a rush for town. Saturday morning was cloudy, with a cold wind from the northwest, and

the crowd was late in getting out. At 9:12 Jean and Dan were put down to finish their heat. In a short time Dan pointed a bevy. Nelson shot, no kill; both dogs steady to wing and shot. Jean then did a pretty piece of work in a cotton patch; he roaded some distance, stopping to a point just as the birds went. Ordered up at 9:39. Heat given to Jean Val Jean.

CHANCE AND BEAU OF PORTLAND.

Chance, handled by Avent, and Beau of Portland, handled by Bevan, were cast off in open. Chance had the best of it in range and speed. In style they were equal. This was a short and uninteresting heat. In looks Beau is a well-put-up, handsome pointer, but on game he showed a want of work and experience, being unsteady to shot and wing. Chance had it all his own way, and won in 48m., neither having done anything worthy of special mention.

NAT GOODWIN AND KING NOBLE.

Nat Goodwin, handled by Merriman, and King Noble, handled by Barker, were cast off in woods at 11:45. Nat is a very small merry-going little dog with very little style in pace, yet his style is good on point. He has plenty of range, speed, and in this respect he had the advantage of Noble. Noble has good style on point. Both dogs behaved well to wing and gun. The only chance either had to retrieve was improved by Nat, when he made a good retrieve on a wounded bird. They did some very nice work on birds in sedge, and after 1h. and 5m. Nat was declared the victor. Both backed well.

KING'S DAN AND PAP SMIZER.

King's Dan, handled by Barker, and Pap Smizer, handled by Nelson, were cast off at 1:02. In range, speed and style there was not much to choose between them. Neither were fast nor wide rangers. Both were steady to wing and shot, and King's Dan retrieved in good style. The pointer out-worked Dan on game, having more points and fewer flushes to his credit. Yet each displayed a good deal of merit. It was a short heat, being ordered up at 1:50 and the heat given to Pap Smizer. We then went to lunch.

GAY GLADSTONE AND BOHEMIAN GIRL.

Bohemian Girl, handled by Barker, and Gay Gladstone, handled by Titus, were cast off in open country at 2:38. Gay is a little below the medium size, but a compact, well-made little bitch full of hunt and vim, she points and backs in grand style and is steady to wing and shot. Bohemian Girl is rather a slender loose put together bitch, yet she has a wonderful stride and a gamy way of going. She was not as steady to wing and shot as Gay, but her style on point is simply grand. Both had good range and speed and both were fair retrievers. They were only down a little while before the Girl came to a stylish point on a covey in sedge grass and was well backed by Gay. Birds were put up by Barker and missed. Both dogs behaved well. Birds were followed into a swamp thicket where Gay had decidedly the best of the work to her credit; she getting five points to the Girl's two. Ordered out in open field Bohemian Girl pointed a bevy in corn. By this time the judges were tired of Barker's attempts at killing a bird—he had never failed to burn powder over the Girl's points; yet no bird. A bird was marked down in a cornfield, Judge Brumby, with the air of get out the way and let a man who never misses one kill that bird, rolled off his horse, took the gun and walked up the bird. We saw the smoke, heard the report, and the little bird went on his way rejoicing. The boys laughed and whooped as the judge came back wearing a smile that was "child-like and bland," saying it was strange that a fellow couldn't always kill them just when he wanted to. A bird was thrown out for Bohemian Girl to retrieve, she did it in good style and was awarded the heat. Down 1h. 34m. This was a good and very close heat.

JOE PAPE AND GRAPHIC III.

Joe Pape, handled by Titus, and Graphic III. handled by Bevan, were cast off at 4:28. Neither dog showed any great range, pace or particular merit on game. Joe was the fastest, and hunted with more judgment. Graphic displayed more style, yet showed a want of experience. If he backed at all it was in a very indifferent way; he was not very steady to wing and shot. Taken up at 5:12 Joe Pape won. This closed the work for the day, and was the last brace in the first series, Prince Mack having a bye.

First Series.

Daisy F. beat Cassio.
Dad Wilson beat Effie Hill.
Lad of Bow beat Tasso.
Nellie Cambridge beat Bessie B.
Noble C. beat Joy of Prince William.
Spot beat King's Mark.
Lass of Bow beat Rena.
Rod's Gem beat Bun Roy.
Keystone beat Cyclone.
Jean Val Jean beat Dan.
Chance beat Beau of Portland.
Nat Goodwin beat King Noble.
Pap Smizer beat King's Dan.
Bohemian Girl beat Gay Gladstone.
Joe Pape beat Graphic III.
Prince Mack a bye.

Second Series.

Christmas was approaching, the judges were getting anxious to see loved ones at home and enjoy a Christmas dinner with them. So on Sunday they gave orders for handlers and the first brace of dogs to be at the starting place at 7 o'clock Monday morning.

PRINCE MACK AND DAD WILSON.

At 7:40 Prince Mack, handled by owner, and Dad Wilson were cast off. Prince is a compact made good moving dog with plenty of range and speed. After drawing a good deal of sedge and open fields blank Dad pointed a bevy in edge of thicket. Prince was called up to back which he did in good style. Nelson put up the birds, shot and killed, both dogs steady. Dad, to order, retrieved well. Sent on in woods, the birds were very wild, having been hunted nearly every day during the running of the Derby. Both dogs got several points and flushes, both behaving well to wing and to shot and displaying good nose. Ordered up and heat given to Dad Wilson. Down about 45m. Style was equal. Prince displayed far the best speed and range. They were not given time enough on birds to show which was the best.

DAISY F. AND LAD OF BOW

were put down in large open country at 9:08. Daisy started off, displaying her usual fine range, speed and style. Her merry way of going seemed to inspire Lad, for he showed decidedly more range and speed than in his former heat. After drawing a good deal of country blank, both dogs were going over a knoll, Daisy stopped to a point, Lad was following, ran past her and pointed the birds. As Rose went in to put up the birds Lad moved up and birds flushed. Rose shot, Lad broke shot. Ordered on after scattered birds Lad flushed and chased. Sent on Lad made a stylish point on several birds in grass, Daisy backed. Sent on Daisy pointed in sedge. No bird found to point, but was afterward flushed by spectators. Sent on Daisy pointed at edge of cotton patch, Lad refused to back, went in and stole point, his handler shouting at him all the while. Daisy roaded to right and Lad roaded to the left and put up the bird and was unsteady to wing. After a short time in which no work of interest was done, dogs were ordered up and decision reserved. In this heat Lad showed great natural qualities, good style on point, and a wonderfully fine nose, yet he broke shot, chased and refused to back, paid no attention either to whistle or commands of handler, who did any amount of shouting at him. Rose made several appeals to the judges to protect his bitch, for it was very evident that the errors of the dog and the frantic efforts of his handler was "breaking Daisy up." Later in the day Lad was ordered out to test his retrieving. A wounded bird was thrown out in cotton patch, gun was fired, but Lad failed to find bird; it must have ran off. Heat was given to Lad of Bow.

NOBLE C. AND NELLIE CAMBRIDGE.

This brace was put down at 10:38. Noble displayed the best range and speed. Nellie had most style, and showed up the same merry little worker she had in her former heat. Noble found a bevy and pointed in good style, but made a very poor retrieve. He was well backed by Nellie. Sent on in sedge, Nellie outworked him on scattered birds and displayed much the best nose, Noble displaying a good deal of the qualities that made Collins's ram so famous, Bevan being unable to control him. Ordered up; heat given to Nellie. Down 23m.

LASS OF BOW AND SPOT

were put down at 11:15. This brace was pointer against pointer, and they were a very good pair, both showing good range, speed and style. Both were steady to wing and shot, and made good display of nose. Spot backed well, and to Nesbitt's kill made a fair retrieve. At 12:25 dogs were ordered up. Spot won. We then went to lunch.

ROD'S GEM AND KEYSTONE.

After a hasty lunch, at 12:50, this brace was put down. In pace, range and style there was not much to choose between them. In a short time Keystone pointed a bevy in corn. Tucker killed, and Key made a good retrieve. Sent on after scattered birds both dogs did some good work, with the balance in favor of Keystone, he showing his experience over his young competitor. At 1:08 dogs were ordered up and heat given to Keystone. A very short heat with not work enough on game to decide the merits of the dogs.

JEAN VAL JEAN AND PAP SMIZER

were put down at 1:12 in open country. At the word they were off with the speed of the wind; Jean's fast, merry way of going seeming to put new life in the old pointer. Both ranged fast and wide, with the balance in favor of the setter. After drawing a good deal of country blank Pap was lost. Nelson found him pointing a big bevy in edge of a plum thicket. Nelson shot and killed. Both dogs behaved well. To order Pap made a very indifferent retrieve, bringing the bird with the feathers well worked in, and the entrails well worked out. Sent on after birds each made bad flushes. Finally Jean got in some nice work on running birds in sedge. Ordered up at 2:25 Jean wins.

NAT GOODWIN AND BOHEMIAN GIRL.

But little time was lost in bringing up the next brace, and at 2:30 the merry-going little Nat and the stylish Girl were turned loose. As they were put down among scattered birds neither had an opportunity to show speed or range. In style on point the Girl was much the best. In a few minutes after being put down Nat pointed several birds in a cornfield. Then they were worked down in a thicket, where both got some points and flushes, the honors being about even. Worked out in open Nat flushed four birds and stopped to point on the fifth. Merriman shot and killed. Much to the Colonel's surprise Nat made a fearful break-shot, running over the bird and some distance away. In the meantime the Girl making a cast flushed a single and was steady to wing. At the end of 30m. dogs were ordered up and heat given to Nat Goodwin. This was a very short heat, and we considered awarding the heat to Nat on the character of work done, a mistake. Although the Girl was handicapped by handling, she out-classed Nat, aside from being steady to wing and shot.

CHANCE AND JOE PAPE

were the next brace, they were put down at 3:08. Chance was one of the fastest, widest and best rangers in this stake. Except the work on scattered birds he had decidedly the advantage of Joe all round, and at the end of 22m. was declared winner of the heat. This ended the second series as follows:

Dad Wilson beat Prince Mack.
Lad of Bow beat Daisy F.
Nellie Cambridge beat Noble C.
Spot beat Lass of Bow.
Keystone beat Rod's Gem.
Jean Val Jean beat Pap Smizer.
Nat Goodwin beat Bohemian Girl.
Chance beat Joe Pape.

Third Series.

DAD WILSON AND LAD OF BOW.

As soon as the third series could be arranged, there being some difference of opinion as to how the dogs should be run, at 4:00 Dad Wilson and Lad of Bow were cast off. In range and speed they were equal, neither having great range nor speed in this heat. Lad showed much the best nose and a good deal of those fine natural qualities that he had exhibited in former heats, not forgetting to show his disregard for his handler. One bevy of birds was found and he out-worked Dad on them and won. Down 29m. This was the last brace of the evening. All went in tired after a hard day's work but some good sport.

Tuesday morning opened dark with a drizzling rain. Toward noon it ceased to rain and we had a cold northwest wind.

JEAN VAL JEAN AND SPOT

were put down at 8:07. Jean soon pointed a bevy in sedge in fine style and was well honored by Spot. To Avent's kill Jean made a fair retrieve. Birds went to woods and no work worthy of mention was done. Jean out-worked and with the exception of being undecided on his point in woods, he out-classed Spot. Taken up in 31m. Jean wins. Too little work on game to decide a heat.

NELLIE CAMBRIDGE AND CHANCE.

At 8:32 this brace was cast off in open. Both dogs had done very creditable work in their previous heats. Both had good speed and range. Nellie had most style on point, Chance dropping to his points now and then. Chance soon dropped to a point on a bevy. Nellie coming in from a cast down wind, not seeing Chance, ran into and flushed the birds and dropped to wing. Sent in woods Chance got a false point and then a good point on a single. Nellie ran over a bird, lost her head and chased. This ended a short heat with Chance the winner.

KEYSTONE AND NAT GOODWIN.

This brace was put down in open country at 8:52. Keystone seemed to go down in the prime of condition, displaying a good nose and running by far the best heat we ever saw him run, in fact he quite redeemed himself from some very poor work we saw him do at High Point. He was very decided on his points and pointed and retrieved in good style. Nat worked in his usual cheerful way, backing in good style. The work on game was all done in woods. Key got the bulge on Nat and wound him up in handsome style. Both were steady to wing and shot. After a very short heat Keystone was declared the winner. This ended the third series with the following result:

Lad of Bow beat Dad Wilson.
Jean Val Jean beat Spot.
Chance beat Nellie Cambridge.
Keystone beat Nat Goodwin.

Fourth Series.

LAD OF BOW AND JEAN VAL JEAN.

At 9:13 this brace was cast off in open country. Jean had the best of range and speed at first, but the pointer warmed up to his work, and after 40 minutes was going equally as well as Jean. Jean made a great many points on larks. After two or three backs from Lad on these points, he paid very little attention to Jean's points, would go up, get the scent and go on. After a long, tedious beat Lad challenged at the edge of a plum thicket. Jean came up to his side and pointed. Jean held his point and Avent went in the bushes and made an effort to flush. In the meantime the pointer's keen nose told him the birds were not there; he drew out to the left, roaded in grass about 40yds., and located birds in fine style. Birds were put up and both dogs behaved well to wing. Sent on in sedge, Jean pointed—we presume on foot scent, as no bird was found. A little further on Lad located a single. Sent on to look for scattered birds, Jean commenced drawing and pointed. About the time he stopped Lad was coming around the hill from a cast, and caught the scent between Jean and the bevy and commenced drawing and did a fine piece of work, locating the bevy, which Bevan put up. Birds were followed into a thicket of oaks and sedge grass, where Jean got two points and two flushes, and the pointer one point and one flush. Dogs were then ordered up. Down 1h. 54m. After a long consultation the judges gave the heat to Jean Val Jean. The owner of Lad gave notice that he would enter a protest against the decision. We followed the heat very closely and saw all the work, and cannot say the decision was wrong; for we think a dog to win in a field trial ought to show that he is well broken. Jean had shown that he was well broken. We do say, however—and we are not alone in our opinion—that under the same ruling that was made in the Lad of Bow and Daisy F. heat, that Lad would have won the heat over Jean with plenty to spare, for in the latter part of this heat Jean had no advantage in range, speed or style. Lad had behaved himself much better than in former heats, being steady to wing and shot; he displayed the same natural qualities that had taken him through his other heats, and he outworked Jean on game. The only grave error he committed in this heat was his refusing to back.

CHANCE AND KEYSTONE.

At 11:30 this brace was put down. This heat created a good deal of interest, as both dogs had run their races well and downed their dogs in good style. Both went off well. At the end of 51m. they were ordered up and we went to lunch, nothing having been done but a false point for Chance, well backed by Keystone. After lunch they were again cast off in open country. In speed and range Chance had the call on Key. Chance soon challenged, drew and pointed a bevy in good style. He made a fair retrieve. Sent on he got another point to Key's none. At 1:30 they were ordered up. Chance won. This ended the fourth series as follows:

Jean Val Jean beat Lad of Bow.
Chance beat Keystone.

Final for First Place.

JEAN VAL JEAN AND CHANCE

were put down at 1:40 to run for first money. As both dogs belonged to Memphis & Avent Kennels Mr. Avent handled them. Chance went off as fresh as a lark, while Jean seemed to be a little stiff from his long heat with the pointer, but he soon warmed up and was going well. The first work done Chance flushed a bevy in woods. Soon after both dogs were found on point about 75yds. apart. Several birds were put up to Jean's point, while Chance's was false. Sent on Chance pointed. Jean coming up stopped some 20yds. in the rear. Nothing was found to Chance's point. Avent tried to call Jean on, but he held his place, and Avent went back and put up a bird just in front of him. This was a fine piece of work and called forth a loud clapping of hands from the crowd. After more work in a thicket in which Jean had decidedly the advantage, they were ordered up and Jean declared winner of first in the All-Aged Stake.

Ties for Second Place.

After consultation, the judges selected Dan as the best dog defeated by Jean Val Jean to run with Lad of Bow to see which should compete with Chance for second place. As Dan was not on the ground Spot was ordered out.

LAD OF BOW AND SPOT

were put down at 2:30 on scattered birds in a thicket. Lad out-worked Spot and won the heat. Down 11m.

CHANCE AND LAD OF BOW.

Both went off at good speed. In a few minutes they were found on point at edge of a thicket, with Lad nearest the birds. Sent on in thicket both dogs did some good work on scattered birds, with the work rather in favor of Chance, barring one piece of work, when he was rather unsteady to wing. After 15m. they were ordered up and Chance awarded the heat and second place. The judges selected Daisy F., Lad of Bow and Keystone as the best of the defeated dogs, to divide third money, and the stake was finished. Following is the

SUMMARY.

First Series.

Daisy F. beat Cassio.
Dad Wilson beat Effie Hill.
Lad of Bow beat Tasso.
Nellie Cambridge beat Bessie B.
Noble C. beat Joy of Prince William.
Spot beat King's Mark.
Lass of Bow beat Rena.
Rod's Gem beat Bun Roy.
Keystone beat Cyclone.
Jean Val Jean beat Dan.
Nat Goodwin beat Beau of Portland.
Chance beat King Noble.
Pap Smizer beat King's Dan.
Bohemian Girl beat Gay Gladstone.
Joe Pape beat Graphic III.
Prince Mack a bye.

Second Series.

Dad Wilson beat Prince Mack.
Lad of Bow beat Daisy F.
Nellie Cambridge beat Noble C.
Spot beat Lass of Bow.
Keystone beat Rod's Gem.
Jean Val Jean beat Pap Smizer.
Nat Goodwin beat Bohemian Girl.
Chance beat Joe Pape.

Third Series.

Lad of Bow beat Dad Wilson.
Jean Val Jean beat Spot.
Chance beat Nellie Cambridge.
Keystone beat Nat Goodwin.

Fourth Series.

Jean Val Jean beat Lad of Bow.
Chance beat Keystone.

Final for First Place.

Jean Val Jean beat Chance and won first prize.

Ties for Second Place.

Lad of Bow beat Spot.

Final for Second Place.

Chance beat Lad of Bow and won second prize.

Equal Third.

Daisy F., Lad of Bow, Keystone.

The Champion Stake was declared off for want of judges. This closed one of the most successful as well as the best managed field trials ever run in this country. If there were errors committed in judging they were honest errors, for as

far as we could see no dog by virtue of belonging to the president or any member of the club received any more favor in judging than the dogs of the humblest exhibitor. In this respect as well as in the good order maintained throughout the trials, they set a shining example that well might be followed by other field trials clubs.

There were more spectators from the beginning to the end than we have ever seen at any trials. Yet the able marshall, Mr. John Davidson, of Monroe, Mich., with his efficient assistants John Bolus and J. W. Peterson, kept the crowd well back, so that the dogs were not interfered with in their work. General Shattuc's able executive ability was felt everywhere. There was no expression of opinions in the presence of judges by reporters or spectators. Judges were kind and gentlemanly toward handlers, and in return handlers were respectful, cheerful and obedient in carrying out instructions. There was no hurrying of dogs or scrambling for "points" by handlers; for the trials were judged on the quality of work done and not the quantity. In this mode of judg ng a dog to win was required to exhibit other points of merit than the mere pointing of a bird. The grounds were all that could be desired. Yet, owing to the fact that they had only been protected for a year, birds were scarce, and it took a good dog to find them.

A club was never thrown among a more hospitable people than these of Florence. They did everything in their power to forward the interest of the trials and make the "strangers within their gates" have a pleasant time. Among those who particularly exerted themselves we would mention Col. Aleck Jackson, Maj. Buck Key, Mr. Jerry Ellis and Mr. Brown. Horses and wagons were plentiful and owners were very reasonable in their charges.

On the whole the members of the American Field Trial Club have many reasons to fell proud of their inaugural meeting. In many respects it was a grand improvement on any trials ever held in America, and by far the most pleasant we ever attended.

KINO.

Editor Forest and Stream:

Thanks to the controversy in your paper between "Malcolm" and Mr. A. C. Krueger, regarding the beagle Kino, for it has been the means of placing me in the way of obtaining his undoubted breeding, which I have long been anxious to obtain, and I desire to publish the facts substantiating my assertions as to his breeding. I am sorry to say this is absolutely necessary to avoid further denials from Mr. Krueger, as, although I stated in my letter written at the request of "Malcolm" that Mr. O'Shea had admitted that Kino originally came from the U. S., Mr. Krueger, in a misleading contradiction, wrote "Kino was imported *and as well bred as any beagle living*" (italics mine), notwithstanding he had previously registered him as "breeding unknown," and, nothwithstanding facts given below, shows that at the time Mr. Krueger wrote as above, and also at the time he advertised Kino as imported, he had previously been told facts most positively showing Kino to have been bred and raised here, and also to have been told his breeding before he registered him.

Upon "Malcolm's" request to me to substantiate his assertion that Kino was not imported, I wrote Mr. Satterthwaite, his former owner, and he wrote me, "Dan O'Shea entered Kino as imported last year, and I asked him where he was imported from, and he told me at the last show in Philadelphia that he was imported from the United States."

Notwithstanding my giving the above statement of Mr. O'Shea, Mr. Krueger, in his endeavor to pass Kino as imported, made the misleading reply that " 'The well known fact' of Malcolm has diminished till nothing more is left but what Mr. Schellhass related to Malcolm and Mr. Schellhass has nothing to offer but a quotation from a letter from Mr. Satterthwaite"; and, notwithstanding Mr. Krueger had been given the positive evidence of Kino's breeding by the gentleman named below; and, notwithstanding the only contradiction of the same came from a person who has given out three conflicting statements regarding Kino's breeding (of two at least of which Mr. Krueger was aware), and who Mr. Krueger himself says admitted that he would not tell the truth to a certain person regarding Kino's breeding; and, notwithstanding the above, Mr. Krueger advertises Kino as "imported" and also writes "Kino was imported and as well bred as any beagle living," and also, "I had the right to claim the dog as imported."

The evidence referred to received by me is in a letter just to hand from Mr. C. E. White, a prominent business man of Cleveland, O., who writes: "Kino is not imported; he was bred by me and I can prove it. I saw the dog when Dan O'Shea had him in Cleveland and knew him as soon as I set eyes on him. I asked Dan where he got him; he told me he was out of Music by Rattler. I told him, 'No sir, I bred that dog,' and to make sure of it I wrote to the man I sold him to in London, Canada, and his answer was he 'sold the dog Kino you saw in Cleveland to Dan O'Shea. * * * I told Mr. Krueger at the Pittsburgh show last spring that Kino was litter brother to champion Bonnie and offered to show him the letter, but he was afraid it would not sound as well to be out of May Belle and by Searcher as it would to call the dog imported.' "

The above evidence, showing the beagle Kino, sire of my Riot, to be by Searcher and out of May Belle, and as bred by Mr. C. E. White, of Cleveland, O., and as litter brother to his Bonnie, I desire to submit to the reputable beagle fraternity without any comment, as the same speaks for itself.

I trust I will not be compelled to trespass further on your space in a matter which should never have required this letter in order to have truth prevail, and more particularly as it is matters of this kind which brings the dog world into disrepute.

However, present and future owners of beagles sired by Kino, who read the above, will have the satisfaction of knowing the breeding of their hounds, which otherwise would not have become known. Justice to them, as well as myself, calls for the above proof, with the explanation accompanying, which circumstances have made necessary in order to avoid further contradiction.

HERM. F. SCHELLHASS.

Editor Forest and Stream:

In reply to Mr. White's letter in your issue of Dec. 23, allow me to say that that gentleman is right in saying that while in conversation with me he claimed to be the breeder of Kino; this was at the Pittsburg show of 1886. On that occasion I also heard Mr. White speak to O'Shea about this same matter and he flatly denied Mr. White's claims as to his being the breeder of Kino. As Mr. White had given me no proofs of his claims, what right had I to publish to the world mere assertions as facts? I do not doubt Mr. White's sincerity, but all mortals are liable to make mistakes. I would be rejoiced to see his assertion verified, for it would be far more preferable to me to know Kino to be one of the Searcher—Maybelle litter than to have him imported and without a pedigree, Mr. White to the contrary notwithstanding. I hope that gentleman will be kind enough to furnish us with some facts such as name of party to whom he sold the dog (said to be Kino), date of sale, etc. It is possible that that person is a reader of FOREST AND STREAM, if so he would certainly oblige the beagle fraternity by shedding some light on the subject. I assure Mr. White and others that I am anxious to have my dog identified, if this is possible, but I want this done beyond a doubt and cannot rest satisfied or claim a pedigree for him on the strength of suppositions or mere assertions. I hope Mr. O'Shea will see the necessity of saying something, for he, I think, is the only proper person who can settle the matter beyond dispute. A. C. KRUEGER.

WRIGHTSVILLE, Pa., Jan. 2.

STORIES OF DOGS.

WE have always been a dog-loving family. Home has never seemed home without at least one dog about, and some of the dogs we have had were remarkable for traits of intelligence and affection above the ordinary canine average. I will tell of some of them.

Blitz was a nondescript little pepper and salt terrier. My father brought him home when my sister was only two or three weeks old and he was about the same age. They grew up together with a great affection for one another. As Blitz got older he showed great intelligence. He ran in to the toll-bar every evening, three miles, to get the evening paper from the newsboy, and nothing but that evening's paper, fresh from the press, would Blitz take. It was of no use giving him an old paper; he would turn up his nose in disdain at it and get fierce and threatening unless the proper one was given him. He dearly loved fighting, but when carrying the paper no amount of insult from a strange dog would induce him to put it down and fight. He would put on a spurt, run home at his best pace, and if he could not find my father, mother or his mistress, would safely deposit it under the mat in my father's dressing room, and then, satisfied that it was safe, would fly back and show his enemy that he was not to be trifled with.

He was very fond of a certain kind of sweetmeat which was sold a at little shop on a street corner, and whenever he was taken to town, would run to this corner, squat on his hams and bark shrilly to attract attention. When he saw that he was noticed, he would sit up and beg, with his head on one side, in a most languishing way. If whoever he happened to be with would not take him in and buy him some of the candy, he would run after them, and getting in front would sit up and beg. This was for a kreutzer. If one was tossed to him he would catch it in his mouth and run back to the shop, jump up on the counter and put the coin down in front of the shopman, who knew him well, and knowing what he wanted, would give him the coveted dainty.

Blitz had his own especial plate and bowl, and woe betide my father's setters, pointers or spaniels did they dare to so much as sniff at them. He would fight like a wildcat.

Wherever my sister went Blitz went, so when trunks were packed he always expected, as a matter of course, that he would have change of air. When the Franco-Prussian war broke out my mother was forced to leave Germany, where we had lived fifteen years, as we were all young and my father having died from an accidental gun shot wound, it was hardly safe to stay in the midst of it Blitz was wild with delight at the idea of going away. It was arranged that his mistress was to go with my elder brother a week ahead of the rest of the household, and was to leave Blitz for us to take, as of course we never dreamt of leaving him, although all the other dogs had to be left behind. When Blitz saw her drive away without him he was like a crazy dog, and made a nuisance of himself generally. At last he disappeared and in the bustle of packing it was not noticed. He was not seen again that night, but toward midnight my mother was awakened by dismal howling in the direction of my sister's room. After continuing for ten or fifteen minutes it ceased.

During the morning it was remarked that Blitz was not about, and my mother then remembered the howling in the night. She went to my sister's room, the door of which was ajar, and on looking in saw Blitz stretched on the bed. She called to him, but he did not stir, so went in and patted him, but to her horror he was cold and stiff. He died of a broken heart.

One of my aunts had a black and tan toy terrier. Tiny was a wee creature, weighing only 3½lbs. She was so small that my aunt smuggled her across the pond several times in her muff. The most remarkable trait in Tiny's character was her objection to kitchen tea. It might be brought up in a silver teapot and the ingredients mixed in the most orthodox manner, but Tiny would none of it, although she dearly loved a dish of tea, provided it was "upstairs." This was the more remarkable as I am sure my grandmother never made her servants drink a very poor quality of the "cup that cheers but not inebriates." Tiny had her own special stool before the drawing-room fire, and did any luckless stranger rest his or her feet on it during her absence, on her return a sharp nip on the leg was her summary way of asserting her rights. She lived, by the way, until she was twenty-eight years old.

The next dog whose exploits I will chronicle was Jack, a liver and white field spaniel, a beautiful old dog, by the way. Jack, strangely enough, had an intense horror of and dislike to water. During one summer while we were all down the river below Quebec, one of my uncles was obliged to go to Sorel, a place between Montreal and Quebec, on business, and took Jack with him. It being an extremely hot day, my uncle went for a bath in the afternoon, and to Jack's intent disgust, forced him into the water. As soon as he was allowed to land he ran away, despite my uncle's whistling. He searched in every direction for Jack, but could not find him. That night the purser on the boat to Montreal saw the dog, whom he knew, slip on to the boat. Thinking he had been stolen, he locked him up. Next morning on the boat's arrival he went to get the dog, but found that he had managed to escape. That evening he again saw the dog slip on board and tried to catch him, but Jack evaded him and hid in some corner. When the boat arrived at Quebec he saw the dog slip off the boat and run down the wharves toward the ferry which ran to the place where we were living. The boat was just pulling off but he jumped on board, and on its arrival at the island wharf, ran ashore and home.

I will continue the stories of dogs on some future occasion.

By the way, I will change my name from C. to CEE.

NEW YORK DOG SHOW.—New York, Dec. 30.—The following is the list of judges as far as completed: Mastiffs Newfoundlands, English bloodhounds, Great Danes, Japanese spaniels, Mexican hairless, and miscellaneous class—W. K. Taunton, England. St. Bernards—Miss Anna H. Whitney, Lancaster, Mass Deerhounds, greyhounds, foxhounds, pointers and setters—John Davidson, Monroe. Mich. Spaniels—A. C. Wilmerding, N. Y. Collies, poodles, basset hounds, dachshunde, fox-terriers and all other terriers, pugs, toy spaniels and Italian greyounds—L. P. C. Astley, England. Attention is drawn to the rule allowing puppies to be withdrawn on the evening of the second day.—JAS. MORTIMER, Supt. ...The premium list for the twelfth annual dog show of the Westminster Kennel Club is ready for distribution. The list provides for 132 classes as against 119 last year. A class is made for English retrievers, one for smooth-coated collies and bob-tailed sheepdogs, and one for Japanese spaniels. There is also a novice class for fox-terriers. The remainder of the extra classes are made by dividing the sexes in some of the champion and open classes. The prizes are also more liberal than last year, the more important classes receiving $20, $10 and $5, with $10, $5 and silver medal for puppies. The club offers a special prize of $25 each for best kennel of mastiffs, St. Bernards, deerhounds, greyhounds, pointers, English setters, Irish setters, field or cocker spaniels, collies, fox-terriers and beagles, each kennel to consist of four. The same amount is also offered for the best three pugs, brace of bull-terriers, best pointer, English setter, St. Bernard and collie, and $50 for the best brace of Chesapeake Bay dogs. The challenge cups and specials of the Mastiff Club, the Fox-Terrier Club and the Collie Sweepstakes will be competed for. The list of judges announced is a very good one, and we have no doubt that it will be perfectly satisfactory to exhibitors. The new departure of the club in selecting a lady judge should meet with hearty support, and the well-known gallantry of nearly all of the St. Bernard fanciers will doubtless fill to overflowing the benches devoted to this breed. It is the ambition of the club to give the largest show that has ever been held. In past years the show has been held in April or May, and recently other shows, held at an earlier date, have weeded out many of the dogs that are entered at the first shows as sure winners, but failing to please the judge, they get discouraged and drop out. Being first in the field this year, a large number of this class of entries are sure to be made, and were it not for the adoption of the obnoxious rule that compels exhibitors to pay fifty cents extra for the purpose of registering each dog that they enter, we see no reason to doubt that the fondest hopes of the management would have been realized, and that we should have seen Madison Square Garden filled to its utmost capacity. We sincerely hope that the club will at once take measures for the rescinding of this very obnoxious rule by bringing the matter before the American Kennel Club. There is not the slightest doubt that, upon a full vote, a large majority would be found to be opposed to the measure, and that it would be stricken from the rules.

CLUMBER SPANIEL SPECIAL.—*Editor Forest and Stream:* I will offer a silver goblet, suitably engraved, value $25, for the best Clumber spaniel stud dog, with two of his get, at the Westminster Kennel Club show at New York and the New England Kennel Club show at Boston this spring. The cup must be won by the same dog at both shows, but not necessarily with the same offspring. Should different dogs win it at both of the above-mentioned shows, it will be offered under the same conditions at these shows in the spring of 1889. The offspring shown with the dog must have been sired in North America.—F. H. F. MERCER (Ottawa, Can.).

EASTERN FIELD TRIALS CLUB.—There will be a regular meeting of the Eastern Field Trials Club on Tuesday, Jan. 10, at 8:15 P. M., at the St. James Hotel, corner of Broadway and Twenty-sixth street, New York. All members are requested to be present, as matters of importance have to be settled for the coming year.—WASHINGTON A. COSTER, Sec.

THE UTICA SHOW judges will be Messrs. James Watson, of Philadelphia, and A. A. Francis, of Rochester.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Lucien S. and Maud S. By Starkey & Keating, Fitchburg, Mass., for fawn, black points, mastiff dog and bitch, whelped November, 1887; imported, pedigree not given.

Dandy. By Cumberland Kennels, Portland, Me., for fawn greyhound bitch, whelped April 20, 1888, by Toney (Duke—Duchess) out of Kittie (A.K.R. 1759).

Baby in the Woods. By Cumberland Kennels, Portland, Me., for red Irish setter bitch, whelped Aug. 1, 1885, by Jack (Elcho—Mag) out of Meg Merrilies (A.K.R. 2181).

Ashmont Cleopotra. By Lewis A. Berger, Langhorne, Pa., for fawn, black points, mastiff bitch, whelped July 16, 1886, by Hero II. (A.K.R. 545) out of Madge (A.K.R. 548).

Ashmont Brutus. By Lewis A. Berger, Langhorne, Pa., brindle mastiff dog, whelped July 15, 1886, by Ilford Cromwell (A.K.R. 2624) out of Ashmont Queen (Major—imported Clio).

Ingomar. By Harmony Kennels, Covert, N. Y., for white, black and tan beagle dog, whelped Sept. 7, 1887, by Bannerman (A.K.R. 1709) out of Dots (Cornet—Solo).

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Princess Pearl—Paxtang. W. R. Traver's (Washington, D. C.) English setter bitch Princess Pearl (Druid—Princess Draco) to F. W. Seller's Paxtang (Count Noble—Fate Gladstone), Dec. 28.

Beadah—Minting. E. H. Moore's (Melrose, Mass.) mastiff bitch Beadah (A.K.R. 2976) to his Minting (Maximilian—Cambrian Princess), Dec. 22.

Duchess—Minting. E. H. Moore's (Melrose, Mass.) mastiff bitch Duchess (Ilford Caution—Bess, A.K.R. 2977) to his Minting (Maximilian—Cambrian Princess), Dec. 26.

Princess—Ilford Caution. E. H. Moore's (Melrose, Mass.) mastiff bitch Princess (Ilford Cromwell—Brenda II.) to his Ilford Caution (Crown Prince—Ilford Claudia). Jan. 1.

Madge—Drake. F. H. D. Viette's (Ottawa, Can.) Clumber spaniel bitch Madge (Ben—Joan) to Clumber Kennels' Drake (A.K.R. 5660), Dec. 28.

Virginia—Fritz. C. W. Littlejohn's (Leesburg, Va.) pointer bitch Virginia (Sensation—Rose) to his Fritz (Beaufort—Spot), Nov. 2.

Bunnie—Bannerman. A. C. Krueger's (Wrightsville, Pa.) beagle bitch Bunnie (Kino—Bessie) to his Bannerman (Marchboy—Dewdrop), Dec. 28.

Tiny—Cameron's Racket. F. C. Stauf's (Baltimore, Md.) beagle bitch Tiny (Trailer—Music) to A. C. Krueger's Cameron's Racket (Rally—Louise), Dec. 31.

Blossom—Bannerman. H. S. Gilbert's (Millersburg, Pa.) beagle bitch Blossom (Blunder—Rue) to A. C. Krueger's Bannerman (Marchboy—Dewdrop), Dec. 21.

Daisy Queen—Count Noble. H. Hartley's (Pittsburgh, Pa.) English setter bitch Daisy Queen (A.K.R. 2266) to B. F. Wilson's Count Noble, Dec. 22.

Bacchante—Luke. A. Perrin's (Cambridge, Mass.) fox-terrier bitch Bacchante (A.K.R. 5117) to J. E. Thayer's Luke (Mixture—Tyra), Nov. 17.

Bonita—Brant. Chas. M. Nelles's (Brantford, Ont.) cocker spaniel bitch Bonita (A.K.R. 1481) to his Brant (Obo II.—Blackie III.), Dec. 23.

Joan II.—Johnnie II. J. S. Wallace's (Toronto, Ont.) Clumber spaniel bitch Joan II. (Johnny—Jill) to C. H. Wallace's Johnnie II. (Johnny—Jess), Nov. 21.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

La Duchesse. Kamernap Kennels' (Brooklyn, N. Y.) St. Bernard bitch La Duchesse (Duke of Leeds—Sheila), Dec. 24, thirteen (seven dogs), by K. E. Hopf's Otho (Rollo—Lady Abbess).

Major. Fawn mastiff dog, whelped July 10, 1887, by Major out of Nettie, by Berkshire Kennels, Hinsdale, Mass., to Hemon Mitchell, Dalton, Mass.

Major. Fawn mastiff dog, whelped November, 1886, by Donald out of Maid of Athens (A.K.R. 5629), by Berkshire Kennels, Hinsdale, Mass., to S. W. Barker, Troy, N. Y.

Champion. Fawn mastiff dog, whelped July 20, 1887, by Berkshire Caution (A.K.R. 5617) out of Maid of Athens (A.K.R. 5629), by Berkshire Kennels, Hinsdale, Mass., to F. C. Kendall, Chicopee, Mass.

Duke. Fawn mastiff dog, whelped July 20, 1887, by Berkshire Caution (A.K.R. 5617) out of Maid of Athens (A.K.R. 5629), by Berkshire Kenuels, Hinsdale, Mass., to J. L. Smith, Medway, Mass.

Donald. Fawn mastiff dog, whelped July 20, 1885, by Berkshire Caution (A.K.R. 5617) out of Maid of Athens (A.K.R. 5629), by Berkshire Kennels, Hinsdale, Mass., to C. M. Cudworth, Worthington, Mass.

Leon Turk. Fawn mastiff dog, whelped 1883 (A.K.R. 5627), by Berkshire Kennels, Hinsdale, Mass., to F. P. Quimby, New York.

Nix. Fawn mastiff dog, whelped July 20, 1887, by Berkshire Caution (A.K.R. 5617) out of Maid of Athens (A.K.R. 5629), by Berkshire Kennels, Hinsdale, Mass., to W. F. Stock, Springfield, Mass.

Nellie. White, black and tan beagle bitch, whelped July 15, 1886, by Flute Ringwood out of Vine, by A. C. Krueger, Wrightsville, Pa., to E. C. Tarr, Lynn, Mass.

Punch. Black, white on chest, English setter dog, whelped March, 1887, pedigree not given, by Homer Eaton, North Reading, Mass., to Arthur S. Aborn, Wakefield, Mass.

Tony. White, black and tan beagle dog, whelped April 15, 1884, by imported Ringwood out of H. F. Schellhass's Trinket, by R. D. Norton, Forestville, Conn., to Geo. W. Proctor, West Gloucester, Mass.

So-So. Black cocker spaniel bitch, whelped July 24, 1887, by Brant out of Bonita, by Chas. M. Nelles, Brantford, Ont., to Geo. H. Bush, Buffalo, N. Y.

Lady Alice. Black Newfoundland bitch, whelped Oct. 20, 1887, by Brown's Follie out of Fanny B., by H. D. Brown, Waterbury, Vt., to H. T. Dearborn, Glen Station, N. H.

Black Jingo. Black cocker spaniel dog, whelped June 25, 1887, by Black Pete out of Phyllis (A.K.R. 5293), by H. D. Brown, Waterbury, Vt., to F. C. Evans, Montown, Vt.

Motion B. Black cocker spaniel dog, whelped Oct. 30, 1887, by Black Pete, Jr., out of Althea (A.K.R. 842), by H. D. Brown, Waterbury, Vt., to R. D. Slayton, Stowe, Vt.

Dandy. Fawn greyhound bitch, whelped April 20, 1887, by Toney out of Kittie (A.K.R. 1759), by Cumberland Kennels, Portland, Me., to F. H. Neal, Enfield, Me.

Baby in the Woods. Red Irish setter bitch, whelped Aug. 1, 1887, by Jack out of Meg Merrilies (A.K.R. 2181), by F. H. Stanorth, Portland, Me., to Cumberland Kennels, same place.

Merchant Prince—Sequa whelp. Orange and white St. Bernard dog, whelped July 14, 1887, by E. H. Moore, Melrose, Mass., to J. B. Kimenour, Belvidere, N. J.

Merchant Prince—Bernie V. whelp. Orange and white St. Bernard dog, whelped July 19, 1887, by E. H. Moore, Melrose, Mass., to J. J. Donovan, Tacoma, W. Ter.

Glen—Flora whelp. Black pointer dog, whelped Oct. 23, 1887, by Cumberland Kennels, Portland, Me., to F. A. Lindsey, New Bedford, Mass.

Prince (A.K.R. 1963)—Meg Merrilies (A.K.R. 2181) whelp. Red Irish setter bitch, whelped May 24, 1887, by Cumberland Kennels, Portland, Me., to E. H. Shannon, Belfast, Me.

Fritz—Virginia whelps. Lemon and white pointer dogs, whelped May 18, 1887, by C. W. Littlejohn, Leesburg, Va., one each to Blair Lee and Mr. Oyster, Washington, D. C.

Berkshire Caution (A.K.R. 5617)—Maid of Athens (A.K.R. 5629) whelp. Fawn mastiff dog, whelped July 20, 1887, by Berkshire Kennels, Hinsdale, Mass., to R. J. Brevord, M.D., Charlotte, N. C.

Major—Nettie (A.K.R. 5630) whelp. Fawn mastiff dog, whelped July 10, 1887, by Berkshire Kennels, Hinsdale, Mass., to J. J. Newgent, M.D., Holyoke, Mass.

Mainspring—Ferry whelps. Pointers, whelped Sept. 12, 1887, by T. F. Rivers, Williamsport, Pa., a dog to H. K. Powell, Newton, Ill.; a dog to C. H. Warring, Amsterdam, N. Y., and a bitch to F. Pitzer, Washington, D. C.

Brant—Juno W. whelp. Black cocker spaniel bitch, whelped Oct. 18, 1887, by Chas. M. Nelles, Brantford, Ont., to John C. Eccles, Dunville, Ont.

Brant—Bonita whelps. Black cocker spaniel bitches, whelped July 24, 1887, by Chas. M. Nelles, Brantford, Ont., one each to W. G. McCullough, Kingston, Ont., and S. L. Boardman, Syracuse, N. Y.

Bannerman—Dots whelps. White, black and tan beagle dogs, whelped Sept. 7, 1887, by A. C. Krueger, Wrightsville, Pa., one each to Dr. H. Danford, Trimble, O., and C. S. Wixon, Covert, N. Y.

Alford Caution—Bess whelps. Fawn mastiffs, whelped July 20, 1887, by E. H. Moore, Melrose, Mass., a dog to Chas. P. Fraleigh, New York, and a bitch to R. M. Conway, Owensboro, Ky.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

E. K. S., Hartford.—It is a great pity that in such cases the belly is not opened and intestines examined. All I would venture to surmise in this case is poisoning by non-corrosive poison like phosphorus. Perforation of the gut and peritonitis resulting, which is common, would give very definite symptoms. So sudden a death would seem to indicate poison or heart trouble.

E. P., Cortland, N. Y.—Since having the distemper, my red Irish setter has been afflicted with a discharge from the mouth of a nature that would suggest some catarrhal difficulty. He is strong and apparently in good health, but the almost constant drooling from the mouth is a source of annoyance. Ans. Give 10 drops of the tincture of belladonna morning and evening in the food.

W. H. S., Jersey City.—My setter pup, three months old, cannot keep anything on his stomach; his hair is falling out; weak in the hind parts; passes blood both ways; has a belching as though sick at his stomach; also craves for water. Ans. It looks as though your pup has an acute inflammation of the stomach and intestines. The cause is from some irritating or poisonous material swallowed. Feed fluids only; let him have all the water he wants. Give two drops of Fowler's solution of arsenic morning and evening.

D. C. B. Fly Creek, N. Y.—My English setter, eight years old, has a bunch about as large as a walnut grown out from his gums on upper jaw back of his tusk, and grown over a tooth. I first noticed it about two years ago; it was smaller then. It is as hard as his gums and looks just like his gums. A gentleman told me to tie a silk thread around it and that it would come off all right. Would you advise me to do that? I can take hold of it and move it a little, about the same as you could a wart. Ans. It is called Epulis. The best treatment is to tie a strong ligature, strong silk, catgut or wire, with the object of strangulating the growth. When it drops off or can be twisted off, cauterize the stump with nitric acid on a pine stick or touch daily with lunar caustic (nitrate of silver).

E. R., Jersey City.—My son owns two setter pups, one ten the other three months old. The oldest one was taken out last week and broke through the ice; when he came home he was wet and chilled. The next morning he was sick, vomited, and refused his food. I gave him castor oil and aconite. I think it has done some good; but he still shivers and likes to get up to the fire, and his appetite is poor. As I am very fond of them, I have kept them sleeping in the house in a warm room. Do you think that would be injurious to their health? The younger one is somewhat troubled with worms. Their diet has been mostly milk, bread, beef and broth. Ans. Dogs are much sturdier when kept out of doors. With a kennel and plenty of straw, they would not suffer in the coldest weather. Give the younger dog a full dose of castor oil, and follow this with a pill containing 10grs. of areca nut. Give the other dog 5grs. of quinine twice daily in pill form.

UNCLE LISHA'S SHOP.

NOT often do the Forest and Stream Publishing Company (New York) issue anything more interesting or valuable than their popular weekly paper of that name, but in a volume bearing the above title they give us really a captivating insight into life in a remote mountain town in Vermont, where game, from bears to woodchucks, coons and owls, has been abundant, and where the life of the people has been very primitive and untinged by the great world outside. Things are greatly changed now—but the daily life of that retired community (as curious as that of any outlying province of France) and the trapping, shooting and catching of game, are presented in this book in a fresh and entertaining shape.—*Hartford Times, Dec. 21.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

HAVERHILL, MASS., RIFLE CLUB.—Christmas Day, 200yds., off-hand, standard target. There was a light fall of snow all day, but within the house all was comfortable and a very pleasant day of sport was had:

H E Tuck	9	8	10	8	8	10	8	8	10	7—86
J Brown	10	6	9	6	10	7	10	10	7	10—87
J Busfield	9	9	8	6	7	10	9	7	9	10—84
S E Johnson	8	8	9	5	8	7	8	9	6	9—68
A Edgerly	9	5	10	10	5	5	6	10	8	8—76
F Merrill	10	5	10	8	7	7	9	5	4	8—73
C Wright	6	6	7	8	9	5	8	7	8	9—70
J P M Green	9	5	4	7	8	8	8	8	7	6—70
C H Poor	6	9	3	6	9	8	5	8	6	9—69

OWENSVILLE, Ind., Dec. 27.—Owensville Ballard Rifle team, strong, 2 o'clock wind and poor light, standard target, 200yds., National rules:

W Gentry	7	4	10	3	5	10	8	4	10	5—66
G Wetter	6	8	4	5	6	7	4	6	10	9—64
J Stone	4	4	5	10	7	6	6	8	7	7—64
J Montgomery	8	10	1	7	7	3	7	8	7	4—62
C Summers	5	5	4	6	9	8	4	9	7	3—60
McG Daugherty	9	1	5	7	7	6	2	3	3	6—49
W Roberts	3	1	5	6	8	3	6	6	4	4—46
J Daugherty	3	4	5	6	5	8	4	3	4	7—48

W. Gentry won gold medal. In the shoot-off for leather medal J. Daugherty won.

BOSTON, Dec. 31.—The cold kept many riflemen at home from Walnut Hill range to-day, and the shooting was not very brisk. The rest match came to a close, and also the victory medal match of '87. H. F. Lynde won the bronze badge in the State militia match. The prize winners in the rest match, and the scores made to-day are given below:

Decimal Off-hand Match.

A Loring	6	10	8	9	7	8	7	8	7	7—77
	9	7	5	5	9	10	10	8	4	4—71
W H Oler	8	6	10	6	10	5	7	4	7	7—70
	7	4	7	8	8	4	9	5	7	8—67
Dadman	5	5	5	8	4	5	10	6	6	9—64

Rest Match.

J Francis	12	12	11	12	12	12	9	11	9	11—111
W Chester	10	12	11	10	12	10	9	12	12	12—116
	11	10	12	10	9	12	12	9	12	12—109

	11	11	11	9	11	9	11	12	12	10—107
B G Barker	8	9	11	12	12	10	10	9	10	10—101
	8	8	8	12	10	12	10	7	11	11— 97

State Military Match.

H T Lynde	34434—18	44553—21	34443—18	44444—20

Prize Winners' Rest Match.

D L Chase	115	114	112	111 109—561
J Francis	112	111	111	110 109—553
W Chester	111	110	110	109 109—544

WILMINGTON, Dec. 26.—It was almost too cold for out-door amusements to-day, but the shooters were out in force. Some of the ranges had fires, which made the contestants at least comfortable, even if they did not win prizes. The Healdmoor range had a big crowd all day and some fine shooting was done. The grand prize match on a Creedmoor target at 200yds. not only brought good shots from Philadelphia and the surrounding counties, but some excellent scores were made. The four cash prizes were won in the order named, the winners making the following scores:

G W Coulsion, Philadelphia	545451—24	555441—24—48
T F Carlin, Philadelphia	545141—23	553151—23—46

(Allowed one point for military rifles).

H B Seeds	44554—22	54445—22—44
J B Bell	55445—23	44444—20—43

The beginners' popular match at 100yds, was won by G. F. Smith with 23 out of a possible 25; P. J. Graw, 22, second; William Lawton, 21, third; L. S. Bullock, 20, fourth. The bullseye match for a shotgun was uninished. The Wilmington Rifle Club had a successful and pleasant shoot at its range near the middle depot. Some of the best shooting ever done by the members was performed.

WORCESTER, Mass., Dec. 29.—The members of the Sportsmen's Club had a meet this week at Broad Meadow Range. The light was bad. The military rifle was used in the Creedmoor match, the sportsmen's rifles in the decimal match. The distance in each was 200yds. The results in detail were as follows:

Creedmoor Target.

C S Macomber	4343544534—39	4334545444—40	4435444345—40—119
James Early	4454444454—42	3444445545—41	5455434554—41—127
M R Morgan	4544445544—43	5554545545—42	3453554445—42—127
E R Shumway	4544444443—40	4545455445—40	4444444444—40—120
A C White	4455455445—45	4455555444—45	5454544555—46—136

Decimal Target.

A C White	8	9	9	6	5	10	10	5	8	9—82
	9	9	9	7	9	6	7	9	10	9—86—168
J Brown	9	10	7	9	7	10	9	8	8	4—81

	6	7	9	8	5	8	10	6	5	10—74—137

LAWRENCE, Mass.—There was a good attendance of riflemen at the range of the Lawrence Rifle Club, Dec. 26. It was a good day for shooting and some fine scores were made, Standard target, 200yds., off-hand:

C M Hill	9	9	10	8	8	8	9	10	10	10—91
O M Jewell	9	6	9	10	8	8	9	10	10	8—87
J W Bean	10	7	10	8	8	10	10	8	6	9—86
Wm Fisher	10	6	7	7	7	10	7	9	10	9—82
A D Elliott	9	10	7	8	8	7	8	7	10	6—80
E H Archibald	10	10	5	6	9	9	6	9	10	6—80
H P Simpson	6	7	9	10	6	6	9	4	9	10—76
H Preston	10	5	6	10	8	8	6	8	4	7—75
H Rowell	8	7	6	5	10	8	6	7	8	9—74
C Frost (mill)	8	8	8	5	6	6	7	8	10	7—73
A A Philbrick	10	5	7	6	8	7	7	9	5	7—71
M Beal	10	7	10	7	6	7	5	7	8	8—69

Saturday, Dec. 31, was also a fine day and Mr. Hill succeeded in rolling up a score which is seldom beaten:

C M Hill	7	10	10	10	8	9	10	10	10	10—94
O M Jewell	8	10	8	9	8	9	10	9	8	6—85
J W Bean	9	10	6	10	10	10	8	7	5	6—81
E H Archibald	8	9	10	7	9	9	4	6	7	6—75

GARDNER, Mass., Dec. 29.—At the last meet of the Gardner Rifle Club, at Hackmatack Range, the totals of the two scores were as follows:

G F Ellsworth	82	82—164	O S Leland	74	72—146
C N Edgell	80	82—162	J C Crabtree	78	66—144
G R Warfield	75	84—159	D E Warfield	61	60—121
F E Nichols	80	76—156	J N Dodge (with rev.)	84	79—163
A E Knowlton	74	75—149			

HAVERHILL, Mass., Rifle Club, Dec. 31, 200yds., off-hand, standard target:

A Edgerly	7	5	10	9	8	9	10	9	8	8—83
H E Tuck	10	10	4	10	9	6	9	9	9	7—83
J Busfield	6	9	10	8	9	7	6	9	7	10—81
J F Brown	7	9	5	9	7	7	7	7	8	5—71
C Wright	5	6	9	8	7	9	6	10	6	5—71
F Merrill	10	5	8	5	9	5	7	5	4	9—67

NEWARK, Dec. 27.—The Essex County Amateur Rifle Association met this evening at the J. Magory Range, 84 Springfield avenue. The five clubs were well represented. A committee consisting of L. Voorhees, J. Magory, Benjamin Rist, Godfrey Snellen and Louis Smith was appointed to purchase a trophy for the coming tournament. The matches, numbering eight, will continue during the winter at different ranges, both in Newark and Bloomfield. After the transaction of other business the association committee held a match. The teams were as follows: Snellen Team—F. A. Freienseiner, Voorhees, Speer, Smith and Akers. Score, 288. Dietz Team—McCraith, Joithe, Raab, Magory and Rist. Score, 281. The sides were evenly matched, and kept well together until near the last round.

THE EUREKA GUN CLUB, of New York, held its annual meeting Dec. 8, and the following officers were chosen for the season of 1888: Franklin Ring, Pres.; Charles H. Swindell, Vice-Pres.; Ezra D. Strope, Sec.-Treas.; Abram Quick, Cor.-Sec.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FORRESTON, Ill., Dec. 24.—A shooting match was held here to-day. The day was fair but a little too cold for much of a turnout. Live birds, ground traps, one barrel:

Phillips	11-01—4	McCoy	11000—2
Brown	10001—2	Hiteman	10101—3
Kline	11110—4		

Phillips won, killing 2 straight, Kline failing on second, Brown third.

Second match, conditions same:

Phillips	00111—3	Kline	11101—4
B Brown	00011—3	J Brown	00111—3
Hiteman	10010—2	Wolf	11111—5
McCoy	00100—1		

Tie for third, miss and out: Phillips 2, B. Brown 2, J. Brown 1. Phillips and Brown divided.

Third match, same conditions:

Phillips	10011—4	Wolf	00011—2
B Brown	01010—2	J Hiteman	01110—3
S Hiteman	01010—2	Kline	11111—5

For second Hiteman missed his first, Phillips killing his and winning. For third: B. Brown 4, S. Hiteman 2, Wolf 5. Another match will take place soon, when better scores are expected. A number of our sportsmen here still cling to the old muzzleloader, and it is not an uncommon thing to find one of those old relics, the army musket, at a live-pigeon shoot.—H. A. K.

CINCINNATI, Dec. 22.—Will H. Jackson, a well-known trapshot of Level, Ohio, won the champion expert medal at the Tri-State contest to-day. A nasty wind prevailed throughout the shoot, which bothered all the shooters more or less, and though it was something of a surprise, it is conceded by all that the gentleman won entirely on his merits. Merrick, of Bethel, Ohio, was the winner in the amateur class, and, though being a gentleman some sixty years of age, showed the youngsters in this race that his hand and eye had not lost their cunning. The birds used were the new lark, and it is an established fact that they are swift flying, as well as easily manipulated. The champions, Bandle and Winston, of whom so much was expected, did not show up in their accustomed form, and as a consequence several of their friends were not troubled with the "change," financially or atmospherically. The shooting, fifty single larks, Ohio State Trap-Shooting League rules governing:

WELLINGTON, Mass., Dec. 31.—There was a good attendance at the grounds of the Wellington Club to-day. The merchandise match, which was opened last September, for prizes consisting of a Winchester repeating rifle, oil painting and a Belcher loader, was closed. Swift took the first, Maguire the second and Snow the third. The usual sweepstake matches were shot.

NEWARK TRAP EVENTS.—Chas. Clanson, Henry Grael and Henry Schroeder, of the Montgomrry Shooting Club, had a match at 25 birds, single traps, 38yds., on the Frelinghuysen avenue grounds Monday, Dec. 26, and Schroeder killed 17, Clarkson 15 and Grael 13.... Chas. M. Hedden, of this city, and John Williams, of Orange, shot a 25 bird match at Erb's on Tuesday, Dec. 27. The match was for $100 a side, at 30yds. rise. Hedden was the winner, killing 18 to Williams's 17. Frank Clars, of Pine Brook, was the referee.... R. Heber Breinthall on Dec. 26 won the cup which the South Side Gun Club won from the Essex County Gun Association, on the first shoot he tied with R. Hunt, but beat him on the shoot-off.... The West Newark Gun Club held its annual Christmas shoot on Monday, Dec. 26, at Martin Adelmann's Hotel. A delegation was present from the Woodside Gun Club. The first event on the programme was a live bird shoot for members and non-members. Several sweepstakes at clays and black bats were afterward indulged in. After lunch sweepstake shooting at clays and bats was resumed. The day was closed with a shoot for prizes. There were 15 entries, and the contest was for 6 prizes. Four of the prizes were secured by members of the West Newark Club, and two by members of the Woodside Club.

BROOKLYN, Dec. 29.—The Amersfoort Athletic Club, of Flatlands, had a pigeon shoot for a gold medal on its grounds this morning. Fourteen members faced the swings, but owing to the coldness of the weather indifferent shooting was shown. Mr. G. S. K. Remsen won the gold medal. The result was as follows at 20 birds:

D Remsen	9	P G Kouwenhoven	6
F W Bergen	6	J Van Wyck	6
C De Groot	5	A V Suydam	4
S Van Wyck	7	J D Remsen	5
G S K Remsen	11	W D Ryder	5
J Ryder	6	Geo E Van Sicklen	4
W K Remsen	6	W K Kouwenhoven	9

Scorer, Capt. R. Remsen; referee, Geo. K. Van Wyck. To-day the Hit and Miss Gun Club, of New Lots, shot a pigeon match with the Liver Gun Club, of Flatlands. The result of the match was as follows:

Hit and Miss.		Liver Gun Club.	
J Bennett	16	J Van Wyck	16
J H Lott	16	F W Bergen	9
J Vandeveer	9	J W Ryder	8
P Clapp	8	W H Ryder	7
A V Wyckoff	4	A V Suydam	5
A L Suydam	0—53	A H Suydam	4—49

PELHAM, N. Y., Jan. 2.—The Country Club, at its house here, entertained its members and guests very pleasantly to-day. The hall and billiard room of the handsome old mansion were decorated with Christmas green, and to those who did not care to face the rather chilly atmosphere on the pigeon ground were given a very cheering warmth, as well as the benefit of a bountiful cellar and larder. Out of doors, nowever, the banging of shotguns proved the manner in which many enthusiasts were passing their holiday. On the pigeon ground the trap was in constant use, both for the two handicap prize matches which had been annouuced for the day and for impromptu sweepstakes, which were continued until the ground froze and the sun went down. Over 400 birds were shot at and some of the shooting was remarkably good. The first match of the day was at 10 live birds, handicap rise, the winner to receive a handsome silver flask, the gift of C. O. Iselin. There were 22 entries in this match, and W. H. Sands and P. H. Adee tied for first place, each having missed but 1 bird out of the 10. On the shoot-off Adee won, Sands missing his next bird. The second match, under the same conditions, was for a subscription cup. There were 33 entries, and Frank Dunning won, killing every bird. E. C. Potter was second. J. L. Mott, jr., has presented the club with a very handsome cup to be shot for on Washington's birthday.

LONG BRANCH.—On Tuesday, Dec. 29, arrangements were made to hold one of the biggest pigeon shooting tournaments ever held in this country. The shooting will take place here, beginning Feb. 7. Phil. Daly, of Long Branch, gave a purse of $1,500 to be divided into three prizes, of $1,000, $300 and $200. Three thousand live pigeons will be on hand when the shooting begins.

MATCH at 23 Lockport bats, 18yds., 5 screened traps:

Buckellew	01111101111111111001111—19— 4
Bockes	11110111110110011111111—19— 4
Thomas	10010100111011001001001111—13—13
Levengston	10011111010011101111111—17— 6

Each contestant who broke his last 3 straight donated to Thomas 1 bat, giving him 26 to 23 chance to come up.—BUCK.

EASTON, Pa., Dec. 26.—The Easton Gun Club held a large meeting to-day. Messrs. Kleinz, of Pennsylvania, and Graham, of England, shot their double race, the conditions of which were 25 birds each, Hurlingham rules, Kleinz to use 10-gauge gun and stand 33yds., Graham 12-gauge, 28yds., 25 birds each, Long Island rules, Kleinz to stand 29yds., Graham 24yds.; total score in both matches to count; race to be for $150 a side, play or pay:

First Match.

Kleinz.....2112011210221111122202 2—22
Graham.....1110211211121120112111 01—22

Second Match.

Kleinz.....11011111111010011111 1011—20
Graham.....11111111111111101111 1111—24

Graham thus winning by 4 birds on the total score. Kleinz's shooting, according to Long Island rules, was not up to his usual standard, while Graham's was particularly good. Previous to the double race between J. F. Kleinz, champion of Pennsylvania, and Wm. Graham, champion of England, a sweepstake at live birds, open to Easton Club members and visiting trap shots, was arranged, and George Givens "opened the ball" by making the first kill:

G Givens	4	Jacob Young	5
H W Cooley	4	F Bean	4
J F Kleinz	5	J Sommers	3
H Sage	3	H Kinsey	2
W Graham	4	C Borcaw	4
G Wilhelm	3	F Davis	3
J Pascoe	1	A Post	5
H Dyc	4	W N Seitz	3
J Young	3	J E Ebner	3
F R Sage	5		

Ties divided.

DAYTON, Ohio, Jan. 2.—The pigeon match for a purse of $500 between Captain Bogardus and J. L. Winston began here at 3 o'clock to-day, but was stopped by darkness when only half shot. The conditions were 100 tame pigeons each, 5 traps, 30yds. rise and 80yds. boundary. Bogardus used a 7½lb. 12-gauge Scott gun; Winston used a 9½lb. 10-gauge Smith. W. L. Colville, of St. Louis, was the referee. Both men had shot at fifty pigeons when darkness stopped the match.

The morning was occupied in the contest between Al. Baudle, of Cincinnati, and Rolla B. Heikes, of Dayton, which was 100 birds each, $100 a side, 5 traps, 30yds. rise, 80yds. boundary. It resulted in a victory for Heikes, he winning by a score of 76 to 75.

Jan. 3.—The Bogardus—Winston match was concluded this afternoon. Winston lost by allowing his 49th bird to get beyond the boundary before it dropped. The score stood, Bogardus 82, Winston 81.

NEWARK, Jan. 2.—There were nearly a thousand persons present on Erb's Grounds, Newark, this afternoon, to see the long talked of pigeon match between Frank Class, of Pine Brook, N. J., and G. Thompson, of Yonkers, N. Y. The stakes were $500. The original agreement called for 100 birds a side, but when the men came on the grounds they decided to shoot at 50 each. The conditions governing the match were 30yds. rise, 5 traps, 80yds. boundary; two barrels and Hurlingham rules, barring restrictions as to weights and gauge of guns. The match began at one o'clock, and occupied an hour and three-quarters. The birds were all strong flyers and the shooting very clean and good. Although Class was made the favorite in the betting, owing to his many excellent performances of late, Thompson came out the winner by 3 birds, killing 44 out of his 50, while the Jerseyman only killed 41. The score was as follows:

G Thompson.....11211011211211211021222102111122210111 1—44
Frank Class.....11121010220221102111102211111112020210111 11222201—41

Referee, John Erb, of Newark. The rest of the afternoon was spent in shooting sweepstakes at live birds.

A NEW SHOOTING GROUND.—Mr. Wm. McDowell, the genial gunsmith of Toronto, has a project on hand for the establishment of shooting grounds in the city after the fashion of those at Notting Hill and Hurlingham, in London. As he says, at present sportsmen are being driven from one part of the city to another to enjoy a pigeon shoot, and have no definite abiding place. With five gun clubs in the city, having 500 members between them, Mr. McDowell justly thinks that well-managed shooting grounds should prove a good investment.

Canoeing.

Address all communications to the Forest and Stream Pub. Co.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON, } Albany, N. Y
Secretary-Treasurer: F. L. MIX, }
Vice-Com. *Rear-Com.* *Purser.*
Central Div., Henry Stanton...R. W. Bailey.....E. W. Brown, 146 Fleway, N.Y.
Eastern Div., L. G. Jones.....Geo. M. Barney.....W. B. Davidson, Hartford.
N'thern Div., A. T. McGachen. W. G. McKendrick. S. Britton, Lindsay, Can.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year ($1.00). Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Secy-Treas. will be forwarded by him to the proper Division.

Persons residing in the Central Division wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

CRUISING CANOES AT THE MEET.

Editor Forest and Stream:

It is easy to see what Mr. MacKendrick is aiming at in a general way, he is raising the cry against racers and in favor of cruisers and cruising, that we have so often heard; but from what he has said thus far I am unable to determine the specific evils which he is complaining of, or the remedies he would advise. He does specify the abolition of the 75ft. limit race, but offers nothing in its place; for the rest, barring the very good recommendation of prizes for cruising gear, his criticisms are merely general. The whole tenor of his letters is against the "cranky machines," Pecowsic and her kind; and he suggests rules that would debar these boats. I am no friend or advocate of Pecowsic, but it seems to me that Mr. MacKendrick, beyond some assertions, has proved no case against these boats, and until this is done it would be very unfair to legislate in any way against them. It may be that they are dangerous and cranky machines, and that no honest, all-round boat can hope to beat them, but before we pronounce them so there are some points to be considered.

Mr. MacKendrick lays the entire merit for Pecowsic's success to her limited dimensions and fine lines, making her a racing machine. Now if he is familiar with Pecowsic and Lacowsic and their owners, he must know that these two boats represent an amount of careful study and experiment that has been expended on very few other canoes in the Association. For four or five years the Messrs. Barney have experimented not only with models, but with sails and fittings, until to-day their two boats are the most perfectly fitted for racing of any canoes in the Association, bar none. Every detail is worked out with the utmost care, smoothness of bottom, thin plate board of polished brass, beautifully made sails of extreme lightness, special steering gear and fittings of the best form. The boats, too, are well sailed.

In spite of all this, to those who have watched the racing it does not seem certain that any one of a dozen boats out of the fleet could not be made to push Pecowsic very hard in most races, certainly to have a good show in the record. Rough hulls, clumsy folding boards or chunks of rough boiler plate, loose, baggy sails and slipshod fittings are found in nearly all the would-be racers which seek to beat these two perfectly fitted boats. Notus and Vesper have been the best of Pecowsic's rivals, and both have given her and her sister some hard races. Until other canoes are fitted for races with the care, skill and ingenuity displayed by Messrs. Barney it would be very unfair to pass any rule that would hamper these boats, in fact, it is a very awkward thing in any case to make rules that bear hard on a winning boat; it looks as if she could not be beaten by fair sailing.

In the case of Pecowsic there are natural limitations, which do not seem to have occurred to Mr. MacKendrick. In one race last year Pecowsic started with too little sail and Lacowsic with too much, and as no extra sails were carried, and it would probably have taken too much time to stop and shift in any case, one boat was luffing and begging in the puffs, while her sister was wishing for more wind. All this was to the advantage of the boat with reefable sails, but further, the small, light Pecowsic was obliged to luff up and bail out at intervals, while in one case she capsized. All this shows the chances which such boats must take compared with the abler craft. I understand further that in spite of Pecowsic's success as a racer her owner has this winter built a bulkier canoe, though I am unable to give details; this fact, if correct, proves much.

But Pecowsic and Lacowsic were not the only small canoes at the meet, there were others of the same build and of far better model and workmanship than the original; did any one hear of them as winners? I think I am correct in stating that the fleet at the last two meets showed a large number of well-modeled canoes of good proportions, 15×30 and 31, but nearly every one badly handicapped by lack of care and preparation or by bad fittings. Now if Pecowsic and Lacowsic be ruled out on account of their dimensions, what is to prevent their owners going into slightly larger craft and fitting them up as thoroughly as the boats were, in which case the rest of the fleet will still be astern, and next year we shall hear the same tune with new words about the well-rigged and fitted canoe called the racing machine, defeating the "honest cruiser," who comes to camp with a hull as rough as the side of a barn, and finishes the rigging of his new experimental sail on the morning of the race.

I am for the cruiser every time, but let us have fair play for the men who put brains and time into racing craft for the benefit of all canoedledum. It may be that Pecowsic is as Mr. MacKendrick believes, but we must at least acknowledge a heavy debt to her and her owner for much that we have learned from them.

Mr. MacKendrick suggests that a race with crews inside, in the "early English" fashion, would be an improvement over the 75ft. limit, but there are few cruisers, to say nothing of racers, who would be willing to give up the great advantage of the deck position, for the very doubtful advantages of an inside seat, and I am not sure that even here, Pecowsic would not have the best of the larger boats with more canvas. I have heard of a narrow, cranky little canoe named Elfin, with two baby leg-o'-muttons, that in old times used to warm the fleet of a certain canoe club, ballast and deck seat notwithstanding. Her crew sat below, I doubt whether he could have stayed on her deck.

Mr. MacKendrick speaks of the success of the meet in England this year, a cruising meet; but if I am correctly informed the camp included a small party, twenty or twenty-five only, the ladies being on a sailing yacht, where some of the cooking is done. Such a meet is easily be a success, but it is a very different matter to manage a party of one hundred and fifty, or more, with some eager and able to turn out at 6 o'clock and make thirty miles in a day, while others wish to turn out at 11 A. M. and dawdle over ten or twelve miles.

There is nothing of as much benefit to a club as a sturdy, conscientious kicker, and I think that I understand and appreciate Mr. MacKendrick's motive; the advancement of cruising; but I submit that he has not yet made his case plain against the racers, he has specified neither the exact evils nor their remedy.

CRUISER.

Editor Forest and Stream:

I have read the FOREST AND STREAM and the *Canoeist* faithfully these many moons, and for one am tired of growls from disgruntled racers and consequently would-be cruisers because racing men will not build boats with a bilge like a wash boiler and use old-fashioned lug sails with total area of something like 50ft. Most of these shots are directed toward Mr. Barney, but he has, I believe, never acknowledged a hit in any way, either on himself or his boats. As I happen to know something of both I take it upon myself to speak in their defense.

First, the statement, either open or covert, that Pecowsic is a "racing machine" is all humbug, for her owner uses her for general all-round sailing on a river where any one who has ever raced or sailed will acknowledge that sailing is no child's play, the winds being very variable and puffy and a big sea being kicked up in a few minutes; in fact the very place where the much-lauded cruising sail is the one to be desired. Mr. Barney and his son are out nearly every day during the season, but I have yet to hear of either being capsized. Last Fourth of July, with the wind blowing a gale, a race started with seven canoes crossing the line, and only two came home, Pecowsic leading as usual, the others having been blown over down the course.

Second, there are in the same club two other canoes of Pecowsic model, an Cid and Volunteer, both of which are used by their owners as regular cruising boats, going under sail or paddle many miles up and down the river, carrying sometimes a passenger and duffle enough for any ordinary camp usage just as safely and much more easily than some other boats in the same club which are built with the above-mentioned wash-boiler lines. I owned a boat of this class last season, a new model of the "cruising" type, and conceded by many to be the best all-around boat; but by actual comparison she proved herself much less seaworthy than Pecowsic, and not so dry in choppy water.

All the success of Pecowsic as a racing boat is not due, however, to her fine lines and simple but perfectly working rig. There were at the last A. C. A. meet at Bow Arrow Point several canoes of as good model and fine lines, and which, had they had as smooth hulls as simple a set of sails, and, most important of all, been as well handled, would have made it hot for that famous boat. It is easy, after one has been outsailed by the Barneys, to go home, and, with pipe in mouth and pen in hand, think up pungent articles for the canoeing press, without giving credit where it is justly due, without taking into consideration the stimulus which the successes of Mr. Barney and his boats have added to canoeing and canoe building all over the world, without thinking of the hundreds of dollars, months of time and many failures which have all combined to evolve the present Pecowsic.

If the disgruntled want Mr. Barney's scalp, why don't they come and take it? There are Pecowsic models without number, her sails are measured many times at each meet, nothing about her is patented, and her owner is always ready and willing to show with kindly interest, anything connected with his boats. Canoe racing has come to stay, as we all know, and the term racing implies speed, so let us have boats that can show a certain amount of it, are still seaworthy, (more so in fact than ordinary cruisers) and easy to handle under sails or paddle. But few racing machines have been produced under the present A. C. A. rules and those have proved themselves unable to cope with Pecowsic.

Perhaps the purely cruising interest has been neglected at the annual meets, but the regatta committee have done their best, and it is so much easier to criticise others than to suggest new methods. Commodore Gibson's manly letter shows that he is ready and willing to do anything in his power to aid the cruisers; so let them act and they will find ready support. But let the men who prefer racing, enjoy it under rules with which they are evidently satisfied. If these kickers prefer cruising in big, pot-bellied boats to cruising in good clean-modeled ones, it is their own lookout. Only let them not be dissatisfied when they find they cannot bring every one to their own terms.

PADDLE.

A SPRING CRUISE.

THE Queen's birthday being a public holiday, the members of the Ottawa C. C. thought it a good opportunity for a club cruise. It was therefore arranged that the members should meet at the club canoe house on the evening before at half past four. Some of the members, however, preferred to start earlier in the day, and it was agreed that we should meet at the foot of the Leonard Islands about fifteen miles from town, camp there and paddle on next day to Thurso, another fifteen miles, returning to town by the S. S. Empress, which passes Thurso about 3 P. M. When the time came it was noticed that there was a thunder storm rolling down the Ottawa Valley; but canoeists always trust to luck in these matters, so off we started in seven canoes. Arriving at the light house, seven miles down, a little after 6, we determined to land and take a bite to soothe the wolf within. This we did at a boat, where we found a French Canadian raftsman in a palatial hut over which was a sign reading "Queen's Hotel." During the summer enormous rafts of square timber are towed down the Ottawa to Quebec, where the timber is shipped to all parts of the world. These rafts require a large crew to manage them, and they live in little huts that look like dog kennels. Over the doors of these they amuse themselves by printing grandiloquent titles, "The Palace Hotel," and so forth. On a clear night a raft is a very picturesque object, bright fires are kept burning all night on hearths of stone and earth, and the light-hearted raftsmen while away the hours with fiddle and song.

As the weather began to grow more threatening it was deemed advisable to put for camp, and off we started at full speed. The thunder storm came rapidly up, and I never saw a grander sight; the purple and leaden-colored clouds rolled over the blue sky, spreading out from the Laurentian Hills that bound the river on the north. Here and there the blood-red and golden rays of the setting sun bursting through the dark clouds would form fiery caverns that would have delighted the weird soul of Dantè. But anticipations of wet jackets and damp beds scattered us in headlong flight, three or four of us dashed into the inner channel through the Leonard Islands, a couple kept to the main river and took refuge in a house; I am glad to say they were punished for it by the mosquitoes, and slept not a wink. Several times slight showers of heavy drops fell, and several times we hailed what we thought were the camp-fires of our comrades, but which proved to be fishermen's camps, fishing with night line and net in open defiance of the law.

At last we struck the right camp, and two of us managed to get up our tent before the rain fell in torrents. The veteran arrived next, and he took refuge in one of the other tents till the first fury of the storm was passed, as he depended on a canoe tent. The captain arrived last, he was soaked through and through, but no effort of his subordinates could induce him to change. He slept in damp clothes, and, what was still more strange, was not a whit the worse for it. After supper we collected in one of the larger tents and told stories and sang songs. We hadn't a mosquito all night, for we were encamped on a sand spit at the lower end of one of the islands, and the wind blowing across kept the vermin off.

Next morning we were off again, five of the canoes under canvas, the rest under spruce. The sailors had a dead beat down the river. The veteran, who always will be in the fashion, had his sails dyed a crushed strawberry color, while the Nixie was clad in old gold. The other three were old-fashioned, and stuck to the white wings. At Cumberland wharf we found the commodore, who had missed the rendezvous the day before, and our two stragglers.

After a short rest we embarked again, bound for the Commodore's shooting box at Campbell's Bay for lunch. At lunch there was a great gathering of the clans, the canoeists all told numbering twenty-two. The commodore decided to stay over and take the steamer at Rockland just opposite, but the rest of us went to Thurso. The wharf here had been washed away by the spring freshet, so we were obliged to embark on the Mouche de Feu, a pre-adamite ferryboat, and from her we boarded the Empress, commanded by the club's good friend Captain Bowie. We gave our commodore three times three when we picked him up at Rockland, and spent the rest of our time on the very enjoyable trip up the river in respectfully listening to the commodore and the captain discussing the changes that time and sawdust had wrought upon the river, the fish and the game.

I may explain that the enormous mills at the Chaudiere and Rideau Falls are allowed to throw their sawdust into the river, and at most if not at all of the mills there are machines which tear up edgings and refuse into chips. The sawdust and chips, after floating about for a time, sink and form enormous banks, said to be in places 40ft. thick. Of course the lumber trade is an enormous industry, and one that should not be hampered by any unnecessary restrictions; but one cannot help regretting that no means can be found to prevent the destruction of the river and the killing of all the fish. Whitefish are still caught, but they are all full of intestinal worms, rendering them useless for food. The decomposition of the sawdust creates gas, which blows up the water as the explosion of a submarine mine would do. Sometimes it has been violent enough to blow up the thick ice during winter. Of course one hears of narrow escapes, but I never heard of an accident resulting from these explosions. The worst thing I know about them is the smell, which resembles rotten eggs.

ALCYONE.

A CLASS B RACING AND CRUISING CANOE.

THE wide difference of opinion over details among men who are thoroughly united on one main issue, is nowhere better illustrated than by the warfare that springs up between canoeists each winter after the sailing is suspended. The ordinary canoeist is naturally a peaceable and sociable animal when at his usual pursuits, racing, cruising and camping; but take away his paddle and salt or fresh water, and give him a pen and a little ink, and at once his whole nature changes, he drops his peaceful demeanor, and charges furiously on the friend whose boat differs from his own pet craft by a quarter of an inch. In this battle of the various schools of canoeing thought, the man who sails a Class A canoe looks down on the paddler in a Rob Roy, and fiercely attacks the limited dimensions of the latter craft. Wet, narrow, cranky, uncomfortable, these adjectives are piled on the hapless Rob Roy in weight enough to sink her; and her owner can only reply that he is a true canoeist, a follower of MacGregor. As soon as a Class B canoe comes in sight the battle changes, the Class A boat now has all she can do to defend herself from just such an attack as she lately made on the Rob Roy, as pretty much the same charges are made by the skipper who believes in 31in. of beam against the 28in. man, as the latter makes against the 26in. By the time that a "wide canoe," *i. e.*, 34 to 36in. has arrived, a canoe yawl or two sailed up, and a few sneakboxes, Barnegat cruisers, duckers, tuckups and other small craft have anchored within fighting range, the battle becomes hot enough to last until spring, even without the help of "Deja" and "Red Jacket," those famous free lances. Fortunately no one is ever injured in these furious wars, and all are as good friends as ever when they meet next year afloat, and the discussion serves each year to bring out many good points, and to hasten the improvement of all the boats by general criticism and an interchange of ideas.

The question at issue just now is between the recognized canoes of Classes A and B; and the lines here given of a canoe of the latter class will prove specially interesting in this connection. This design was made in 1883 for Mr. Wm. Whitlock of New York by Mr. John Hyslop, and from it the well known Guenn was built in the winter of '83-4. Unfortunately she was too large for the A. C. A. limits, and in order to race she had to be shortened, drawn in and re-decked after being in use for some time, which altered the lines materially. Further than this, she was heavily built, with a large keel and a fin centerboard, thus handicapping her in racing. In spite of these disadvantages she has shown good speed at times and there is every reason to believe that the model is a fast one, though not fairly tested in the Guenn.

In the present design we have preserved the outlines of the hull intact, but the raking sternpost of the Guenn has been replaced by a straight one, in accordance with the latest practice, and the exterior keel and the deep deadwood aft have also been cut away. We propose to give the scantling for a light but strong cruising boat, and with the model and a suitable rig she should prove a winner in the races as well. The hull is large and powerful and well fitted to carry a large load of stores and gear, or a heavy board and some ballast for racing. Her place should be about New York and on broad waters, rather than on the upper Hudson and the Connecticut; and she will undoubtedly make an excellent all-around boat and an able racer as well, even though she should prove unable to master the Pecowsics in all weathers. The design is the first that Mr. Hyslop had ever made for a canoe, a class of boat with which he was not familiar, and the dimensions and leading particulars were given by Mr. Whitlock, the designer being responsible only for the lines of the model.

It will be noticed that the drawing measures but 30⅝in. extreme beam, with planking. If the moulds are carefully made to this size the boat when planked may be allowed to spread a little, bringing her to 31in., leaving ⅛in. inside the A. C. A. limit before the deck is put on. This, as described in "Canoe and Boat Building," is better than building to the exact width, as the boat will always spread a little. At the same time it would be possible to build a 30in. boat from the same moulds, using a little care in drawing the sides together before fimbering, and fastening them well until deck frame is in, but it is always best to build a light boat narrower rather than wider than she is to be, and then allow her to spread a little. If a smaller boat is desired the design may be cut down in depth, taking 2in. off the sheer all around without impairing its integrity. Such a boat would of course need no ballast, and would be a very fair match for Notus, Vesper and others of that class. The line shown for crown of deck is simply drawn in with a batten to make a fair sweep, with a crown of 2in. at midships. This will not allow one beam mould to be used throughout, as the round of the deck beams varies at each station, but it will make a handsome deck. The dimensions are:

Length, extreme		15ft.
Beam, extreme		2ft. 7in.
Depth, amidships		1ft. 0¼in.
Sheer	Bow	6¼in.
	Stern	2¼in.
Draft, including keel		6½in.
Displacement, to above draft		535lbs.
	Per inch immersion	130lbs.
Area, midship section		.965 sq. ft.
	Loadline plane	23.88 sq. ft.
	Lateral plane	7.33 sq. ft.
C. L. R. from fore side of stem		7ft. 9¼in.

Waterlines, 2in. apart; stations, 1ft. apart.

THE BRITISH CANOE ASSOCIATION.—Our British cousins, some of whom criticised the early efforts of the founders of the A. C. A., are now having a little experience of their own in the same direction. Apparently it is not thus far all plain sailing, but they have struck several snags, not the least of which is the small boat owner. We, of the A. C. A., have been through all this in the past and can fully sympathize with them, and in wishing a Happy New Year to the new British Canoe Association we include a speedy settling of all such vexed questions.

THE NEW DIVISION.—On Jan. 3 a meeting was held in New York pursuant to the call issued in the FOREST AND STREAM, at which it was resolved that application be made to the A. C. A. for recognition as a new division, to be known as the Atlantic Division, the boundaries being those already published. The officers elected were, Vice-Com., Henry Stanton, New York; Rear-Com., A. S. Pennington, Paterson, N. J.; Purser, E. W. Brown, New York; Ex. Com., T. S. Westcott, Philadelphia.

NEW YORK C. C.—The annual meeting was held on Dec. 30, the old board of officers being re-elected: Com., C. K. Munroe; Vice-Com., R. B. Burchard; Sec.-Treas., C. J. Stevens; Executive Committee, W. P. Stephens, B. H. Nadal. Com. Munroe sailed on Dec. 31 for Florida to return to New York in the spring. Messrs. Munroe, Drake and Nadal constitute the regatta committee, and Burchard, Platt and Power the house committee. The spring regatta will be held on June 16.

A. C. A. MEMBERSHIP.—Northern Division.—Mr. E. Easton, Lindsay, Ont., is proposed for membership.

THE BOYCOTT DEED OF GIFT.

AT the time when the new deed of gift was first made public it was taken up hastily by the American press, and commented upon favorably by nearly all. At first the FOREST AND STREAM stood alone in its denunciation of the document, save for one New York paper, the *World*, which also characterized the whole proceeding as unfair and unsportsmanlike. As public opinion has made itself more loudly heard, some of our contemporaries have wakened up to the real state of the case, and have now even gone so far as to demand another revision of the much revised and doctored deed.

The Boston papers, however, have come to the support of the New York Y. C., and in answer to these adverse criticisms the *Herald* brings forward Messrs. Paine, Forbes and Burgess to defend the new deed, as follows:

"Gen. Paine and Commodore Forbes enjoy too high a reputation for fair play to sit idly by and allow a deed of gift to be so framed, the terms of which were unsportsmanlike. Gen. Paine has built two vessels himself, and he, with Commodore Forbes and others, built the Puritan. Neither of them is afraid to race, and they have never sought to take refuge on technical grounds. The writer has interviewed them on the terms of the new deed of gift, and both without any hesitation said that the terms of the new deed are all right, and the changes made were demanded, so that American yachtsmen would have an even chance with those on the other side, and they want no more nor no less than their opponents. They both believe that the committee was composed of honorable, fair-minded men, and that their work in framing the new deed of gift is in accordance with their high character.

"As Mr. G. L. Watson has expressed himself unfavorably on the changes in the new deed of gift, the writer called on Mr. Edward Burgess yesterday with a view of obtaining his ideas about the new deed of gift.

"'What do you think of the new deed of gift?' was asked.

"'It is all right; needs no defence. The *London Field* says that Gen. Paine had six months advantage over the Thistle people. This is not so, it is the other way. None of us knew the dimensions of the Thistle until the last moment, and then only had six months to build, equip and work up the Volunteer for the races. The Thistle people had the advantage of having had their yacht launched before the Volunteer was started. The truth is that Gen. Paine, immediately after accepting the challenge of the English cutter Arrow for the Queen's cup, decided to build a steel sloop 90ft. waterline, to meet the Thistle. She was made shorter after learning the length of the Thistle, as sent to the New York Yacht Club, so that she would be the same length as the Thistle; this does not look like taking advantage.'

"'What do you think of the 10-months' notice?'

"'If they want to come over here with a new boat, built especially to sail for the Cup, and not give us a chance to beat her, this may be their idea of sportsmanlike conduct, but it is not mine. It looks as if they wanted to take us unprepared.'"

"'What is your opinion of the clause asking for the dimensions?'

"'Advantages are now conceded to them which were not enjoyed under the old deed of gift. As it stands now, the challenge can be accepted when the dimensions are received. Under the old deed the yacht had to be built, and custom house certificate sent before the challenge could be accepted. Each side should have a chance to meet the other on even terms, and to my mind it is not fair to have the advantage all one way.'

"'Then you believe that the committee on the revision of the deed of gift acted fairly and in a sportsmanlike manner?'

"'I certainly do; such changes as they made were all in the interest of fair play, where both sides start off in the race with even chances. The inside course was abolished, two races to windward were substituted for the old courses—a great improvement. Any fair-minded man who will carefully read the provisions of the new deed of gift, must come to the conclusion that they were gotten up in the interest of fair play. If they can build a 90ft. cutter or 115ft. schooner faster than we can, the cup is theirs. Of course an agreement can be made between the parties to build a smaller vessel.'"

"Mr. Burgess has great respect for the members of the club who acted on the committee, and heartily approves of their actions."

Against the general indorsement of the deed of gift by the three gentlemen named there is the document itself, within the reach of all yachtsmen, by which they may judge for themselves of the fairness of its provisions. Further still, there is the unqualified condemnation of two foreign yacht clubs and of many American as well as foreign yachtsmen.

Looking at Mr. Burgess's defence of the deed; if correctly

reported it certainly does not make out a very strong case. The particulars as to Volunteer's design are interesting, though how she would be the same length, and with no advantage, if Thistle was designed for 85ft. and Volunteer for 85ft. 10 4-5in., is not quite clearly explained. The demand for a reasonable amount of time in which to build to meet a new boat is fair enough, though ten months seems a long period, but the other side of the question, that it leaves the designer of the challenger but a few weeks after the conclusion of one race in which to design a new boat prior to challenging, is entirely ignored in Mr. Burgess's ingenious answer. The answer to the most important question, concerning the required dimensions, has nothing at all to do with the case. Of course the old tonnage measurement is out of date and useless, and it is desirable that terms may be arranged before a yacht is completed; but it would be much more to the point to hear how Mr. Burgess would like to be tied down absolutely to a fixed length, extreme beam, waterline beam and draft, with the penalty of disqualification hanging over him if he understated them in advance or overran them when in racing trim. Still further, would he consider the terms even which compelled him to give long in advance these leading details to his adversary, but to wait in the dark until the race came off to know what the latter would bring to beat him?

We do not see that thus far the defenders of the deed, either in New York or Boston have made other than a very weak case, or that they have answered in any way the charges originally made in the FOREST AND STREAM, which may be summarized as follows: The deed of gift is illegal, in that one surviving donor has no right to alter the manifest spirit and intention of the original five donors. But further than this the new deed is evidently not his work so much as the work of others in no way associated with the donors. In the same connection there is no evidence that the action of the half dozen revisers represents in any way the majority of the seven hundred members of the New York Y. C. who were not allowed to discuss or virtually to vote on the acceptance or rejection of the proposed deed.

The deed is unfair in that it demands certain information from the challenger while giving none in return or no security that he will not be outbuilt; and it also reserves to the holders the right to substitute a length rule for the rule of the club if they so desire.

The deed is absurd, impracticable and inconsistent, in that it imposes on the challenger conditions as to building which no designer can guarantee to comply with; it confines the races to sizes of yachts never yet built, and not likely to be under any ordinary demands of yacht racing; and it nullifies the accepted racing rule of the club, by length and sail area, replacing it by a totally different rule.

The deed is obstructive and detrimental to American yachting in that it shuts out every existing yacht from competition; it confines international yacht racing to a new and special class of yachts and a few very wealthy men, and does nothing to encourage the healthy and systematic development of designing, building and racing American yachts; and, further, it has already brought discredit upon American yachtsmen and will operate to prevent the competition which for three years has wrought such good results to both sides.

Editor Forest and Stream:

Some lame attempts have been made to justify the unsportsmanlike conduct of the New York Y. C. in their recent tampering with the America Cup challenge.

Mr. Burgess attempts to defend the questionable action of the club, and in late Boston papers winds up his views with this sentence: "If they (the foreigners) can build a 90ft. cutter or 115ft. schooner faster than we can the cup is theirs."

Now, this sentence will strike all fair-minded persons as a direct confession of the utterly unsportsmanlike conditions under which the New York Y. C. seeks to maintain possession of the Cup at all hazards except those of actual racing.

As no such boats have ever existed and are not likely ever to exist, the New York Y. C. might as well have set the limit at a mile length for cutters and two miles for schooners.

The club, by insisting on dimensions which have not been built up to in the past and will not be built up to in the future, has practically withdrawn the Cup from further competition, and intrenches itself securely in its possession behind stipulations which are prohibitive and therefore unsportsmanlike, to say nothing of their entire illegality.

The original deed specifically opened the Cup to challenge by craft from thirty tons up, and under the rules of the club holding the Cup; that is with just and proper time allowance for difference in size of the competitors, a very different offer to the yachting world from the document lately promulgated.

The original deed contemplated a test between fair representatives of the yachting fleets of the world. The new modifications boycott all yachts which exist and leave the Cup open only to challenge by mythical craft having no being. Even should an occasional venture be made in accord with the dimensions insisted upon, such ventures would be but special machines contrived for a special purpose, and would not in any sense represent the national types or practices which the original deed of gift sought to bring together in friendly comparison.

Apart from the prohibitive clause here considered, the new document bristles with other unfair requisites, such as the demand for details and impossible information concerning the challenging boat, with no corresponding information or restrictions imposed upon the challenged. We are to be put in possession of the elements of the foreign craft, but vouchsafe no return in equity, nor do we agree to abide by the same length should the challenger be under 90 or 115ft.

Furthermore, though the time of notice is set down at ten months, an absurd period in itself, the notice in reality may amount to sixteen months, should the challenger, for likely enough reasons, be unable to get his papers before the New York Y. C. prior to five minutes past midnight Dec. 31, for the period of notice would carry the challenge five minutes beyond the expiration of the "season" terminating with the last of October, and could be made to stand over to the next "season," commencing May1. Sixteen months notice and all the risks of war, pestilence, famine and bankruptcy to interfere with the consummation of the race! Surely, the New York Y. C. does not realize that life is fearfully short, or it would not interpose such barriers to international racing. And this is what the club believes to be "encouraging" challenges from abroad, as the donors of the Cup expressly desired in the original deed!

But it is not worth while to discuss the various clauses in detail. The prohibitive dimensions and the abolition of time allowance, high-handed and illegal actions in themselves, have erected an impassable obstruction about the Cup and given a quietus to international racing.

The action of the New York Y. C. has been pronounced absurd, unsportsmanlike and unlawful by all good authorities. It is maintained only by a handful of interested persons and their mutual admiration circle.

It has been suggested that the club should hasten to recall the blunder of its committee. Unfortunately it is too late for any such remedy. The America Cup and the New York Y. C. have lost standing abroad. A club which, as in the case of Mr. Sweet's challenge, harps on a technicality, so that its legislation may be made retroactive, cannot be depended upon in the future, neither can foreigners be asked to keep the America Cup conditions everlastingly on tap and themselves informed by cable of the latest changes every twenty-four hours in the year.

The deed of gift has been robbed of its stability, and no matter what action may be taken in relief, the Cup cannot be reinstated in favor among yachtsmen abroad, whose conservatism and respect for established institutions naturally lead them to view with disgust the selfish, not to say panicky, manipulation which has for many years characterized the conduct of the New York Y. C. in all matters connected with the America Cup, from the time it insisted upon sailing a fleet against one vessel, then the selection of a different vessel according to the state of the weather, the then nomination of the competitor on the morning of the race, then the fluking over the club course, and finally the boycotting of all existing yachts, the denial of time allowance, and the stand-and-deliver clause as to the challenger's elements with no equity offered in return.

The New York Y. C. may derive a great deal of satisfaction from having "engineered" the Cup safely into its locker for all time, without the risk of further attack from abroad, but the public at large views with regret the odium thereby cast upon American sportsmanship and the cessation of the instructive trials which were destined to become an annual event before the New York Y. C. hauled off and lowered its colors with a lee gun.

PUBLIC OPINION.

HAULING UP DEEP YACHTS.

WE lately published a description of a method for hauling up keel yachts which brings from Lake Ontario the following account of the way in which the operation is conducted there: The water level is constant or nearly so, there being no tide. Two hardwood planks, say 3in. thick and a little wider than the keel of the yacht, each being 16 to 20ft. long, are needed. To each of these side strips are nailed, making a groove fully wide enough for the keel and preventing it running off the plank. The yacht is hauled in to the beach, the end of one plank is sunk under her forefoot and the plank is then pushed well under the middle of the boat before she takes the ground. Two guys are carried out from the masthead to posts on each side and tended by careful men, the weight of the yacht being just taken by one guy, the other a little slack. A sling is placed about the boat and the fall made fast to it, and then a strain is put on to start her up the plank. When the end of one plank is reached, the other is put in front of it, and so the work goes on. The boat may be readily shifted to any berth when once on shore. In shifting the guys ahead, the weight is taken on one while the other is being moved. When the yacht is perfectly upright no appreciable force is required to hold her, as she is balanced, but if she is allowed to heel any distance, it will require a great force on the guys to right her. For this reason the guys should be kept nearly taut all the time, to check her in case of a sudden lurch. With good posts or cleats for the guys, a deep boat may be easily and safely handled; but the strength of the support should be well looked to before a guy is shifted. Every yacht should have a hole through the fore end of keel itself for hauling up by, thus avoiding heavy strains on masts, bitts, etc.

THE TEN MONTHS LIMIT.

IN commenting on the non-arrival of a challenge for the Cup up to midnight on Dec. 31, the daily papers have nearly all fallen into the same error, as the period of grace really closed two weeks since, and a challenge received in the last week of December would insure no certainty of the races being sailed before Nov. 1. By the terms of the deed of gift it is not that a challenge must be received within ten months of the date, Nov. 1, but that all the races must be sailed prior to that date, and in order to make a certainty of this the first of the three races should be set not later than Oct. 21, or in other words the challenge must leave England by Oct. 12 or even earlier. The races are arranged for alternate days through one week, and two or three successive days of bad weather, or a mishap such as befell Genesta in '85, may so delay the races as to cover ten days for three races. As the game stops on Oct 31, no matter whether one or two races have been sailed, all challengers, should there ever be any more, must look to it that their full specifications and certificates are in the club house on Madsion avenue at least two weeks prior to the new year.

SEAWANHAKA CORINTHIAN Y. C.—The class in navigation under Captain Howard Patterson has grown to such a size that it has been divided, one part meeting every Tuesday and the other every Saturday evening. During the past two weeks the sessions have been held on Friday. On Jan. 7 the third lecture, "A Cruise Along Shore by Corinthians, with Practical Illustrations," will be given by Captain Patterson. The lecture will begin at 8:30. On Jan. 14 the first regular meeting will be held, with election of officers. The attendance at the town club house is very good, and it is becoming one of the principal yachting centers about New York.

THE NEW BURGESS FISHERMAN.—The discussion that has followed the advent of the Carrie E. Phillips, Mr. Burgess's new fishing schooner, has at last led to a challenge from her to the rest of the fishing fleet, to race over one of four courses, around Bermuda, to Cape Race and return, or one of two 100-mile courses off Boston, for a sweepstakes of $1,000 each. It seems probable that the Alice M. Stropies, of Gloucester, will accept, and possibly several others may enter.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

S. G. M.—Try the vicinity of Turner's, in Orange county, New York.

H. L. S., Philadelphia.—The address is 912 Bergen avenue, Greenville, N. J.

J. B. S., Hartford.—Tell me if the octagon rifle barrel has any advantage over the round barrel. Ans.—None.

T. M., Wheeling, W. Va.—The longer barrels will, as a rule, do better; but it is not a rule without its exceptions. For practical purposes the difference in execution is slight.

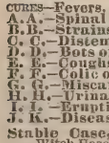
J. J. K., Philadelphia.—What is the proper outfit for tarpon fishing? Ans. A striped-bass rod, line and reel; rod 5 to 8ft., line of linen, 12 or 15 thread, 150yds. long, and a multiplying reel large enough to hold it, and a 10-0 hook. Use half a mullet for bait.

A. G. W., Melrose, Mass.—You will have some difficulty in securing the live grouse, and we think it not a profitable effort to try to restock your grouse covers. Quail have been turned out in repeated instances with success; birds for this purpose are advertised in our advertising pages.

A. A., Montreal.—At a live-bird shooting match one of the shooters came to the scratch, placed two shells in his gun (but they both fell out), closed his gun, gave the word "pull," and snapped both empty baarels at the bird; then he noticed his two shells lying at his feet; he replaced them in his gun, and as the pigeon was coming back toward him he fired and killed his bird, which had not been out of bounds at any time. Should this be scored a dead or lost bird? As we have had great arguments over this, we are very anxious to have your decision on the subject. Ans. It should be scored as a dead bird, and a well won one at that.

J. G. S.—1. The bite of a wild rabbit may be poisonous, just as the bite of a man would be under some circumstances. 2. If poisoned by a bite you should consult a doctor. 3. No, it is not lawful to hunt in close season, even if you do not intend to kill the game. 4. For live rabbits apply to Reiche & Bro., Park Row, New York.

E. D. B.—Did the bullets from the right and left barrels of the 45-caliber, double express by Bland, which you used in your trajectory test, cross or meet at a given distance from the muzzle? Was the recoil of the above-mentioned rifle very great? Can buckshot cartridges be used in a full chokebored gun, without injuring the gun in any way? Ans. 1. Yes. 2. Yes. 3. Yes, if chambered to fit the choke.



J. M. S., Stockton.—1. For the purpose you mention we recommend the 12-gauge, .45-70. 2. The drop of stock suited to you may be determined by experiment, and when ordering your gun you can give it, expressed by the distance from bottom of a straight-edge, laid on the barrels, to the top of the butt plate. 3. Have one barrel cylinder and the other choked. 5. The Ligowsky trap. 6. The guns you name are reliable arms.

J. G. W., New York. I have a tract of land within 150 miles of New York, pine forest with lakes and brooks. Can a living be made with the proper amount of diligence and capital, by raising brook or lake trout, or bass for the New York market? Ans. The information you give is too slight to base a reply on. If you want an opinion on this you should engage some fishculturist to make a personal inspection of the waters. Raising trout in inclosed waters on artificial food has not proved profitable.

F. J. Philbrook, a machinist, well known as an expert angler, made a curious discovery the other day. Mr. Philbrook lives near the water works dam, and while on his way home recently met some boys carrying three large fish, which they had shot, and which they pronounced to be codfish. The fish were so thin and wasted in flesh that Mr. Philbrook did not at first recognize the species, but he soon ascertained them to be salmon. Having bought the fish, he succeeded in inducing the boys to tell where they were captured, and later he visited the locality, where he witnessed a remarkable sight. On the Brewer side, a short distance below the dam and fishway, a small stream, locally known as Dyer Brook, comes into the main river. It is an insignificant rivulet, nearly dry a part of the year, and having its source in some swampy pastures not far back from the river. Yet some distance up this stream Mr. Philbrook found a shallow, muddy pool, literally packed full of sea salmon of mature growth. They were so frightened at his appearance that they splashed about frantically and tumbled over each other, some even jumping on to the land in their efforts to escape from their prison pen and the new danger which threatened them. Mr. Philbrook managed to secure them without injury, 16 in all, and, carefully transporting them to the river, let them loose in its waters. The fish were on the point of spawning. Their peculiar freak in ascending this narrow and shallow creek, floundering over its rocky shoals and muddy bars for such a distance, can only be accounted for, it would seem, by some serious defect in the fishway of the dam. It is a matter for the Fish Commissioners to look to.—*Bangor Commercial, Dec. 24.*

LONDON ROOKS.—While they are building and repairing their nests they are most pugnacious and thievish, as not only will they, as we have said, prevent a pair building in what may seem to the majority an unsuitable site, but they are constantly endeavoring to rob one another of their nesting materials. and woe betide the unwary pair that are rash enough to be absent from their nest at the same time; on their return they will, in all probability, find the labor of days destroyed, and nothing but the poorest foundation left of what was on their departure, probably a very short half hour before, a promising structure. Our observation leads us to believe that only the very young and inexperienced birds leave their home in company. As a rule, one bird remains on guard while its mate goes afield, and the unfortunate stay-at-home has often to fight against long odds in defence of its nest, which would, were it not stoutly defended, be torn from under it. Occasionally an enterprising pair will separate themselves from their companions and build sufficiently far from the nearest rookery to be free from molestation, though after their nest is built they in many cases, apparently finding solitude not so pleasant as they anticipated, desert it and return, no doubt in a penitent mood, to their former friends. An instance of this occurred in Kensington in 1885, when a pair of birds, no doubt from the rookery in Holland Park, built their nest in a tall plane tree not far from the parish church; but no sooner was it complete than they deserted it. All, however, are not so vacillating, and often they continue to rear their young from year to year far from any of their kind. Many cases are on record of these birds making choice of such unusual positions for their nests as the vanes on the spires of churches or public buildings. One well-known instance which occurred in London may be cited–we refer to the case of the birds which early in the century built between the wings of the dragon forming the vane of Bow Church. They were dispossessed when the vane was repaired, but removed to a plane tree at the corner of Wood street, Cheapside, where they continued to nest for many years, and became one of the sights of London, or at least of the city. It would be impossible within the limits of this article to give even an outline of the rookeries of London, as during the early years of the century London was comparatively a small city, and abounded in trees, and consequently rooks were as common as they now are in most of our provincial towns. When London began to spread, as it did with marvelous rapidity about the middle of the century, the rook, finding its home destroyed, gradually withdrew to the suburbs, from which, as we have said, it is slowly but surely being driven. In conclusion, the rook, by still nesting in London wherever it is permitted, has most conclusively proved the falsity of the theory generally held in the country that, if many of the young birds are not shot as soon as they are able to fly, the rook will desert its nesting place.—*Saturday Review.*

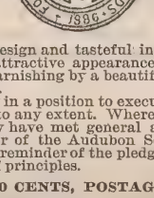
"SHOOTING."

The only English journal devoted exclusively to sport with gun and rifle is *Shooting*, edited by Sir Ralph P. Gallwey, Bart., author of the Badminton Library, and G. T. Teasdale-Buckell, Esq., who exported all the Llewellin setters to America and won the National Brace Stake and the Field Trial Derby four times each.



The most practical correspondence and the best selection of advertisements appear in *Shooting* weekly.

Few Americans ever heard the names of our best English gunmakers.

Price of *Shooting*, postpaid, $3.25 per annum. Send post office order to the Publisher, 182, Strand, London, England.

THE AUDUBON BADGE

Is a brooch pin in coin silver with the motto and monogram of the Society.

Chaste in design and tasteful in execution, it presents an attractive appearance, and is protected from tarnishing by a beautiful satin finish on its surface.

We are now in a position to execute orders for these badges to any extent. Wherever they have been sent they have met general approval, and every member of the Audubon Society should wear one as a reminder of the pledge and an open declaration of principles.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1887 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1888 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1888 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportsmen, anglers and naturalists, make up these pages.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away. Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in the legal close season, and in restricting the taking of game both as to season and methods, so that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., New York.

HOLIDAY PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of holiday gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for the holidays. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Antelope and Deer of America.

By HON. J. D. CATON, LL.D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Rod and Gun in California.

By T. S. VAN DYKE. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By DR C. A. NEIDE. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. BOWYER VAUX ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In his book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and it is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual for boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Hunting Trips of a Ranchman.

By THEODORE ROOSEVELT. A delightful book of hunting adventure in Dakota and Montana. Price $3 50.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Forest Runes.

Poems by "NESSMUK." With artotype portrait and autobiographical sketch of the author. Cloth, 208 pp. Price $1.50.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. Cloth, 250 pages. Price $3.00.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among American sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. WYNN, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

Uncle Lisha's Shop.

LIFE IN A CORNER OF YANKEELAND. By ROWLAND E. ROBINSON. See advertisement elsewhere.

Artotypes of Paintings.

By JOHN M. TRACY. Mr. Tracy has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. We have for sale a series of admirable artotypes of these paintings, which preserve with admirable fidelity the spirit of the originals. The artotypes are 15x20 inches. Price $1 each.

Book of the Black Bass.

By JAMES A. HENSHALL, M. D. Comprising its complete scientific and life history, with a practical treatise on angling and fly-fishing, and full descriptions of tools, tackle and implements. Illustrated. Cloth, 470 pages, Price $3.00.

The Still-Hunter.

By THEO. S. VAN DYKE. A practical treatise on deer-stalking. Extra cloth, beveled, 390 pages. Price $2.00.

Southern California.

By T. S. VAN DYKE. Its valleys, hills and streams; its animals, birds and fishes; its gardens, farms and climate; its insects and reptiles, with hints on going to California. Extra cloth, bevel edge, 235 pp. Price $1.50.

Cruises in Small Yachts and Big Canoes;

Or, Notes from the Log of the "Watersnake" in Holland and on the South Coast, the Logs of the "Water Rat" and "Viper" on the Thames and South Coast; with remarks on anchorages for small craft. By H. FIENNES SPEED. Cloth, 280 pp. Price $2.50.

Yachts, Boats and Canoes.

By C. STANSFIELD-HICKS. With special chapters on model yachts and singlehanded sailing. Numerous illustrations and diagrams and working drawings of model yachts and various small craft suitable for amateurs. Cloth. Price $3.50.

Camping and Cruising in Florida.

By JAS. A. HENSHALL. With a list of fishes and birds, 84 illustrations and maps. Cloth, 250 pages. Price $1.50.

Forest and Stream Publishing Co., 39 Park Row, N.Y.

The Diseases of Horses;

Their Pathology, Diagnosis and Treatment. To which is added a complete dictionary of equine materia medica. By HUGH DALZIEL.

A very complete, concise and intelligible treatise, conveniently arranged. Every horse owner should have such a book. Paper, 102 pages. 75c.

FOREST AND STREAM PUBLISHING CO.
40 Park Row, New York.

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson's poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actual canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. The upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene. In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channel outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scene is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border and the artist's remarque, and form artist's proofs, an édition de luxe.

The prices of these engravings are as follows: Singly, $3.00; any group of 4, $10.00; the complete set, $30.00. Any group of four may be ordered, but we beg to suggest the following groups as strong combinations:

Group A.	Group B. (Upland.)	Group C. (Duck).
Plate 1, The Reverie.	Plate 3, Snipe Shooting.	Plate 9, Duck Shooting—over Decoys.
" 2, The Dawn.	" 4, Woodcock Shooting.	" 10, Duck Shooting—Flight
" 7, Trout Fishing.	" 5, Quail Shooting.	" 11, Homeward.
" 8, Deer Hunting.	" 6, Grouse Shooting.	" 12, Home.

Agents, THE SPORTSMAN PUBLISHING CO., Detroit, Mich.

AUDUBON'S
Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1856, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories,

Aududon's Birds have never been equalled.

Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.

Forest and Stream Publishing Co., 39 Park Row, New York.

Open-Air Sports.

A Book Issued by the New York "Tribune."

500 Pages; 150 Illustrations. Price $1.50.

CHEAPEST BOOK IN THE MARKET FOR THE MONEY.

A year ago the New York *Tribune* employed a large number of accepted authorities to assemble in one volume all the facts of value and interest concerning the open-air amusements and athletic exercises of Ameriea. The work has been well done, and the book is a perfect mine of information concerning history, records, rules, and interesting data. The book is absolutely correct. Every sportsman can learn from it something he does not know.

'WHY WE WANT TO BE STRONG," by William Blaikie, the lecturer; a Treatise on the Needs of Business Men, and the Effects of Exercise on the Muscles, Nerves and Vital Organs.

"ARCHERY, OLD AND NEW," by Maurice Thompson, the champion archer; a Delightful chapter, full of Reminiscences and Practical Suggestions.

3. "HORSEMANSHIP," by a New Yorker; being an Exposition of the best Rules for Horseback Riding for both Sexes, with Contributions by the Cavalry Instructor at West Point; Frank Menzdorf, the Veteran Riding-master; Edgar B. Bronson, the Cattle Ranchman of El Paso, Texas, who describes Cowboy Riding; and John Gilpin, of Newport. "Hunting Across Country" in the North and South.

4. "GAMES OF BALL," with all the Rules for playing Base Ball, Foot Ball, Tennis, La Crosse, Racket and Cricket, by various *Tribune* reporters of those games.

5. "FISHING," by Yale Beach, with Instructions as to Fly-throwing, Bait and Rods, and a Full Description of the Game Fish of this country and the methods of taking them.

6. "TRAPPING," an amusing chapter for the Boys.

7. "AMATEUR PHOTOGRAPHY," by James Hall, of the *Tribune*, with full instructions.

8. "YACHTING," a chapter full of Records, Historical Data and Minute Instructions for Building and Sailing Small Yachts, making Knots and Calculations for Centers, etc., by Henry Hall, Special Agent of U.S. Census on Shipbuilding, with contributions by Thomas Clapham, David Kirby and John P. Kirk, Yacht Builders; Charles E. Emery, Ph. D., Expert in Steam Engineering; Henry E. Rhoades, Engineering Corps, U. S. N., and Captain Jones, U. S. Signal Service. Special chapters are devoted to the Catboat, Yawl, Sharpie, Canoes and Buckeyes, Sloops and Cutters, Schooners and Steam Yachts.

9. "SWIMMING," by W. S. Rossiter, of the *Tribune*, assisted by Sundstrom of the New York Athletic Club, the Champion Long Distance Swimmer of the United States. Full Instructions and Records. Rules of Resuscitation from Drowning.

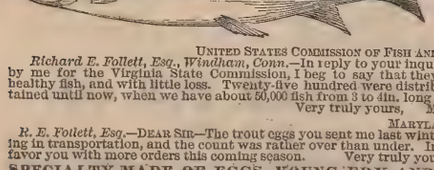
10. "ROWING AND CANOEING," by Horace Townsend, with Records of the College Races, and Rules for Building Boats and Canoes.

11. "GYMNASTICS," by George Goldie, Director of Athletics of the New York Athletic Club.

12. "CAMPING OUT, by Yale Beach, with suggestions as to Tents, Camp Sites, Cooking, etc., etc.

13. "SHOTGUN AND RIFLE," by Charles B. Reynolds, of the FOREST AND STREAM; Henry Hall, of the *Tribune*; General Geo. W. Wingate, of New York; with Data Contributed by a Large Number of Private Sportsmen. This chapter teaches the Rule for Shooting, gives the Record of the International Rifle Matches, and Describes the Different Varieties of Game in November.

14. "CROQUET," by W. A. Rossiter, with Rules of the Scientific Game with Record of the Tournaments.



15. "CYCLING," by George D. Baird and others.

16. "THE SPORTS OF WINTER," with Instructions to Skaters, Ice Yachtsmen, and Descriptions of the Sled, Toboggan and Snow Shoes.

17. "USEFUL FACTS." Accidents; Chance, Rules of; Distances; Drinking; Expectation of Human Life; Eyesight, and Care of the, by John H. Payne, M. D., of Boston; Food; Fording of Streams; Good Manners; Smoking; Sound, Velocity of; Specific Gravity; Weather Phenomena; Work of Men and Animals.

Order from the *Tribune* by mail, or through any bookseller or newsdealer. Price $1.50 per copy. THE TRIBUNE, New York.

Indian Hollow Brook Trout Hatchery.

WINDHAM, CONN.

R. E. FOLLETT, Proprietor.

Brook Trout of Superior Quality Furnished in Quantities to suit Purchasers.

UNITED STATES COMMISSION OF FISH AND FISHERIES, Washington, D. C., Sept. 7, 1887.

Richard E. Follett, Esq., Windham, Conn.—In reply to your inquiry as to the quality of the trout eggs purchased by me for the Virginia State Commission, I beg to say that they arrived in prime condition, hatched out good, healthy fish, and with little loss. Twenty-five hundred were distributed just after beginning to feed, the rest retained until now, when we have about 50,000 fish from 3 to 4in. long for distribution from this lot.

Very truly yours, M. McDONALD, Commissioner Fisheries, Va.

MARYLAND FISH COMMISSION, Oakland, Sept. 19, 1887.

R. E. Follett, Esq.—DEAR SIR—The trout eggs you sent me last winter were so well handled that our loss was nothing in transportation, and the count was rather over than under. In hatching we obtained 98 per cent. I shall favor you with more orders this coming season. Very truly yours, G. W. DEELANDER, Commissioner.

SPECIALTY MADE OF EGGS, YOUNG FRY AND YEARLINGS IN THEIR SEASON.

Dogs, bitches and puppies for sale. Pure white, fashionable English blood from noted bench winners.

Stud Dogs.

Young Royal Prince (A.K.R. 2102), Baronet (A.K.R. 3480) and Royal Diamond (A.K.R. 4311).
FEES $15.

Address J. W. NEWMAN, 87 Hanover st., Boston.

Gath's Joy.

(Champ. Gath—Gem.) A grand field dog himself and litter brother to celebrated Gath's Mark and Hope; also the same blood as Joey B., Nat Goodwin and Chance. Fee $20; free service in case of failure. Address D. A. GOODWIN, JR., Newburyport, Mass.

Silver Shoe.

Imported pug dog; a grand sire. Weight 13lbs. Stud Fee, $25. (A.K.R. 3758). Pups for sale.
MIDGET PUG KENNELS,
sep1,tf Lansing, Mich.

CRICKET.

Smallest prize pug stud dog in this country; weight 9½lbs. (A.K.R. 3240), in the stud. Pedigree and full particulars. HENRY C. BURDICK, 150 Bridge st., Springfield, Mass.

UNTIL MAY 1 THE CELEBRATED CLUMBER SPANIEL **JOHNNY** (A.K.R. 5661, S.B. 5896), will be in New York and allowed a few approved bitches. Address W. TALLMAN, 1203 Broadway. dec22,3t

STUD MASTIFFS. SEASON OF 1887-88. Send for terms and pedigrees. C. C. RICHARDSON, Westfield, Mass. nov17,3mo

FOREST AND STREAM

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JANUARY 12, 1888.

VOL. XXIX.—No. 25. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by express money-order, regi ered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, London. General subscription agents for Great Britain, Messrs. Davies & Co., and Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, London, Eng. Foreign subscription price, $5 per year; $2.50 for six months.

Address all communications,

Forest and Stream Publishing Co.

ANSWERS TO CORRESPONDENTS.

WHO MADE RULE TWO?

THE preposterous rule compelling entries in the American Kennel Club's stud book has been repeatedly referred to as a rule of the American Kennel Club. Is it so in any proper sense? and does it deserve the consideration due to a measure deliberately adopted by that club in its representative capacity? These points are worth taking into account in making up an estimate of the character of the rule.

The American Kennel Club is composed of a union of a number of clubs, which are chiefly bench show associations, whose individual members are owners, breeders and exhibitors. In theory, an action of the American Kennel Club is to be taken as embodying the views of that organization itself, through it of its several constituent clubs, and through them of their individual members; in short, of the great mass of breeders and owners —the entire portion of the public interested in kennel affairs. It is quite clear that, before it can be received as truly representing the views of this dog breeding, dog owning and dog showing public, an American Kennel Club measure must first have had the sanction of a majority of the individual members of the constituent clubs, and an affirmative majority vote of the clubs themselves. Whether a given measure be good, bad or indifferent, it cannot be accepted as the fruit of the deliberate judgment of those who are concerned in it, unless it has been considered and acted upon by them.

This compulsory registration rule is not at all of that character. It does not embody the recorded views of the American Kennel Club itself, nor of a majority of the constituent clubs, nor of the individual members of those Clubs, nor of the great body of breeders, owners and exhibitors whose interests are involved.

The action taken on the compulsory rule was not the action of the A. K. C. itself, for it was not adopted by the club, but by a clique in the executive committee, when only six votes were cast, and the vote even then only stood four in favor to two against. It would be the height of absurdity to accept this job, put up by a few men, after others had gone home, as in any adequate sense the action of the American Kennel Club.

The measure did not represent a majority of the constituent clubs. Philadelphia voted against it; New England (the leading club of the country) promptly withdrew in disgust; New Haven did the same; Hornell repudiated the rule; Mr. Wade assures us that Pittsburgh will not have it, and prominent members in private letters to us corroborate this; even in the New Jersey Club there is so much opposition that it is not impossible that the rule will be disapproved there; from all we can learn St. Paul and Minneapolis will not show under it; the Fox-Terrier Club obey the rule, but acknowledge its injustice by themselves paying the required fees for exhibitors.

Moreover the attitude of the subsidiary clubs, which though not members of the A. K. C., show under its rules, is demonstrated by the action of the Fort Schuyler Club of Utica, which refuses to sacrifice its entry list by submitting to the rule.

The action most certainly did not represent the expressed wishes of individual members of the constituent clubs, for the subject had never been brought before them, and had not been acted on by them; but was a surprise to them when they learned of it after the meeting on Dec. 6. We have published many letters from members of the various clubs, and the sentiment is so overwhelmingly of indignant opposition to the rule that we are perfectly safe in affirming that had the rule been voted on by the club members it would never have had a chance to go to the A. K. C. at all.

Nor is the compulsory registration measure recognized as wise by any large proportion of independent breeders and exhibitors, who are not club members but on whom as large exhibitors the success of the shows largely depends. We have published a number of letters from well-known breeders expressing their disapproval of the catch-penny scheme, and their conviction of the bad effects such a rule enforced would be sure to have on kennel interests. These men speak in behalf of those who are most concerned in the matter; and they speak with the fullest understanding of what is truly for their own benefit and what is not. They understand it a great deal better than the individuals who are trying to force this tax on them.

This, then, is "American Kennel Club Rule 2," a measure not discussed by club members, not intrusted by them to be voted for by their delegates, not approved by a majority of the clubs, not even voted on by the Club itself. This is Rule 2—a put up job, rushed through by a clique of self-constituted dictators to the breeders and exhibitors of the United States and Canada, and levying a tax of fifty cents all around on every dog shown on this continent. If four votes could do all this, and do it all alone, what might not have happened had there been five? It is possible that no dog could have wagged his tail after Jan. 1, 1888, without leave from Mr. Peshall, or turned around before lying down without a permit from Cugle, or bayed the moon except to sheet music supplied by some other crank ambitious to "elevate the dog" at his master's expense.

PARK MATTERS IN CONGRESS.

TWO bills relating to the Yellowstone Park have already come before Congress.

On Thursday last Delegate Toole, of Montana, introduced in the House a bill granting a right of way through the Park to the Cinnabar and Clark's Fork Railroad. This is substantially the same bill that was defeated at the last session of Congress by a vote of 170 to 65, and which was fully discussed in these columns while it was before the House. The present bill has been referred to the Committee on Public Lands, of which Mr. Holman is chairman.

Mr. Holman visited the Park two years ago, and his experience there enables him to comprehend the value of this reservation. He appreciates the economic importance of preserving its forests and realizes what their destruction would mean to a vast territory in the Northwest. This territory is as yet only sparsely settled, but under favorable conditions it is destined to become a flourishing farming district. Its development depends on its water supply, and its water supply depends on the forests which protect the sources of streams rising in the Yellowstone Park and in the mountains immediately to the south and east of the Park. The region which is thus dependent on these streams is not a circumscribed one. There is plenty of room in it. It will ultimately support many millions of people. On streams which rise in and near the Yellowstone National Park depends in a large measure the fertility of an area which contains more than six hundred thousand square miles. In more than one of the Territories, which but for these streams would be deserts, there is room for all the New England States nearly three times over. On the east side of the Mountains, Wyoming, Montana and Dakota, which are watered chiefly by these streams, have an area aggregating nine times that of New England. On the west side of the Rockies, Idaho, Washington and Oregon, nearly five times as large as New England, would be barren wastes without these streams. The country that they water is larger than that occupied by the Thirteen original States, with Ohio, Indiana, Illinois, Michigan, Wisconsin and Iowa added. All through this vast region farmers are settling, breaking up the ground, and using the water from the streams to irrigate their crops. To permit the destruction of the forests of the Yellowstone Park would be to dry up these streams and so to bring ruin on the farmers who have gone into this wild and arid country and are making it productive. Mr. Holman is aware of the vastness of the territory under consideration, and he knows that the streams which are of such vital importance to the farmers of the dry Northwest depend for their volume and regularity on the forests which clothe the mountains of the Yellowstone Park.

These forest consist of evergreen trees, pine, spruce and fir, and are easily set on fire. The pitchy forest floor, made up of pine needles, branches and resinous roots, needs but the touch of a spark to set it in a blaze. Such sparks would be supplied by locomotives, and fires would be started which would cause irreparable damage.

The railroad people have now less excuse than ever before for trying to enter the Park. In years past they have pretended that a road was needed to develop that "flourishing mining camp," Cook City, but there are at present only fifteen or twenty people in Cook, and it does not appear that it is worth while to destroy the forests of the Park in order that this handful may have rail communication with the great centers. Moreover, a railroad—the Rocky Fork and Cook City—is in process of construction, and is partially completed from Billings, Mont., up Rocky Fork, wholly without the Park, nearly to the mines at Cook. It would seem that this road could be completed in half the time that it would take to construct so difficult and expensive a piece of engineering as the Cinnabar and Clark's Fork R. R. would inevitably be.

In view of the fact that Mr. Holman is chairman of the Public Lands Committee, which has the bill in charge, and the further fact that he realizes that the forests of the Park must be protected, it may be reasonably assumed that the project for a railroad through the Park will be checked in Committee. The bill should be reported adversely or not at all.

Senator Vest's Yellowstone Park bill will probably be referred to the House Committee on Territories, of which Mr. S. S. Cox, of New York, is a prominent and influential member. At the last session of Congress, Mr. Cox employed his brilliant talents in opposing the bill authorizing a railroad through the Park, and through his efforts that bill was killed. No doubt he may be relied on to take again the position which did him so much credit last year.

It is to be hoped too that Mr. Cox, who then showed himself so firm an upholder of the rights of the people at large, will actively interest himself in Senator Vest's bill and will urge its prompt consideration when it reaches the House. What the Park has always needed is an influential, energetic and talented supporter in the House of Representatives. We have strong hopes that Mr. Cox may prove to be this long wished for champion. If he will take the bill in hand, there will be little anxiety among its friends as to the result.

THE HOTEL PROPERTY at the Upper Geyser Basin in the Yellowstone National Park was recently sold by order of the Wyoming courts at public auction in the Park. It is understood that the sale was made to settle the claims of different parties who professed to have an interest in the property. The Department of the Interior telegraphed the Superintendent of the Park to make a public statement before the sale, that no sale would be binding unless approved by the Department of the Interior. It is understood that the property was bought by Mr. Gibson for the Yellowstone Park Association.

AS ANNOUNCED last week, the *American Kennel Register* will be enlarged, the change being made with the January number.

THE ROCK CLIMBERS.

III.—A WHISKY TRADER'S CAMP.

IF any one had put his head into the tent of the Rock Climbers one morning early in October, he would have been surprised to see it all so quiet. Outside it was full daylight, and a westerly wind was whirling great clouds of snow hither and thither over the hills. The lake was not visible, and the figures of horses and mules were hidden, except now and then when there was a lull in the gale and the eddying drifts for a moment fell to the ground. In its sheltered position the tent was loaded with snow and the light within was dim, as if the dawn was just breaking. Motionless within their warm blankets the occupants were waiting for daylight, but as it did not come they began to stir, and at length from one end of a pile of blankets a hand was stretched forth, which fumbled about for a moment among the clothing which served for a pillow, and then drew forth a watch. Then came the cry:

"Hullo, boys, it's eight o'clock. *Levez, levez!* It must be snowing."

Five minutes later, all hands were astir, and the state of the weather was being discussed. It seemed rather an inhospitable welcome to the lakes. The snowfall would have been an advantage had they been nearer their hunting ground, but as it was it meant mud and difficult pulling over the few remaining miles which lay between their present camp and the upper end of the lower lake.

All the morning the storm continued; but by noon the snow had ceased falling, and before long all hands had started out to see whether there was any prospect of finding game in the vicinity. A long round was made and the pure white mantle which covered the ground carefully scrutinized, but no tracks were seen except those of a single bay lynx and a ruffed grouse. The day was warm and pleasant, and the snow, which was only two or three inches deep, melted rapidly. Toward evening the animals were transferred to a wide flat across the creek where the grass was thick and sweet, and here picket pins were driven and the horses staked out.

By the next morning the snow had almost disappeared. The tramp of the day before had made it evident to those who had followed the trail up the shore, that with their light team it would be impracticable to haul the wagon to the head of the lake. But if power to move it could be supplied, the boat, which was cached in the brush at the outlet of the lower lake, was large enough to carry all their goods. Appekunny is stalwart and well able to tug the laboring oar, but the Rhymer is an invalid and Yo is unused to rowing, and besides is troubled with a certain chronic laziness. Talking the matter over the night before, it had been decided that another man must be had, and it was whispered that the right one might be found at a whisky trader's camp at Pike Lake, about ten miles distant. It was decided that Yo, who had the toughest horse, should ride over to this camp and try to secure the man; and so the horses were brought across the creek in order that, while he was gone, the boat might be brought from its hiding place to the water's edge and so up to camp.

Now Yo's horse was, or at that time seemed to be, a wild horse. As a matter of fact, he was not so, and when the rider was once fast in the saddle, no more gentle animal could be found; but he had been badly treated by his previous rider, was hard to catch, much given to pulling away if he was not watched, and to snorting when he was approached in a manner terrifying to one unaccustomed to horses. Sometimes, too, if he got frightened he would rear and strike savagely with his forefeet, but all this was the result of bad treatment and not of any viciousness in the horse's disposition. It so happened that on this unlucky morning, Caribou, as this horse was named, got away, and for two or three hours it was impossible to catch him. Once or twice he let one of the men come close enough to grasp the end of the rope with the tips of his fingers, and then he would toss his head, snatch the coveted object from their clutch, and gallop off a short distance. Presently the Rhymer saddled up Tingle, his riding animal, and after an hour's chase, during which the loose horses crossed the river and raced all over the flat between Swift Current and the lake, he returned with the truant, who was promptly tied up to a tree. Meantime the team had been harnessed and driven down to where the boat lay, a rope lashed to it and to the double-tree, and presently, with Appekunny at the reins and the Rhymer and Yo guiding the boat, the latter was snaked out of the brush, over the hillside, down the bank to the water's edge. Then while one man drove the team back to camp the other two slowly rowed the heavy craft up the river and into a little sheltered bay only a short distance from the tent.

Then Yo's horse was saddled, an overcoat, in the pocket of which was a bit of bread and cheese, tied behind the saddle, and Yo mounted and rode off down the river along the narrow trail, plunged down the steep bank and into the water, at first shallow and splashed high by the horse's hoofs, then into swifter water, which gradually deepened until it reached halfway up the animal's sides, so that the rider had to tuck his feet almost up behind the saddle to keep them from getting wet. Appekunny had pointed out to Yo a gap in the distant bluff down the river, and had told him that behind the hill which stood on the left hand side of this gap lay Pike Lake. A month or two before a party had gone there with a wagon, and the tracks of this could be seen every now and then, and would serve as a guide when it became necessary to leave the river and turn in toward the hills. At a swinging gallop the good horse was started down the bottom, which, though flat, was covered with hump grass, which is very hard and tiresome for a horse to travel over, but soon he struck into an Indian trail, where the going was easy. He crossed Swift Current, picking his way slowly through the tumultuous waters that rushed and swirled by the great boulders in the stream's bed, paused a moment on the farther side to drink, and then at a touch of his rider's heel was off again. Mile after mile was left behind, and yet the gap toward which the rider was heading scarcely seemed to grow nearer. Slowly doubts as to the accuracy of his directions began to force themselves into Yo's mind. Pike Lake was said to be at the very foot of Chief Mountain, and yet his course was leading him away from that peak. Something was evidently wrong.

He turned his horse diagonally toward the mountain and began to look for the wagon tracks. It was not long before he found them, and for a while followed them as fast as the nature of the ground would permit. And what an eccentric course that wagon took, winding about in all directions and seeming to pick out the worst and most miry spots that could be found. Mile after mile he passed on over the hills, for the flat river bottom had now been left far behind. Several times he saw before him the shimmer of water, and his hopes rose, but as he came to each little prairie lake it was easy to see it was not the one sought. Following the wagon tracks began to be tiresome, and as the sun was sinking toward the west, he determined to cut loose from them, trust to his own instinct, and look for the lake in the place where he thought it ought to be. If it was not to be found, he would look up some sheltered nook in the hills, gather a big pile of wood before dark, and lie out all night by the fire to resume his search in the morning. It is not pleasant to sleep out without blankets, but it is something that one has to do now and then.

Turning sharply to the right, Yo rode straight for the majestic buttress of Chief Mountain, which towered skyward almost above him. The faithful horse kept up his easy swinging lope, down sharp slopes, across little valleys, where he splashed the water high from the standing pools, where the mallards and teal were feeding, and then up the gentler slopes, never pausing except when a slight pressure on the reins warned him to take matters more easily on the steeper hills. Yo had ridden in this way perhaps ten minutes, when he came to a mesa, beyond which it seemed that the foothills of Chief Mountain began to rise sharply. Galloping across this four or five hundred yards, he saw in a basin at his feet a pretty prairie lake, at one end of which was a clump of willows, near which were three or four horses feeding. In the reeds near the other end of the lake was a boat with a man in it and on the shore knelt another man, and just as the rider's eye took in all this, a shot rang out sharply on the still air and a little flock of ducks rose from the water and swiftly flapped their way down the lake. A moment later the men at the lake caught sight of the horseman on the hill and started toward the camp, while the rider slowly descended the steep hill, galloped across the level valley at the lower end of the lake, and in a few moments was exchanging salutations with Steve.

Having reached the camp, Yo requested its hospitality for the night, as he had neither blankets nor provisions. Jack, whom he wished to see, was out hunting and would not be back until dark, so that to return to the lakes that night would be impossible. Steve was cordial in his invitation to stay, apologizing for the lack of accommodations, but explaining that he had been out so long that supplies were running a little low. As soon as the horse had been turned out, Steve asked Yo if he would not like to go fishing, and the suggestion was gladly accepted.

Pike Lake is, as its name suggests, full of these fish. It is a warm and muddy prairie lake surrounded by reeds, and its bottom is overgrown with weeds. Pike are occasionally taken in the St. Mary's River, and even in the lakes of that name, but they are not abundant there, probably because the water is too cold. Here in Pike Lake, however, they can be caught in goodly numbers, and run from 3 up to 12lbs. As they walked down to the point where the boat lay, a superb white pelican was seen slowly fanning his way from the northwest, and at length, after making several majestic circles over the water, it alighted near the further shore. Steve suggested that they should try to kill him, but when Yo asked why, was at a loss for an answer, realizing that the bird was not eatable and that he had no means of preserving him even if he had known how to take off its skin. The opportunity to read a little lecture on useless slaughter was too strong to be resisted, and Yo briefly gave his views on this subject, but they were probably wasted on Steve, who had been a buffalo hunter in the last days of that animal in the northern country, and could hardly be expected to experience a change of heart all at once.

A cranky, leaky, flat-bottomed skiff, built years ago by Appekunny, was the only boat here, and stepping on board, Steve kindly took the oars and insisted that Yo should do the fishing. The bait used was meat or a piece cut out of the belly of a fish, and in a few minutes the simple tackle, which consisted of a hand line and a home-made gang of hooks, was overboard, and the boat was moving along with slow strokes just outside the fringe of reeds. This did not appear to be the fishes' day for biting, and the circuit of the lake was made without any event more exciting than catching a bit of weed or some of the rushes which grew in the deeper water. Steve was a pleasant talker, however, and discoursed fluently on a variety of topics. It was easy for his companion to see that he was a little curious to know just what had brought him to Pike Lake. As they rowed slowly along the shore a couple of large piles of stone came into view on top of a ridge only a quarter of a mile away, and these were pointed out by Steve as the monuments which marked the boundary line between the United States and Canada. In reply to this piece of information Yo casually remarked that the proximity of this line was handy for them in case they should be disturbed by the Indian police, at which Steve for a moment or two looked rather sheepish, and then with a laugh tacitly acknowledged his business, but earnestly averred that he never had and never would sell whisky to Indians, but said that if the Canadians came across the line to purchase whisky of him he did not see that he was doing anything especially out of the way in selling it to them.

The laws of the Canadian Northwest Territories absolutely prohibit the sale or having in possession of ardent spirits, except by permit issued by the Governor of these Territories. Permits to have two gallons for one's own use are issued, but not indiscriminately, and as there is a great demand for liquor, the business of running whisky across the boundary line into Canada is a profitable one. Only two years ago whisky that could be bought in Montana for $2 per gallon brought $20 in Alberta, but such profits of course induced a great many people to go into the whisky trade, and the result has been a fall in the prices to $6 or $7 at the present time. The business is not without its risks, the penalty being confiscation of cargo, horses, wagon and other property, and a fine of from one to six hundred dollars, or imprisonment of from one to six months, or both fine and imprisonment. The Northwest mounted police are constantly on the lookout for the whisky traders, and capture a great many of them, but still the trade prospers. Of course the number of men who are competent to carry it on is limited, for, since they must travel chiefly by night, they must be perfectly familiar with the country, able almost to travel through it with their eyes shut. There are a good many men, however, who do not expose themselves to the risk of capture by crossing the line, but who venture as close to the border as they dare, and then, leaving their contraband property on United States soil, proceed to notify possible customers of the proximity of the desired beverage. This was Steve's present position, and the Canadians were coming to him for their liquor, and had taken almost all that he had.

The boat had been almost twice round the lake, twice disturbing the great white bird that floated so lightly on the water, when, as they were passing the mouth of a little creek which flowed into its upper end, Yo felt a tug at his line. He let the fish have it for a moment or two, and then, striking sharply, began to haul in. The long nose of the pike soon showed above the water as it came in with little resistance, and when it was swung over the side and lay flapping in the bottom of the boat it was seen to be a fish of about three pounds weight. A little further on another more vigorous bite was followed by the capture of a six-pound fish, which dropped from the hook just as he was being lifted in, and luckily fell into the boat. One or two more bites were had, but the fish took the bait so gingerly that they could not be hooked. These pike were sluggish fish, making little or no fight for their liberty, but coming in like logs. It was now nearly dark and becoming quite cold, and as they had enough fish for breakfast and supper, the boat was pulled to shore and the men returned to camp.

Sitting by the fire was a round-faced, tow-headed boy, about 18 years of age, whom Steve addressed as Silvertip, and who replied to him in English, which, though correct enough, was marred by an accent which seemed to show that he was a foreigner. His countenance and coloring were those of a Swede, and Yo, who nodded to him as he stepped up to the fire, took him for a Scandinavian. His garb was the ordinary canvas clothing of the country, but he wore moccasins instead of boots or shoes. As Yo was filling his pipe the boy said to him, "Where you come from?" "From New York," was the answer. "Ah! New York, New York; I have heard of that New York, but I don't know where it is." This remark rather startled Yo, who now considered his interlocutor more attentively. It was true that his face and hair and figure were those of a Swede, but his gait and manner were those of an Indian. Later, inquiry developed that the boy supposed himself a half-breed, that he had been raised in the Crow camp, but that neither he nor any one else knew much of his parentage. Just such a fair-haired

boy, then about five years old, Yo had seen in a camp of Mountain Crows twelve years before on Big Spring Fork of the Judith. The Indians said that he was a full-blooded Crow, but Yo did not believe their statement, but thought the child a captive, and as he talked with this boy he wondered whether he might not be the fair-haired child of 1875. Silvertip had left the Crow camp two years before, and had now been living with white men for some time. He seemed remarkably bright and intelligent.

It was dark when a shout from the other side of the clump of willows by which the camp was situated caused Steve to remark, "There's Jack, now we'll get supper." Presently out of the darkness Jack appeared, and with him a couple of Bloods that he had picked up somewhere during the day. He said that he had hunted along the foothills of Chief Mountain for most of the day, but had seen no game, in fact no tracks. Supper was soon under way, Jack cooking the fish, Steve baking bread and Yo watching the coffee, and before long the three were eating heartily. When they were through, Silvertip and the Bloods fell to and finished the eatables. Then sitting about the cheerful fire all sorts of topics were discussed, until at last the increasing chill warned them all to seek their blankets, and they all slept under the brilliant moon.

Yo.

The Sportsman Tourist.

DUCKS ON LAKE BISTENEAU.

ON Sunday of the last week of October a very heavy rain fell. On Monday I rode to Knox Point to have a deer hunt with Mr. James Atkins and Mr. John Graham of that place. Mr. Atkins was too unwell to accompany me, but he sent several negroes with Graham and myself. We found deer in abundance, yet failed to get a shot. Ducks were numerous along the ponds and sloughs of Lake Swan, indicating that a good duck hunt could now be had on Bisteneau. I returned home that night worn out, but resolved to load a number of shells the next morning and go for a three days' outing on Bisteneau. Up to this time the long drouth had prevented the ducks and geese from coming to the lake. Bird shooting had been very poor, as the heavy post oak mast had attracted them to the woods, without a bevy being found in the old worn out fields on Bossier Point.

I was busy loading shells the next morning, when who should come rushing into my room but my shooting companion, Mr. Will Hodges. "Good morning, Colonel," said he; "John Lot has just come in from the Hills, and reports duck shooting to be splendid on Bisteneau. Can you accompany me?"

"Yes," I replied. "See, I am loading to get ready, and was on the eve of sending for you to join me in a three days' camping."

"Get ready as fast as possible, and let me have your pony to take back to my house, to hitch to my dog cart with my pony, and I will send up for you in less than an hour. I have been loading shells all the morning, and will finish by the time you arrive, and we will drive to Carter's Point by sundown. Put up some rations and bed clothing. It will not be necessary to carry food for the horses, as we can put them in Bill Hogan's stable and get him to feed them. It looks as if we shall have fair weather, and there will be no necessity to take a tent; should it rain, we can go into Hogan's cotton press and keep dry."

"All right, Will," I replied, "send for me and I will be ready by the time the dog cart comes."

It came in time, and I put in both of my hammerless guns, some 500 shells loaded with 3½drs. of King's quick-shot powder and 1¼oz. of No. 5 shot. The eatables, with sufficient bed clothing, waterproof overcoat and a hunting coat, with the Allan duck-call, completed my outfit. Will was ready when I arrived. Our route took us eight miles through Red River bottom. It was very deep pulling, and we did not make over three miles per hour. But when we reached the hills our ponies made the seven miles in less than an hour. John Lot, a worthy, industrious freedman, a tenant on one of Hodge's plantations, accompanied us. We went by Bill Hogan's house. He was not at home, but I told his wife to tell him to come to Carter's Point to our camp that night, and to be prepared for waiting on me while I remained on the lake.

As we neared our objective point we heard the guns of other campers booming in every direction, and we could see clouds of ducks darkening the sky all over the grand lake. When we got within half a mile of the point I got out, took my gun and proceeded in all haste to the lake. As I did not have my rubber boots on I could not get out sufficiently far from the banks to shoot. It was dusk when I got there, and I shot but once at a great horned owl that came sailing along the shore. He fell dead in the current and floated away. The fire that Will had kindled enabled me to get to his camp through the briers and young cypress trees. It was so dark when Will drove to the point that he could make no selection of a good spot to spread our bedding. There was a dead tree fallen on an open piece of ground that was suitable for making a fire, and there he proceeded to kindle it. Of all the places I ever camped on that certainly was the worst. Bamboo briers covered the entire place, and thorn bushes were thick over it. John soon had a pot of coffee made, and Will and I broiled sundry pieces of raw breakfast bacon, stuck on forked sticks. No sweeter meat in the world than breakfast bacon broiled in this manner, and I know I never eat more and enjoyed it so much as I did this meal. By the time supper was over Bill Hogan came to our camp. I engaged him to bring his skiff the next morning and take us over to Peggy's Island, as also to wait on me during the camping. He reported a number of parties camped on the lake, some on both sides, one party from Haughton, not far from us, as we could see their camp-fire and hear their boisterous laughing and talking. A half mile below were camped my particular friends, John Skaunal and Maury Bryant; and below them, Andrew Moss and Dr. Kimball. John and Bill cleared the ground as well as possible, and then took our ponies to Hogan's stable, where they were well attended to during our stay on the lake. They returned in time to spread out bed clothing for sleeping, and to bring us some sweet potatoes and a water bucket, with other necessary implements for cooking. Bill went back home so as to get his skiff down in time for the morning's sport. About midnight we lay down to try to sleep, or at least to rest. No sleep there was, neither rest for me. Thorns stuck me no matter how I twisted and turned. The sky was brilliant with innumerable stars, twinkling in the blue vault of heaven; not a twig overshadowed us, for Will was afraid lest some of the great cypress trees might fall on us. It was very cold, almost freezing, and our bed clothes were covered the next morning with a heavy frost. It was so cold that we repeatedly made John Lot get up and replenish the fire. Will slept like a log.

My uneasy position brought most forcibly to mind the bitter cold night I spent on the side of the mountain leading up to the little town of Bath Springs, previous to the night I lost my arm, the 4th day of January, 1862, while with Stonewall Jackson on his memorable Romney expedition. We had been ordered to fall down in line of battle that night of the 3d, so as to be ready before daylight to storm Bath. My regiment had a position on the road that led along a rapid stream on the left, with the steep mountain on the right. Snow was about 2ft. deep. We were not permitted to kindle fires. My men had either to cling to the cedar bushes and jump up and down to keep from freezing, or if they fell asleep the chances were they would slide into the rushing waters. I could not now help remembering how I buckled myself to a young cedar with my sword belt, and spent the miserable night jumping and slapping my arms to prevent freezing. Long before the stars went down the roar of Jackson's advanced artillery roused us into action. It was nearly dark when the enemy fled across the Potomac, and ere the hour of 10 P. M. came I was lying wounded in the forks of the Capon and Patomac rivers, with an arm shivered to pieces, senseless and frozen. When I awoke the next evening it was to bid farewell to my left arm, ere it was consigned to a cave, because the ground was too hard frozen to bury our dead. What hours of happiness I have been deprived of by that empty sleeve! How many deer, turkeys, ducks and birds have I not failed to kill for want of that arm! Had it been a leg, how much better off I would have been. Now, here I was, 1,500 miles from that never-to-be-forgotten Capon Bridge, sorely pricked with thorns and briers, yet planning murder for the waterfowl that quacked by thousands all over the lake, and an endless whirr of thousands more coming in from more northern parts.

Quack! quack! quack! with tumultuous roar of moving wings could be heard in every direction. I could not sleep. I was digesting the outlines of the morning's work. Will was to be stationed on the left of Peggy's Island, myself on the right; John Lot was to keep the ducks moving above Will, while Hogan was to take his skiff to a point below me and drive back the flocks that would desire to settle on the wide part of the lake in front of the long Stumpy Lake. The many gunners that would fire on them along the shore from Catfish Point to Burr Ridge would keep the flocks in continual flight and the shooting around Peggy could be nothing less than splendid. I had it all settled in my mind. It was grand. Success was certain. Nothing under several hundred would satisfy me. I could see Bill picking up so many ducks that his skiff would be too crowded for us to return to camp. A second or third trip across the lake would be necessary. How pleasant are anticipated successes. Alas! how often do they end in bitter disappointments to the hunter.

An owl hooted near our camp just at the right time for John Lot to rise and make us a pot of coffee. Before the stars disappeared we heard Hogan's horn, the signal that he was coming with his skiff. Rubber boots were quickly put on, plenty of shells stowed in bags to be taken to the boat, the hammerless in its leather case swung to my shoulder, and I was ready for the morning's work. A wide slough ran before our camp, which had to be crossed, and beyond it a belt of grassy land some 300yds. wide, to be traversed before we could arrive at the skiff. It was impossible to get the skiff to the banks, as the water was too shallow. We were compelled to wade in water about 6in. deep, with sticky mud not less than 2ft. deep, for some 200yds. By the time we got in the boat with all our luggage it was daylight, and as we neared the place vast flocks would rise up before us, too far to kill. Guns were booming from every quarter. At the points where we agreed to stand, both shore and water were black with ducks. Hundreds of geese were feeding on the goose grass and wild rice. I never was so fidgety, so nervous, so excited, and so anxious to get to my position. The channel of the lake, or rather deep water, was over a quarter of a mile wide. I thought we never would cross it. When the skiff got to shallow water I could not contain myself any longer. I made Hogan stop rowing and I got out to wade, and down I sank in the mud, almost over my boots. Had to make John Lot get out and assist me back into the boat. I was cooled down enough to wait until we could make a landing at the nearest point. After we landed it was a long half mile to our positions.

Peggy's Island, so named from a girl whom some one stole from her home, built a home for on the high land, lived there with unmarried for a number of years, is the best shooting spot on Lake Bisteneau. The high land is about 200yds. wide and a quarter of a mile long. Once it was cleared and cultivated by this runaway couple, who left the tall oaks and pecans fringing the edges to stand to keep their whereabouts concealed. Now it is all grown over with vines and young trees, and scarcely a vestige of former habitation remains. This high land is above any high water of the lake. On the west side a strip of land lies covered with goose grass in low water, extending to the hills of Bienville Parish on the north for some half mile. On the east side a similar strip lies, much wider. Before reaching to the hills, all covered with timber, a wide slough, for the greater part of the year filled with water, makes this strip of land an island. At this time there was no water in it. In high water Peggy's Island is a narrow strip of land, 200yds. wide by a quarter of a mile long.

My position is at one end of this slough and Hodge's at the other, and we were about half a mile apart, yet could see each other. Opposite my stand was a wide plat of grass, now an island because of the low water, and between it and Peggy ran a body of water about 300yds. wide and some two miles long, in the form of a quarter circle. In no place was the water over a foot deep, but the mud in some places had no bottom, while in others it could be crossed without sinking over the tops of hip boots. The ducks and geese would fly from the great lake around this circle of water and feed on the grass on both sides. Many cyprus stumps were standing in it, and the sportsman, by wading to some central position and standing beside one of them, could shoot all day when ducks were plentiful and grass sufficient to attract them.

Such was the position I selected. It was the first time I visited Peggy's Island. It took one day for me to discover the best place to stand. After getting to the mouth of the slough, and scaring at least five thousand ducks, I waded to a stump about half way from each side, and took my position. The flocks I scared flew over to Will, and two guns in rapid succession drove them back to me. They discovered me by the glitter of my gun barrels, and veered around me. However, an old greenhead ventured a little too close for his safety, and I cut him down in fine style, not without a heavy recoil of the gun. I never intend loading so heavily again. Three and three-fourths drams of powder with three wads over it, and 1¼oz. of shot are too much for a No. 12 gun. Had I put only two wads and 1oz. of shot, it would have been better, or even ¾oz. of shot. Holding the butt of the gun firmly to the shoulder, I felt no recoil there; but the re-action was felt in the wrist, and when I left my stand at night, I was unable to hold my gun, or even put a shell in it, and I was suffering great pain.

I was in an uneasy position, the mud and water were deeper around the stump than a few feet from it, no doubt caused by turtles and buffalo fish. I dare not move from the stump, lest the ducks would discover me. They dreaded to pass by one, expecting every minute to see a gleaming gun barrel, and hear a deafening report. They would shy off at the least ripple of water, and one dare not raise his gun until they were almost over him for fear of scaring them. Then the mud was so sticky, that I could scarcely turn enough to get a fair shot at one flying on either side. I had to shoot at them flying over me, or at long range, too far to reasonably expect to kill, when on the side. There was no cessation of guns, which kept the ducks flying very high all the morning. I came to shoot, and shoot I did, whether far or near. I must have shot some sixty times, bagging only eleven, before Hogan and Lot returned to take me back in the skiff to dinner. I had shot down perhaps as many more that fell in places too deep to wade after them, and the swift current bore them away before the freedmen came.

"How many ducks have you got?" said I to them, as I deposited mine in the bottom of the boat. John replied, "Mr. Will got 7 and Hogan and I have killed 10." "That makes a total of 28 for the morning's shoot; a very poor beginning, men," I remarked. "It will be better shooting this evening," said Hogan. "The ducks are flying too high to kill this morning, but to-night they will come in to roost and feed, and we will have a splendid time." "Bill, take the skiff back for Will to go to dinner; I will not return until it is too dark to shoot. Be sure and bring me some more shells and some dinner also. I will wade over the other side and shoot some of those curlews that have been exciting me all the time I have been here." I dreaded to leave my stand lest I should miss a good opportunity of bagging an old mallard. I started across the arm, but the freedmen waited to see the result. Hogan called to me to come back, stating I would be swamped. Paying no attention to his remark, and with eyes intent on the curlews, I stumbled and fell, not flat, for the stock of the gun fell on a log buried in the mud, and supported me until I could rise. Was I not furious, as a gallon or more of water filled each boot? "I guess you will come now," shouted John Lot. "No, I'll be hanged if I do. I won't be able to get my boots on to-morrow, and I intend making the most of this evening," was my reply.

Fortunately I was using brass shells, so they did not get wet when I sank in the water. The freedmen began rowing back and I waded on to the curlews. They were very gentle, let me get as close as I wanted for several shots, then realized the fact that there was something dangerous in me, rose and flew across the lake, but left thirteen of their number to gladden my old eyes. What beauties they were; so fat and plump. With the exception of the sora I never shot such fat birds in my life.

The bottom was firm on that side of the arm of the lake, covered with short grass, and with not over 6in. of water on it. I felt assured the ducks would come there to feed, and I would have grand success to repay the unlucky fall and wetting. I selected a stump, with a projection on which I could rest my gun. Lighting a cigar, I felt considerably better as the clouds of smoke curled around my mouth, and I was getting into a happy frame of mind, when *honk! honk! honk!* a half mile off roused me to action. Hastily taking out the No. 5 shells, I inserted two more, each loaded with 21 small buckshot, and then I scanned the horizon to see where the geese were. I saw three rounding Peggy, and making a bee-line for my stump. Holding my gun to the hip, so as to be ready for the shot, calmly I awaited their approach. Straight as a line they came, one behind the other, and buck ague suddenly struck me; my heart was beating so fast and loud I imagined the geese heard it. I was afraid to even bat my eyes. Straight they flew toward the stump; the gun came to its right position; they saw it and shied slightly to the left. They were about 100ft. high. Sighting the foremost, with the second in close proximity, I pressed the right trigger. There was a ringing report, and down came the grand old gander with a heavy splash into the water nearly at my feet. The next to him was also badly wounded. At the shot he mounted upwards, but the left barrel belched its charge. As it struck him he gave his death cry and fell headlong to the water not far from his mate. What would I not have given for a third barrel to have killed the last, a goose, that flew round and round me several times, too far to shoot. I had slipped in the gun two more shells, ere she took a last fond look at her dead mates. Was I not happy? I would rather have killed those two ganders than two of the biggest bucks in Bossier Parish. I was so eager to get them and feast my eyes on their lovely plumage and graceful forms, that I did not use cuss words, as I made a false step and fell a second time, with one knee in the water. I was so happy that after picking them up and hanging in the game carrier to a projection on the stump, I missed several

good chances to have bagged a duck each shot. After satiating my eyes I leveled down to business, and by the time John Lot returned with my dinner I had killed five more mallards and one coot. John came to my assistance, packed my game in the skiff, and I waded over and ate my lunch. He stated that Mr. Will had concluded to shoot on the other side of the lake, but that he would return by the time it would be too dark to shoot, as Bill Hogan had gone to Knox Point to get him a pair of rubber boots and a bottle of "snake cure bite;" I told him I never indulged except on occasions like this, and I regretted Will had not sent for a flask of old Bourbon for myself, as he never drank. He said, "That was just what Will did, because he was afraid your ducking would either bring on an attack of pneumonia or you might have the rheumatism." I felt truly grateful to Will for his thoughtful care, and getting my fresh supply of shells, I went back to the stump where I had slain those bright wanderers from the Polar Sea.

It proved to be the best one I could have selected. The water being shallow, the footing steady and the good dry grass in easy shooting distance to my left, I was satisfied the ducks would flock there by hundreds before sundown. Some other sportsman must have occupied the same place the evening before, as the many feathers along the shore told of slaughter, and besides every flock avoided the place, just passing too far to kill; some lighting on the grass and others on the water. I did not get a shot until it was nearly dusk. Then the sky was black with them. I must have shot down at least thirty, until it was too dark to see them. I can see but little after dark, but I shot at random, often at the whirr of wings until every shell was emptied. John finally came and picked up eighteen fat mallards, I had not killed a teal. It was too dark to find the others. He was compelled to carry my gun as well as the ducks, for my wrist was dreadfully swollen, and after the excitement was over I could not bear in my hand even the weight of a duck. We arrived at camp by 9 o'clock. Hogan had not returned, but in half an hour he did so, and Mr. John Graham came with him. He brought the Bourbon. Will bathed my wrist with some of it, and a stiff horn of it made me feel wonderfully better.

Will had considerately put Dick Menefer, one of his negro tenants, and a splendid cook by the way, to preparing supper. He had killed several teal, which Dick had broiled to a nicety, just to suit my appetite. Never did I enjoy more such a supper as this was. Two teal and three curlew barely satisfied me. Talk about good eating! broiled teal and curlew just beat anything ever put into a hungry sportsman's mouth. But they must be broiled in a scientific manner, known only to hunters. When ready for cooking stuff the teal with pieces of raw breakfast bacon—well peppered with Cayenne—put in a plenty of good butter, then stick on a forked stick and hold over the coals until thoroughly done. If a few ashes fall on it, no matter, it is all the better. Next put the birds in a hot plate with plenty of melted butter, and a little vinegar, add some Worcestershire sauce, have by you several slices of risen corn bread, and drink with it several cups of "He No tea," and you have a supper that makes a sportsman feel good all over, at peace with himself and the balance of mankind, ready to yarn it big until kind nature can hold out no longer, and he sinks into the arms of the drowsy god.

I had brought with me on this outing my Ferguson's head light, and Will rubbed my wrist, now twice its natural size, with some of the signal oil of the head light, which relieved me considerably before morning.

Our cooks picked a number of ducks and put them in a large kettle filled with water, with plenty of dry-salted raw bacon and red pepper. The kettle was put over a slow fire, and by next morning we had the best stew of ducks I ever ate.

Before daylight we were all off to our respective positions. Graham said he would go to Catfish Point, Will and John Lot went down the lake to the big pond opposite Stumpy Lake, while Bill Hogan and I went in the skiff over to Peggy's Island, to the point where Will stood the evening before. When we proceeded as far as we could push the skiff, I left Hogan and waded across to the place I intended to stand. Crossing the flat I made two fine shots at a brace of ducks, one of which proved to be a redhead, the first I ever shot on Bistereau. The recoil of the gun caused my wrist to swell, and with great difficulty I managed to bag five more. When the pain became so severe I was compelled to call Hogan and return to camp. He had also bagged five mallards.

All returned for dinner. By constantly saturating a piece of cloth with coal oil and binding to my wrist, I thought I might hold out for the evening's shoot.

Graham had bagged a baker's dozen of curlew and one duck, Will and John Lot had killed together some ten ducks. After a late, hearty dinner we all crossed over to Peggy and shot until too dark to shoot. I took my Greener gun, as it was lighter than the Colt, and I could handle it easier. I took my same station where I bagged the geese. Just before sunset the ducks began coming on by thousands. A small flock flew over me and I killed a greenhead with each barrel, the largest and fattest I ever killed. They were superb shots, when considering their height and my swollen wrist. I had bagged some ten when an accident deprived me of any more shooting that evening. One of my Kynoch brass shells, that I had reloaded some fifteen or twenty times, got the head broken off as I put it in the chamber of the gun. I had no stick to push it out, and my extractor was useless in such an emergency. Calling Hogan, who was doing good shooting, I directed him to cut a stick for me and endeavor to force out the shell. There was nothing near us but some crooked thorn bushes. He cut one, and shaved it small enough to be forced in, but on account of its crookedness could not get it down to the shell. I directed him to get another. A good one he could not find, but he brought one too large and too crooked. Before I was aware of what he was doing, he cut the first stick off at the bending part and thrust it in the gun. It was now too short, and next he cut the last stick in half and attempted to drive the first one down with this piece. He got it wedged so tight that it was impossible to force it down or draw it back.

I could shoot no more, being afraid of some accident if I shot the other barrel with a stick projecting from the first. It was too bad. Never had I seen ducks flying so close and so many. I could have bagged at least 100 more but for this accident. Mad, in pain, and annoyed beyond expression, I made Hogan gather up our ducks and carry his and my gun back to the skiff, where I waited in the worst of humors until Will and Graham returned. They had been quite successful considering a number of duck hunters from Ringgold, Bienville Parish, had camped that afternoon on the island, and were shooting all around them.

I had the blues—sick unto death. Never expected to have such a glorious chance for making a big bag of ducks again. A strong pull and a long pull at the flask of old Bourbon restored me to my usual equanimity of temper. Will rubbed my wrist until I felt easy. We told yarns until after midnight, and then went to bed, resolved to break camp the next morning and leave for home.

Morning came; we did not rise until our freedmen roused us for breakfast. While eating the deep cry of a hound arrested our attention. "That is Aaron Lock's hound. Let us run to the stand. It is a deer, and he will go through the old field not 300yds. from here," said Bill Hogan. We jerked up our guns, inserted buckshot shells, and ran up the steep bank. "No use to go," said Bill, "the hound has gone through the stand." "Where will it run?" I asked of Hogan. "Sometimes it goes to Burr Ridge, not unfrequently it crosses to Peggy and goes to the Bienville Hills." It was a cold frosty morning, I continued standing, listening to the deep mellow cry of the hound as he ran up one hill and down another. "Look," said Bill, "it is a big buck, and he will cross the lake." I looked and saw a sight I will never forget. It was a monster buck. He was very tired, smoke was curling from his nostrils, and his long red tongue was hanging out of his mouth. On he went, straight to where our skiff was anchored. The sight of it caused him to stop and hesitate a moment, but the deep cry of the hound was coming nearer. In he plunged, into the mud and water, going down sometimes entirely out of sight. His efforts were frantic to get out, and we could distinctly hear his surges; and see the splash of water at each jump, until he struck deep water. Rising with sides half out, I never saw an animal swim more gallantly or more gracefully. He was heading direct to the high part of the island, where the hunters from Ringgold had pitched their camp, once the exact site of Peggy's cabin. We shouted as loud as possible, but the half mile across prevented any one from hearing us. The buck had to plunge through the mud for 100yds. after he left the deep water, before he struck dry land. The hunters were booming all around the island with their double barrels, but none saw him. When he got to land he stopped, threw up his head with those great wide-spreading horns like a chair on it, listened intently, looked back at us, who were shouting, shook his muddy sides, and then plunged into the thick brush, going no doubt in a few yards of their camp-fire. It was a grand picture. I would not have shot that buck, even had I the opportunity.

The disappearance of the buck called our attention to the noble hound. By the time the buck got into the bushes, the hound had arrived at the point the buck took the water. He ran up and down the shore to be certain that the deer had not taken to land again, and then he plunged into the water just where the buck did. Hogan blew several long blasts of his horn, to which the dog was accustomed, as he often hunted with Hogan's own hounds. He caught the sound, stopped, listened, took in the direction, and soon came bounding to our camp, apparently as fresh as if he had just started on a drive, though Will and I learned from Aaron Lock on our return home that the dog started the deer about midnight, while he was opossum hunting. Our ponies were sent for and harnessed and hitched to the dog cart. Guns, implements, ammunition and camp equipage, with ducks stowed away, our bills to Hogan and Lot paid, and homeward did Will and I set our faces. Two better pleased sportsmen never went from Lake Bisteneau. Each pronounced it the best and most enjoyable hunt he ever had. We had killed over 150 ducks, 2 geese, 1 owl and 3 dozen curlews. But for my strained wrist I verily believe I would have bagged 200 myself. A drive of three hours brought us home pleased with ourselves and all the world.

PUPPIES AND GUNS.

Editor Forest and Stream:

I wish to appeal to your readers in (verification or non-verification) of an alleged fact which, if satisfactorily established, would settle a great scientific question. It is well known that evolutionists consider that what in the ancestors were habits or associations of ideas impressed from without may in the young become instincts or intuitions anticipative of experience—provided only the number of ancestral generations be sufficiently large. This hereditory transmission of acquired habits forms one of the corner stones of Mr. Herbert Spencer's philosophy. It is perhaps not so well known that the objective evidence in favor of this very plausible and serviceable doctrine consists of a mere handful of facts, almost every one of which is susceptible of a different interpretation.

A crucial fact, however, if it could only be well attested, would be this: I have heard two accounts of young sporting dogs who had never seen any shooting, showing great and unusual excitement the first time their master took down his gun to prepare for a day in the fields. One of my informants tells me that he cannot doubt the phenomenon in the case of his own dog. This excitement at the sight of a gun in a young setter, pointer or spaniel could hardly admit of more than one interpretation. It can only be due (in case it exists) to the pup having inherited something of the tumultuous expectations which for generations back the sight of the gun had called up in the bosoms of his ancestors—expectations only too well grounded (as the birds would have to confess) in "associations" wrought in them by many a day in the woods and fields.

Now, has any one of your readers witnessed such a phenomenon? And is he sure it was not a mere chance coincidence, or explicable in some other way, but a genuine exciting quality which the gun seemed to possess for the untrained dog? If such a reader will answer me either through your pages, or personally as below, I shall feel deeply obliged. Or if any reader has good reasons to doubt the truth of such stories, and will communicate the ground of his doubts, I shall feel obliged no less.

CHERISHED MYTHS.

"THERE is neither ibex, goat or mountain sheep (big horn) in the Olympian range." So vanish, one by one, the little conceits and romances that so largely color our lives, I soliloquized as I laid down the letter containing the above extract. It was from a friend who had recently located a ranch near the foot of the range in Washington Territory, about which less is really known than is the case with many regions much more remote from the busy haunts of men.

I had heard that there were strange animals there, among which the ibex was mentioned, and the letter was his answer to my request to send me if possible some information upon the subject—a reply based, he wrote me, upon the testimony of a trapper who had spent several years in the range between Fort Townsend and Grey's Harbor.

As we reach the meridian of life, we relinquish these cherished fancies with reluctance, even when they are proved to be myths; in early youth the crop is so abundant that a few of them are easily spared, and their vanishing forms leave no acute pang of regret. The youth of to-day will tell you that the mermaid is an impossibility, but the old barnacle-back, whose years spent out of sight of land far outnumber those he spent upon the shore, will tell you still with a wise look and a shake of the head that he has seen things that could be accounted for by no other hypothesis. In reading, when a boy, the "Life and Adventures of Grizzly Adams," I found no chapter more interesting than the one relating his journey over the Sierras to the mysterious Humboldt Mountains in search of the purple panthers which emigrants from across the plains had assured him dwelt there, and I remember the disappointment I felt when even his imaginative biographer was obliged to confess that he found only the common gray kind there—a disappointment that was subsequently enhanced when a personal investigation of the region where, according to the narrative, those mountains existed, failed to reveal anything that harmonized with his magnificent description of their sublimity.

Scientific researches and careful, intelligently constructed observation dispel much of the fabulous element that so frequently attaches itself to little known subjects, as has often been illustrated in your own columns in regard to the panther, wild goat, sheep, etc. But the fact that science itself sometimes makes mistakes and asserts as truths deductions that are subsequently ignored, makes us sometimes reluctant to reverse what our personal experience has led us to regard as established facts. The discovery of those immense cuttlefish on the shores of Newfoundland considerably modified the views of scientists concerning the sea monsters which they had declared existed only in the brain of Hugo; and prone as is our own FOREST AND STREAM to skepticism where the documents are not perfectly regular, it is evident that it has a strong bias in favor of the sea serpent as at least some huge marine reptile, whose shape even is as yet a matter of conjecture.

Science attempted at one villainous scoop to deprive "Nessmuk" of his cranberry bear, but although I regret to say that my only knowledge of his character has been derived entirely from his charming sketches, I feel confident that the attempt was a dismal failure and that in the mind of the old veteran the cranberry bear still exists, a species as distinct and clearly defined as ever. The summary manner in which scientific classification demolishes our pet hobbies is appalling to those who, like "Nessmuk," have grown gray in the woods. A striking example came under my own observation.

In 1870 I took a horseback journey from ocean to ocean through Costa Rica. The first day's travel from Punta Arenas led through a country essentially tropical, but on the second day, when about forty miles from the coast, and at an elevation of nearly six thousand feet, we passed through a region whose general appearance and arboreal productions would have passed muster in any portion of Massachusetts or Connecticut. I was forcibly struck by the resemblance, and it seemed to be the most natural thing in the world, when I discovered a small pack of birds dusting themselves in the road, which, after as close an inspection as it was possible to obtain without alarming them, I decided to be ruffed grouse. A few miles beyond a clear ringing whistle from a field adjacent to the road fell upon my ears and carried me in an instant back to the days of childhood and youth. I reined up my horse to listen, and again that familiar sound, sharp and vigorous, came floating through the air more convincing than before. As far as my ears were to be trusted, it was the pipe of the quail of New England, the partridge of the South. Heard amid those surroundings there would have been no doubt concerning its origin, but in this far land I determined to investigate still further. Slipping from the saddle I crept along the wall until as near as I thought I would be likely to get, and rising up looked cautiously over. There on the capstone of the wall, just where I expected to find him, and looking, as far as my eyes could be trusted, just as I expected to see him look, was the old friend of my boyhood, Bob White, the white spots upon his face were visible from my standpoint, and at my approach he ran down the side of the wall into the brush, just as we have all seen the little fellow do time and again. In neither case was I more than 40yds. away from the birds, but as I had no firearms, except a belted revolver, neither of them came to my hand. Judge my surprise then, when several years after I made inquiries through the FOREST AND STREAM concerning the habitat of these birds, to learn from Prof. Ridgway, of the Smithsonian Institute, that there were neither ruffed grouse nor quail in that country, but only birds of a somewhat similar species.

From a decision emanating from a source so distinguished, there was, of course, no thought of appeal, especially as he informed me that the ornithology of Costa Rica had been more carefully studied than that of almost any other tropical section of America. But to say that I was puzzled is drawing it very mild, and "Nessmuk" and his cranberry bear came instantly to my mind. On the one hand I had been deceived about birds with which from childhood I had been nearly as familiar as with the barnyard fowls. I had never met with the ruffed grouse in Nevada or California, but I had shot them in the mountains of Utah and the Cascade Range of Oregon, and I recognized them as such before I sighted them over my rifle barrel; and although in the mean while I shot many a pinnated, sharptail, and blue grouse,

I had never confounded them with the other, and as for the sage hen, science, I believe, classes them as grouse, although they have no gizzard and would starve to death upon food that all the others would fatten upon.

On the other hand, all the variety of bears in the United States are declared to belong to one of only two species; the black, brown, cinnamon, silver-tip and grizzly are familiar to most of your readers, but there is still another kind that, as far as I know, is found only in the mountains that form the headwaters of King's River, in California. I refer to the little yellow or golden bear, less than half the size of the black, weighing usually when full grown about 125 or 150lbs. Several hunters in that region have described them to me; and their accounts agree so well that they carried conviction with them. In addition to this at least one of your own correspondents has described them in precisely the same terms, so I know this bear is not entirely new to you. In appearance it differs from all other bears as a donkey differs from a Norman horse. Please, therefore, dear FOREST AND STREAM, inform your readers to which of the two species the little golden bear belongs.

OAKLAND, California. FORKED DEER.

SNOWY OWLS IN 1886-7.

THE winter of 1886-'87 will be remembered by naturalists and collectors throughout the country as a remarkable one for the number of these birds of prey. Throughout the Northwest they were very abundant, as well as in the Eastern and New England States. Immediately after the big storm in the middle of November they put in an appearance and remained until late the following spring. Scarcely a newspaper throughout the country but had an account of the killing of one or more of them, and it is usually the case that only a small per cent. of the number killed find an account of the killing or capture in the columns of any newspaper; so the number killed must have been remarkable. Quite a number were recorded in the FOREST AND STREAM and other papers interested in ornithology. Within a radius of twenty-five miles from this point no less than a dozen were killed, and of this entire number I know of but two that were preserved. I have been collecting birds for ten years, and have watched and waited patiently all that time to add one of these birds to my collection, but was not successful until last winter, when I secured six; one I killed near here and recorded it in the FOREST AND STREAM, and the others were procured by my brother in Calhoun county, Iowa.

A friend of mine, J. Y. C., of Whatcom, Wash. Ter., writes that they were very plenty there. Late in April, 1887, I saw one on some bottom land fifty miles south of here while gunning for ducks. A friend was with me and he was very anxious to kill one. We had seen this one several times, but did not know it was an owl, and thought it was one of the large bones of which there were many scattered about. He had been shooting that morning half a mile from me, and when he returned to my blind I pointed to the object I thought was a bone, telling him it was a snowy owl. He seemed surprised, but at once proceeded to make a detour, and then getting on all-fours commenced creeping toward his prey. I was watching the proceedings carefully and chuckling to myself at the joke I thought I had on him. Suddenly I heard two reports in quick succession, and on looking up saw the owl flying rapidly away, and my friend, with a look of dismay, holding the smoking gun in his hands. Now I was thoroughly surprised at the way my joke had turned out. We laid many plans for his capture and tried various ways to get within gunshot of the old fellow, but all to no avail. The weather at this time was very warm and many of our summer birds had returned from their southern homes. Wounded ducks were numerous all over the bottoms, so he must have had a good living, which, I suppose, accounted for his tarrying so long.

Up to the present time I have only learned of one being killed this winter. The report comes from Vermont. One was reported seen six miles from town last week, but it may have been a light-colored, rough-legged hawk, although the person who saw it was quite positive, as he was within easy gunshot, but had no gun. Just why so many migrated to the United States last winter I am not prepared to say. It may have been the severe weather or a scarcity of food. The bird is a regular migrant south in winter, but has never, to my knowledge, appeared before in such numbers. H. A. KLINE.

FORRESTON, Ill.

PLUMAGE OF MALLARD DRAKE.

Editor Forest and Stream:

I note in your issue of the 22d ult., that Dr. T. H. Streets, of Philadelphia, severely criticises an assertion made by Mr. Frank Wilkeson, in his article, "Along the Manitoba Road," "that mallard drakes leave their breeding grounds during the breeding season." Mr. Streets says he "speaks from an experience much further north than Rupert's Land, where the mallards also breed in great numbers." The writer's knowledge of the habits of mallards does not extend much further north than "along the Manitoba road," but as to their habits in that region Mr. Wilkeson is correct.

During the past ten years I have shot at every lake in the Province and know, I think, besides, nearly every pond and swamp, and have never yet seen a "green head" mallard between say July 15 and Sept. 15. During the time just stated you can find in ponds the female mallard with her young, but no sign, in the vicinity, of a "green head," or as we designate them "Tom mallard," not even in his summer plumage, that Dr. Streets says "assimilates so closely to that of the female."

In further proof of this, I might mention that last autumn two friends of mine came up here from Toronto, Ontario, to spend a few weeks in hunting and shooting. We struck camp at Whitewater Lake, in southwestern Manitoba, about the middle of September. We killed about 1,000 ducks before the first of October, and not a single "Tom mallard"; but a sharp frost setting in on the third of October, one of my friends, Mr. Thomas Louden, killed during the forenoon of the following day about fifty mallards, the majority of them being "green heads." After that they began coming in "from the north" in thousands, most of our birds from that time out being "old Toms." THOS. JOHNSON.

WINNIPEG, Manitoba.

FACTS ABOUT SNAKES.

I SAW, quoted from the FOREST AND STREAM, an article on rattlesnakes climbing trees. Though what I am about to communicate does not relate to that kind of snake, yet it may be interesting to some of your readers to learn facts in regard to the habits of snakes, that very few have opportunities of witnessing. In the article alluded to, snakes are represented as having been found in the branches of trees, but there is no statement of any snake having been seen in the act of climbing.

About the year 1839, in passing on horseback through a forest that then stood on a point opposite Lake Providence, Louisiana, I saw a snake about five feet in length on the trunk of a tree from 2 to 2½ft. in diameter. The tree was straight and erect, without a branch within 40ft. of the ground. The snake was about 6ft. from the ground and transversly on the trunk of the tree, as if in the act of ascending it spirally. The snake was spotted with white and blue circular spots abont ¼in. in diameter, and was of a kind called in that part of the country king snake. Its body, as it clung to the trunk of the tree, was a succession of folds, by which the snake held on to the tree. Its course had to be spirally, because the creases in the bark by which it attached itself to the tree were longitudinal; had they been transverse it could have as easily ascended perpendicularly. The tree was, I believe, a water oak; had it been a sycamore, beech or birch, I do not think it would have been able to ascend it, for the plain reason that these trees have no creases by which it could attach itself to them.

I will also mention that in walking through the swamp opposite Gainsville, on Pearl River, in the State of Mississippi, I saw a snake, there known as the cotton mouth, coiled on the top of a log. Being quite close to it, I shot it with a shotgun. The shot cut its body quite open. On examining it after it was dead, I found within its body four or five live snakes, each about 4 or 5in. in length. On freeing them from the carcass they began to crawl about, except one which appeared enveloped in a kind of mucus.

This snake, as well as I can remember, was about 3ft. long, not thick, yet it carried within itself these young snakes, apparently large enough to take care of themselves.

In the "Memoirs of the Royal Society," Vol. X., pages 222 and 266, there are several accounts of the effects of snake bites, and of the remedies for them, and the bites of mad dogs. There are also in the "Asiatic Researches," Vol. XI., page 310, similar accounts. Also in a compilation entitled, "Dissertations on Asia," page 486, there is an article "On the Cure of Persons Bitten by Snakes," by John Williams, Esq. This last gives seven cases.

As in both Philadelphia and Washington city persons have been experimenting on the poisons of snakes, and their antidotes, I thought the references here given might be of some service, either to them or to others interested in such subjects. B. S.

LOUISVILLE, Ky., Nov. 24, 1887.

TAME RACCOONS.—Opposite our place, and but a few rods distant, a neighbor farmer found last May a mother raccoon in the hollow of an oak tree, four or five feet from the ground, with four young ones. The poor mother was killed and a dog had dispatched one of the young, when a young man present saved the lives of the remaining three and took them home with him, where he commenced feeding and training them. About six weeks afterward I went to see them, and quite fell in love with the pretty creatures. Though their fur is long and coarse, their faces are marked beautifully with bands of alternate black and white, each about one-half inch in width, running lengthwise of the prettily-shaped head, and the tails are ringed. Their eyes are bright, yet very soft and pleasant looking. They were exceedingly fond of their master, gamboling and frolicking with him like kittens, running up and down on him and putting their arms around his neck. He has taught them to jump over his clasped hands, and a variety of other tricks such as are taught puppies. He brought them up on a bottle, and the prettiest sight of all was to see them nurse! Their little hands and long, slender fingers played very gracefully with the bottle as they drew the milk, just as a nursing infant plays with its mother's breast. It was really a lovely, delightful sight, and very funny too. In the month of October they wandered out one night and their master found them the next morning a mile from home, but they were quite delighted to see him, and returned gladly. The young man has now sold two of them; the other follows him about the village like a dog, and goes into the store, where it will eat crackers, of which it is fond, and it is specially fond of candy, eating all they will give-it.—VERITAS (South Woodstock, Conn.).

AN INTELLIGENT CHELONIAN.—A family in Washington, D. C., have lately possessed a pet turtle of the species called snapper, which manifested remarkable intelligence. It recognized and distinguished people readily and had its personal likes and dislikes. Toward strangers he was always hostile, and some quite vicious, but members of the family could fondle him like a kitten, and he would sit by the hour and doze on the shoulder of a favorite lady. He was kept in a small glass dish, which he seldom cared to leave, and so far from showing any inclination to escape from captivity he would not be turned adrift, for as often as he was pitched into the river, when the family had finally tired of him, he climbed out, up the bank and came home, and it was only when they dropped him into a deep hole at a great distance that they managed to shake him off. One noteworthy peculiarity was observed during the natural period of hibernation. At such times his body was seen to exude a thick dark substance resembling mud, which covered it completely to the thickness of half an inch, so that in its semi-torpid state it resembled a ball of earth. An opaque belt of discolored water surrounded it for a distance of four or five inches—no doubt a provision of nature to aid its concealment during its defenseless state in winter.—H.

WOODDUCK IN WINTER.—On Sunday, Jan. 8, 1888, a flock of ducks, composed of 11 black ducks, 2 mallards and 1 male woodduck, were seen by me in the Hackensack marshes. There can be no doubt as to the identification of the woodduck, as after separating from the rest of the flock he flew back over my head at very close range.—ROBERT T. MORRIS (New York).

A TAXIDERMIST'S PREPARATION.—St. Albans Bay, Vt., Dec. 19.—I wish to bring to the notice of some of your readers an important discovery in taxidermy, that is the discovery of a preparation which put upon the bills and legs of mounted birds will cause them to retain their natural color. My son, who is a taxidermist, has tested it thoroughly for the past four years, and it has proved a perfect success. It was tried upon mounted fish eight months ago, and the scales and fins retain their natural color to-day.—H. L. SAMSON.

RECENT ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased—One brown capucin (*Cebus fatuellus*), and two blossom-headed parrakeets (*Palaeornis cyanocephalus*). Presented—Five prairie dogs (*Cynomes ludovicianus*), one Virginia deer (*Cariacus virginianus*), two red-tailed buzzards (*Buteo borealis*), one duck hawk (*Falco communis*), one redbird (*Cardinalis virginianus*), one long-eared owl (*Otus vulgaris wilsonianus*), one sparrow hawk (*Falco sparverius*), one barred owl (*Syrnium nebulosum*), and two alligators (*Alligator mississippiensis*). Born in Garden—Five dingos (*Canis dingo*).

ZINC FOR GUN BARRELS.

Editor Forest and Stream:

In your issue of June 9, 1887, appeared an article entitled "Zinc for Rust in Barrels," by Austin, which I supposed would attract the attention of all interested in that matter, and I hoped that it would elicit the observations and ideas of other correspondents. But the sugges tions of the article must have seemed impracticable or else there is not the urgent demand for a gun rust pre ventive that I had supposed. Now the ideas presented by Austin seemed to me to be of considerable importance, the only question being the most practical method of attaining the end proposed.

Though I have not had the opportunity to test the plan advised, I made the following experiments, which, while they gave a different result from that obtained by him, were so far a success as to meet all the demands of the case. I took a piece of zinc, such as is used in making washboards, about 1⅝in. long and about ¼in. wide. This I tacked to a block of wood with ordinary iron tacks, filing the heads bright and placing a tack at each corner and one in the center. On the head of the first corner tack I placed a drop of muriatic acid prepared as for tinners' use. The head of the tack at the next and nearest corner and also that of the center tack I covered with fine table salt and then added a drop of water to each. This I stirred, making as strong a saline solution as possible, and rubbing it well over the heads of the tacks. On the head of each of the two remaining tacks I placed a drop of nitric acid. Now as to the results. The muriatic acid discolored the iron, but it did not appear to be rust. The salt, though repeatedly wet after becoming dry, showed no sign of causing rust until six or eight weeks after its application, when the corner tack, near the one to which the muriatic acid was applied, began to rust and has since become covered with rust. But on the center tack the salt has produced no effect and it still remains bright. The nitric acid, which was strong, immediately acted on the tacks as if it would destroy them and they were soon covered with a coat of rust. After some weeks, I applied some of the salty solution to the tack on which I had placed the muriatic acid, and this soon caused a coat of rust to form. Thus four of the five tacks were sooner or later corroded, the fifth or central one remaining bright. The rust, however, seems to be only a crust on the surface, which, after rubbing to a certain depth, ceased altogether, for I notice that where the nitric acid was used this crust is scaling off, leaving the head of the tack in such places perfectly bright. Why one tack in failing to rust should have been an exception I can only account for on the ground that it was protected by a larger proportion of zinc, having the full width of the plate to itself, and not being within a half inch of another tack, while the tacks at the ends of the plate were within one-fourth of an inch of each other. This would lead me to fear that Austin's plan of placing in the barrel a strip of zinc the length and width of the bore might not be a sufficient protection. With the edges of the strip in contact only with the opposite sides of the bore, and probably an imperfect contact at that, would the influence be sufficient to protect the whole surface of the bore? Much, of course, would depend on the thickness of the strip, which is not specified. Austin does not state whether this method has been actually tested and found efficient, or whether it is regarded as a justifiable inference from the facts noted. If a strip of zinc should prove ineffective, a tube of that material, made to fit the bore, would, no doubt, answer the purpose. Probably this is what Austin means when he speaks of rolling up thin zinc to fill the barrel. The greatest difficulty that I see would in any case be to get a good fit in the chokebores, though it may be possible that a good fit is not at all necessary.

I wish that Austin would write again and give the readers of FOREST AND STREAM some further information on this subject; I feel sure that it would be appreciated. I hope others also may be induced to express their views. I think Austin did the readers of FOREST AND STREAM quite a favor in his communication, and I for one wish to thank him. SPLASHER.

THE RABBIT PLAGUE REWARD.—As stated in your paper recently, the Government of New South Wales offers a prize of £25,000 for a plan which will rid them of the rabbit pest. I have one which has worked effectually in this locality, and would, no doubt, prove an entire success there. I guarantee it to be effective and claim the award. The idea is to import into that country the entire African element of this, furnishing them with a requisite number of Zulus and mongrel canines.—J. G. D.

COLEMAN'S ISLAND CAMPS.

IT was a wild stormy night toward the middle of October that we alighted at Gardner's, after a tedious journey of twenty miles. We had come down for a few days of sport with the ducks, and to find relief from a distressing complaint by a sojourn among the pines that fringe the shores of Nine-mile Pond, and to drink in the beauty of the richest piece of landscape to be found on all Cape Cod.

We had planned to go into camp that night, so after getting warm, and greeting our old acquaintance who sat before Gardner's cheerful fire, we tucked trousers into stockings, true soldier fashion, to keep out the wet; took guns, ammunition, and what little camp duffle we had brought along, together with an old lantern, which had seen service half a century before on the Norwich and Worcester packet line, and whose feeble rays served to make the "darkness visible;" and bidding those around the fire good-night, we started on our lonely tramp. It was pretty dark, and rained a little, and the path was not very well defined, but we struggled on through the woods, now up to our waists in the thick underbrush, and again finding the path, only to be knocked out again by some refractory rock or stump, which would insist in getting under our feet. We reached the shore of the pond without getting very wet or meeting with any accident, and finding the boat, which was moored to a tree and locked, we deposited our duffle in the bottom and were soon skimming on the dark bosom of the water toward Coleman's Island, the flickering rays of the antiquated lantern dimly lighting up our course. We were in some doubt, owing to the distance, as to the exact point to land, but as the boat grated on the pebbly shore we were gratified to see the dim outlines of the little cabin, which was to be our home for the next week, only a few rods away. We made the boat secure for the night, and taking traps and guns, Gardner led the way to the shanty. The decoy ducks in their comfortable quarters in the stand greeted us with a quack of welcome as we approached, and after taking a look at them to see that they were all right, we entered the shanty and took note of our surroundings.

A few minutes' work sufficed to put our little den in order. Then we made all secure for the night, and finding available seats sat down to have a chat. As our conversation began to flag, across the wide expanse of waters, now sullen and angry, came the moaning of the night wind. The miniature waves dashed spitefully upon the pebbly beach and the air began to grow chilly. Throwing away our cigars we rolled ourselves in the blankets and tried to sleep. The novelty of our surroundings, the screeching and moaning of the night wind as it howled among the ancient pines and the constant dashing of the waves upon the shore prevented us from getting much sleep, but we rested all the same. The pure air, the delightful freedom of our surroundings, the strange and mysterious voices of the night, all seemed to lull the senses into sweet repose, and toward morning we both slept soundly.

Four o'clock found us awake; and tumbling out of our bunks, we hastily dressed and after a bath and a draught of pure water from the pond, we were ready for the day's work. We started up our little kerosene stove, and after getting a cup of hot coffee under way, went down into the stand. The moon was still shining as we placed our live decoys in position. The fowl immediately set up a most vociferous quacking, as a pair of black ducks flew swiftly by into the bend beyond, and suddenly wheeling were upon us before we had fairly taken in the situation. We managed to get out of sight in time as on swiftly flying pinions they rushed by the stand, and alighted within easy gunshot to the leeward. The waning light of the moon shone for an instant along the polished surface of our guns as we quickly sighted and fired, making a clean kill. This was a good beginning and as it happened a good ending, for it was the only shot we had that morning.

The sun came up over the distant hills, clothing the maples and birches upon Long Point with an added glory, while far away to the north Shoot Flying Hill loomed up grand and majestic against the autumn sky. The morning wore on, a chill norther had set in, and taking leave of the stand for a little while, we paddled across to the mainland and took a tramp up into the village, Gardner's son Willie, who had now joined us, securing a partridge on the way. Will Gardner and myself got back to the stand before noon, and spent the remainder of the day and night there. Gardner dropped in on us every day during our stay there, taking turns with his son in stopping at the shanty nights.

Thus passed five halcyon days, days passed amid the solitude of forest and stream, and, free from business cares, days that brought health and strength to the wasted energies and sent the blood leaping through the arteries with renewed vigor. We found game plentiful enough to insure us good sport, with enough to keep the wolf from the camp door and some to distribute among friends, and when we left we brought several trophies of our skill.

We broke camp one lovely morning the 17th of October, and started on our homeward journey. Never was a hunter's heart gladdened by a more beautiful panorama than that which was unfolded to our gaze that lovely autumn morning in the little stand at Coleman's Island. No breath of wind ruffled the broad expanse of water upon which the morning sun in all his splendor cast his gentle rays. Every sound for miles around was brought to our ears with a distinctness almost startling as we leaned upon our guns and drank in the silent beauty of the scene. It was the one morning in all the world upon which a sportsman would most hate to break camp and leave the woods. The ducks were constantly moving, keeping us in a perpetual state of excitement, as now a bunch would take notice of our decoys and swing toward us, only to sheer off at the critical moment and pass out of gunshot. Once a large flock flew directly over the stand, so near that we could see their eyes and hear the sharp whistling of their wings. Silently we crouched in the bottom of the stand, and managed to escape their notice, for presently they wheeled, and shutting their wings, dropped gracefully to the decoys, but even as we reached for our guns the sharp report of a gun in a neighboring stand rung out, and the ducks turned and sped away on startled wings. We sprang to our feet and took a flying shot, but we were too badly rattled to shoot well, and stopped no birds.

We lingered under the shadow of the pines long after all probability of another opportunity presenting itself had passed away; lingered because we were loth to leave the scene of so much pleasure; lingered because we hated to lay aside the wild freedom of the camp and go back to the monotonous routine of civilized life, unwilling to forego the pleasures of the chase, the pleasant evenings passed before the camp-fire, the sweet refreshing sleep that "knits up the ravelled sleeve of care," and when the last sound that falls upon the ear before sinking into the land of dreams is the low sweet music of the wind among the treetops or the gentle murmuring of the waves upon some pebbly shore.

But all things come to an end, and as the sun mounted high in the heavens we drove in the decoys, made all snug and tidy about camp, then taking our guns, embarked in our little craft and pulled silently across to the mainland. As we turned for a last look at our late camping place and for a last breath of the pine-laden air, the soft wind came lightly dancing over the placid surface of the lovely pond, reflecting the bright rays of the sun in a myriad sparkling hues which were finally lost under the dark shadows of the pines, which for centuries have skirted Coleman's Island's lonely shore.

SCUDDER.

FALMOUTH, Mass.

AMONG THE ELK.

GALLATIN VALLEY, Mont., Dec. 22.—I have always wanted to kill an elk, particularly a bull elk; moreover I promised my brother before I left my Eastern home that I would send him a pair of elk antlers for a hat-tree when he should begin housekeeping on his own hook, being struck by their natural adaptability to such uses.

Consequently, when I and my two companions started out on our fall hunt, about the end of September, we turned our horses' noses toward the already hoary peaks of the Gallatin Range, where I knew a man could reasonably count on seeing elk in quantities to suit, as well as all other game native to the Rocky Mountains, with the exception of goats.

Borrowing a wagon we piled our outfit in with care (and it filled the wagon box pretty full), and rolled out of Bozeman in high spirits. The following evening we reached the end of the wagon road in the West Gallatin cañon, where we unloaded the wagon, and with it I started back to the valley, taking with me a saddle to come back on. When I joined the boys on the next day I found them fishing with some success, but they said they had seen not a sign of game, and did not believe there was any in the country, but I assured them that there was last year any way, as I was up the river myself at the time. But to tell the truth meat was scarce in our camp for about a week; but of fish we had plenty, both trout and whitefish, whenever we chose to catch them.

The night before we started up the pack trail we had the misfortune to lose one of our horses by his getting his hind foot fast in the picket rope around his neck, and choking to death. This left us rather pinched for transportation, and we had to cache some of the grub and leave it. Prospects continued discouraging as we journeyed through the cañon for two days, when we reached the Lower Basin. Here the feed was good and the hills looked more promising, so we took possession of a deserted logging camp and turned the horses out. We all three then sallied forth in different directions, feeling sure we could run on to big game the first thing, but at night one brought in a snowshoe rabbit, another a mountain grouse, and the third nothing but a big appetite. All had seen plenty of fresh deer and elk sign, and each had felt sure the others would be more successful than himself. Thus several days passed away before we killed anything, and right glad we were to bring a fat blacktail doe into camp, and mighty good the meat tasted, but who does not enjoy venison of his own killing and cooking?

Of my first shot at an elk I am almost ashamed to tell. I had been climbing and creeping around all day on a timbered hillside that was just one maze of paths made by the elk, and in many places I could plainly see the imprint where some big bull had lain through the heat of the day in a spring or mud hole. Many little trees were twisted up and stripped of their branches where they had been trying their newly-grown horns, but not one could I catch sight of, and when a flock of blue grouse jumped up and lit in a tall red fir, I couldn't resist knocking the heads off two, when I started for camp, thinking of course that my two shots would certainly alarm all the game in the neighborhood. Not so, however, for I soon ran on to three or four elk standing on a steep and thickly wooded slope, apparently asleep. I was within 60yds. before I caught sight of them, and I thought I should now surely be enabled to see how elk meat tasted. Their heads being hidden, as they stood with their tails toward me, I blazed away at the body of the nearest one, aiming as near as might be at his heart. They all started off, and I after them, knife in hand, thinking the one I shot at would surely drop after a few jumps. They stopped presently, and I ran toward them, thinking the wounded animal must surely drop before I got there, when they saw me for the first time, and I plainly saw that my wounded elk was not in that outfit from the way they decamped.

Long but vainly I searched that hillside for a dead elk, but from that day to this I hold to the belief that that animal turned down hill, hidden by the thick timber, instead of running off south with the others; but the boys insist that I must have missed him. However, I had better success with the next band I ran on to. This time I saw a big bull lying apparently all alone in a little sage brush park, just as I emerged from the timber; his face was turned toward me, and my best shot appeared to be right at his forehead, but as the distance was somewhat over 100yds., and my Marlin was sighted to 50yds. point blank, I stopped and carefully raised the sight one notch before I fired, thinking I had the dead medicine that time. Well, I was in such a hurry to look under the smoke and see that bullet lay him out that I must have pulled the gun off the whole sidehill, for, contrary to my expectations, that magnificent animal jumped to his feet and was turning to make off, when I recovered sufficiently to give him a shot behind the shoulder, when down he went again. At the report of the rifle ten or eleven cows ran into view and paused, panic-struck at the sight of their leader thrashing his horns around in his death agony.

I loaded again and sighted on the neck of one of these, but did not shoot when I reflected that I had killed my head and there was no occasion for further slaughter. So they ran off unharmed, and I ran to bleed my prostrate game, feeling very much as did Hiawatha when he killed his first buck. I was pleased to find that I had secured a fine pair of antlers, for, although they had but twelve prongs, they were slender, graceful and perfectly symmetrical. I cleaned him, cut out his tusks for trophies, and headed for camp, well content with myself and all the world. The boys were pleased, too, as the deer was nigh eaten, and we forthwith caught our horses to pack in the meat, which, quartered up, gave two stout ponies all they could stagger under. The hide and head we lashed on another, the horns reaching within eight inches of the ground on either side. I found that the bullet had glanced upward upon entering his body, broken his spine just above the shoulders and lodged there; though it struck just opposite the heart, a rib had deflected it from its course. I was shooting up a hill, and when I paced the ground I found it to be 120 good long steps.

Leaving the elk head and scalp hanging safe from mice in the cabin, we started in search of further adventures and explorations, being anxious to see the far-famed Henry's Lake country and mighty Snake River. We left the Gallatin Basins under snow, encountered a foot of snow on the divide, and still snowing, but as soon as it became clear enough to see the country ahead, we were much surprised and not at all displeased to find the whole Madison Valley bare and brown before us. I should have liked well to stop and take a bear hunt on the head of Indian Creek (tributary to the Madison) for we saw the tracks of several bears that had evidently been traveling in attendance upon a large herd of elk thereabouts for some time, but in a party of three it is rare to find perfect unanimity of opinion; the others were for moving on. So we crossed and ascended the Madison, and upon gaining the summit of the Reynolds Pass (in the main range of the Rockies) Henry's Lake was in sight, distant four miles. I wish I dared take space to tell what fun we had here among swans, geese and mallards. We camped for more than a week on the north fork of Snake River, and though we saw no moose, we made the acquaintance of a fish new to us, the salmon trout, a red-meated, black-spotted fish of two or three pounds weight, very abundant in these waters. IPSARRAKA.

SALESVILLE, Montana.

PELEG'S EXPERIENCES.

III.—HOW JAB MADE TRIBULATION.

"I HAVE been wondering," said Sang the evening of the quail hunter's last night in Grinder's Sugar Camp, "whether it would be better for me now that Rot is growing too old for good service, to buy a new dog full grown and trained, or to get a pup and raise and break him myself."

A good deal of talk followed this remark of Sang's, relating to the age of his dog and of his many good qualities, after which the hunt of the day, which had been along the bottoms of Kootz's Fork mainly, where quail in abundance had been found and good bags made, was recounted, when Sang reminding his comrades that his question was unanswered relapsed into silence. Jap remembering the hint of a story on dog training at the close of Peleg's narrative the previous night and divining that Sang was fishing for another story, fell in with his humor and answered that he "believed he would raise and train his own dog."

"Yes, but isn't it a world of trouble to bring up a pup?" said Sang.

"Why no, not much," Jap replied. "Bird dog puppies are about as much trouble to bring up as pet lambs, certainly no more."

"O well, if that is all my mind is made up," said Sang.

Peleg could stand it no longer. The truth is, he had felt hurt over the treatment Sang had given him the night before, in fact the two nights, and had taken a mental oath that he would under no circumstances suffer himself to be beguiled into a yarn the last night of their stay. But this talk of the two innocents was too much for him. To think of their ignorance of dog raising when he knew so much! He couldn't sit quietly by and listen to such twaddle. If he mustn't talk he could at least walk, and so up he quickly jumped and kicking the fire brands together viciously, he lifted old Jab with the toe of his boot under the pretext that he was appropriating all the fire to his own use, after which exercise he sat down somewhat calmed again.

"There are many and weighty reasons," said Jap, "why every sportsman should bring up his own dog. Your dog is your satellite—nay more, your reverent worshiper. To him you are the one perfect being, the one of all who can do no wrong thing. Do to him what you will, treat him as cruelly as you may, and worshipfully he will continue to lick your hand in love. Now it is all important that he should never know but the one dog deity—yourself. And besides that, the pleasure he will give you in training will far outweigh any trouble that may come. The truth is, he will grow up with the children and give no more trouble than a chicken."

"Did you ever raise one?" asked Peleg, energetically.

"No."

"No! I should think not."

"I am sure," said Sang, "that I don't know experimentally, but then I've heard that pups beat the world for mischief."

"Well, you have heard wrong," said Jap, with an air that said plainly, "I know."

"He has, has he?" broke in Peleg in his most sarcastic tone of voice. "Now I *do* know. I've tried it, and the man who says they are no trouble—"

"Lies!" interposed Sang.

"No. I don't say that. I'm a gentleman at least."

"Well, what is your experience? Let us have that," said Sang.

"Yes, gentlemen, I've had experience, and let me tell you the man who thinks that a pup is as gentle as a lamb and as easy to be brought up as a chicken, will find himself awfully mistaken when he tries it on as I did. Why, when I got Jab I fancied I would have nothing to do but keep him in scraps from the butcher's shops. My! my! wasn't I mistaken? Why the very second day after I took him home the trouble began. When I went to my dinner Nancy met me at the door with a white lip, and I knew something was up. 'Look 'e there!' said she, pointing to

a shapeless, ragged bit of blue cloth and bluer cotton batting lying in the middle of the floor.

"'What is it?' I asked, assuming an indifference I did not feel.

"'What is it?' exclaimed she in a tone of voice that plainly indicated she was not indifferent to the little pile of chewed-up blue cloth and blue cotton batting. 'It's little Simon Peter's cap that cost a dollar and a half, that's what it is, all chewed up by that nuisance of a pup of yours!'

"I did look at the ruined cap—I had to; but by promising to get another that afternoon just like it, I managed to calm my wife down. She insisted, however, that I should tie the dog up, and so to please her I passed a cord about his neck and hitched him up to a post in the back yard. But Jab wasn't used to standing hitched, and long before night he was racing back and forth over the grounds in all the joyousness of young puppyhood.

"In two or three days after we went from home on a visit to be gone over night, and it became a question to know what to do with Jab. Nancy proposed that we fasten him up in the servant's room, and it was done. On our return I hastened to that room to release the prisoner. Good gracious! What a muss that room was in, to be sure. He had clawed and pulled at a thick, heavy comfort that was on the bed until he had got at the cotton with which it was lined, and bits of cotton were scattered all over the room. It looked like a snowstorm had come in our absence. That evening I brought up from the store a brand new comfort to replace the one Jab had so mercilessly torn up.

"I think it was about a week before there was another outbreak. Not that the dog ever behaved himself for a whole week during his minority, for I am sure he did not, but he had not been in the family long enough for us to find out his tricks. One of my slippers was missing that week and one of baby's stockings, both of which were found the following spring badly decayed in the raspberry patch. Also one of the children's books was badly rumpled and torn, but as no one had seen Jab with the book, he could not justly be charged with it. What Nancy may have thought about it she did not say, and I did not ask.

"At the end of the week succeeding the comfort performance I went home one afternoon an hour or so before my usual time, and instead of going in at the front door I passed around the house, where a sight met my eyes that was truly amazing. Jane had that day washed the bedclothes and the clothesline had been covered from end to end with snow white sheets and counterpanes. A smart breeze had sprung up and sheets and counterpanes had been swaying and flapping as if they actually enjoyed the day out of doors. What better fun for a young dog than to lay hold of one and pull and tug and shake and growl, as only a young dog could? Jab may have imagined that they were hung out for his special delectation; at any rate he made the most of his opportunity. As fate would have it he selected the largest and handsomest counterpane—the very one of all that Nancy prized the most, for it was a present from her mother—pulled and tugged at it till in one corner were a hundred slits and shreds. Every other article on the line had received a worrying at his teeth, but he had done his level best at the big counterpane."

"What did Nancy say?" interposed Sang impatiently.

"Say! Why she was too mad to say anything. She just jerked the things off the line and threw them all in a heap, while I lambasted the pup within an inch of his life. I whipped him and whipped him until my arm fairly tired out and then I went and tried to comfort Nancy, but I soon quit. She was mad as a hornet and I've found out that when she is that way the best thing to do is to let her alone.

"After that we tied Jap up on wash days and saved our clothes. Several days passing without any complaint, I began to flatter myself that the dog had sowed his wild oats and that there would be no more trouble. But alas! The time had now come to sow the flower seeds, when Jab concluded to sow more oats. The way of it was this: Nancy had a flower garden all to herself, in which she succeeded so well in raising flowers that she was the envy of all the women of the town. As the sun began to lengthen his stay and the spring days to come, Nancy called in old Hugh, and between them they worked over her flower garden till it looked like it had been sand-papered. The marigolds and the Johnny-jump-ups and all the other things that grow in flower gardens had been planted in the pretty beds, and it was left for the sun and rain to finish the work so prosperously begun.

"Had the two industrious mortals only looked under the branches of the gooseberry bushes close by they might have seen the bright inquisitive eyes of a very mischievous puppy watching with great interest the progress of the work; but they didn't, and so, when their work was done and the coast was clear, all that mischievous puppy had to do was to walk boldly out and take up the work where they had left off; and he did it. The way he wallowed and rolled and scratched and dug over and over those beautiful flower beds beggars description. That garden was a ruin, a waste, and verily I thought Jab's last hour had come. The outraged woman insisted on him being led out to execution at once, and I stood dumb before her, unable to utter a plea in his behalf. But Jab always was the smartest dog that ever was, and if he did not understand what she said, we have always given him the credit of it, for no sooner did she say it than he ran up to her and looked her steadfastly in the eye with such a beseeching confident look that she relented and forgave him on the spot.

"I do believe that the dog tried to mend his ways and do better. For nearly two weeks he gave us no cause of complaint, but on the contrary endeared himself to us all. Whenever Nancy would step out of doors he was sure to be at her heels, and he made a great show of being a sort of body guard by running the chickens and pigs and cows from her path, and you know there is no woman who is not susceptible of attention, even from a dog. And he also romped and played with the children to their great amusement, and in other ways made himself useful.

"But in an unlucky moment temptation came in his way and he again fell. A few months before one of our neighbors had provided his wife with a baby carriage, which was considered by her and her 'set' as a little ahead of anything in that line which had ever been brought to our town. Not long after its advent it became necessary for us to have a vehicle of the kind, and although I could not very well afford it, I nevertheless bought one so much better and handsomer than our neighbor's that her 'set' even were known to admit it. This carriage was a source of a vast deal of solid pleasure to Nancy, for she liked above all things to slip little Ted into it and wheel him around town, and especially past the door of our neighbor's house, for to confess the truth the two families stood on a sort of war footing toward each other. One afternoon she had been out, and coming in, had left the carriage for a minute or so, as she at the time intended, on the front porch, but her minute lengthened into an hour, and when she did go out, not only the porch, but the whole front yard was strewn with bits and shreds and patches and strings of cherry-colored silk, moss, oiled cloth, patent leather and all the other things that go to make up the finish and style of a fine baby wagon. The beautifully painted wood work looked like it had been riddled with shot, and the whole thing was a most miserable wreck of its former self.

"Jab's doom was sealed and no mistake. At least you would have thought so had you gone into the woodhouse as I happened to do within ten minutes after the discovery. Nancy had taken the clothesline and made a running noose on one end which she slipped over his head, while the other end had been thrown over a beam and was in her resolute hands. The boys had assisted her thus far, but as she began to tighten the noose and the dog to struggle the children one and all set up such a lamentation and begged so lustily for the life of their playmate that she was driven to relent and substitue banishment for the death penalty. She proposed to Tobe that if he would carry the dog to the country—away off on the other side of the Poor House—and leave him there she would not hang him, and Tobe assenting did so, but he had hardly got back ere the dog, as I expected, came sneaking back too. But I think he was a wiser dog than ever he had been before. He seemed to understand that he was a criminal, and hung around the barn and in the further side of the garden. The boys and I carried food to him in the days of his disgrace, and although Nancy knew of his reappearance and our Samaritan-like conduct, yet she held her peace, pretending to know nothing of it.

"Thence on, I must say he never meddled with any of Nancy's belongings. He ceased 'setting' and crushing with his paws her chickens; he robbed no more her hens' nests—in a word he let her and hers alone. But dear me, how he did worry one or two of the neighbors. Old Mrs. Bouncer charged him with enough crimes to have justified the hanging of half the dogs in town, while Mrs. Fenceroper actually laid out poisoned meat for him, which the Bouncer dog ate to his death. Mrs. Caplow accused him of stealing a ham off her kitchen table one day, a story so improbable I refused to believe it unless she herself would say she saw him do it, which she would not, but not long after I discovered Jab gnawing in our back yard on a recently unearthed ham, and I had no doubt then but it was the Caplow ham. If he let Nancy's things alone he did not mine. The devil seemed to be in him. He actually raided one night a half dozen choice young apple trees I had recently set out and killed them as dead as herrings. Taking the trunk of a tree between his teeth he ran round and round till he ringed it as neatly as I could have done with a knife. Old Fenceroper heard him growling in the night and walked over to my fence to see what he was at, and was so tickled with the performance that he never mentioned it till the next day. O, if you think a pup is no more trouble to raise than a chicken just get one and try it awhile. That's all!"

"I think I'll buy my dog full grown," said Sang, after a short pause.

"And I think I'll go to bed," said Peleg.

D. D. BANTA.

FRANKLIN, Ind.

NOTES FROM THE PARK.

MAMMOTH HOT SPRINGS, Dec. 29.—The condition of the Park at the present time presents a marked contrast to that of last year at this season. The snow fall to the present time has been so light that horseback travel over the whole Park has scarcely been impeded. The most of the large game still remains in the mountains, though scouting parties report the slopes of Specimen Ridge fairly lined with elk. The elk are also reported in other mountain resorts in undiminished numbers. Last year at this time the borders of the Park were surrounded by professional hunters ready to pounce upon any unwary elk or deer that might stray outside, or to take advantage of any lack of vigilance on the part of the soldiers to venture a short distance inside. Now the Park appears to be almost entirely free from this annoyance. Several causes have combined to bring about this changed condition. The difficulties experienced last year in marketing the meat, discouraged many old hunters, and the excellent law passed by the Legislature of Montana at its last regular session has added to their disgust. This law gives an open season from Aug. 15 to Dec. 1 only, and absolutely forbids the killing of any animal for his head or hide alone or for sale or speculative purposes.

The mining camp at Cook City, located at the northeast corner of the Park, and whose people have heretofore almost subsisted during the winter off of the game killed by hunters—who are indifferently hunters or honest miners, according to the season of the year—has become so reduced in circumstances that scarcely twenty people remain in the place where there were several hundred a year or two ago. It is expected, however, that this place will again become prosperous upon the completion of the Rocky Fork R. R., and it will doubtless always give the Park much trouble.

The arrest of several hunters within the Park during the past two years, and the confiscation of their outfits, has doubtless contributed in some degree to the present improved condition of the Park.

C. C. C.

DEER AND DOGS ON LONG ISLAND.—Marvelous stories are told of the performances of the deer that was recently chased by dogs through Sayville, L. I., two men declaring that they saw it clear a 2ft. ditch, a 4ft. board walk along which runs a hand rail 3ft. high, and finally a 66ft. road, all at a single bound. Such a leap would be over 70ft. The poor creature finally ran into the bay, where it was caught by some baymen and brought to shore. It was so exhausted, however, that it only lived for a short time after being captured.

MAINE LARGE GAME.

THE season for moose, deer and caribou shooting in Maine legally expired on the first day of January, 1888. The record of deer and caribou killed is not large but that on moose, if all stories are even one-half true, is surprising. The Maine Fish and Game Commissioners, who make no report this year, for the reason that there is no session of the Legislature of that State, are reported to have said that the increase in the large game, moose, deer and caribou, has been wonderful. This is true, if the record of the killed is also true. This increase has gone on in spite of all the illegal hunting that has been done, and which the last Legislature neglected to appropriate money enough to punish. These facts go to show what a paradise of game that State might become, were the State wise enough to provide the means for enforcing the game laws, as they should be enforced. None know better than the worthy Commissioners of that State that the game laws are but feebly enforced at the best, and this for the want of means. The Commissioners do not need to be told in the columns of the *Industrial Journal*, by Jock Darling, that the game laws are not enforced as they should be in Hancock county, but the only reason why they do not have a sufficient number of officers and wardens down there to really protect the game is for the want of means. The State is a great one, with an enormous tract of unsettled territory to be looked after, as well as a large tract of thinly settled districts on the borders of the unsettled wilderness. It would require nearly an army of wardens and patrolmen to fully protect the entire State, so the work of the Commission has had to be narrowed down to the worst plague spots, and Mr. Jock Darling can readily see in what light his neighborhood is regarded by the Commission by the amount of work they have put in there.

But, as noted above, the killing of moose in Maine has been remarkable, even if the stories are only partly true. In the first place the record of moose killed in the open season embraces ten or twelve, the last ones having been killed in Franklin county the other day, in the neighborhood of Tim and Bartlett lakes. There were two killed by the hunters from the herd of four or five. One of these, so said the reports in the daily papers, was an enormous fellow, whose age indicated by his antlers must have been 14 years. He was killed by A. B. Douglass, but the reports in the papers say that this moose must not be confounded with the other one killed by A. P. Douglas early in the fall. What does this means? Are there two Douglas moose hunters? Evidently somebody is trying to save somebody from the odium of the law, which provides that only one moose, two caribou and three deer shall fall to the lot of the same hunter in the same season. But the item does not entirely screen the slayer of the moose from the name of breaking the law, for it goes to say that the horns and steak of the moose "are on the way to Boston, where it cannot fail of bringing a good price." Now it really looks as though Mr. Douglas or somebody had been law-breaking, for the newspapers nearly give him away as having killed two moose this fall, besides shipping the animals, or parts of them, out of the State. Besides it was true that the other great moose killed by Mr. Douglas early in the fall, concerning which the FOREST AND STREAM has already had an account, found its way to Boston; for it was shown at Messenger's, on Bromfield street, this city. It is well enough for Mr. Douglas to be emblazoned in the papers as the slayer of a great moose, if he delights in such notoriety, but it is shameful for him to kill more than his legal share and then ship them out of the State in defiance to the law.

But the record of moose illegally killed in that State the past year is a bad one, even if half of it is true, while at the same time there is no good reason for doubting the entire story. A gentleman, thoroughly acquainted with moose hunting in Maine, and acquainted with a number of the best guides in the Moosehead region, has kindly made up a record of the moose killed, generally illegally, that he has heard of in that State the past year. The record embraces 12 of these noble game animals, and since they were nearly all killed out of season, it shows how great the need is of better protection than the Commissioners, with the limited appropriations of the State, are able to give them. The record includes 1 moose killed between Chesuncook farm and Pine Stream, 1 killed at Spencer Pond, 1 at Lobster Lake, 1 at Neilhodus Stream, 1 at Tomhegan Pond, this one after Oct. 1; 3 at Harrison Lake, 1 at the thoroughfare between Eagle Lake and Churchill Lake, 1 at Sunset Brook, near Eagle Lake—the hide and meat were both to be seen by those who knew where to look for them; 1 at Ellis Brook, this one after Oct. 1; 1 in the neighborhood of Loon Lake. Besides his record shows a caribou killed at Mud Pond. The above game killed illegally, was chiefly killed in the spring, either by crusting or late in the spring for bear bait. The gentleman thinks, and his reasons are sound, that the bounty on bears in that State is a curse to the large game. To kill a deer or a moose in the woods in the spring and leave the carcass where it fell, simply stripping it of the hide, is sure to attract all the bears of the vicinity. In this work the bear trapper or hunter is doubly sure if he drags the carcass some distance before it is done bleeding. The bear scents the blood, and quickly trails it to the point where the carcass has been fastened to a sapling, but he cannot reach it without falling into the trap set to catch him. But the hunter must have some large game animal, and there are few to answer the case but moose, deer or caribou. Of the above-mentioned moose the meat of but two or three ever came out of the forest. It was used for bear bait generally, and suffered to rot if not eaten up by the bears.

The trappers are generally poachers. They go into the woods, ostensibly after furs, but they take all the game and fish they desire, either for bait or for their own food. They do not scruple in the least to bring down a moose if a single mess of steak is wanted. Such poaching is hard to reach, and add the amount of it to the number of moose and deer killed by the lumbermen and the hunters who follow them every winter. It is a wonder that the large game of Maine has not long ago been exterminated. And yet at the close of the year the Commissioners are able to say, with truthfulness, that there has been a great increase in the number of moose, deer and caribou in Maine. This only goes to show what a paradise for sportsman that State might become, in only a few years, if only the proper protection could become a fixed fact. But the moose, even if they have shown a marked increase in the sections where the game laws are

the best obeyed, cannot long exist under the hunting and slaughter the lumbermen and trappers are willing to meet the increase with every time the lumbering interest centers in a section where the timber has reached a growth sufficient to be cut. The number of moose killed in Maine the past year by sportsmen from outside the State is very small; on the fingers of one hand they could doubtless be counted, and that, too, generally in the open season. Just here the State should take a hint. It is just as wrong for one person to kill a game animal out of season as it is for another, but the profit is greater to the people of the State if the animal be killed by the outside sportsman than it is if the same animal is killed by a trapper for bear bait. I am not desirous of instructing the friends of game protection in Maine in ethics, it is only a question of policy that I hope they may adopt, and hence try to lead the lumberman poacher and the trapper poacher to justice as well as the sportsman who happens to come from Boston or New York or Philadelphia. Both should be brought to justice, but as a matter of policy, the one who pays the best should be allowed to get away, if either is to go unpunished.

The feeling is certainly getting a strong hold upon the minds of the sportsmen in this part of the country that it is the hunter or fisherman who comes from outside of the State who is brought to justice, if he kills game or takes fish out of season. I do not wish to thus make a note of a fact for the sake of giving anybody trouble, much less the worthy Fish and Game Commissioners of Maine; for they know and I know that I have both respect and admiration for what they have done in the past. I only state the fact of the existence and the growth of this feeling because it does exist and is growing, and because the only way to cure it is to make more of a record of punishments centering around the lumber camps, and by bringing more of the local hunters and trappers to justice. If the Boston sportsman is obliged to wait till Oct. 1 in order to kill game legally in Maine, it is rather disgusting to him, after reaching the hunting grounds, to find them tainted with putrid moose flesh, to find lumber camps littered with deer bones—moose and deer have been killed in defiance of law by the trappers and lumbermen of the State. I am well aware that the last session of the Legislature in that State left the Commissioners without the means to enforce the game laws as they should be enforced, but there was something appropriated, and it is devoutly to be desired that one or two lumbermen or trapper moose and deer killers be brought to justice. Here is this man Douglas, mentioned above; one moose of his killing has certainly been shipped out of the State illegally, and the newspapers are accusing him of killing another, and that its being shipped to Boston. If he is guilty and I read the law aright, then he should pay into the State $240. Is he guilty and will he be made to pay? If the moose comes to Boston we shall see. I have just heard that a moose and the horns have been stopped in Portland en route for Boston; that the express companies refuse to handle or transfer it. Perhaps this is the other Douglas moose. SPECIAL.

PARMORE'S BEACH.

IF a man of property, a dozen years ago, had made a specialty of investing his money in the natural ducking grounds along the seacoast of Maryland, Virginia, North and South Carolina, what a fortune he could have made by this time by disposing of his shores to shooting organizations. I know of an island off the coast of Virginia that could have been purchased in those days for $7,000. It is seven miles long and several miles wide. In a direct line it is about six miles from the mainland. When I first visited it there was but one house on the island, approachable only at high tide by a muddy creek. This was "t-whenty years ago." The house consisted of two spliced-together cabins off wrecks, and the door was as hard to find as the bower in the Rosamond puzzle. The occupant was a long, lanky, savage, senescent seacaptain. He had gotten into trouble and was on the drydock, so to speak, in unquestionable seclusion. Being a widower, there was no grown female to make one feel uncomfortable on the island, but the old salt's little daughter, who looked as if she never had her hair brushed in her life, lived in one of the lockers, only coming out periodically to roast black ducks and geese, and play dominoes with her "dad" with a broken set, kept in an old shot bag. Having been the sole proprietor of the shipwreck which cast me on the bleak shores alone, the cold made me muster up courage to approach the stronghold of the man with a dead bad record. My reception was simply diabolical. The old cuss grunted worse than the biggest wild hog on the island, and that weighed over four hundred. He declined to let me in. The efficacy of prayer on this occasion was a dead failure, so I played Jameson's Irish whisky, in an imperial quart bottle, instead, and made a winning from the start.

I lived on the island ten days, and during that time enjoyed the best black duck shooting I ever heard of. The center of the island was covered in those days with a heavy growth of red cedar. This was traversed by a narrow glade—a series of shallow fresh-water ponds, about as wide as Broadway—in which grew an abundance of duck-grass. When the northeast wind would blow, and rain and sleet pelted down, the ducks on the vast Broadwaters would seek the glade for shelter. Standing shivering under a red cedar snag, I, with an old muzzleloader, killed 117 ducks one day and 64 the next morning. On Nov. 18 and 19, 1876, I nearly duplicated these bags by shooting 89 and 42. I am not bragging about these bags, any one could have done the same. The ducks simply hovered thirty to forty feet in front of me, and were very gentle. The trick of the whole thing was in knowing how to handle the birds, and by refraining from shooting into the flocks. I got the tip about these ducks from an old shooting friend, a blockade runner in war times, who used to hide his boat up the muddy creek. He has told me that it nearly made him crazy to see the ducks go boiling into the glade, and from fear of discovery be afraid to fire a gun.

I shot on the island four winters. What was rather strange a half a dozen very well known New Yorkers were at the same time shooting quail and fowl not eight miles away; often they gunned for geese under the lee of the south end of the island, yet not one of them or their men ever located the ducks settling in the island ponds. I systematized my secret down to a fine point and only shooting in the wildest kind of weather for fear of being heard. I baited the ponds with corn and cabbage, the latter for the geese, and only shot two or three times a week. There were some big salt ponds at the north end of the island which afforded fair goose shooting, and when not after fowl I used to go hog hunting with the Captain.

The island was overrun with hogs, which for forty years had been the masters of the situation. As cold weather approached they became aggressive, and the Captain never ventured far from home without carrying his long muzzleloader charged with ball and buckshot. I was duck shooting one morning in the glade not far from the house, when I heard the report of my host's gun, and then saw him coming toward me at the top of his speed. Close behind him was a huge boar covered with froth and blood in full pursuit. I had never seen any one run so fast before in my life, except the long-legged captain the night he saw the ghost of an old sailor walk out of the surf, climb upon a sandhill, make a fire and sit down to dry himself. That night he came home on a dead run and this time he was even lowering his previous record. The two loads of duck shot I sent into the brute only tended to madden him the more; he had just overhauled his victim, when the Captain seized a low overhanging limb and swung himself up clear of the ground, but as the boar passed under, with one of his long curved tusks he ripped the Captain's leg open from knee to ankle. He had just managed to save his bacon, but he was lamed for life. The boar halted for a second and then went dashing into the woods. The shooting on the island is now a thing of the past. A fish factory grinds away where the geese used to honk. The woods are cut down and the ponds in the glade have long since been filled up with drifted sand from the beach. Yet what a place it would have been to organize a club.

THE WISE ACRE.

FROM THE FAR NORTH LAND.

THE following letter was recently received by His Honor Judge Jellett, of Picton, Ont., from Mr. Peter McKenzie, a gentleman well known to many in the county. Mr. McKenzie is a factor for the Hudson's Bay Company at Fort Chimo, Ungava Bay, on the northern coast of Labrador:

FORT CHIMO, Ungava, Sept. 3, 1887.

MY DEAR JUDGE—Your welcome letters of June 1 from Picton and July 13 from Quebec, both came to hand the 28th ult.

I am glad to say that I have been first class in health ever since I last had the pleasure of writing you, but did not have any sport at all, there were no deer within 200 miles of my place. The like was never known before and numbers of natives starved to death, although well supplied with ammunition. There were not only no deer, but to make matters worse ptarmigan were also so scarce that in a day's walk a man could only get a dozen or so, where in former years he might have killed over 100 if he could carry them home. Where I used to kill 100 in a forenoon two years ago I could only bag half a dozen in a whole day this winter. I always take a team of ten dogs with me when I go hunting partridge (as we call them here) to haul the game home and myself on top of the load. Last winter the dogs had an easy time of it, they had only me and the driver to haul backward and forward. I trust that things will mend next winter and that I will be able to make up for all this bad luck. If not I am afraid it will kill me, as it is mostly the shooting that keeps me here. My setter dog Flavius is a grand one for the partridges and retrieves as well. I have just received from the Duke of Sutherland's kennels a splendid staghound, £25. If there are any deer I expect to have some fun, at any rate it will be great fun to get him after Arctic hares; they are sometimes quite plentiful near the houses, in fact I have shot them from the door on moonlight nights. This hound will soon catch one or drive him to me to shoot, as they run in a circle when closely pursued; he can have a go at a fox also occasionally so I have no doubt he will afford me plenty of sport and amusement. The beggar is rather wicked and has taken a dislike to Indians; he nearly worried one to death the other day. He doesn't seem to know the difference between an Indian dressed in deer skins and a real live deer; he goes for the fur every time.

The mate was mistaken when he told you there was only one vessel coming here. The Diana was on her way here when the Labrador was in Quebec, but she has not, as yet, put in an appearance, and as she is now over a month past her time I am very much afraid that she has gone on the rocks or been crushed in the ice. She had a full cargo of lumber and provisions for this district, making things very bad for us by not arriving. Most of my letters were sent by her, including all the official's from London and Montreal, and as no copies have come for Labrador I am quite in the dark regarding business matters; pleasant, isn't it? The skipper tells me that he saw you after your interview with the mate.

I am glad to hear that the Ontario Government have at last passed one act to prevent spring shooting altogether. I am sure that in a few years there will be a great difference in the number of birds during the open season, and that by the time I go west again there may be a great improvement in the shooting. I shall take a run up to Picton in October and have a go at the ducks and woodcock. Is my little bush on the old Irishman's farm much shot over now? or have the birds failed to rest there? West Lake and Weller's Bay will be crammed with ducks in a few years, if left alone in spring. I generally get as many as twenty geese. I do not hunt them in the fall, being too busy getting in my stock of venison for the winter. Last fall I did not kill a single deer; about the middle of December I fell in with a herd of thirty or forty, but it being very calm at the time and no good ground for stalking I could not get nearer than 300yds.; as it was getting near sundown and no meat in the snow house, I thought I would crack at them anyway, as I might not find them again the next morning. I fired about twenty rounds right into the middle of them, hitting twelve, but only killing six dead; the others walked off, but it was too late to follow that evening, but the next day the Esquimau boys who were with me got the whole of them. I went to look for the scattered herd, but saw only eight of them, too far away to shoot. I never saw a deer for the remainder of the winter. This spring I shot two in May, that is the extent of my deer shooting for the past year. Of course I got plenty of ptarmigan, but as I said before, nothing compared with former years, but good enough sport, formerly it was slaughtering.

One of my men killed a fine polar bear about six miles from the house, not the largest size, but above the average. He put four Snider bullets into him before he gave up the ghost at short range, not more than 40yds. Several other tracks were seen, but I never could get sight of one, though often out for the whole day. One of these bears quietly walked into an Indian's tent one night; there was an old man and his wife in it; the bear made a grab at the old woman, but the old man hit him over the nose with a sharp axe, which made Mr. Bruin retire. The gun was outside, stuck in the snow; the night was dark as Erebus, but the old fellow got out and found his gun, loaded it, but could see nothing of the bear for a time; at last on looking behind the wood pile he made him out, standing quietly, I have no doubt feeling a little dizzy. The Indian could not see which was his stern or head, it was so dark, although only about 5yds. from him, but trusting to luck he let drive, and the bear vanished in the dark. The next morning the old man got his snowshoes on and after the trail, a very bloody one. When he had gone about five miles or so he saw his enemy lying on the side of a hill, but not dead, so he crept up within 50yds. and let fly a ball into his side. The bear rose and tried to walk, but could not get on at all, upon which the old man, being rather saving of his ammunition, went up with his axe and chopped off his legs, then coolly split his head open. On examination he found that when he fired his first shot behind the wood pile the bear must have been standing almost stern on to him, for the charge of buckshot had raked him from the middle of the belly to the fore shoulders, smashing several ribs but not penetrating into the vital parts. I have the skin here, and saw the rip in it, a very ugly one, and the gash from just below the eye to the middle of the nose, the result of the first blow in the tent. This bear was awfully poor and not eatable, a very old one seemingly, for he has hair like pig's bristles.

Wishing you all a happy time next winter, I am, my dear judge, yours very truly, P. MCKENZIE.

THE SALE OF GAME.—New York, Jan. 7.—*Editor Forest and Stream:* I desire to call attention to the quantities of game still displayed in the various markets, groceries and restaurants of this city. This is particularly noticeable in large bunches of quail, and in some instances of ruffed grouse and quail, so displayed and offered for sale at this date (Jan. 7) or one week after beginning of close season. Is this not due to a laxity on the part of the game warden to enfore laws which he is paid to see properly carried out?—SUBSCRIBER. [Quail may be sold until Feb. 1. The grouse are unlawfully put on sale.]

THAT BREEDING THEORY AGAIN.—*Editor Forest and Stream:* I beg to inquire, in view of Mr. Roosevelt's explanation in respect to deer hounding, whether he was "joking" when he wrote a long letter last winter advocating woodcock killing in July breeding time, whether such practice helps breeding, etc.? A further explanation seems to be in order in view of our present scarcity.—MOTHER WOODCOCK.

THE LYMAN RIFLE SIGHTS have been reduced 40 per cent., the manufacturer having put in new machinery and considerably enlarged his plant.

THE MASSACHUSETTS ASSOCIATION will hold its annual dinner at Young's Hotel, Boston, Jan. 26.

TESTING A RIFLE'S STRENGTH.

Editor Forest and Stream:

The following is a report of an experiment to test the strength of the Hepburn action as used in the Remington-Hepburn or Remington No. 3 rifle. This rifle is made by the Remington Arms Co., centerfire only, in all calibers from .22 to .45; the particular rifle which was used in the experiment was a .38cal., of 8lbs. 6oz. as weighed without the sights, 28in. round barrel and chambered for the Remington solid head 50grs. shell. The rifle was an accurate shooter and had been fired at the target some 400 times with the usual charge of 64grs. powder and 255grs. lead.

In this trial it was fired from a fixed rest, the butt resting on a solid rear block, without the intervention of a pad, so that it received the full strength of the recoil.

The powder used was orange FG, the bullets 225grs., patched, some of Remington and some of Winchester make. As the bullets fitted too tight to enter the barrel at the muzzle with the patch on, I was obliged to remove the patch and enter the bullets naked. Before entering them, however, I greased them with lard and filled the hollow at the base also with the lubricant. The shells used were new .38-50 Remington solid head with the No. 3½ Remington primer. A fresh shell was used for each shot. In loading I entered a shell at the breech, closed it and poured in the powder at the muzzle, followed by a Remington felt lubricating wad and the bullets. The loads of powder were weighed in druggists' scales and made up in packages to carry to the firing ground. I poured them down with the help of a tin funnel. The number of shots and loads were as follows:

	Shots.	Grains powder.	Bullets.	Grains lead.
First series	5	150	2	510
Second series	5	200	3	765
Third series	5	250	4	1020
Fourth series	5	300	5	1275
Fifth series	5	350	7	1785
Sixth series	5	400	9	2295
Seventh series	2	400	10	2550

This latter charge filled the barrel to within 5½in. of the muzzle. The rifle gave no trouble in the rest, and the firing continued without effect till the eleventh shot, when the firing-pin spring broke. For several shots after this I had some trouble drawing the firing-pin back, and had to strike the rear of the breech block with a hammer, to "jump" it back and let the block traverse.

As the loads increased the primers (three No. 3½ Remington) began to burst, allowing a great deal of gas to escape into the lock and action, and when half through the trial I was obliged to remove the breech block and clean and oil it and the traversing grooves. The firing-pin and firing-pin screw were also removed and cleaned, and at this stage of the trial both of the latter were in perfect condition.

The rifle received no further apparent injury till the second shot of the seventh series, when the firing-pin was broken and the rear end of it thrown out upon the hammer. The point of it dropped out of the hole while I was examining the rifle.

On dismounting the rifle I found the lock, action and frame thickly coated with dirt, but after cleaning and oiling I found that the lock and action worked with ease and precision; but there was a something wanting in the action. It did not "speak" with the sharpness and decision it had at first, but a close examination showed no injury except to the firing-pin, firing-pin screw and firing-pin hole. The two former appeared to have suffered the brunt of the trial. The pin had broken in the middle, and at this point showed the marks of severe collisions with the screw, being considerably battered and worn, and its front was thickly coated with a bright red deposit. The screw was reduced to half its original diameter, and had the appearance of having been badly rusted and eaten by some powerful acid. This was doubtless caused by its contact with the firing-pin and the escape of gas through the firing-pin hole. The hole itself was damaged; in the face of the breech block it had been enlarged to twice its original diameter, and inlaid in its outer circumference was the rim of a primer. How the rim of a primer could get there and be placed so neatly, too, is a puzzle to me.

Inside the frame, at that point where the head of the firing-pin screw lies when the breech is closed, was a round ring cut by the head of the screw. Strange to say, the mark was not sunk in the center, it was simply a circle marking the outer circumference of the head of the screw where it had touched the frame.

On the opposite side of the frame, where the point of the screw touched, was a roughly-made square mark of about the same width as the mark made by the head. Now, both head and point of the screw are circular, and the point not more than two-thirds of the size of the head. How could each make a different shaped mark and each as large as the other? and how could they be jumped against the frames so as to leave such marks? Have any of your readers ever met with such a case?

During the latter part of the trial the primers with few exceptions all burst, the crowns being blown right off, allowing a great part of the gas to escape rearward. None of the shells stuck or burst, but two had their muzzles blown off and were twisted in a most curious way. The stock, although butted against the solid wood without a pad or even a metal butt plate (it had a rubber butt plate), suffered no injury save a crack 5in. long at the heel.

The barrel was wiped out after each shot, that is I breathed through it a few times and then drove a tight-fitting rag through. This did not remove all the dirt, but it made it fairly clean. The fouling was, of course, excessive and worst in that part of the barrel which had been occupied by the powder. On cleaning the barrel after the trial I found it slightly leaded, but so slightly that it was easily removed by a tight-fitting rag. To prove if all

the powder charge was consumed I placed at 10yds. from the muzzle a sheet of tough brown paper. I found that in no case was the entire charge consumed. Some grains were driven through the paper, others stuck in it, and others again indented the paper and fell off. There was no doubt whatever about it being powder grains. The bullets themselves struck the sheet in much the same way as would the same number of buckshot from a cylinder-bored gun.

The barrel of the rifle seemed perfect, I could detect no injury to it, indeed the rifle with a new firing-pin and screw was perfectly serviceable and could have been used again.

J. CAMPBELL.

P. S.—Since I wrote the above report I have been informed by the Remington Arms Co. that the marks on the inside of frame, which I supposed to have been made by the firing-pin screw being "jumped" against the frame, have really been made by the powder gas escaping around the screw.—J. C.

Angling Talks. By Geo. Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Anglers' Book. By Thad. Norris. Price $5.50.

THE NEW HAMPSHIRE TROUT LAW.

NEW YORK, Jan. 5.—*Editor Forest and Stream:* The trout law to which you refer is five or six years old and is aimed at jiggers and grapplers. So it is interpreted by the Fish Commissioners who all fish with from three to four flies, and some flies are double-hooked. Then you know that spoon fishing is legal in New Hampshire and that a spoon often carries three hooks. Some one who understands the use of English should frame our fish laws and make them perspicuous. No one from reading them can arrive at the true meaning. By the way, since it is unlawful for a man to have more than 10lbs. of brook trout in his possession at a time, what is he to do when an eleven-pounder strikes his minnow at Sunapee Lake? This is a good law for the protection of fingerlings, but the Legislature should have gone further and prohibited Sunday fishing. Sunday is the day when the innocents are slaughtered. They have stopped Sunday shooting in New Hampshire and should stop the Sunday fishing, also. On Sunday the hoodlums are out picking the fingerlings out of the holes.

J. D. QUACKENBOS.

CHARLESTOWN, N. H.—*Editor Forest and Stream:* I have read your comments on the "New Hampshire Law," in FOREST AND STREAM of Dec. 29, and wish to say that the clause referred to, confining anglers to the use of the "single hook and line," was intended to prohibit the use of "trawls," or "set lines," with from a dozen to a hundred hooks attached, which were extensively used on Lake Winnepesaukee and others of our inland waters. It was not supposed that it would prohibit the angler from giving the trout the choice of two or three varieties of artificial flies, nor do I think it has ever been applied in that manner. The law might perhaps have been better worded, but its intent and meaning are fully understood in New Hampshire, and I do not think that any sportsman visiting our waters and fishing in a legitimate manner need have any fear of its misapplication.

SAMUEL WEBBER.

[This is no doubt the case, and just as we supposed, but we called attention to it to show how a person so disposed could make out a technical violation of the law against a fly-fisher who fished in the ordinary manner, with two or more flies.]

RANGELEY SPAWNING GROUNDS.

Editor Forest and Stream:

I am much surprised at "Special's" communication, which appeared in your paper last week on "Maine Trout," particularly at what he says of the spawning beds in the Cupsuptic stream. Here at the lakes it is the common talk of the hunters and guides, who have boated up and down this stream for many falls past, that they have never seen more trout on the beds than there were last fall. That there were more trout on the spawning beds on the Kennebago stream (which empties into the Cupsuctic stream) this fall than have ever been seen there before I think is a fact that sportsman, guide, or hunter will not dispute. The Cupsuptic, Bemis and Rangeley streams are all important supports to the Mooselucmeguntic and Cupsuptic lakes in the way of furnishing spawning grounds, but the seven miles of the Kennebago stream, between its mouth and the "Ash Tree," probably furnish these two lakes three trout to either of the other's one. Some of the spawning beds are in 4in. of water, others in 6 or 8ft., but let the trout alone for knowing the whys and wherefores of the location of their spawning beds; why in one place they will wiggle, twist and squirm their way up the tiny outlet of a muddy-bottomed spring and work the bottom over till it looks like another place, then, after depositing their spawn on the clean gravel, work their way back again to the main stream, and in another place choose the shallow running water of it and work their beds over and do their spawning with their back fins out of water. In another place they go into a currentless pool in a stream where the water is 8ft. deep, when near by are plenty of shallows with running water and fine gravel bottoms. Other beds are located in the lake in 8 or 10ft. of water, rods away from the shore, when there is plenty of spawning room in streams close by. Generally both the lake and stream beds are in less than 3ft. of water.

For years before the Union Water Power Company tripped up nature and made the Mooselucmeguntic Lake over to suit themselves, one of the largest spawning beds to be found anywhere in the Rangeley region was off the Bemis bar in this lake and in not less than 8ft. of water, and 40 rods from shore. Year after year they came there and did their spawning, but when the water was raised only 2ft. higher over their bed they abandoned it altogether. This fact shows that they are particular about the depth of water even over their deep-water lake beds, and, by their maneuvering the last few years since the Power Company has been continually changing the depth of water in the lakes, it is evident that nature has not slighted them in an endowment of instinct and reason, and although they have been considerably disturbed for the last few seasons on their lake spawning grounds, they will at no distant day get settled right again, whether it be in the streams or lakes. Taking one day with another, the spring and summer fishing was never better on the three upper lakes than the last, and I think it was up to the average on the lower lakes also, but the fall fishing (fly-fishing especially) was generally unsatisfactory. This was accounted for on the lake by the high water.

The first of September being close time on all the important streams running into the lake, that are not closed before, put a stop to the fly-fisherman's sport in that direction. It may have seemed hard to some of them, but that law is right and long may it stand. I don't think there was ever much better sport to be had in this region with the fly-rod than there was on the Kennebago stream during the month of August. As far as the blue-backed trout being enemy to the brook trout, by devouring their spawn, is concerned, I am very sure that this is a mistake—they are thoroughly a deep-water fish and only come to shallow running water when their breeding fever is at its height, and return as soon as their work is done. They are very valuable to any body of water where brook trout are, in the way of food for them. It is a very common occurrence to catch a trout in deep water in the lake with a blueback in it, partly digested. This was very common when we used to fish in winter in deep water through the ice. The blueback will sometimes take bait in deep water, but I know of no case of their taking a fly. They are very regular in size, hardly ever weighing over a quarter of a pound, and are seldom found weighing much less; generally they go about five to the pound. The cause of their disappearance from their old spawning ground below the Upper Dam last fall is very plain; the water in the lake below was so high that it backed up over the "rips," where they have usually done their spawning, rendering the whole line of "rips" as quiet as a millpond. Their leaving this point altogether is probably the cause of so large a number at Sawmill Brook, but no doubt there has always been more or less of them that did their spawning there.

F. C. BARKER.

CAMP BEMIS, Rangeley Lakes, Dec. 25, 1887.

ALONG THE NEW JERSEY COAST.

IN the inlets and bays of New Jersey this last fishing season small fish have been more numerous than for several years past. In the channel of the north bay of Little Egg Harbor, from off West Creek to Beach Haven, there was a swarm of very small weakfish averaging about ¼lb., and from 300 to 600 were easily caught to a boat on a tide by boys with hook and line. Could those have been young fish? They had roe in them, which would indicate that they were at maturity or at a state of reproduction, or are they a new race of weakfish for those waters? The ordinary weakfish that are caught there are much larger, from 2 to 9lbs.; 3 to 5lbs. would be a fair size. How young a fish will reproduce would be interesting to know. There also have been plenty of small porgies and sea bass; question, are they the young of the sea fish taken out at sea? There are many other small fish that are not taken account of.

Rockfish (striped bass) along this coast have been more numerous than for two years past, and were readily taken with hook and line, but not near so plenty as they were fifteen or even ten years ago. Sportsmen know that this fish gives about as much sport as any ordinary fish, and are among the best for food. In the bays fish from 2 to 10lbs. are caught—about 4lbs. would be a fair average. The sheepshead, porgies, sea bass and most other small fish leave the bays and inlets and go to sea, but where they go there is unknown. Rockfish and perch of the bays go into deep waters of fresh rivers, where they lie dormant during the winter. Little Egg Harbor, Mellica rivers that empties into the great bay, Metedeconk River at the head of Barnegat Bay, and Great Egg Harbor are the three principal rivers where such fish lay up.

In these rivers great quantities are taken with nets under the ice, I have heard of 200 tons of rockfish being so taken at one haul many years ago, but I think it is incredible. From what I can learn I have no doubt that from five to twenty tons are often taken at a haul, and that would seem to be very big. Little Egg Harbor, from its mouth inward, has from 12 to 30ft. of water, and I have no doubt that there is at times in those deep places a solid mass of fish. In all the rockfish I have ever seen caught in these rivers or bays I have not found any roe in them, which would indicate that they are young, not matured to a state of reproduction. I am informed that early in the spring very large rockfish, called "green-head," come into the bay from sea and spawn; they will not take bait, but are sometimes caught with nets. A few days ago we caught quite a large number of perch at Cape Horn, near Little Egg Harbor River, and, strange to say, that every one of them had either roe or milt, apparently well developed. Is it possible that perch spawn in the winter?

In Little Egg Harbor River fishing with the net is prohibited except from the first of November until the first of April, and the nets used there in the winter season are called sink nets and are set in the channel to catch the fish when drifting in the river, when there is no ice. They are somewhat like a long square bag should be, are about 30ft. wide, open at the mouth 8ft., and about 50ft. long. The tideway keeps them open, the fish being benumbed by the cold water drift into these nets, and when the tide slacks the nets are taken up, the fish taken out and the nets turned the other way so it will drift by the turned tide, and in this way large quantities are taken. When the river is frozen over then the ice is cut through and the nets hauled under the ice, and it is in that way that the big hauls of rockfish are made. It is this hauling that people complain of, the fishermen not only catching the rockfish but the little fish, and the food of all fish of those waters are hauled ashore and left to perish.

P.

NATIONAL ROD AND REEL ASSOCIATION.—New York, Jan. 7.—A meeting for the purpose of making arrangements for the coming tournament and transaction of such other business as may offer, will be held at the laboratory of Mr. Eugene G. Blackford, Fulton Market, Saturday, Jan. 14, at 2 P. M. By order of the President. Annual dues are payable on the first of the year and members are requested to forward same as early as possible in order to aid the committee in determining what prizes can be offered by the Association. Members in arrears for 1887 will kindly send in their dues so that accounts may be closed for the year.—GEO. POGY, Sec't'y.

PRIZES FOR LARGE FISH.

MR. C. F. JOHNSON, an enterprising dealer in books and fishing tackle, of Duluth, Minn., last spring offered a $25 split-bamboo trout rod for the largest brook trout taken with rod and line, purchased from him, in streams tributary to Lake Superior or adjacent waters, and a $15 split-bamboo rod for the heaviest black bass taken under like conditions. He gives us the list of captures:

TROUT PRIZE LIST.

The following is a transcript from my record of brook trout caught by competitors for the prize of a $25 Abbey & Imbrie split-bamboo trout rod, advertised by me to be given for the largest trout captured during the season with rod and line bought at my establishment:

C. D. Pattison, May 6, 1887, in Rice's Point Creek (a very small stream within city limits), 1¾lbs.

W. W. Douglass (voucher, Capt. Chas. Anderson), May 15, Knife River, 3¼lbs.

Dr. G. A. Derby, May 16, Knife River, 1 9-16lbs.

Gus Rakowsky, May 22, Lester River, 2lbs.

Dean Foster (age 10), May 30, in Chester Creek (within city limits), 13oz.—caught trolling and does not count for the prize—is only recorded on account of the age of the fisherman and the stream in which it was captured.

M. H. Alworth, May 30, Iron River, 1¼lbs., length 14in.

C. d'Autremont, June 14, Nipigon River, 3½lbs., 4, 3¼lbs.

Hon. A. J. Whiteman, June 26, Nipigon River, 3¾lbs.

H. A. Douglass, July 28, Washington Harbor, Isle Royal, 4lbs., length 21in.

H. Owens, July 30, Stewart River, 3lbs.

Geo. R. Thompson (of London, Ontario) July 31, at Split Rock, Nipigon River, 3¼lbs.

H. E. Partridge (St. Paul) Aug. 1, in Hamilton Pool, Nipigon, 3 7-10lbs.

H. M. Bristol (St. Paul) Aug. 1, same place, 3½lbs.

John Choldetch (London, Ont.) same date and place, 2, 3¼lbs. each, 1, 3lbs.

H. E. Partridge (St. Paul) Aug. 3, same place, 4½lbs., length 22½in.

James C. Hunter (Duluth) Aug. 15, Devil's Track River, 4½lbs. (Not caught in compliance with terms of contract).

N. Drake, Aug. 25, Sucker River, 2, 10-16, 2, 14-16lbs.

Edward Cass, Aug. 30, Onion River, Wis., 5½lbs. (Not caught in compliance with terms of contract).

Trout season closes in Wisconsin and Minnesota Sept. 1, and no further authentic records having come in I hereby declare the prize awarded to Mr. H. E. Partridge, of St. Paul, as having caught the largest trout in strict compliance with the conditions upon which it was offered.

BLACK BASS PRIZE LIST.

W. M. Anderson, May 14, Lake Cletherall, 5lbs.

F. W. Eaton, July 30, Pike Lake, Minn., one of 5½ and one of 6lbs.

N. P. Thayer, Aug. 8, Pike Lake, Minn., 4½lbs.

F. W. Eaton, same date and place, 4½lbs.

Graham Pulver, Aug. 22, Pike Lake, Wis., 2¾lbs.

C. F. Johnson, Aug. 22, Pike Lake, Wis., 3lbs.

Joe Sullivan, Aug. 24, Hanging Horn Lake, Carlton county, 6½lbs. (Voucher, R. S. Hawkins, Barnum).

H. Root, Aug. 26, Spirit Lake, Minn., 2½lbs.

M. Gridley, Aug. 26, Spirit Lake, Minn., 2 7-16lbs.

Mrs. J. H. O'Neill, Sept. 4, Pike Lake, Wis., 2½lbs.

Mr. J. H. O'Neill, same date and place, 5¼lbs.

Mrs. C. F. Johnson, same date and place, two of 4lbs.

C. F. Johnson, same date and place, 4lbs.

F. M. French is said to have caught a 6½lb. bass at Pike Lake, was sent me by D. J. Angus, but disappeared somewhere in Hotel St. Louis.

To Joe Sullivan, of Carlton county, the bass prize rod is hereby awarded.

C. F. JOHNSON.

DULUTH, Nov. 19, 1887.

THE OHIO FISH LAWS.—A bill is now before the sixty-eighth General Assembly of Ohio to amend Sections 6,961 and 6,968 of the revised statutes of that State. We give the gist of the present fish laws and the proposed amendments. It is forbidden to shoot or spear fish or to take them with "trammel or pocket-fyke or gill-net," but from the following sentence this appears to mean all inland waters and not Lake Erie, although it is not so stated: "No person shall draw, set, place, or locate any pound-net, seine, trap or fish net in Lake Erie, Sandusky and Maumee bays, from the 10th day of June to the 15th day of September, inclusive. No person shall catch fish in the Licking, Lewiston or Mercer county reservoirs, with any device except hook and line, between the 1st day of April and the 1st day of October." It is further forbidden to take fish except with hook and line in waters not named above. Black bass are protected from May 1 to June 15. No person shall buy, sell or offer for sale fish out of season, but nothing in this section shall prevent the taking of minnows for bait with nets not more than 10ft. in length. It is proposed to add to this that the Fish and Game Commissioners may take fish at any time and place for stocking waters, artificial culture, etc. It is also proposed to make it unlawful to kill fish with dynamite or other explosive mixture or by poison.

HOW THE FISH GOT THERE.—Dublin, Dec. 13.—*Editor Forest and Stream:* In FOREST AND STREAM of Nov. 24 there is a small article asking how some fish, of a different kind to those in the neighboring streams, could have found their way into some ponds formed only a few months previously. The fact is easily explained on the supposition that waterfowl visiting the pools may have had fish spawn adhering to their legs or feathers. I was puzzled in the same way some years ago by finding a number of the small crustaceans of the kind called by naturalists Cypris, swimming in two small pools on the very topmost peak of a mountain in the Himalayas, 9,000ft. high. The only outlet was a channel through which, during heavy rains, the surplus water escaped into a valley 6,000ft. below. I could not account for the ova of the little animals getting there until I remembered that the myriads of waterfowl which migrate every spring and autumn between northern Asia and India, cross the Himalayas during their passage.—J. J. MEYRICK.

Fishculture.

Address all communications to the Forest and Stream Pub. Co.

THE LATE PROF. SPENCER F. BAIRD.—A bill has been introduced into the U. S. Senate to pay to Mrs. Baird a sum of money as compensation for her husband's sixteen years of labor as Commissioner of Fisheries, for which he received nothing. After a lifetime devoted to scientific work, Prof. Baird died poor, his salary as Secretary of the Smithsonian Institution having afforded him merely a comfortable living. No doubt the bill will pass and the family of the man who did so much for science and fishculture will receive a just reward for his labors, which he never thought of doing in his lifetime. His long and arduous work undertaken as a labor of love should be remembered by the nation for which it was done.

THE LOBSTER FISHERIES OF MAINE.—An investigation of the lobster fisheries of Maine and the effect of the laws thereon has recently been made by Deputy Labor Commissioner Campbell, of that State. He reports that the lobster fishery is an industry that has grown up in the past thirty years. Said a fisherman, "When I first went into the business in 1853 there were but six smacks running lobsters in Maine waters, four of which were from New London, Conn. These smacks averaged about four men each. Five men caught at that time twice the amount of lobsters these five smacks could carry." From this small industry in 1850 it has grown to such vast proportion that it now employs nearly 2,000 boats, 40 sail of vessels, and gives employment to over 2,000 fishermen, and the transportation smacks in Maine waters employ more than 100 men in freighting or transporting lobsters caught in Maine waters. This industry distributes in various ways among the fishermen of Maine a gross sum of more than $600,000 annually. The business of lobster catching in general requires two men to a boat, with 200 traps, at a cost of about $300 for the entire outfit. The greater part of the fishing is carried on in small boats within a short distance of the fishermen's homes. In winter a small number of vessels are employed in deep sea fishing.

FOREIGN SHIPMENT OF EGGS.—Last week the U. S. Fish Commission sent 90,000 eggs of lake trout to W. Oldham Chambers, Secretary of the National Fishculture Association, South Kensington, London. They came from the station at Northville, Mich., in care of E. G. Blackford, New York.

THE U. S. FISH COMMISSION.—A bill is now before Congress authorizing the appointment of a Commissioner of Fisheries who shall be well versed in the knowledge of fishes and who shall hold no other office at the same time. His compensation shall be five thousand dollars per year.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Jan. 10, 11, 12 and 13, 1888.—Bench Show of the Ohio Poultry, Pigeon, Kennel and Pet Stock Association, Columbus, O. H. O. Bridge, Secretary, Columbus, O.

Jan. 24. to 29.—Augusta, Ga., Richmond County Poultry and Pet Stock.

Feb. 13 to 17.—First show Fort Schuyler Kennel Club, Utica, N. Y. E. J. Spencer, Sec.

Feb. 21 to 24, 1888.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

Feb. 28 to March 2.—Show of Philadelphia Kennel Club. W. H. Child, Sec.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

FIELD TRIALS.

Jan. 16.—Fifth Annual Field Trials of the Pacific Coast Field Trial Club, near Kingsburgh, Cal. N. P. Shelden, Secretary, 320 Sansome street, San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5708.**

INDIANA FIELD TRIALS.

Editor Forest and Stream:

At the directors' meeting of the Indiana Kennel Club, held last night in this city, it was decided to open our trials this year to dogs owned in Indiana, Ohio, Kentucky, Michigan and Illinois. The trials will be held on the club's grounds at Bicknell, Knox county, Ind., and will begin Thursday, Nov. 1, with the Derby, open to all dogs owned in the above named States, born on or after Jan. 1, 1887. The forfeit will be $5, with $10 additional to start. Entries close June 1. The Derby will be followed by the All-Aged Stake, open to all dogs owned in said States that have never won a first prize in any All-Aged Stake in any recognized field trials in America. The fees will be the same as the Derby. Entries close Oct. 1. The All-Aged Stake will be followed by the Indiana Stake, open to dogs of any age owned in Indiana that have never won a first prize in any recognized field trial in America. Forfeit $5, with $5 additional to fill. Entries close Sept. 1. Any dogs owned in Indiana that are eligible to the Derby can run in the All-Aged Stake, and dogs owned in the other States named, that are eligible to the Derby, can run in the All-Aged Stake. The club decided to make the purses on the sweepstake plan, as we did last year, and which proved entirely satisfactory to all concerned. The necessary expense of the trials will be deducted from the entrance money, and the remainder will be divided as follows: Fifty per cent. to first, 25 per cent. to second, and two equal thirds of 12½ per cent. each.

A new rule was added, penalizing a dog for chasing a rabbit, the same as chasing a bird. We are the first club to adopt this rule. The club's grounds are all that could be desired, and birds will be found in abundance.

Competent judges will be selected, and every man who favors us with an entry shall have fair treatment. Any man found hunting or shooting south of the railroad within three miles east, west or south of the hotel, will be debarred from participating in the trials, and any prizes he may have won shall be forfeited to the club. Running rules, entry blanks, etc., are now in the hands of the printer, and will be ready in a few days. My P. O. address is Lock Box 4, this city, and parties writing for rules, entry blanks, etc., will please bear this in mind. P. T. MADISON, Secretary.

INDIANAPOLIS, Ind., Jan. 3.

UTICA DOG SHOW.—We have received the premium list of the first annual dog show of the Fort Schuyler Kennel Club, to be held at Utica, N. Y., Feb. 14 to 17. The prize in the champion classes will be a silver medal; in the open classes $10, $5 and diploma, with $5 and diploma for puppies. The club offers kennel prizes of $10 each for mastiffs, St. Bernards, pointers, English setters, Irish setters, spaniels and collies. The judges are Messrs. A. A. Francis, Rochester, N. Y., setters and pointers, and Jas. Watson, Philadelphia, all other classes. The show will be held under the rules of the American Kennel Club, with the exception of Rule 2, and entries will be accepted whether registered or not. Entries close Feb. 4. The address of the secretary is E. J. Spencer, Box 172, Utica, N. Y.

RULE NUMBER 2.

THE young man from Hartford, who claims credit for having fugled for the A. K. C. stud book clique, says he made the motion because he thinks the exhibitors ought to chip in 50 cents all around so that the stud book fees may pay the expenses of the American Kennel Club. This may be a perfectly just and reasonable consideration, but it will strike some disinterested lookers on as rather a case of rubbing it into the exhibitor. The constitutent clubs are perfectly competent to pay all legitimate expenses of the American Kennel Club; and what is more they ought to be willing to do this out of the show profits some of them reap from exhibitors. Take the Westminster Kennel Club for instance, which we name because it happens to be the first one to print the compulsory rule in its premium list. The Westminster Kennel Club gives dog shows because there is money in them; or to put it in another way, the club makes money out of its shows, and this element of profit is one without which the shows would not be given. It is generally understood that the Westminster shows are managed by a committee, the members of which, after paying to the club proper a stipulated percentage, divide the profits. The first show was so remunerative that the club made enough to buy its grounds at Babylon; and Mr. Tileston, the show manager, started a paper called *The Country* with his share of the proceeds. The annual profits of the Westminster shows are believed to have aggregated many thousand dollars. The Westminster Kennel Club, having made these handsome profits from exhibitors, might gracefully pay stud book deficiencies out of its own treasury, if it feels a special interest in the venture. It is most certainly not in good taste for it to demand registration head money from exhibitors, nor does the Hartford fugleman's plea have much weight when he says that the American Kennel Club with such rich members cannot pay its necessary expenses.

When a Western philosopher was engaged in printing his serial, which he called "False Statements," explaining why he had never paid that little loan to the Memphis man, he wrote as follows, in explanation of the Memphis man's mode of reasoning:

> There is therefore no other conclusion than that he measured us by himself and argued: . . ."Now, when I, Bryson, would do such a thing as that, it is nonsense to suppose that Rowe would not do it; therefore Rowe did do it, because I would do it."

Last week in commenting on the compulsory registration rule he asked:

> One question to the FOREST AND STREAM: Supposing the American Kennel Club had adopted the *A. K. R.* as its official stud book, would it have yelled "robbery," "bulldozing," etc., as it does now? We reckon not.

Now, if this Chicago philosopher's theory, as put forth by him in the Bryson loan case, be true, namely, that one man imputes to another the feelings which he knows he himself would have in like circumstances, it follows, as the day follows night, that the Chicago man draws his conclusion about the FOREST AND STREAM's attitude in the above contingency from his knowledge of the stand he himself would take; that is to say, he believes this journal to be influenced by the same lack of principle he knows that he would be governed by in anything in which he thought there might be a dollar or a dime for himself. By the way, when the wolf assures the sheep that he is grown old and lazy and has lost his taste for mutton, it is a good time for the sheep to be looking out for themselves.

If any seeker after light, who does not know us, wants to be told whether the FOREST AND STREAM would have been party to any scheme to compel dog owners to pay us registry fees, we are free to say that when we cannot conduct our publications on fair business principles we will go out of business.

Editor Forest and Stream:

I have heard a great deal about Rule 2, pro and con, but it would seem to me that in the heat of the controversy the most important point has been lost sight of, namely, the value of the stud book itself. There is an outburst of indignation at the idea that, if owners want to exhibit their dogs, they should be compelled to put their hands into their pocket and, in addition to the regular entry fee, pay out an extra half dollar for the registration of their dogs, be they curs of no value or valuable thoroughbreds.

There is no doubt that if the A. K. C. sees fit to have a stud book of its own, the said body has a perfect right to have one. I have been of that opinion from the very beginning, and have liberally supported it by registering all my dogs. This was an extra tax on me, for, like many other breeders, I had them already registered in the *A.K.R.*, where I still continue to register new ones and puppies, the same as in the A.K.C.S.B., for I look at it from a business point of view, and if on the one hand I help to support both stud books, on the other hand I derive a certain benefit from the publicity thus given to my stock. I have no party feeling in the matter whatever. I am merely acting as a business man believing that if a buyer or a breeder wants to find some information about my stock it is to my advantage that he should find the information looked for in both the stud books. You perceive from this that I do not find fault with Rule 2 on account of the fifty cents, but because, if enforced, it will lessen the standard of the A.K.C.S.B. It was bad enough that, for the sake of paying fifty cents, any cur could be registered under the heading of the breed that he most resembled, but to enforce such registrations is a detriment to the cause of the A. K. C. (though it may be a benefit to its treasury).

The A. K. C. is a company of clubs that were organized for the purpose of improving the different breeds of dogs. Now, does Rule 2 work in that direction? No, on the contrary, I am sure it does not. Let me give you an instance. At the last Westminster Kennel Club show about a dozen Leonbergs were catalogued with the St. Bernards, and brought, in their respective classes, into the judging ring. Every one of them was turned out by the judge before he commenced judging. And why were they turned out? Because they were mongrels, which are not recognized as a breed, neither in Germany (their native land), nor in England, nor in Switzerland, and have no claim to the name of St. Bernard.

According to Rule 2, these dogs would have been previously registered by their owners in the A.K.C.S.B. under the breed of St. Bernards, and, notice, with pedigree, undoubtedly correct, name of breeder, etc., etc., and as imported at that. A St. Bernard man could tell to a certain extent what kind of stock it is, when he finds it registered, just the same as a mastiff man, a fox-terrier man or a collie man can tell about his own particular breed, but the public at large cannot, and hence the stud book would be quite unintentionally a means of deceiving many, for it would indorse a Leonberg as a St. Bernard. This is no argument for the sake of gaining my point, it is an indisputable fact, a fact which is applicable to all breeds, not to St. Bernards only.

What gives their value to the different herd books, the Jersey, the Guernsey, the Dutch-Friesian, etc? The fact that thoroughbreds only are eligible for registration, and the public knows this. Hence the demand for registered dogs! Poor, simple-minded outsiders, they don't know that Rule 2 is going to force in any creature with four legs, a tail at one end, a bark at the other; any cur, no matter how wretched, provided his owner thinks enough of him to show him at, may be, some small village show, held under A.K.C. rules, and is going to place it side by side in the stud book with some valuable dog brought from the other side at great cost, or side by side with some American bred crack.

If Rule 2 provided for the registration of prize winners at the expense of the A. K. C., and for the benefit of dogdom, the club would be true to its cause, but not so with Rule 2 as it stands.

I blame Boston and New Haven for going out of the club. We need such a club as the A. K. C. with Boston and N. H. in it; there is no cause for going outside; let the clubs stay in and fight Rule 2 inside. If the A.K.C.S.B. is paying its own way, as some say it does, what do we need the obnoxious compulsory 50 cents for? If it does not pay but is still wanted, then let the clubs pay for their book, and let its standard be raised rather than lowered.

I think that, in view of the fact that only four or five clubs were represented when Rule 2 was proposed and carried, a special meeting should be called for the purpose of reconsidering the said rule, which I consider to be contrary to the interests of the A. K. C. K. E. HOPF.

ARLINGTON, N. J.

Editor Forest and Stream:

It is great fun to whack the head of a fellow who is fighting on your side; the effect is so surprising that it gives a zest to the whack. For instance, Mr. Mercer says that the Pittsburgh club is "pretty certain" to indorse Rule 2. Pray how does he know that? Did he suppose that was the inevitable evolution of "pewter medals"? Or that "copper" ones necessarily led to such an end? Or that "100 cents on the dollar" was a hotbed that always sprouted such plants? Or that "solid silver" involved solidity of head that made acceptance of Rule 2 a foregone conclusion? Truly, if such were his ground, his judgment was reasonable. But alas for human judgment! Messrs. —— and ——, the brains of the Pittsburgh club, both tell me that they are unalterably opposed to the rule, as calculated to cut down their entries, and they care more for the number of their entries than for the A. K. C. I think I am abundantly within bounds when I say that if there were a show in Pittsburgh next spring, Rule 2 would be disregarded. You know who —— and —— are, and if I mistake not, already know their ideas, and I am sure you will agree with me, that no men of higher character adorn American kennel affairs. Both are averse, to what I consider a ridiculous degree, to having their names in print, and therefore I do not give them, but you can probably say that you know just the same of them that I know and say.

I am disappointed, but not surprised at the acceptance of the bulldoze rule by the W. K. C.; disappointed because I thought they had risen above the narrowness that has so far characterized them, and that they realized that the metropolitan location, which has made their show what it is, imposed on them equal prominence in action, and that they would not longer linger so far in the rear of Boston, New Haven and Philadelphia in enterprise. I am not surprised, as this unfortunate club has never gone in with public opinion if there was a chance to go contrary to it, and it has always been *shoved* into every forward step it has taken. Of course Beaufort—Patti M. goes for the rule and I will be surprised if Cincinnati does not follow. What Philadelphia will do is a puzzle and I sympathize with them in their peculiarly complicated position. However, the vitality that shook off the gang that so nearly throttled Philadelphia at its inception can do great things. "Bide a wee." W. WADE.

HULTON, Pa., Jan. 7.

Editor Forest and Stream:

I am pleased to see the bold, uncompromising position taken by the FOREST AND STREAM in opposition to the last and most despotic of all the arbitrary rules of the A. K. C. We shall see whether the A. K. C. will kill the rule or the rule kill the club. If the A. K. C. as a confederate body cannot meet or pay its expenses, let it disband and each club defray its own individual expenses or cease to exist. Let the A. K. C. stop their arbitrary taxation of exhibitors, pay their own expenses and not try to linger through a moribund existence upon an obnoxious, forced tax levied upon and unwillingly paid even by the few who may lay their pride and self-respect at the club's feet by wearing its dog-collar Rule No. 2 around their necks. I am not a dog fancier. I have never sold a dog, but have owned many, and am now the owner of one, the winner of two first prizes at the Crystal Palace and one in New York. I shall never exhibit a dog and shall always, if I can, dissuade others from doing so at any show where Rule No. 2 of the A. K. C. may be in force. Such, Mr. Editor, are the views of many, and expressed by one MEMBER OF THE AMERICAN PET DOG CLUB.

NEW YORK, Jan. 9.

Editor Forest and Stream:

You ask me what I think of Rule 2. I should hardly think you need ask any exhibitor such a question, for all I have met are, like me, decidedly opposed to being called upon to chip in a half dollar to help keep the stud book on its legs. Nearly all of my dogs are already registered in the *American Kennel Register*, while others are in the English Stud Book. I supported the *American Kennel Register* because it was the only one being used by the bull-terrier breeders, and now if we are to be compelled to register in the club's book, the whole thing must be done over again. That, however, is a secondary consideration, the objection being that we know exactly what the idea is in altering the rule, and if people make such bargains they should father the law themselves, and not look to exhibitors to do what is their own duty. FRANK F. DOLE.

WEST PHILADELPHIA, Jan. 9.

Editor Forest and Stream:

We wish to state most decidedly that our views on the subject, which we have held for some time, are those of cordial sympathy with the American Kennel Club, believing, as we do, that all breeders should give their assistance to that club, in order to draw together the kennel interests of this country and to forward the stud book controlled by the club. We believe Rule 2 is not only a wise one, but necessary. CHESTNUT HILL KENNELS.

PHILADELPHIA, Pa.

Editor Forest and Stream:

What we need in behalf of exhibitors is protection, not restriction. We have enough restriction now without an extra 50 cents to pay for each exhibit. Better make a rule compelling all their clubs to deposit the amount of premiums offered previous to opening their shows, thus insuring to winning exhibitors their medals and cash prizes. If the A. K. C. would devote a few minutes of its time at each meeting to such legislation as that, it would be of some benefit to exhibitors. J. H. SHEPHERD.

NEW YORK.

PUG MEDAL.—Catawissa, Pa., Dec. 22.—*Editor Forest and Stream:* In offering my special prize for the best stud pug under fifteen pounds, two or more, or a litter not under eight weeks old, must be shown to make him eligible to compete for my prize.—GEO. W. FISHER.

BEAU OF PORTLAND.—The owner of the pointer dog Beau of Portland writes us that the dog was afflicted with ulcer and that he had never seen his handler until the beginning of the trials at Florence. This will account for his indifferent performance.

SPANIEL DOG LOST.—The liver-colored spaniel dog Newton Abbot strayed from Bergen Point, N. J., Jan. 3. He weighs 33lbs., has long ears and short tail. A reward will be paid for his return to his owner, A. C. Wilmerding, Bergen Point, N. J.

FOX-TERRIER CLUB STAKES.

Editor Forest and Stream:

Entries for the third Produce Stakes will close Jan. 31. The full particulars, in circular form, will be supplied on application to the secretary.

The Stud Dog Stakes for 1889.—$2 each p.p., with a cup added by the president to a subscription of $10 each by owners of fox-terrier stud dogs, whose get alone shall be qualified to compete. Get to consist of dog and bitch whelped after Jan. 1, 1887, which may be the property of different owners. The winning brace to receive one-half of the subscription, the cup and half of the subscription going to the subscribing owner of the brace's sire, the stakes to go to the second best brace. The death of a subscriber not to disqualify the get of his stud dog, nor the death of the dog. Subscriptions to close on or before Feb. 1, 1888. The Stake to be competed for at the spring show of the Westminster Kennel Club, New York, 1889, and to be published in the W. K. C. premium list, and entries to the Stake to close with the regular entries for the W. K. C. show of 1889.

May I ask you to remind owners who may have fox-terriers by the stud dogs given below entered in the Stud Dog Stakes of 1888, and to be judged at the Westminster Kennel Club show in February next, that they will have an opportunity to compete according to the conditions as given, viz.: that the brace may be the property of different owners. The dogs are: Splauger, Warren Jim, Raby Mixer, Raby Jack, Mixture, Belgrave Primrose, Bacchanal, Lucifer, Warren Dicken, Warren Spider, Earl Leicester, Valet, Venetian, Luke, Mephisto, Regent Vox, Resolute.

AUGUST BELMONT, JR., Acting Sec. and Pres. A. F. T. C.

EASTERN FIELD TRIALS CLUB.

THE regular meeting of the Eastern Field Trials Club was held at the St. James Hotel, New York, on Tuesday evening, Jan. 10. There was a full attendance and the meeting was an interesting one. The treasurer's report showed a balance to the credit of the club of $1,486.92, with no liabilities, and a further sum of $382 is still due, making a total of $1,868.92 as against $838.60 a year ago. Mr. George A. Dillworth, Pittsburgh, Pa., was elected a member, and Messrs. David McK. Lloyd, Pittsburgh, Pa., and S. B. Duryea, Brooklyn, N. Y., were proposed for membership. It was voted that the salary of the secretary be $250 per year.

It was decided to hold the field trials for 1888 at High Point, N. C., beginning with the Members' Stake, Thursday, Nov. 15. The public stakes will begin on Monday, Nov. 19, with the Derby, to be followed by the pointer stake, then the setter stake, closing with the champion stake. The prizes and conditions of all the stakes will be the same as those of last year with the exception that the two equal third prizes in both the pointer and setter stakes are changed to third and fourth prizes of $100 each. A vote of thanks was tendered Mr. N. Rowe for the cup donated as a prize in the champion stake. Rule 19, which reads, "When two dogs, the property of the same owner, or confederates, shall remain in for the deciding trial * * *" was changed to read a deciding trial.

A motion was made that Derby entries be required to retrieve, but it was not carried. The secretary was instructed to obtain, if possible, the services of Mr. Bergundthal as one of the judges for the field trials this year. It was voted that members be not allowed to shoot on the club grounds. It was suggested that the judges at the field trials should be requested to make an official report of the running. After some discussion the matter was laid over until the next meeting.

At the annual meeting of the club, held at High Point, N. C., the old board of officers was re-elected for the ensuing year with the exception that H. B. Duryea, New York, and C. Fred Crawford, Pawtucket, R. I., were elected to the board of governors in place of Messrs. Orth and Grant.

A PROPOSED BREEDERS' CLUB.

Editor Forest and Stream:

Rule 2, as amended at the late meeting of the American Kennel Club, seems to have met with much criticism, and Mr. C. D. Cugle seems to take umbrage at my remarks in your columns. To Mr. Cugle I would say that I have no ill feeling toward him personally, for I have reason to believe he is a gentleman, but whether Mr. Cugle or Mr. Wun Lung made the amendment referred to the fact remains that it (the rule as amended) can never be enforced, and I am sorry for Mr. Cugle that his name is coupled with so narrow minded a motion. Mr. Watson has taken so many words out of my mouth in his "Porcupine" article this week, that I can say but little that he has not "caught on" to. To Mr. Winslow I adress myself in an apologetic way, as it seems he only seconded the motion to bring it before "the house", which, as I now see it, shows his ability, for he has by so doing brought to light, the "ways and means" by which the A. K. C. clique are to thrive.

It has been written that the A. K. C. should not be "downed" because they have made this one mistake, and that the seceding clubs have been too hasty in their actions. Would the supporters of the new Rule 2 like to go into a resume of the work performed by the A. K. C.? This mistake (?) is not the first one made by the A. K. C.—the mistake of its life was in being born.

The action of the New England Kennel Club shows me that they are wide awake, and in protecting exhibitors they have done only what they should do. The American Kennel Club is a club composed of other clubs, and as such has but few expenses, as the expenses of meetings are paid by its members in the annual fee of $10. The office of Secretary of the A. K. C. is, or should be, one of honor; it requires but little time, and if the A. K. C. would allow the FOREST AND STREAM stenographer to be present at all meetings he would be a most valuable secretary free of charge.

Mr. Cugle is so sure that the 50 cents demanded for registration in the official (?) stud book will not cut down entries at coming shows; will he guarantee to the N. E. K. C. spring show a number of entries equal to the last, if they enforce the new Rule 2?

The A. K. C. finding that they have put the last straw on the camel's back, think that by removing it they can coax the beast to carry the load across the great desert, but the sands are drifting, and the whole caravan will soon be lost to sight.

To those who remember the circumstances attending the formation of the American Kennel Club, I would say that the time has come when breeders should take a hand in matters pertaining to dogs. The idea was, when the A. K. C. was formed, that local clubs would not be supported if the breeders should form a national club, and all pressure was brought to bear in favor of a national club being composed of local clubs; the result has been a national club only in name. Its rules have made trouble from first to last, and now the very clubs which were the backbone of the A. K. C. at the start, are compelled to repudiate in order to exist. The local clubs such as the New England are composed of gentlemen who have given their time and money in the good cause. They are breeders, and they have received no benefit from the A. K. C., hence their disgust. I can speak for the New England Kennel Club better than any other, as I was the founder of that club, and I know that its members are men who are advancing the standard of dogs, I regret to say oftentimes against the interest of their pockets, and though one of the warmest supporters of the present American Kennel Club at its start, I now see my error, and feel that an association of breeders and exhibitors could and would be beneficial to the breeders and exhibitors of dogs, and that the standard for dogs would be better, and better understood by the public, and bench shows better conducted under a National Club of Breeders, than at present.

I will not use more of your valuable space, but would like to see the views on the above subject of a few such gentlemen as Mr. John E. Thayer, Mr. E. H. Moore, Dr. J. Frank Perry, and other prominent breeders who have or have not expressed their views about Rule 2.

In closing I would say that if Mr. Cugle for a moment imagines I am seeking notoriety, or have in view anything but the advancement of the canine race, I desire he should disabuse his mind from any such thought.

J. A. NICKERSON.

BOSTON, Mass.

Editor Forest and Stream:

I would like to ask the A. K. C., and more especially the five members who voted for the addition to Rule 2, how they know that enforcing such a rule will be advantageous to breeders? If they are individually too modest to speak of their achievements as breeders, let some other champion stand up for them, and tell us, through your paper, what they have ever done. An organization such as the American Kennel Club assumes to be should never be permitted to lapse into such a condition as to be in the control of a few men, the majority of whom are unskilled in breeding, and who can pass arbitrary laws obnoxious to all fair-minded breeders in the United State and Canada. Such being the state of affairs, is it not high time that the breeders get together and form a breeders' club or association, and put such safeguards around it that none of its laws can be changed by a few; the society to be regularly constituted, and require due notice to be given to all its members of any proposed change in rule or by-law; such motion to be made at an annual meeting.

In 1873 and 1873 the poultry fanciers of the United States were in about the same fix as the dog fanciers are to-day, controlled by a few. A meeting of the fancy was called for at Buffalo in 1873, when the American Poultry Association was formed, which at present consists of 250 life members. Its object is to consider and discuss all matters of a national character pertaining to poultry. It also advises with and assists all poultry societies, when so requested, in the selection of judges of good standing, ability, etc.

I would like to hear from the breeders throughout America regarding the matter, and if there are enough that would like to form an international dog breeders' association, let there be a call for a meeting at Boston, during the show of the New England Kennel Club, to organize such a society. I think it could be made a success just as the American Poultry Association is, which holds its fourteenth annual meeting this year.

M. H. CRYER.

"THE AMERICAN KENNEL REGISTER."

Editor Forest and Stream:

In the October, 1884, issue of the *A. K. R.*, I spoke a few lines to the editor, in which I stated that as the *Register* had not only lived up to its prospectus, and added a deal more to it, that it should increase its subscription and registration fees, and give us a little more of the same good material that it had already given us. From the beginning up to the present time the *A. K. R.* has supplied us with the best of information of kennel matters, has prevented a great deal of irregular registration, as well as espoused the cause of the weak in fighting unsportsmanlike doings.

H. W. HUNTINGTON.

NEW YORK.

Editor Forest and Stream:

The *American Kennel Register* stands upon it own merits. It is well edited, accurate and altogether indispensable to dog breeders.

The proprietors of the *American Kennel Register* have but done their duty to the supporters of that journal by continuing its publication.

The *A. K. R.* is used by a number of breeders as a kennel record, wherein are recorded in the various departments of sales, breeding, deaths, etc., a complete history of their respective kennels. We who have used the *Register* for this purpose are grateful to the publishers that they have stood by us and our property, for it is to a great extent our property now, and a valuable one at that.

In spite of the combined opposition of the speculators who run the official (?) stud book, the *A. K. R.* has recorded this year an average over one hundred per month.

VICTOR M. HALDEMAN.

PUPPIES AND GUNS.—A note under this title in our natural history columns will be found of interest.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ Notes must be sent on the Prepared Blanks.

Mildred. By Charlottesville Field Trial Kennels, Charlottesville, Va., for orange and white English setter bitch, whelped Feb. 25, 1887, by Dashing Rover (Dash II.—Norna) out of Muriel (Ben Hill—Zoe W.).

Shady II. By Mrs. H. M. Robinson, Charlestown, Mass., for black cocker spaniel dog, whelped Sept. 26, 1887, by Shady (Obo II.—Darkie) out of Edith (Brush II.—Olivia).

Peg Merrilies. By Cumberland Kennels, Portland, Me., for red Irish setter bitch, whelped May 24, 1887, by Prince (A.K.R. 1968) out of Meg Merrilies (A.K.R. 218).

Fred. By Cumberland Kennels, Portland, Me., for liver and white pointer dog, whelped Oct. 23, 1887, by Glen out of Flora (Jeff—Fan).

Glendon. By Cumberland Kennels, Portland, Me., for fawn greyhound dog, whelped April 20, 1887, by Toney (Duke—Dutchess) out of Kittie (A.K.R. 1759).

Ebony Pape. By W. J. Middleton, Boston, Mass., for black pointer dog, whelped March 22, 1887, by Croftstone (A.K.R. 3587) out of Daisy (imported Bob—imported Sal).

Topsy Sweep. By W. J. Middleton, Boston, Mass., for black pointer bitch, whelped July 7, 1887, by Drake, Jr. (Drake—Accident) out of Vic II. (Sweep—Victoria).

Pearlie. By W. J. Middleton, Boston, Mass., for black cocker spaniel bitch, whelped Sept. 22, 1887, by Teddie (Phil— ——) out of Floss B. (A.K.R. 3449).

Rialto Kennels. By W. J. Middleton, Boston, Mass., for his kennels of pointers, setters and cocker spaniels.

BRED.

☞ Notes must be sent on the Prepared Blanks.

Yum Yum—Scarsdale. D. S. Collins's (Providence, R. I.) fox-terrier bitch Yum Yum (Raby Tyrant—Shamrock) to E. Kelley's Scarsdale (Joker—Ella), Dec. 19.

Muriel—Dashing Rover. Charlottesville Field Trial Kennels' (Charlottesville, Va.) English setter bitch Muriel (Ben Hill—Zoe W.) to their Dashing Rover (Dash II.—Norna), Dec. 15.

Merry Legs—Mainspring. O. W. Donner's (Coosaw, S. C.) pointer bitch Merry Legs (Graphic—Bloomo) to J. T. Perkins's Mainspring (Mike—Romp), Jan. 2.

Flash—Blue Cap. A. B. Merner's (Waterloo, Ont.) beagle bitch Flash (Bannerman—Queen) to H. Card's Blue Cap (Blue Cap—Blue Bell), Dec. 25.

WHELPS.

☞ Notes must be sent on the Prepared Blanks.

Nellie. Detroit Kennel Club's (Detroit, Mich.) cocker spaniel bitch Nellie, Dec. 21, four (two dogs), by Sinclair's Black Jack.

Beech Grove Gabrielle. Geo. Jackson's (Beech Grove, Ind.) mastiff bitch Beech Grove Gabrielle (Bob Ingersoll—Betsy Trotwood), Jan. 2, ten (four dogs), by his Beech Grove Toby (Ashmont Victor—Delph Viva).

Rachel. Detroit Kennel Club's (Detroit, Mich.) English setter bitch Rachel (Lexington—Kelp), Dec. 27, thirteen (four dogs), by L. R. Taylor's MacD. (Count Noble—Spark).

Fannie Fern. W. A. Wickham's (Cedar Bluffs, Ia.) collie bitch Fannie Fern (Shep—Dart), Dec. 30, seven (two dogs), by his imported Clyde (Glen—Beauty).

SALES.

☞ Notes must be sent on the Prepared Blanks.

Beech Grove Lucy. Light fawn mastiff bitch, whelped June 26, 1887, by Tor (A.K.R. 4882) out of Delph Viva (A.K.R. 1432), by Geo. Jackson, Beech Grove, Ind., to D. J. Duncan, Johnston, Pa.

Beech Grove Macduff. Light fawn mastiff dog, whelped July 6, 1887, by Beech Grove Duke (A.K.R. 3370) out of Beech Grove Gabrielle (A.K.R. 3371), by Geo. Jackson, Beech Grove, Ind., to Wm. M. Thrasher, Irvington, Ind.

Beech Grove Fiske. Light fawn mastiff dog, whelped March 7, 1887, by Tor out of Beech Grove Duchess, by Geo. Jackson, Beech Grove, Ind., to Mrs. Mary Fiske, High Bridge, N. Y.

Beech Grove Bess. Light fawn mastiff bitch, whelped Dec. 14, 1886, by Beech Grove Duke out of Beech Grove Gabrielle, by Geo. Jackson, Beech Grove, Ind., to R. R. Bennett, Indianapolis, Ind.

Beech Grove Topsy. Light fawn mastiff bitch, whelped June 15, 1885, by Beech Grove Duke out of Beech Grove Gabrielle, by Geo. Jackson, Beech Grove, Ind., to Chas. P. Willard, Chicago, Ill.

Beech Grove Wanda. Light fawn mastiff bitch, whelped Dec. 14, 1886, by Beech Grove Duke out of Beech Grove Gabrielle, by Geo. Jackson, Beech Grove, Ind., to Jos. P. Sharp, Springfield, O.

Beech Grove Gypsy. Light fawn mastiff bitch, whelped Dec. 14, 1886, by Beech Grove Duke out of Beech Grove Gabrielle, by Geo. Jackson, Beech Grove, Ind., to T. E. Gilpin, Chicago, Ill.

Beech Grove Cleopatra. Light fawn mastiff bitch, whelped Dec. 14, 1886, by Beech Grove Duke out of Beech Grove Gabrielle, by Geo. Jackson, Beech Grove, Ind., to Arthur L. Dale, Rome, N. Y.

Beech Grove Scott. Stone fawn mastiff dog, whelped May 29, 1887, by Rover out of Beech Grove Patsy, by Geo. Jackson, Beech Grove, Ind., to Mrs. Carrie Kennard, Chestertown, Md.

Beech Grove Rowena. Light fawn mastiff bitch, whelped Jan. 26, 1887, by Tor out of Delph Viva, by Geo. Jackson, Beech Grove, Ind., to Mrs. Carrie Kennard, Chestertown, Md.

King of Ashmont (formerly Clement). Fawn mastiff dog, whelped Feb. 13, 1884, by King Canute out of Dora II., by Ashmont Kennels, Boston, Mass., to L. A. Berger, Langhorne, Pa.

Alto. White, black and tan beagle bitch, whelped June 27, 1887, by Blue Cap II. (A.K.R. 4008) out of Constance (A.K.R. 2712), by F. B. Zimmer, Schenectady, N. Y., to E. T. Sweeten, Bridgeport, N. J.

Edith. Black cocker spaniel bitch, whelped August, 1883, by Bruce II. out of Olivia, by C. E. Gilchrist, Charlestown, Mass., to H. Jaques, same place.

Staunton. Lemon and white pointer dog, whelped March, 1886, by Spot out of Dora, by Charlottesville Field Trial Kennels, Charlottesville, Va., to T. C. Van Buren, New York.

Jipsey. Golden fawn greyhound bitch, age and pedigree not given, by Detroit Kennel Club, Detroit, Mich., to Lewis Terry, same place.

King Bow's Lass. Liver and white ticked pointer bitch, whelped July 20, 1887, by King Bow out of Ruby Croxteth, by Detroit Kennel Club, Detroit, Mich., to John D. Harris, M.D., Newton, Ill.

Strephon. Golden sable and white collie dog, whelped June 17, 1884 (A.K.R. 2730), by C. T. Thompson, Philadelphia, Pa., to Chestnut Hill Kennel, same place.

Count On Me. Black and white English setter dog, whelped Nov. 5, 1886, by Buckellew out of Bessie Noble, by O. D. Thees, New York, to Thos. Ebert, New Rochelle, N. Y.

Black Bess. Black cocker spaniel bitch, whelped June 25, 1887, by Black Pete (A.K.R. 3071) out of Phyllis (A.K.R. 5233), by H. D. Brown, Waterbury, Vt., to John D. Olds, Fort Wayne, Ind.

Millie B. Black cocker spaniel bitch, whelped Oct. 30, 1887, by Black Pete, Jr., out of Althea (A.K.R. 842), by H. D. Brown, Waterbury, Vt., to Dr. A. Drinkwater, Rochester, N. Y.

Fred. Liver and white pointer dog, whelped Oct. 23, 1887, by Glen out of Flora, by Cumberland Kennels, Portland, Me., to J. M. Bartlett, Orona, Me.

Flash. Black, white and tan baagle bitch, age not given, by Bannerman out of Queen, by Hiram Card, Elora, Ont., to A. B. Merner, Waterloo, Ont.

Lady. Black, white and tan beagle bitch, age not given, by Ranger out of Beauty, by Hiram Card, Elora, Ont., to A. B. Merner, Waterloo, Ont.

Chase. Black, white and tan beagle dog, whelped April 25, 1886, by Blue Cap out of Chimer, by Hiram Card, Elora, Ont., to A. B. Merner, Waterloo, Ont.

Sis Obo. Black cocker spaniel bitch, whelped October, 1886, by Obo, Jr., out of Topsy, by Hiram Card, Elora, Ont., to A. McCully, Marden, Ont.

Tom and Jerry. Black white and tan beagle dogs, whelped Sept. 7, 1887, by Waveno out of Wenonah, by Hiram Card, Elora, Ont., to A. B. Merner, Waterloo, Ont.

Rose. Black, white and tan beagle bitch, whelped July 30, 1887, by Waveno out of Nokomis, by Hiram Card, Elora, Ont., to A. B. Merner, Waterloo, Ont.

Blue Queen. Black, white and tan English setter bitch, whelped May, 1881, by Druid out of Leda, by G. F. Clark, St. George's, Del., to G. L. Y. Tyler, West Newton, Mass.

Countess Wind'em. Black and white English setter bitch, whelped Dec. 25, 1882, by Roderick II. out of Jennie, by G. F. Clark, St. George's, Del., to Wm. Lunsford, Roanoke, Va.

Belle Royal. Black, white and tan English setter bitch, whelped July 4, 1885, by Baden Baden out of Daisy Dot, by G. F. Clark, St. George's, Del., to N. B. Tyler, Warren, O.

Glen Fairy. Lemon belton English setter bitch, whelped Sept 8, 1887, by Glen Rock out of Countess Flirt, by G. F. Clark, St. George's, Del., to V. L. Bossa, New Canaan, Conn.

Princess Alice. Orange belton English setter bitch, whelped June 9, 1887, by Royal Albert out of Maida, by G. F. Clark, St. George's, Del., to V. L. Bossa, New Canaan, Conn.

Shady—Edith whelps. Cocker spaniels, whelped Sept. 26, 1887, by C. E. Gilchrist, Charlestown, Mass., a black dog to Mrs. H. M. Robinson, same place; a black dog to W. F. Young, Fitchburg, Mass.; a black dog and liver dog to C. E. Wilson, Southbridge, Mass.; a black bitch to D. W. Hill, Lewiston, Me., and a black bitch to Oscar J. Gore, South Boston, Mass.

Beech Grove Duke (A.K.R. 3370)—Beech Grove Gabrielle (A.K.R. 3371) whelps. Mastiffs, whelped July 6, 1887, by Geo. Jackson, Beech Grove, Ind., a light fawn dog to Judge John A. Holman, Indianapolis, Ind.; a light fawn dog to Strawther Givins, Abingdon, Ill.; a light fawn bitch to W. H. Croner, Piqua, O., and a dark fawn dog to Chas. Guider, Hinckley, Minn.

Rover II.—Beech Grove Patsy (A.K.R. 4359) whelp. Steel gray fawn mastiff bitch, whelped May 29, 1887, by Geo. Jackson, Beech Grove, Ind., to Chas. Guider, Hinckley, Minn.

Tor—Delph Viva whelp. Grayish fawn mastiff bitch, whelped June 26, 1887, by Geo. Jackson, Beech Grove, Ind., to Strawther Givins, Abingdon, Ill.

MacD.—Spark whelp. Black, white and tan English setter bitch, whelped Nov. 8, 1887, by Detroit Kennel Club, Detroit, Mich., to Dr. L. R. Taylor, Bancroft, Mich.

PRESENTATIONS.

Fleet—Judy whelp. Liver and white pointer bitch, whelped Sept. 28, 1887, by Detroit Kennel Club, Detroit, Mich., to Dr. L. R. Taylor, Brancroft, Mich.

Lady Lance. White and fawn fox-terrier bitch, whelped Oct. 14, 1887, by Little Jim out of Spright, by Detroit Kennel Club, Detroit, Mich., to H. E. Cook, Hillsdale, Mich.

LAKE VIEW CLUB.—At the regular annual meeting of the Lake View Rifle Club, of Cook county, Ill., Dec. 30, the following officers were unanimously elected: Pres., N. H. Warren; Vice-Pres., H. C. Bradley; Sec., Dr. F. D. Porter; Treas., T. G. Dickinson; Capt., J. Macauley.

THE NATIONAL RIFLE ASSOCIATION.

THE annual gathering of the life members of the National Rifle Association was held on Tuesday evening last at the 22d Regt. Armory. The reports showed progress in some lines but not in others.

General Winate, in his annual address as President of the association, said:

Gentlemen—While at Creedmoor the past year has not been marked by any occurrence which has attracted the attention of the press or the public, there have been few if any years in the history of the range in which the attendance has been greater, or more satisfactory results attained.

The number of civilians who have attended the matches have been no larger than during the last two years.

Long-range rifle shooting appears also to have been almost wholly abandoned by civilians and very largely so by military riflemen. But the interest in off-hand and mid-range military rifle shooting by the rank and file of the National Guard has never been greater, and the number practicing at the range and the aggregate of the marksmen who have qualified there has never been previously equaled.

Rifle shooting as a mere amusement appears to be at a standstill, but rifle shooting as a part of military instruction has never been more popular or more efficiently conducted than has been the case at Creedmoor during 1887. As this was the main purpose for which that range was established and this Association formed, we have every reason to congratulate ourselves upon the results of the year.

The annual meeting of the Association was well attended, the weather was exceptionally fine for shooting, and the scores were high. Several protests were made against the rifles used, which have led to some dispute and which it would be well to avoid in the future.

The great variety of rifles in use by the military marksmen of the different States, and the changes in their sights that are from time to time either directly authorized or tacitly permitted, make it exceedingly difficult for the directors of this Association to either frame or enforce regulations which are just to all competitors. Nearly all the serious disputes which have occurred in our matches since the range was established have had their origin in this portion of our regulations, and it seems to me wise that when the rules are next revised, either they should be made so broad as to permit the use of any sight upon a military rifle which is sufficiently strong for military purpose, so as to give the freest scope to individual ingenuity, or else such sights should be restricted to certain official patterns and no deviation therefrom allowed by any individual or team by any authority whatever. Any middle course involves endless disputes and heart burnings. The coming year will require action upon two important and difficult points which will largely affect the efficiency of the range.

The lease of the western part which contains the short range targets, expires within a short time and cannot be renewed. The Association must either purchase this land (comprising some fifty acres) at a cost of about $5,000 or give it up. To surrender it will deprive us of eleven targets which we cannot do without except at a great inconvenience, and yet the problem of how to provide the funds for its purchase is a most serious question, as the resources of the Association are not equal to its support.

During the last two years the owner of the land in rear of the eastern portion of the range has claimed that the use of his land has been interfered with by bullets fired by the State troops in their class practice. In 1886 he was content to accept $150 as payment. In 1887, however, he demanded $500. The Association considered this exorbitant, but it was awarded him by the arbitrators to whom the matter was referred to avoid a law suit.

This amount was paid, but to do it swept away the profits which had been realized from the efficient and economical manner in which Secretary Shepherd had managed the affairs of the Association during the year.

The resources of the Association cannot meet this exaction if made annually, as is certain to be done. It amounts to much more than the interest upon the value of the entire land affected, and it would be far cheaper to buy the premises than to pay it.

The question of how this difficulty is to be met will form one of the most important questions which the new board of directors will have to pass upon.

In closing these remarks, it is proper that I should state to you that this is my last appearance as an officer of the Association. Since its organization, a period of sixteen years, I have been continuously either secretary, vice-president or treasurer. With the exception of General Woodward, I am the only one of the original directors remaining in the board. While in office I have done my best to perform my duties, but business engagements have for some time rendered this to be almost impossible, and I am unwilling to hold a position whose duties I feel that I do not properly fulfil. For this reason I sent in my resignation as president last November. Although it was not accepted by the directors, I must tonight surrender the office to some one who, I trust, will prove more efficient in your interest and that of rifle shooting in America than I have been.

Secretary Shepherd made a brief pointed report of the affairs of the Association:

NEW YORK, Jan. 10, 1888.

Mr. President and Life Members of the National Rifle Association:

Your Secretary begs leave to submit the following report of the transactions of the Association for the past year:

The annual meeting of the Life Members was held on Tuesday, when the following named members were elected Directors for the term of three years, viz: Messrs. J. H. Brown, L. B. Bell, L. C. Bruce, G. L. Fox and and Edw. Duffy, and for one year Col. C. E. Bridge.

At the regular meeting of the Board of Directors, held on Feb. 15, Gen. Geo. W. Wingate was elected President and Gen. John B. Woodward Vice-President, the Secretary and Treasurer having been re-elected at a previous meeting.

During the year we have lost by resignation Messrs. Allen and Zalinski, and by death Major Lawson B. Bell, which vacancies have been filled by the election as Directors of Messrs. Brown, Witthauss and Nesbitt.

Early in the year a committee was appointed to look at a plot of ground on Staten Island that was offered to the Association at a reasonable price, but after carefully considering the matter it was not deemed expedient to attempt to make any charge in the locality of the range.

The annual fall meeting was fairly well attended, and some fine team scores were made, those of the Brigade, State, Hilton Trophy and Inter-State being far ahead of all previous records. The expenses, including prizes, exceeded the receipts by nearly $300, but as compared with the two previous years this may be considered satisfactory. I am pleased to be able to again report that an increased interest is shown in the semi-monthly matches in which an opportunity is given to the members of the National Guard to win the coveted State decoration. The net profit in these matches was slightly in excess of that of the previous year, notwithstanding the fact that extra prizes in the shape of medals were given, which cost the Association nearly $250. I trust that another season we may be able to reduce the entrance fees to these matches and thus to make them still more popular. The increase in the number of marksmen in the State from 3,400 in 1885 to 3,600 in 1886, and 4,700 in 1887 shows that the current is moving in the right direction.

The lease of the ground at Creedmoor, commonly known as the west or new range, expired on the 1st of January and cannot be renewed, the owner having decided to sell the property, some fifty acres in all, which includes, in addition to the land lately used by us for short range purposes, a considerable piece of ground in the rear of the targets.

The Treasurer's report showed a balance on hand at the close of the year of $1,606.35, to which may be added the sum of $200 which will shortly be paid in for railroad tickets sold and redeemed. The Long Island Railroad Company, through the persistent efforts of two of the directors, consented to reduce the price of military excursion tickets to Queens to 40 cents each, and the increase of sales by us was morethan 50 per cent.

We have again been in receipt at the office of the following papers: The *Spirit of the Times*, the FOREST AND STREAM, the *Army and Navy Journal*, the *Turf, Field and Farm*, the *Rifle*, the *American Field* and the *Volunteer Service Gazette*.

We are again indebted to Mr. J. H. Steward, of London, optician of the Association, for valuable prizes, and also to Messrs. Tiffany & Co., Messrs. Benedict Bros., and the staffs of the First and Second Brigades. Very respectfully,

JOHN S. SHEPHERD, Secretary.

A committee of three directors, consisting of Gen. Robbins, Gen. Wingate, and Gen. Woodward, was appointed to prepare a bill for the Legislature providing that Creedmoor may be given into the charge of the State, the land it now owns, providing the Association shall have the use of the range for shooting purposes.

Gen. J. B. Woodward was chosen President of the Association. Major H. C. Brown, Capt. G. Henry Witthaus, James Duane, Lieut. J. S. Shepherd, and Major George Shorkley were elected Directors for three years; Lieut. D. A. Nesbitt for two years, and Jor C. A. H. Bartlett for one year.

OWENSVILLE, Ind., Jan. 3.—The Owensville Ballard Rifle Team, standard target, 200yds. rise, national rules. There was a full attendance of the members on the range to-day. Weather conditions bad for the comfort of the contestants and scores ranged low. J. Montgomery won gold medal, R. Speck leather medal. Light poor, with a strong, cold 10 o'clock wind:

J Montgomery	8	4	5	9	7	4	7	9	8	8—69
W Roberts	9	5	7	7	7	5	4	6	8	10—68
McG Daugherty	5	8	4	10	6	5	6	7	6	7—64

D P Norris	6	5	7	5	8	7	8	10	10	4—70
T T Philbrick	5	9	4	6	7	7	10	9	7	4—68

SPRINGFIELD, Mass., Jan. 2.—E. T. Stephens and A. L. Rogers of this city were the guests of the Amherst Rifle Club to-day, and were treated in "bang-up" fashion. They were taken to the range in hacks—something that does not happen to marksmen often—and found one of the best shooting houses in the State. Besides all this they were served with a fine game dinner. Following are some of the scores made during the day:

E T Stephens	6	6	10	10	9	10	8	8	8	9—86
A L Rogers	6	6	10	8	7	9	8	8	4	10—76
Henry Adams	5	9	6	8	8	10	9	7	5	8—75
A L Bardwell	7	5	9	8	10	7	8	8	6	6—74
James S Thomas	5	5	6	8	5	7	6	10	8	9—69

THAT MUZZLELOADER CHALLENGE.—Syracuse, N. Y., Jan. 9.—*Editor Forest and Stream:* Having noticed the challenge of Messrs. Moore, Garfield and Perry, published in your issue of Dec. 29, we hope that you will kindly allow us space to reply. They have read our claim aright, and we have nothing to retract. We are willing to defend that claim against all challengers, but do not feel under any obligations to call in the assistance of our neighbors. Therefore, we accept their proposition for a trial of guns upon the terms named by them, except that the shooting be done by two men on each side instead of three. Or, if all three of their team desire to shoot, Warner & Lowe will put up the same amount of money that they do, and the prizes shall be awarded to the best average shooting, according to the number of shots made by each team. We wish further to explain that, since they refer to the rules of the N. R. Club governing weight of guns, and only quote one-half of the rule, we shall expect that the other half will be equally applicable. Being the challenged party we claim our right to name place and date for meeting and we select the Anderson Rifle Club range, near Syracuse, N. Y., as the place, and May 8, 1888, as the time for this contest to commence. We have deposited $100 as forfeit in the hands of a respected citizen of this place, whose name and address will be given to interested parties who may wish to deposit for the same purpose. Whenever the above-named parties make a like deposit for a like purpose we shall think they mean business, and not before.—WARNER & LOWE.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

CLEVELAND, O., Jan. 3.—Inclosed find account of match between East End and Cleveland Gun clubs. The match is one that has been watched with great interest by all Ohio shooters. You will please note that 1,000 blue rocks were thrown with only five balks, and that the highest and next highest scores were made with Chamberlin cartridges. The victory was a most creditable one for the younger organization, even though the Clevelands were handicapped by rules, targets and grounds, all of which were chosen by the East Ends. The match was very exciting at the finish. On the first two squads of three men each the East Ends gained twenty birds, but lost seventeen of these on the last three squads. All the East Ends but Elford shot well, and while Jim Jones of the Clevelands fell furthest away from his usual form, Hendershot, L. O. Jones and Cross were almost as bad, and it was to the unsteady shooting—in which some bad luck was mixed—of this usually reliable quartet that the East Ends owe their victory and the Clevelands their defeat. The conditions of the match were as follows: Teams of 15, 21 blue rocks, 18yds., 3 traps, highest possible team total 315. An uneven wind, light good. The referee for the team match was C. H. Sayle, and the judges J. Jenks for the Clevelands and J. Ellis for the East Ends.

W Roberts	111001111011111101111—17—213

Team average—14 1-5.

Sweep No. 1, at 6 blue rocks, 18yds. rise, and three traps: Roberts 5, Hendershot 3, Martin 3, Auld 4, Chamberlin 2, North 3, Eidam 4, Haycox 3, Conger 5, Cross 2, J. Jones 2, F. Hogen 5, A. B. Jones 2, Coggswell 5, Elford 3, Sweetman 4, Calhoon 5, Willard 5, Behlan 4, Sheldon 4, Bassett 4, Wheal 4. L. O. Jones 3, McGregor 0, Silsby 3, Powers 4, Wightman 3, C. Hogen 5, Drake 2, Kelly 2, Gault 5, McCracken 1, Neff 4, Phare 6. Phare and Wightman divided first, Frank Hogen won second in the shoot-off, Bassett third and A. B. Jones fourth.

Sweep No. 2, at 6 blue rocks, 18yds. rise, and three traps: Hendershot 5, Calhoon 5, Bassett 2, Sheldon 5, Neff 2, Wightman 5, Powers 5, Willard 3, Auld 3, A. B. Jones 5, Martin 3, Conger 3, Phare 4, F. Hogen 2, North 3, P. Sherman 3, Wheal 5, Roberts 5, Edam 2, Behlan 4, Drake 5, Cross 4, Elford 3, Stevenson 3. After a good deal of shooting the survivors, A. B. Jones and Powers, had a very funny fight for first money and Jones finally won it, Phare, Cross and Behan divided second and Martin won third. After the sweepstakes Calhoon, Sheldon, Wheal and Roberts had a 20-bird race, 16 single and 2 pair of double blue rocks, 18yds. rise and three traps. Calhoon was "stuck."

RIDGEWOOD, N. J., Jan. 2.—The Ridgewood Gun Club held a live bird sweep, Jersey City Heights rules to govern. Ties divided. First sweep:

V Hopper	1 1 1 0—3	R Ramsey	0 0 1 0—1
J B Jacobus	1½½ 1 0—2	T Blackledge	1 0 1 1—2
D Hopper	0 0 1 1—2	G Oblenis	1 0 1½—2½
J Henion	0 1 1 0—2	R Van Ripes	1 1½ 1—3½
A J Post	0 0 1 0—1		

Second sweep:

V Hopper	0 1 1½—2½	R Ramsey	½ 1½ 0—2
J B Jacobus	1 1 0 0—2	F Blackledge	1 0½ 0—1½
D Hopper	0 1 0 1—2	G Oblenis	1 1 0 1—3
J Henion	1 1 1½—3½	R Van Riper	1 1½½—3
A J Post	0½ 1 1—2½	A Christopher	0 0 1 1—2

Third sweep:

Hopper	0 1 0—1	Blackledge	1½½—2
Jacobus	0 1 0—1	Oblenis	1 1 1—3
Henion	½ 0½—1	Van Riper	1 1½—2½
Ramsey	0 0 0—0		

DUNELLEN, N. J., Jan. 6.—Although no shoot had been announced, a number of the members of the Middlesex Club gathered on their grounds on Monday last to have some sport. The birds were an excellent lot, and, aided by a strong wind, made it difficult work for even the experts to stop them. The Orange contingent, Messrs. Manitz and Quad, were in great form, making some very pretty kills. Quinlan, as usual, was the life of the party. L. B. Campbell, of Little Silver, N. J., paid us a visit and shot in with the boys in several sweepstakes. At one time it looked as if a long-talked-of and much-desired match could be arranged between Mr. Campbell and a member of the Middlesex Club. When it came to drawing up the articles of agreement, however, it fell through, as Mr. Campbell seemed to "want the earth and a shawl strap to carry it in." Mr. Campbell can be accommodated, as he well knows, if he will only be satisfied with half of this earth. The following are the scores, remarkably good ones, I think, under the conditions. Where not otherwise stated, ties divided. Smith, Tee Kay and Quad, 28yds.; the rest 30:

Sweep No. 1.—Four birds, 5 ground traps, Middlesex rules:

Quinlan	1102—3	H White	0121—3
Manitz	1122—4	Quad	1211—4

Sweep No. 2:

Quinlan	0121—3	H White	1222—4
Manitz	1100—2	Quad	0110—2

Sweep No. 3:

Quinlan	2102—3	Quad	0011—2
Manitz	2011—3	L B Campbell	0211—3
White	1120—3		

Ties shot off in next event.

Sweep No. 4:

Quinlan	1121—4	Quad	2120—3
Manitz	0211—3	Campbell	1122—4
White	2201—3		

Quinlan and Campbell divide first; Manitz won second in shoot off, killing 4.

Sweep No. 5:

Quinlan	1121—4	S G Smith	1011—3
Campbell	1112—4	Quad	1111—4
Manitz	1101—3	Forrest	1020—2

Ties shot off in next event.

Sweep No. 6:

Quinlan	1022—3	S G Smith	2122—4
Campbell	0221—3	Quad	1011—3
Manitz	1101—3	Forrest	1120—3

Second shot off in next event.

Sweep No. 8:

Quinlan	1101—3	Quad	1110—3
Campbell	1111—4	Forrest	1120—3
Manitz	1011—3	Squires	0221—3
Smith	1010—2		

Quinlan and Manitz divided second, killing six each.

Sweep No. 8:

Quinlan	2211—4	Campbell	2100—2
Manitz	1111—4	Dickens	0211—3
White	0000—0	Forrest	2111—4
Smith	1111—4		

Ties on first shot off in next event.

Sweep No. 9:

Quinlan	0111—3	Dickens	1110—3
Manitz	0111—3	Forrest	1111—4
Smith	0212—3		

Ties shot off in next, Quinlan winning.

Sweep No. 10:

Quinlan	1212—4	Dickens	2011—3
Manitz	1011—3	Forrest	1223—4
Smith	1010—2		

Sweep No. 11:

Quinlan	0210—2	Forrest	1100—2
Manitz	1100—2	Dickens	100w.
Smith	1101—3	Tee Kay	1212—4

Sweep No. 12:

Manitz	00w.	Dickens	1111—4
Smith	1123—4	Tee Kay	0121—3

Smith first on shoot-off, killing 10.

Miss and out, $10 entrance:

S G Smith	112121120—8	Dickens	211121112—9
		Tee Kay.	

BOSTON, Jan. 4.—A number of shooters were present on the Boston Gun Club grounds, at Wellington, to-day, to shoot off the third match in the series for the ten prizes offered by the club. The Wellington, East Boston, Chelsea, Brighton and Boston gun clubs were well represented. Following are the scores in detail: 1, five clay pigeons, D. Kirkwood first, E. Flanders second, F. Norton third; 2, five Peoria blackbirds, W. Norton first, F. Norton and F. Whitcomb second, Flanders third; 3, five Macomber metal targets, Kirkwood first, F. Norton second, W. Brewer third; 4, five Peorias, A. F. Adams and J. Connel first, E. B. Douglas, Kirkwood, Flanders and Whitcomb second, W. Norton third, Brewer fourth; 5, five clay quail, Hart, Flanders and Kirkwood first, Douglas and Adams second, Whitcomb and F. Norton third, J. H. Wild fourth; 6, five Peorias, Hart first, W. Norton second, Douglas third, Whitcomb fourth; 7, five clay pigeons, C. M. Hoffman and Kirkwood first, Hart and Whitcomb second, F. Norton third, Flanders fourth; 8, five Macombers, Hoffman and Kirkwood first, W. Norton second, Whitcomb and F. Norton third, J. Connel fourth; 9, ten clay pigeons, J. A. Sampson first, Kirkwood second, Hoffman third, Adams and F. Norton fourth; 10, ten Peorias, Whitcomb first, Sampson second, Hart third, Connel and Adams fourth; 11, five Macombers, Hart first, Whitcomb second, Sampson third, Kirkwood fourth. The last three scores constituted the scores for the Boston Gun Club prizes, and were as follows: J. A. Sampson first, F. Whitcomb second, W. Kirkwood third, J. Connel and Hart fourth, E. B. Douglas and F. Norton fifth, A. F. Adams and C. M. Hoffman sixth, W. Norton seventh, E. Flanders eighth, S. Mitland ninth, J. Wild tenth.

MONTREAL, Jan. 2.—The much talked-of championship shoot came off to-day on the Montreal Gun Club grounds and was the most successful in point of numbers and importance perhaps ever held in Lower Canada, although the scores showed nothing to boast about. On the contrary they were very poor. There were 7 teams entered for the championship team cup, and 47 entries for the individual championship medal. The shoot began at 9 o'clock in the morning, and darkness came on just as the ties were completed in the individual match. The weather was clear and cold, but the wind was very high and rendered good shooting almost impossible, particularly early in the day. Then the sun was right in the shooters' eyes for a couple of hours. The conditions in both matches were 15 Peoria blackbirds, 18yds. rise, the Montreal Gun Club winning the team championship with a poor score of 37 out of a possible 75, while Mr. C. Wallace, of the same club, won the individual match with a score of 13 birds out of 15. This was the only good string made during the day. The following is the score of the winning team:

Wallace	110001111111111— 12	Emond	000001011110111— 8
Trotter	000011010000101— 5	Allan	010101101010000— 6
McCan	001000011110000— 5		

Lachine Gun Club, first team, came next with a score of 32; St. Lawrence Gun Club, 30; St. Hubert, of Ottawa, 28; Lachine, second team, 23; Cote St. Paul, 21; Richelieu Club, of St. John's 20. In the individual championship, after the ties had been shot off, the winners of the prizes and number of birds were:

O H Wallace	13	W L Cameron	7
P Thomson	11	J Delorme	6
D Robertson	10	L G Trotter	6
W Esmond	9	A Boa	5
E Arpin	9	C Magey	5
J Allan	8	P Levesque	5
E A Champagne	7	Ed White	5
A O Scott	7	E W Stretby	5
P Trudeau	7	A E Penniston	4

H. G. Verity, A. Bonneville, H. McCaw, A. Throop, Geo. White, H. Cartier and W. Parisien also competed. The Montreal club have been challenged already to shoot for the championship cup in four weeks.

Individual championship of Canada, at 10 Peoria blackbirds, 18yds. rise:

H Lajeunesse	9	J Galbraith	6
G W Lesage	9	J Paquette	6
R Monteith	7	J Twinny	6
R Lucas	7	J B Bedard	5
C Aubin	7	P Masse	5
L Vermette	7	F Dowd	5
J Cook	7	Wm Shields	5
J G Hadley	6	H Brault	5

J. Leroux hit 4 and E. B. Wescott 3.

BOSTON, Dec. 28.—The attendance of shooters at the closing of the M. R. A. silverware matches was limited to a few who had an interest as prize winners. The gunners, encased in waterproofs, managed to shoot the necessary scores to complete the series of matches and the prizes were awarded. There will be no more shotgun matches at the range until toward the last of January. O. R. Dickey won the macomber gold badges, and immediately upon receiving it presented it to the M. R. A. to be placed among the trophies of the association with the express condition that it was never to be offered for competition again. Following are

named the winners in the several classes of the silverware match and sweepstake events:

Merchandise Match.

Smith	011101111	11	11	10	11	11—18A
Snow	0100111111	11	10	11	01	11—15B
Nichols	1101 11110	10	10	10	11	10—13C
Swift	0111011010	00	11	00	11	01—10D
Crown (visitor)	1110001100	11	10	10	10	11—12G

Macomber Badge Match, 10 singles, 5 pairs—Smith 13, Nichols 11, Snow 8. Prize Winners' Merchandise Match—Smith, first in Class A; Swift, first in Class B; Snow, first in Class C; Warren, first in Class D; Nichols, first in Class E. Visitors Match—Wilson, first in Class G; Crown, first in Class H. Sweepstake Event—five clay pigeons—Swift first, Nichols second, Snow and Curtis third; ten macomber birds—Curtis first, Nichols second, Smith third; five pairs macomber birds—Smith first, Nichols second; ten clay pigeons—Smith first, Snow and Nichols second, Folsom third; five pairs bats—Smith first, Curtis and Snow second, Crown third; six blackbirds—Smith first, Swift second, Snow third; six clay-pigeons—Smith and Snow first, Nichols second, Bridge third; ten clay-pigeons, straightaway, 50yds. rise, for a special prize, a valuable sterling silver sugar shell:

Snow	0111110110—7	Swift	0110011101—6
Nichols	1111010110—6		

ST. LOUIS, Dec. 26.—John Shauer of Memphis, happened in the city to-day and tried to keep his Christmas by bowling over both Joe Fischer, president of the Excelsior Gun Club, and Theodore Rick, the genial bear hunter of St. Louis, at pigeons. He backed himself to beat the aggregate score of his opponents, ground traps, 30 birds each, 26yds. rise, half wild and half tame birds. The shoot took place at Compton Avenue Park, the stakes being silk hats all round, carriage hire and x's, besides the price of the birds. Memphis had to pay as Mr. Shauer lost by 2 birds. The pigeons were supplied by Fred Trescher and were strong flyers. In the subjoined score the figure 2 denotes that both barrels were fired at the bird:

Shauer	1120211201110121110—16
Rick	1212100001000000001— 8
Fischer	2121202010000000100—10—18

NEW YORK, Jan. 6.—The Manhattan Gun Club that meets at John Maisenholder's (555 East Sixth street) has elected the following officers: President, Fred J. Berrman; Vice-President, Joseph Hoffman, Jr.; Treasurer, John W. Bayer; Secretary, Albert C. Lorey.

Canoeing.

CRUISING CANOES AT THE MEETS.

Editor Forest and Stream:

In reading "Asticou's" letter in a late issue I was very much struck with the inference he has drawn after reading the letters which I have written on cruising canoes at the meets. He quietly puts away with the idea that because I asked that a craft larger than the Pecowsic be encouraged, I want to encourage a 30in. craft or a scow of some kind or other. The largest sizes that I have mentioned is a canoe 30 or 31in. beam, and if he places a 30in. canoe down as a big, heavy, unwieldy craft that cannot be portaged, he simply shows that his knowledge of that craft is very deficient, and again so when he talks about a large canoe not being more seaworthy than a small one. On the same theory I suppose he would argue that a ten ton yacht was not more seaworthy than a five-tonner of similar lines, or that a 30in. canoe was not more seaworthy than a 15 or 20in. one of similar lines.

As "Asticou" started out with the assumption that I was asking for a big, heavy canoe, and as all his arguments hinge on that one point, there is nothing further in his letter to reply to, unless it be the pity he expresses for the judges who would have to award the prizes for the best kit, etc. Why that would be an easy position to fill; just let the commodore appoint some of these gentlemen who have served as judges at a baby show or something of that kind, and if they are given the usual 15m. start after the prizes have been awarded I have no doubt but that the position could be ably filled.

Agreeable to your request, Mr. Editor, I take exception to one or two points which you brought forward on Dec. 29.

You state that there are two opposing interests in canoeing, namely, cruising and racing, and I take the ground that these two should not be opposing interests if we encourage the right class of a canoe, which I take to be a light, moderate-sized craft, say 30 or 31in. beam and 11 or 12in. deep. When you put a craft of that class against one 28 or 29in. beam and 9in. deep, you must expect them to be opposed to each other, as one is for racing only and the other is the general purpose craft that I call a cruiser, which can be used for almost everything except getting a place in our races.

I agree with you in saying that racing must be retained and encouraged—but in the right direction—as the tendency the last two years has been entirely in the direction of over development of one point, namely, speed, to the exclusion of all others. Now, I consider that racing and racing, and I take the ground that these two should not be opposing interests if we encourage the right class of a canoe, which I take to be a light, moderate-sized craft, say 30 or 31in. beam and 11 or 12in. deep. When you put a craft of that class against one 28 or 29in. beam and 9in. deep, you must expect them to be opposed to each other, as one is for racing only and the other is the general purpose craft that I call a cruiser, which can be used for almost everything except getting a place in our races.

You say "there is no reason for insisting that a man shall be able to stow his racing sail." Well, who said there was? You see, any one reading your article would infer that I had been advocating such a thing. Though I have not before stated it, I do consider that all sails should be made to hoist and lower, not stow, remember, as in all the cruises that I have taken part in or seen I do not remember seeing any one stow their sails in their canoes, but they do lower them when they want to paddle. In conclusion, I agree with you when you say that the requirements of a canoe should be "that the hull be large enough to carry an ordinary cruising load, and of a safe (or steady) and seaworthy model." The only difference appears to be that you think we have and are now encouraging this style of craft, and I think we are not, as in our races with the 75ft. limit included, this class of canoe is at a disadvantage, as a small, low, lean hull can be, and is, driven much faster with a limited sail, as the records prove.

With reference to "Cruiser's" last epistle, he appears to think that there were a dozen or so canoes of the cruising type at the meet that could beat or push very hard Pecowsic. Now, while he is entitled to his opinion on that point, I think he would have considerable difficulty in getting others to believe as he does. Take the '86 meet for example; take the Vesper, a well-modeled light craft, that would make a suitable cruiser. Her bottom was rubbed down until it was as smooth as glass; her sails were well made, and she was manned by a skipper whom I would place second to none as a sailor, and yet, with all these things in her favor, where was there a craft that you could cruise in comfortably? Beaten every time except once. Her owner then built the Notus, and I would just here like to ask "Cruiser" if the Notus is as stable a craft as the Vesper? My own opinion, formed by examining the lines, is that she is not. However, he evidently did not whittle down her proportions or get deadrise enough, as the same fate met her again. Vesper was a good cruiser, and she was beaten and discarded for a less staunch craft, that was again beaten by one less so than herself, and yet in the face of that it is said that the A. C. A. are advancing the cruising canoe.

"Cruiser" says: "Now, if Pecowsic, Lacowsic, and the rest are ruled out, what is to prevent their owners going into slightly larger craft, fitting them up as thoroughly as the old boats, and again coming out on top?" Why, that is just what we want them to do, and what I have been aiming to get the Association to do, as then we would have our races won by a class of canoe that every one would like to use and to see encouraged, instead of as it now is by a class of canoe that unless a person was going to race he would never think of getting. "Cruiser" learns that Mr. Barney is building a roomier craft for next season, and I am much pleased to learn of it. I could not have anything better in support of my contention than the fact that Mr. Barney himself is discarding the Pecowsic for a roomier class of craft, such as I have been advocating. If such is the case I hope he will be even more successful with her than in previous years, and the thanks not only of the racing men, but of the cruisers also, will be due him as the originator of the fastest canoe in existence and for applying the same ideas to a canoe that will come into general use as an all-round boat.

"Cruiser" contends that I have made no case against the present tendency of racing, and that I have suggested no remedies. He surely cannot have read my articles, in which I mentioned a race which I would substitute for the 75ft. limit. He has never read that among the evils I mentioned were that our sailing races are won by a canoe too narrow, too shallow and too cranky to come into general use for anything but mere racing. He has not read that I suggested the remedy of making a rule that a Class B canoe must be 11 or 12in. deep, and must be a certain beam, 30 or 31in., instead of the rule as it now is. He has not read that I suggested giving prizes to encourage cruising kits, tents, sails, etc., or that I proposed having one or two cruises at each meet. Oh, no! He has not read these things, but simply puts me down as a "kicker." The following adage would apply to his case: "There are none so blind as those who will not see."

By the way, there are many who consider that "Cruiser" has no more right to the non de plume behind which he hides his identity than a mud scow has to be called a yacht. Many think from the tone of his letters that he is one of the foremost racers in the A. C. A., for with one exception he has doubted or thrown cold water on everything that has been suggested as beneficial to the cruising man.

If "Cruiser" is not ashamed of hiding behind the fence it would be well that he tack his name to the next article with which he favors us, so that no one can say that he is a pure and simple racer.

With the class of canoe such as I advocate we could still have all the fun and excitement of our sailing races as we have at present. We would still excite as much interest among yachting and boating men and canoeists and their friends as we do now, and we would still attract to the A. C. A. meet just as many racers and I think many more good racers than we do now. We would do all this and more. We would be encouraging a class of canoe that would be good for something besides simply match sailing; and we would be building up a fleet of canoes such as any true canoeist could point to with pride and say, "This is the style of craft we use in our manly sport!" Why if you were to take a fellow, and, pointing at a Pecowsic model, say, "That is the kind of craft we have to use to win races," I am afraid we would not have half a dozen new canoeists joining our clubs in a year.

W. G. MACKENDRICK.

TORONTO, Jan. 7, 1888.

[The whole history of yacht racing, which extends back far longer than canoeing, shows the same contest we have mentioned between cruisers and racers; the attempt to place cruising boats on an equality with craft on which more skill, labor and money has been expended to make them win prizes. We need only mention the late C class in British yachting, and the discussion as to what shall take its place since it has proved a failure. The history of canoeing shows the same contention, and it must always continue to exist. At the same time, it need work no harm if suitable rules are prescribed to prevent purely racing machines. The whole point of Mr. MacKendrick's argument rests on whether Pecowsic is really a racing machine, and, in the face of some evidence to the contrary, this fact he has not yet proved. His arguments against Pecowsic would almost apply as well to all Class A; but while so many of these boats are successfully used he cannot condemn them summarily. Mr. Vaux went from the 31in. Sunbeam to the 28in. Bessie and Bo-Peep and has never regretted it, and the Rat, Sea Urchin, Peggy, Nirvana and dozens more testify to the abilities of the class. Pecowsic may be small for Class B, but she is certainly as powerful as a 15×28 canoe, with her dimensions, 15ft. 10½in.×29in. There are too many Class A boats in the cruising as well as racing for the type to be discouraged or suppressed, and if our correspondent objects to them on the ground that they are too small, he must remember that their owners have the same right to criticise his choice of a larger boat. Our comments on small sails and the stowage of racing sails were suggested by other communications that have appeared in connection with the discussion, as both demands have been made frequently by cruisers since the A. C. A. was formed. Mr. MacKendrick condemns all sails that cannot be lowered by a halliard, and would rule them out, but what reason has he for so doing? Mr. Barney claims that he can carry his outfit of five small sails within his canoe, shifting them at will so as to set some thirty or forty feet in two sails for a snug cruising rig, or 100ft. in three sails for racing. If this can be done, is not Pecowsic, so far as rig is concerned, the best-fitted all-around canoe yet devised? No special sails with long spars to be left ashore when not racing, but small, light and compact sails, shifted in a minute from a storm rig to full racing canvas. When it is proved that this claim is not well founded, and that the sails used are dangerous in any way, it will be time to devise a rule to prohibit them, but not until then. While commending on the letter from "Asticou," Mr. MacKendrick seems to have overlooked the moral, a very good one, which it contained, that tastes differ in canoeing as in all other matters, and that while his 15x31 canoe may be just right for him, it does not follow that a 15x28, or on the other hand 16x36 boat, is not as good for certain legitmate uses. We might take up some points raised against "Cruiser," but as he seems well able to swing his own paddle we leave them to him to answer].

Editor Forest and Stream:

I sometimes enjoy eating a good dinner, but I would not enjoy an eating match for the sake of a prize. I enjoy a canoe cruise, but I do not think that I would enjoy a cruising match; nor would I enjoy having to get up at an hour that did not suit me; to cook a breakfast when a cup of coffee and a piece of bread is all I want; to paddle a certain number of miles when I felt disinclined. In fact I do not think that I would care to enter a cruise for a prize or trophy. Generally a cruise should be its own trophy, and it is hard to imagine how the mere addition of a flag, for I do not suppose that any other prize is intended, could add any interest or enjoyment to a cruise. My canoe suits me exactly; perhaps it would not suit any one else; and so with my kit, sails and other matters relating to a canoe or a cruise.

While a canoe cruise for prizes would not suit me, it might suit others, and there does not appear any objection to it so long as you do not compel me either directly or indirectly to join in the excitement. Tastes differ and so long as I can do what pleases me best, I have no objection to others doing the same.

Owing to the controversy as to an Association cruise, and large canoes, I have carefully examined the constitution and laws of the Association, but I have been unable to find any provision which could be so constructed as to prevent any member of the Association or any number of members from cruising all they wish while at the meet. Nor do I find any provision which prohibits large canoes from carrying the burgee of the A. C. A. even although they are outside of the limits of any of the racing classes. I think that it should be clearly understood that there is no rule against large canoes, but on the other hand every encouragement has been offered by the Association to bring such canoes to the meet, but thus far the number present has been so small that it has been impossible to obtain sufficient entries to have a satisfactory races. It therefore seems unnecessary to create a separate class for these canoes until they appear in sufficient numbers to justify the act.

After having attended several meets I can certainly say that I have never been compelled to enter a race, nor have these races in any way interfered with me or my pleasure. I do not consider it the duty of the commodore to arrange and plan a cruise for me; when I want to cruise I can do so without his aid. The meets, as now managed, permit every one to do as he pleases; with a cruise it would not be so, and I would have to do what others wished and not what I wished. This would not suit me. But it might suit others, and perhaps it would not be a bad plan to start a kindergarten, with a committee of instructors to plan and arrange a cruise for those who are not able to plan and manage a cruise for themselves.

Looking at it in this light, I can appreciate the missionary efforts which have been made, and can join in the work with heart and hand so long as I am not called on to give anything more than advice without instruction.

LORNA.

QUAKER CITY C. C.—At the semi-annual meeting of the Quaker City C. C. on Dec. 30 the following officers were elected: Com., J. A. Barton, canoe Malta; Vice-Com., Arthur Letchworth, canoe Lorelei; Sec.-Treas., Sam C. Fox, canoe Mephistopheles; Executive Committee, A. A. Jackson, canoe Vixen, and E. H. Barten, canoe Caprice. The secretary in his report stated that the club was entirely out of debt and in a good financial condition, with good prospects for the coming season. The cruising record for the past season is very fair, and it is expected that it will be much better next season. A new constitution and by-laws, with a new set of house rules, were adopted at this meeting. A resolution was also adopted to join the new division of the American Canoe Association as a body, providing the arrangements made are satisfactory to the club.—SAM C. FOX, Sec.

Yachting.

BUILDING NOTES.—At Marblehead Mr. Eddy is busy with the schooner for Mr. Wyeth, and a new cutter, about 36ft. l.w.l. for Mr. Everett Paine, owner of Vera. Both yachts are from Mr. Burgess's designs. The schooner will have an iron keel of 30 tons.

THE DEED OF GIFT.

IN last Sunday's *Herald* an interview appeared in these columns from Mr. Edward Burgess, giving his ideas of the new deed of gift. The FOREST AND STREAM, in its issue of last week, criticises the well known architect for his comments, to which the naval architect has taken exceptions. Mr. Burgess was called upon at his office yesterday by the writer, and in the following interview he answers the statements made by the FOREST AND STREAM:

"Have you read the comments of the FOREST AND STREAM on your remarks published in last Sunday's *Herald*, Mr. Burgess?"

"Well, I glanced over them hastily," said Mr. Burgess.

"I wish you would write a reply," urged the reporter. "No, thank you; I have no time for that; besides, the New York Y. C. hasn't appointed me a committee to explain its position, and, as I said last week, in my opinion, its position does not need explanation and certainly not defence."

"Well, read this, Mr. Burgess:"

"The demand for a reasonable amount of time in which to build to meet a new boat is fair enough, though ten months seems a long period, but the other side of the question, that it leaves the designer of the challenger but a few weeks after the conclusion of one race in which to design a new boat prior to challenging, is entirely ignored in Mr. Burgess' ingenious answer. The answer to the most important question, concerning the required dimensions, has nothing at all to do with the case. Of course the old tonnage measurement is out of date and useless, and it is desirable that terms may be arranged before a yacht is completed; but it would be much more to the point to hear how Mr. Burgess would like to be tied down absolutely to a fixed length, extreme beam, waterline beam and draft, with the penalty of disqualification hanging over him if he understated them in advance or overran them when in racing trim. Still further, would he consider the terms even which compelled him to give long in advance these leading details to his adversary, but to wait in the dark until the race came off to know what the latter would bring to beat him?"

"Well," laughed Mr. Burgess, after he had read the paragraph. "If the Cup was now abroad I would a thousand times rather design a boat to challenge for it under the new deed than the old. Surely the challenger has at least six or eight weeks to decide upon the leading dimensions, which should be enough in all conscience. As to being tied down absolutely to a fixed length, beam and draft, why it is practically what I have to submit to with every racing boat, I am building half a dozen boats to-day that will be disqualified if they exceed their class limit in length. They are simply designed three or four inches shorter, to allow for any reasonable change of trim, and, of course, the waterline, beam and draft will vary with, but far less than, the length.

"The new deed says the challenger shall not exceed his stated dimensions. The defender, too, will be in just the same position, in case he decides to build for the extreme limit named in the deed. As for giving my adversary 'leading details,' of course I might like to build in secret a boat twice as large and powerful as any he possessed, and then sail off in triumph with the Cup, but I think he would probably regard this as unfair. I suppose the committee asked for beam and draft in order to identify the challenger; certainly these dimensions alone tell very little.

"Why, look at the Volunteer and the Mayflower. The *Field* says we went to work to outbuild the Thistle after learning her dimensions. Yet, as far as the Volunteer's 'leading dimensions' go, they are practically identical with the Mayflower's, the beam being actually less."

"Yes," said the *Herald* reporter, "that is true. What do you say to this?" (Reading from the FOREST AND STREAM):

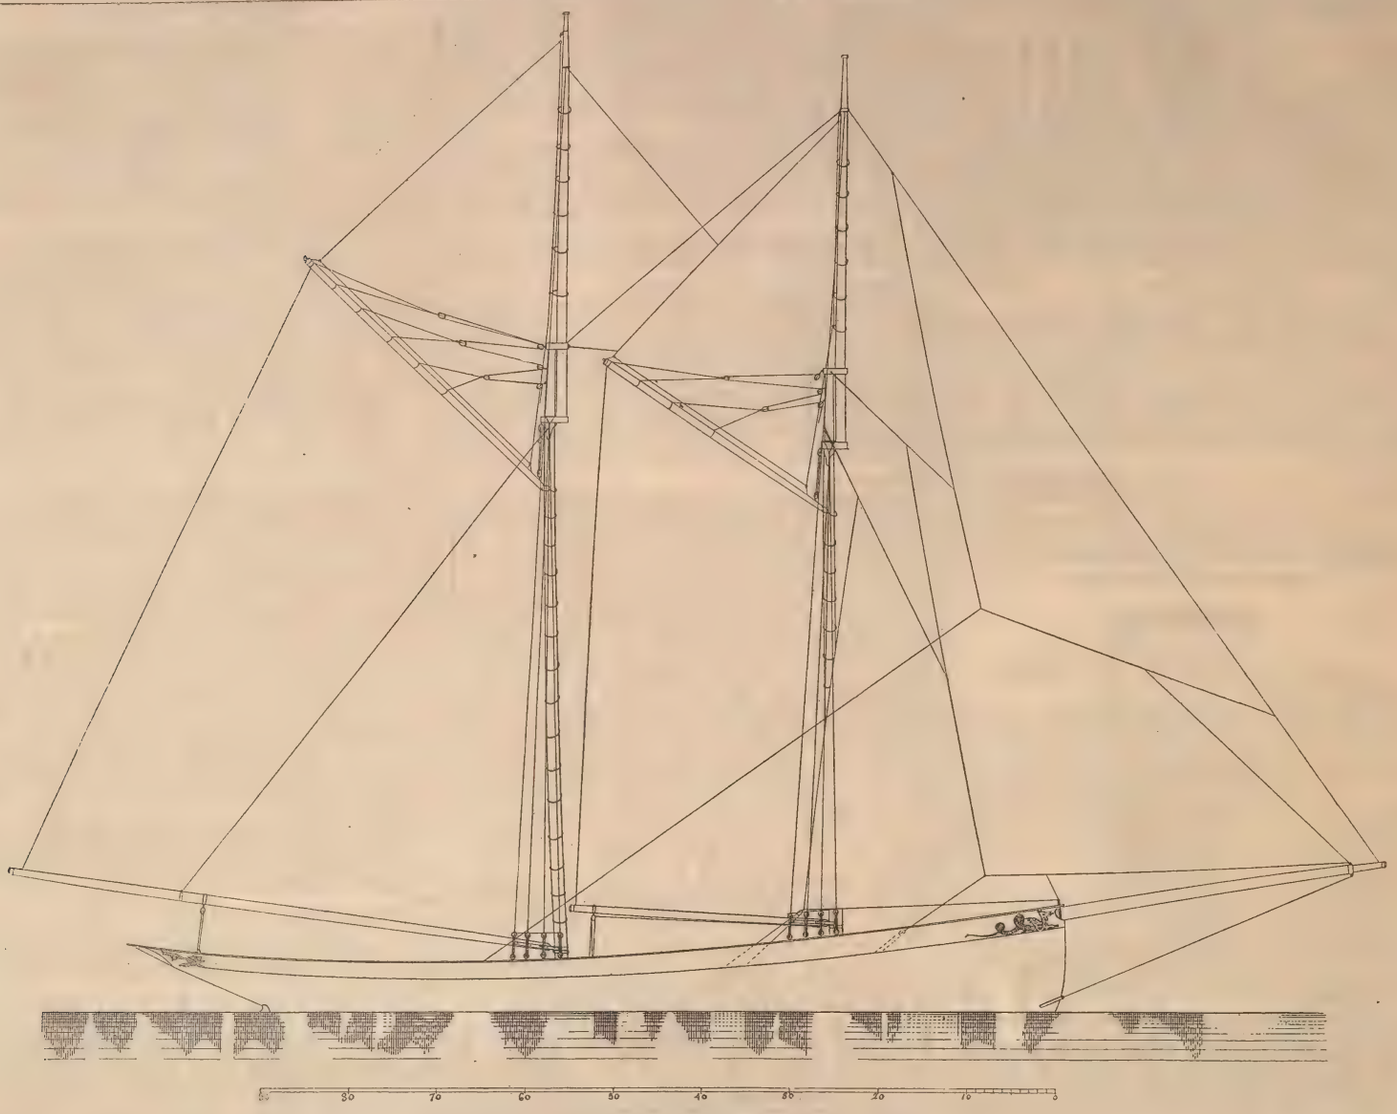
"The deed is unfair in that it demands certain information from the challenger while giving none in return or no security that he will not be outbuilt; and it also reserves to the holders the right to substitute a length rule for the rule of the club, if they so desire.

"The deed is absurd, impracticable and inconsistent, in that it imposes on the challenger conditions as to building which no designer can guarantee to comply with; it confines the races to sizes of yachts never yet built, and not likely to be under any ordinary demands of yacht racing; and it nullifies the accepted racing rule of the club, by length and sail area, replacing it by a totally different rule.

"The deed is obstructive and detrimental to American yachting in that it shuts out every existing yacht from competition; it confines international yacht racing to a new and special class of yachts and a few very wealthy men, and does nothing to encourage the healthy and systematic development of designing, building and racing American yachts; and, further, it has already brought discredit upon American yachtsmen, and will operate to prevent the competition which for three years has wrought such good results to both sides."

"I can only say," replied Mr. Burgess, "that this is an example of the one-sided statements made by the critics of the new deed. Surely the old Cup deed 'demanded certain information from the challenger, while giving none in return.' The new deed makes it clear what information shall be given, while the old deed only implied it. It also reserves to the holder the right to substitute a length rule for a rule of the club, if they so desire. Why it is really incredible that any one can say such a thing. The right to demand a race without time allowance is clearly a concession to the challenger, not the challenged. Of course, no club holding the Cup could possibly refuse to race under its own measurement. This provision is clearly intended to prevent holders of the Cup from adopting any measurement which would unfairly handicap their adversary. Don't you remember how the cutter men used always make the cubic contents rule was adopted to unfairly tax the cutter type? Now, anything of this sort is rendered impossible.

"As to confining the races to sizes never yet built, the old deed would allow the building of boats far larger than 90 and 115ft. If the challenger should name a 70ft. boat we should meet her with the fastest boat in the country, regardless of size, whether under old or new deed, giving her whatever time allowance might be in use. It would be absurd to adopt any other course. The Cup is to be held by the country owning the fastest yachts, not the one by chance owning some little racing machine.



"From the nature of things existing yachts are likely to be shut out from these cup races. Both challenger and challenged will always make a special effort to produce a faster boat than any built up to the time of the challenge. It is quite true that this species of racing must be confined to wealthy men or syndicates, but this is a misfortune, not a fault. If any one wants an international race for a special class, it is easy enough to offer a prize which will bring it about, without putting up the America Cup, which was clearly intended by its donors to be sailed for by the fastest yachts in the world."

"One more question, Mr. Burgess, what do you thing about the ten months' limit?"

"Why, as I said last week, it practically gives the challenger more time than he had by the old deed, while it gives the challenged only reasonable time for preparation. The *Spirit of the Times* ridiculed the idea of the necessity of a year or two months for preparation, but just look at the facts. Can any one think that six months last year gave us time to build the Volunteer and bring her to the line in best racing form? She was designed in haste, built in haste, and is at this moment far from what she ought to be, or would have been, if Gen. Paine could have begun his season last summer on the first of June, instead of August. Indeed, it would have been utterly impossible to have brought the Volunteer up to the line at all, had it not been for the inestimable advantage that our experience with the Mayflower had given us. It might have been impossible to build her at all at that late time in the spring. Many builders were too busy to undertake her, and the necessary haste with which she was built increased her cost and her imperfections at the same time."

Lest any mistake might occur, a copy of the above interview was shown Mr. Burgess, who, after reading it, pronounced it correct.—*Boston Herald, Jan. 8.*

Mr. Burgess's statement as to dimensions is by no means exact, as no designer thus far has been tied down to the extent that the deed of gift compels. It is stated not only that certain dimensions shall not be exceeded, but that they shall not be departed from in any way; in short, the "reasonable change of trim" which Mr. Burgess alludes to, is denied the challenging yachts. To build within a certain length is one thing, but the challenger must do far more. We have not the accurate dimensions of Mr. Burgess's boats, but we venture to say that, under such restrictions as the deed of gift lays down, nearly all of them would be disqualified. Certain dimensions have been decided on in each case in the design, and these dimensions have in nearly every case been departed from when the boat was finally in racing trim. Puritan is over her length as first given, and we believe draws 4in. or more than her designed draft. Mayflower was deepened by a lead shoe added in her first season, but after some trial; while Volunteer is apparently floating above her designed l.w.l. Titania not only is over her designed length, 69ft. 9in., but she exceeds her designed draft considerably, and it is a fact that her right to sail in the 70ft. class, for which she was designed, depends on a very small fraction of an inch. Every yacht requires certain changes of weight or trim after trial before she is at her best, and on these changes the length, beam and draft depend. A designer must

CRUISING SCHOONER "ALERT."—SAIL PLAN.

make certain that his yacht will not exceed the length allowed, and must provide a margin in his design, but it is absolutely impossible for the designer of a large yacht to say in advance the exact draft at which she will perform best. Mr. Burgess has never yet been called on to comply with such a condition, but any one designing a challenger must give her exact, not her approximate, draft. As long as the measurement rule is complied with, and certain restrictions as to changes of ballast on race days, it has been the universal custom to allow all changes in trim that an owner might deem necessary after experiment, and all of Mr. Burgess's boats have been improved by the careful tooling they have had; but this privilege is denied the challenger, whose exact dimensions must be filed before his yacht is begun.

The whole question of dimensions is a perfectly plain one; a club has a certain unit of size for racing, under which its yachts compete; in the present case a unit, termed corrected feet, depending on sail area and waterline length. A challenger for a race under the club rules should give with the challenge her measurement by the club's rule, and nothing else, being held strictly to the penalty if she exceeds that measurement. What the New York Y. C. has a right to demand from a challenger is the measurement by the club rule, and it has not the least concern with the beam or the draft. As a matter of convenience that is equally fair to all, the extreme limit of loadline might accompany the challenge, but the fact is self-evident that when a club has once committed itself to a certain measurement as the best for racing, all it can ask of a challenger is the size by the club's standard, leaving the details of beam and draft to the designer alone. The excuse that dimensions are required in order to identify the challenger is absurd; does any one suppose that there will be half a dozen 90ft. cutters of the same name built by one challenger, all varying in beam and draft? With the sailing measurement given there would be no possiblity of building in secret a boat of unfair dimensions. The intention of the clause is evidently to learn all that is possible concerning the challenger in good season. We will warrant that with these four dimensions and the name of the designer in his possession Mr. Burgess would be able to sketch out within very narrow limits the design of the challenging yacht.

We went into the question of a length rule and its inevitable tendencies in the first criticism of the deed of gift, and it is not necessary to recapitulate here. If we read the wording correctly, it is always possible for the holders, be they the New York Y. C. or a British club, to disagree on some point, in which case the challenger is thrown back on a race without allowance. Even if his boat be as long as his rival's, the latter has the option of placing a length class boat against her. Pappoose gives evidence enough of what is possible in a length class boat with no limit of sail, and it is doubtful whether a boat built under a length and sail area rule could beat her if racing on waterline length alone. The effect of the deed of gift is to make the possession of a 90ft. racing machine with unlimited sail a very desirable thing for a defender; then it would always be possible to force a disagreement, and the honest yacht that crossed the Atlantic must meet the racing machine without allowance. We do not say that the New York Y. C. would do such a thing, but they clearly have reserved the power to do it if they wish.

In speaking of the limits of size Mr. Burgess overlooks a very important distinction; the old deed *allows* yachts of any size to be built, but the new one *compels* one size for each rig. The old deed left the competition to regulate itself by the growth of yachting and the natural development of various sizes; the framers of the new deed, in their far-seeing wisdom, take upon themselves to lay down fixed limits. What right have they to say on the one hand that the challenger must be 90ft. long, or on the other, that she shall not be still larger. They have for the present passed over the sizes which a long course of evolution has shown to be best fitted for the general conditions of American yachting, and at the same time they have set a maximum limit which no future development shall exceed. It is absolutely certain that a 90ft. class cannot be maintained here for many a year, but who is wise enough to say that with increased wealth and engineering skill the size may not in the future even be exceeded. All this is, however, finally provided for, the committee decide that 90ft. is the proper thing for all time, so 90ft. it must be. The reason for the selection of this size is plain to all; the holders of the Cup have learned that they are strongest for the time in a certain size of yacht, consequently all races must be reserved to this size, regardless of the result to national yachting.

The fallacy as to speed is all very well from non-racing men and kettle yachtsmen, but from a racing yachtsmen and a scientist, such as Mr. Burgess, we should look for a correction rather than an indorsement of such popular errors. The very foundation of yacht racing is the acknowledged law that speed varies with the size, that a large vessel is faster than a small one of equally good model, and the whole end of measurement and allowance is to neutralize such inequalities as come from excess of size. This being the case, the term fastest is void of any fixed meaning. If the view taken by the committee, and defended by Mr. Burgess above, is the correct one, then any of the old second class yachts are better than Pappoose; Atlantic is better than Clara; Ambassadress is a triumph and Sachem a failure. In the first trial races Bedouin failed to save her time off Priscilla, consequently the latter was the faster boat. Bedouin stood at the head of her class, a place won by good sailing from the then existing fleet, and could claim the title of champion, but a victory by Genesta over Priscilla would have counted for little. Clara and Cinderella are at the head of the 55ft. class as the fastest of all existing boats of that size; but they rank nowhere in the eyes of the Cup committee beside a possible failure of 90ft. length. Speed is only relative; the fact that a yacht has beaten all her class in a season's racing makes her the fastest boat, and a worthy competitor for any challenger in the class. The assertion that a challenger of 70ft. would be met by a defender of 90ft. under the present allowance savors little of the fair play Mr. Burgess spoke of last week, for every one knows that the best of the second class cannot save their time off Volunteer. What show would Bedouin or Titania have with Volunteer in a season's racing with time allowance? Mr. Burgess speaks of the intention of the real donors of the Cup, that it should be sailed for by the fastest yachts in the world, but he omits to state that they specified the limits, from 30 to 300 tons, within which the competition should be confined, which limits have been utterly disregarded by the last interpreters of the very plain language of the original and only deed of gift.

Editor Forest and Stream:

In the Boston papers Mr. Burgess and a few interested persons continue to "defend" the illegal action of the New York Y. C. by glittering generalities, taking good care not to meet the specific charges brought against the absurd conditions attached to the America Cup. Mr. Forbes indulges himself in the vain belief "that foreign yachtsmen see no way of wiping out that two miles and a half of lead which Volunteer had over Thistle." This is contrary to fact. Mr. Sweet did send notice of challenge after the races were over, but was obliged to withdraw when the New York Y. C., harping upon a technical informality, threw Mr. Sweet out with a view to forcing him in again under new and adverse conditions passed after notice was in the hands of the club.

Several other gentlemen abroad had challenges in view, indeed were anxious to get ahead of one another, but withdrew upon promulgation of the new restrictions. Only two foreign clubs have deigned to answer the circular sent out by the New York Y. C. and both condemned the unsportsmanlike "deed" in plain measure. All the other clubs have tossed the circular into the waste basket and quietly sent the Cup into Coventry.

It takes two to make a bargain. It is easy to set up challenge cups galore, but of what avail, if those to whom the challenges are addressed refuse to recognize their international character?

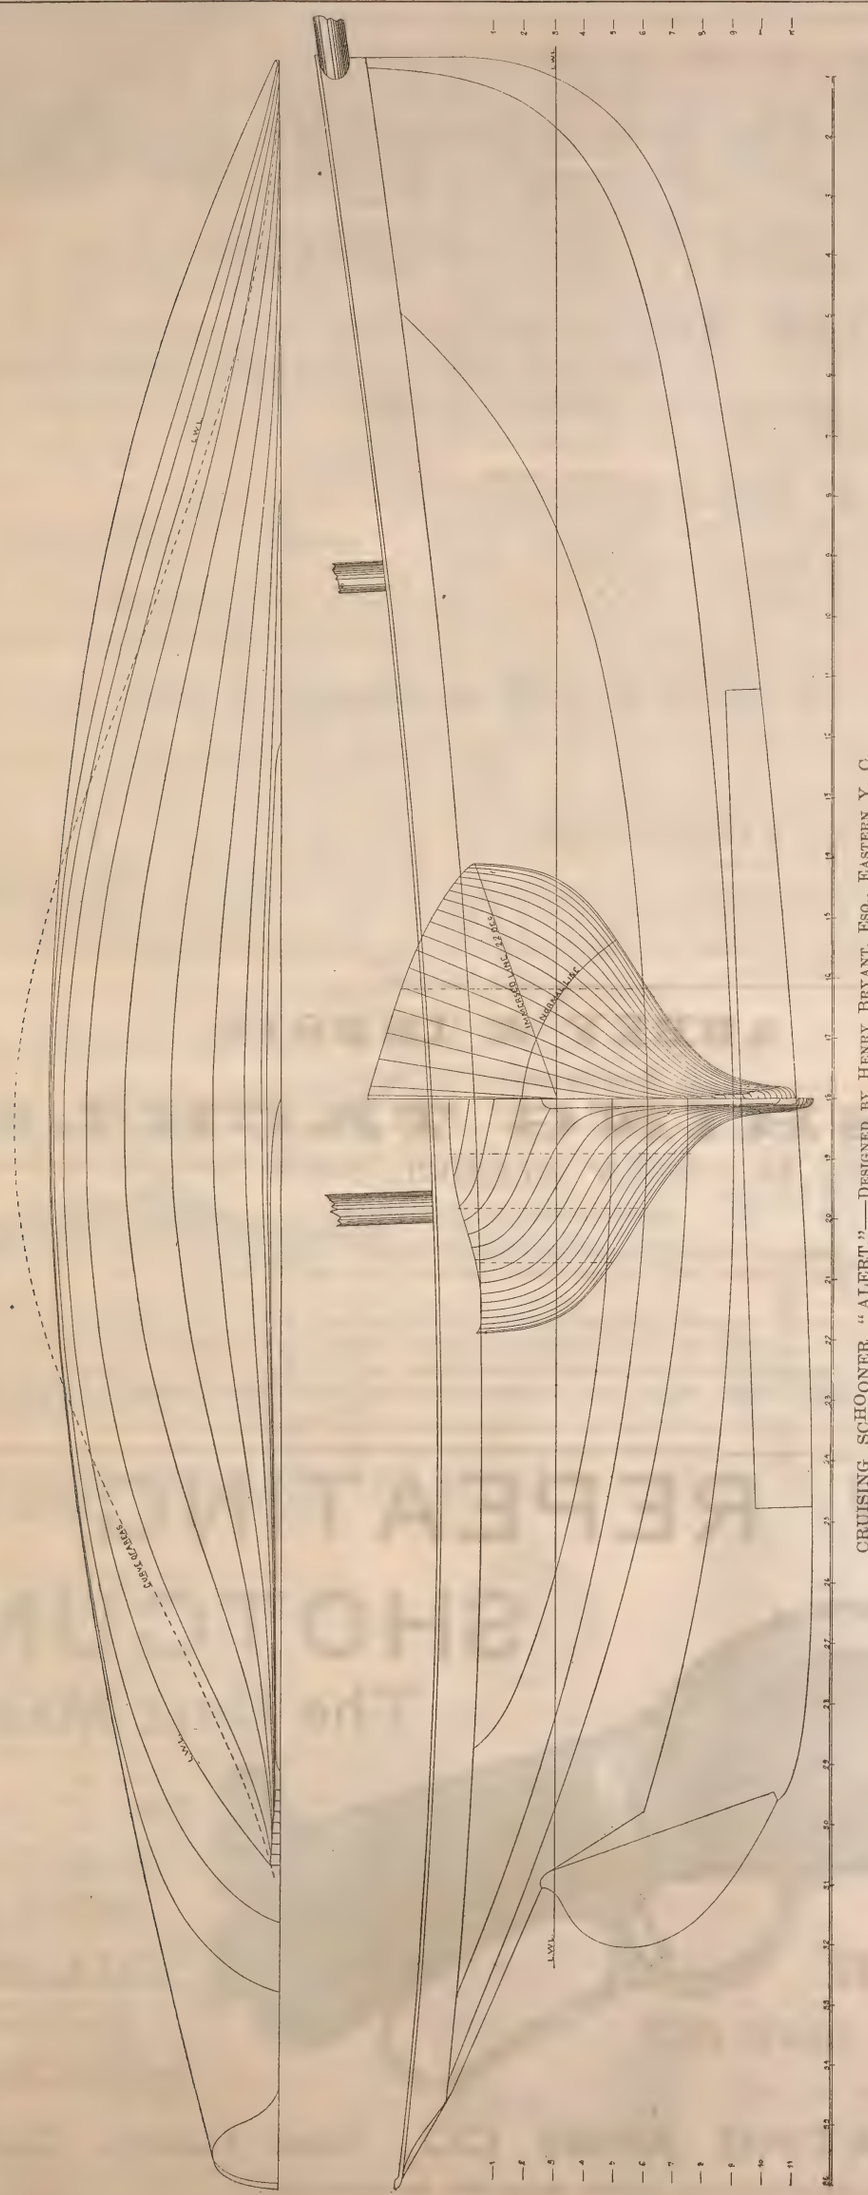
All the talk will not abolish the main fact, that the New York Y. C. has to all intents and purposes confiscated the America Cup and that foreign authorities and clubs have unanimously disowned the trophy.

The new conditions are contrary to the spirit of the original deed, for in place of "encouraging" international trials they stop all further proceedings.

To a small circle of persons anxious to intrench themselves safely behind victories already achieved and desirous of avoiding the risks of further competition, the illegal action of the New York Y. C. is no doubt welcome enough. But the American public declines to father their narrow and unsportsmanlike conduct.

PUBLIC OPINION.

THE CRUISING SCHOONER ALERT.



IT IS always a pleasure to chronicle the addition of a new boat to the cruising fleet, a boat designed and built for cruising and hard off-shore work at all seasons; and especially so in the present case as the design is the work of an amateur and Corinthian. The Messrs. Bryant have been prominent in Eastern yachting for many years, and have been identified with some of the most famous boats. The Shadow has won most of her races under the ownership of Dr. John Bryant, one of the Corinthians whom Gen. Paine has relied on as a part of his crew in Puritan, Mayflower and Volunteer; and Mr. Henry Bryant is known as the designer and owner of Thetis, the first of the large compromises. His experiments with her, though less successful than the later efforts of Mr. Burgess, undoubtedly paved the way for the construction of Puritan, in which both the brothers were owners in connection with Gen. Paine, Com. Forbes and others. The accompanying drawings show the new schooner which Mr. Henry Byrant has designed and is now having built by Smith, of South Boston, who also built Thetis. The Alert, as she will be named, the original name of Speedwell having been abandoned, is intended solely for cruising, but she is of the same type as the late Boston racers, with the very substantial steadier of 38 tons, nearly 70 per cent. of the total ballast, in the keel, in a single piece. This is one of the largest lumps ever cast in this country. The hull will be of wood. The leading dimensions are:

Length over all	107ft.
Length on l.w.l.	89ft.
Beam, extreme	23ft. 3in.
Beam, l.w.l.	21ft. 10in.
Draft	13ft.
Least freeboard	3ft. 11in.
Overhang forward	1ft.
Length of fore body	51ft.
Length of after body	39ft.
Area of midship section	107sq. ft.
C.B. from stem	49.38ft.
C.B. below l.w.l.	2.98ft.
C.B.R. aft of stem	51
Ballast, short tons	56
Ballast in keel, 42ft. long, short tons	38
Bowsprit, outboard	36ft.
Main mast, deck to hounds	63ft.
Main boom	63ft.
Main gaff	37ft.
Maintopmast	31ft.
Foremast, deck to hounds	58ft.
Foretopmast	28ft.
Mastheads	9ft.
Foremast from stem	24ft. 11in.
Mainmast from stem	56ft. 3½in.
	Area Sq. Ft.
Mainsail	2,844
Foresail	1,402
Staysail	658
Jib	1,000
Jibtopsail	755
Foretopsail	471
Maintopsail	611
Lower sails, total	5,907

We shall give the interior plans next week.

SEAWANHAKA C. Y. C.—On Saturday night Capt. Howard Patterson, of the School of Navigation, delivered a very interesting lecture on navigation before the S. C. Y. C. After describing the compass, log, etc., Captain Patterson outlined a yacht cruise on Long Island Sound, afterward taking his hearers for a short cruise on deep water, explaining the ship's log book, and some of the principal problems of navigation. The two weekly classes at the club house now number about twenty each. The annual meeting of the club will be held on Saturday next. Among the models lately added are two presented by Mr. John Harvey, Miranda and Jullanar, the former a specially handsome specimen. Montauk's model has also been added lately.

THE PAINE-BURGESS FUND.—The Boston and E. Y. C. subscription to the fund amounted to $12,100, and the New York Y.C. testimonial to Mr. Burgess reached $10,172.25.

CRUISING SCHOONER "ALERT."—DESIGNED BY HENRY BRYANT, ESQ., EASTERN Y. C.

ICEBOATING ON THE HUDSON.

FOR many a year I have been devoted to the regal pastime of iceboating. At all times and in all weathers I have been out on the old North River, and the results I have to tell may interest the readers of FOREST AND STREAM. I shall touch upon the lighter and pleasantor features of this most fascinating sport, its haps and mishaps, and to show outsiders how we enjoy ourselves in winter upon the Hudson. The cost, the equipment and the construction of these swift flying craft, have all been scientifically treated in various papers. The jib and mainsail, catrig, lateen and all sorts of rigs have been tried and tested by all sorts of men in all sorts of ways. No ends of traps and contrivances "to go close to windward;" single and double runner planks, all have had their admirers.

Briefly stated, no expense has been spared in their build and equipment, workmanship and sails of the very best material, as strong as wood and iron can be put together, going as fast as we go, we must be well assured of our rig in every shape and way; the principal parts are bowsprit and center timber, crossed by a runner plank, with runners, shod with cast iron, and a skate runner to steer by, with a cockpit large enough to hold two men, which is enough for any boat to carry. The boats are of all sizes and weights, from a boat put together by a boy, with an old sheet for a sail, 10ft. long and weighing say 25lbs., to a boat with 60 odd feet of length, nearly one thousand feet of canvas, and weighing 2,300lbs.

Big boats are very costly toys, requiring plenty of wind and muscle to move them and 7in. of ice, while a smaller boat, say about 30ft., can be more easily moved and sail on thinner ice. In any event J. E. Buckhout, of Poughkeepsie, stands head and shoulders above other ice boat builders, and can build anything you want in the line of his profession.

The Hudson River Ice Yacht Club to-day stands confessedly at the head of the list, with the most members and the finest fleet of ice yachts in the world, and what its highly esteemed commodore does not know about ice boating is not worth knowing. The club station is at Roosevelt's Point, just above Poughkeepsie, and the club course is as fine a one as could possibly be desired. Doubts have been expressed as to whether our favorite craft make the time they do; whether they can go faster than the wind has been questioned by reverend, grave and potent seigniors; can they beat the express trains and is not all the extraordinary time made round the club stove? Oh, no! we old yachtsmen know better; we have beaten the trains many times and hope to do so again; so we do the wind. Our course has been surveyed, and the stop watch will tell you exactly the time. A mile a minute has been frequently made on the river.

No deception here; where the deception comes in is in the extraordinary pictorial representations of our beautiful boats, these look like nothing in the least ever seen on ice, they exist only on paper. Those wonderful cloud and boat pictures emanate from the artist's brain and only serve to amuse the public. Clouds of appalling Egyptian darkness; birds of larger size than the albatross, hovering over our heads as if about to carry us off as the roc did Sinbad the sailor, our yachts cavorting around, careening in the most extraordinary nautical positions, first on one runner, then on the other, like a man on stilts; while perched on the very end is a fair maiden in the very latest of Worth's productions, her lovely tresses floating on the breeze, while she clings convulsively with one hand to a shroud, the other grasped by a slender, romantic youth, dressed like a bandit and reminding you of the susceptible Tupman and Mrs. Leo. Hunter. Oh no, we don't go out sailing in any such an outré rig as that.

When the fair ladies honor us with their presence, which is an event of daily occurrence, we give them a snug and cozy couch on the cushion of our boat, cover them up daintily with shawls and wraps, and enjoy their welcome presence and excitement of the sail. But never do we put any one, much less one of them, out on the end of the runner plank, like a chicken perched up on a roost.

From north and south, from east and west, visitors drop in on us at the "Point," and one and all are delighted with their experience. Now and then "a mortal funk" seizes a man when first he gets aboard, but such cases are very rare. Occasionally we get a rise that provokes a smile.

There came into a certain New York club, heaven knows how or from where, an ingenuous youth, half English and one-fourth American, gorgeously wrapped up in fur and sable, but with such gushing innocence of iceboating as could only be met by prompt and heroic treatment, to whom a sedate member of our ice yacht club, with unmoved countenance, responded:

"What—ah—is their size—ah?"
"About 100ft."
"Cabin—ah—on deck—ah?"
"Oh, yes, suite of rooms."
"How many men—ah—do you carry—ah?"
"Generally twelve before the mast."
"Sailing mastah?"
"Of course, and two mates."
"Cook—ah—and steward—ah?"
"My dear sir, a *chef de cuisine* is of prime importance."
"Cabins—ah—like a steamah?"
"Oh, yes, ocean steamer, electric lights and bells."
"Ah—yaas. I should think—ah—you would suffer from the cold—ah."
"Rooms are heated by stoves in every room."
"How far—ah—do you sail—ah?"
"We frequently make up a little party and run up to Albany, dine at the Delavan, and home again to tea, 150 miles."
"Ah—yaas."

By this time he was full, chock a block. When, escorted out on the ice that winter, he viewed one of the large boats, his face was as good as a play. He was not afraid to sail, though, and one trial made an enthusiastic convert of him and much more of a man.

But, tremendous as is the velocity with which these boats sail, long as I have boated on the river, I can recall no very serious mishaps. This speaks volumes in itself for the skill and coolness of its members. For teaching a man promptitude and decision of character, there is nothing to compare to iceboating. It stands to reason there is no time to hem or haw. Whatever your hand finds to do has to be done mighty quickly. Their flight is the very poetry of motion—no jar, no noise, nor dust and roar of clanging iron. You fly through the air as swiftly and as noiselessly as does the bird.

A great race is soon coming off, the river is as smooth as glass for miles away. Countless craft are gliding to and fro, of every variety of shape and form. Here comes the commodore's yacht, the stately Icicle, one of the largest ice yachts in the world. What a noble sight as she goes swiftly gliding by! Look at the famous Jack Frost, chief among a thousand, and altogether lovely. What a beauty, what breadth of towering snow-white canvas, surmounted by the famous red circlet, "Follow my lead." Yonder flits away the Avalanche, once the queen of lateens. Here comes the flyer, the Northern Light, always in the van. Look at that boat, not 10ft. long, with an old rag of a bed quilt for a sail and a towel in tatters for a flag, on which is depicted a rooster about the size of a turkey. What is this nondescript coming through the crowd? A shellboat on runners, and a man therein pulling with sculls with iron spikes on the ends, and see him go. What an attractive picture it all makes! What a merry throng of skaters! Do you wonder at the fascination of the sport? See, they are going to call the race.

Some ice yachts are in line, stretching across the river. Each man stands eager, watchful, his hand resting lightly on the tiller awaiting the signal gun. "Are you ready? Go!" rings out as the gun is fired, and in a twinkling they dash off. What a grand sight it is to see them dash away as they cross and recross under the influence of the rising wind. Soon they are lost to sight; soon they reappear. Reindeer leads! No, 'tis Northern Light. No, 'tis Jack Frost. There flutters the well-known flag to the fore. Follow my lead, round they dash by the goal amid resounding cheers off and away. It does not seem so long. Here they come on the home run. Old Jack they will never catch you this time. Cheer after cheer goes up, as the famous boat comes in a winner closely followed by Reindeer, St. Nicholas and Northern Light. Not a bad race by any means. Here were four crack boats that started at 2:47 P. M. over a 24-mile course, which they had to tack over all the way, and the winning boat's time was 1h. 6m.; that is nearly 60 miles an hour and fast enough if you are not in a hurry. That night with exultant cheers we hung the champion pennant of the world up for the second time "in the halls of the Montezumas," while many a kinsman in a generous libation drank the health of the hospitable crew of the famous boat and flag.

Mishaps, as I before said, seldom if ever occur. Sometimes we get becalmed, then patience becomes a cardinal virtue. Sometimes we run into a crack or snow bank, then "heave and pull" and shoving is the order of the day. Sometimes, though very rarely, over she goes; well, "vot of it." If she is a small boat right her up again and go on your way rejoicing you do not own a bigger boat. Sometimes you get fired out, and this is worth going up to Poughkeepsie and trying for yourself. You'll never forget it. It has come on to blow hard and you are coming down wind swifter than any canvasback, close-hauled, for so we always sail. Suddenly your boat swerves a little from her course, you try to meet her—all too late. 'Hold hard," shouts the helmsman; next moment round spins your boat like a top. Hold on, you might as well try

to stop a locomotive. In a moment, in the twinkling of an eye, you are sailing off into space; up you go like a rocket, down you come, plump. You slide off mayhap 50yds., look round, spring to your feet, dash the snow off of your ulster, and you have had an experience and a novel sensation that will last you a lifetime. Sometimes your boat, after treating you in this uncourteous way, goes flying off on her own hook. The spectacle of a young man trying to overtake his boat under such distressing circumstances, straining every nerve to overtake her, this is amusing enough; chasing your steed over a hunting field is mere child's play. At New Hamburgh some years ago, it is on record, that a boat suddenly started off, crossed the river, turned as though the helmsman were on board and came flying back safely, but very little damaged.

One boat is credited with having jumped the Poughkeepsie ferry track. I have never seen that done, but jumping a crack is great sport. It is blowing freshly and a lot of us want to go down the river to Roosevelt's Point. Jump in and away we go. The ice is rather "hummocky," caused by wind piling up the snow, we shall have many a jounce. As we dash along some distance ahead we sight a bank of snow piled up. "Hold hard, head her for it," a plunge, a rise, a whirl of snow, a thud as we strike that makes things rattle, and over we go. "Hallo, there's a crack all the way across Crom Elbow." We run down, luff, run along and take an observation. "I guess we can get over," sings out one man. Round comes the boat and off we go like a flash, no time now to stop and calculate; head her straight for it. "Hold hard," slap, splash, dash, a crash, a rattle of broken ice, flying in splinters over us, a mighty jump, the oaken jumper underneath us saves our rudder point and springs us over; we come down with a resounding clang that sends us clear up in our cockpit and knocks all the breath out of us, but the next instant we are off like a shot and we round to and watch our friends go through the same performance. The danger is in coming down so hard as to smash the runner plank, then dire disaster and ruin surely follow, so when your runner plank lifts high in air, as it frequently does, you want to let her down gently, not like a trip hammer, then you will not hurt your boat.

Jump aboard the Snowball with me and see for yourself what iceboating is. Pull up your overcoat collar, pull down your sealskin hat; just as well go warm, we don't make many stoppages; stretch yourself out on your side on the starboard side, for I steer with my right hand; tuck yourself well on, and hold on to the life rail, a small rail securely fastened to the center timber of the boat; now dismiss all care behind. "Charley, give us a shove." Away we go. It's a mile across from the boat house, and, though we seem to have just started, how soon we flit across. I steady her to the rising wind; the slightest motion of the tiller does that. Apparently we are dashing head on, in full flight toward the river's bank. "Steady! Don't lose your head." No fear of that. Round she comes, "swifter than the swallow's flight," and away we speed in the contrary direction.

Here comes the stately Jack Frost rushing by, closely followed by St. Nick. Blizzard follows after, and the saucy Bessie. They are too big for us. Ah, no, Snowflake, not to-day are you going to outstep me. We draw close up to the lower end of Sopus Island. There a fir tree stuck in the ice marks a turning point. Round flies boat after boat. Round we go, with a dozen more close to us. "Hold hard, now," and as we catch the strength of the wind with lightning speed we dash down the river.

"Ha! ha! here comes the express train!" We went up to meet her. Loud re-echoes the shrill whistles, up go windows, handkerchiefs flutter in the breeze. Pull your throttle valve, old boy, rake out your ash pan, fireman. No use, we dash down to Hyde Park station, 3 miles in as many minutes, steam against wind and wind ahead, round to and off up the river again.

Glance at our friend beside us; how the blood leaps up through his veins, his face is all aglow with excitement, his eyes are fairly dancing in his head, his voice fairly trembles as he whispers, "Isn't this glorious?" He's right, so it is. Talk of the rush of your canoe through the rapids, of your being foremost in a steeple chase, of your facing a rebel battery—well I have tried all these and I say give me iceboating, first, last and all the time. The very nature of our sport gives it a great element of fascination, you never know when you are going to have a sail or lose one. One day the ice may be like the glass in smoothness; the next day a foot of snow will spoil all our fun. However, we will not keep our friend too long in the boat. Up we come to the boat house, run up into the wind, that soon stops our boat, lower away, in jib and out jumps our friend, a convert to iceboating for the rest of his life.

The winter of 1886 was marked by some of the wildest iceboating imaginable. It was made a notable winter by two things—the loss of the famous Jack Frost and the Snowball's winning a prize. It was a pleasant afternoon, and the boat house was thronged by a party of ladies and their friends watching the animated scene on the river. Brightly glistened the Catskills in the distance, Sopus Island in the foreground, and merrily the skaters enjoyed themselves on the ice. The owner of the Jack Frost had left her for a moment awaiting the arrival of a guest for a sail, and had forgotton to pull his tiller athwart ship to hold his boat, when suddenly, just as he was close by her, away she darted out in the river with a dash. Her owner caught the tiller and held on like grim death to it, but all too late. Flying over the ice at high speed, he might as well have been a fly for all the good he could do where he was. Suddenly she turned, and as she did so, away went the helmsman, sliding over the ice, and the boat sped on her way to destruction, dead on toward the shore. We scattered in all directions. The fated boat dashed by my brothers within 6in., just missed the genial author John Burroughs by a hair's breadth, and dashed herself to pieces against Bard's Rock. One universal pang of regret seized us as the beautiful yacht shivered into pieces. Fortunately, no one was hurt, but it was a very close call.

Then came a family race between the Bessie, Snowflake and Snowball, the course straightaway, a mile and a half and return, twice over. Wind blowing hard from northwest, close reefing was the order of the day. The Snowball won, going over the course, 6 miles, in 7m. 14s., and winning a silver trophy, described as a magnificent silver box, with repoussé ornaments. This was the gift of Mr. P., and it is no disrespect to the genial giver of this prize from Tiffany's that we had a heap of fun over it. Innocent readers might think it was a silver box of large size and great value. It was so described for the benefit of the much enduring public. The truth was it was a match box, and the golden ornaments represented a cupid in a costume utterly unsuitable for iceboating—cooking before a cheerful fire what I am not yet quite certain, is a quail or a butterfly. Judge M., of the *Scientific American*, on this occasion, it was his first appearance in an ice boat, said, "I have experienced a new sensation. I felt as though I were run away with by a thoroughbred steeple chaser, or a wildcat locomotive, whose engineer had pulled out the throttle and jumped off." A gallant colonel who honored me by coming on board my boat, and who, owing to the fortunes of war, was unfortunately fired out of the Snowball when going at the rate of 60 miles an hour, said he would not have missed the sensation for any money.

CAPT. CLAYTON.

MOHICAN.—On Jan. 2 the steam yacht Mohican, which had left Hampton Roads on the previous day, grounded on Willoughby Spit Shoals on the Virginia coast, as she was returning to harbor in consequence of bad weather. She was hauled off without serious damage. Mr. William Clark, her owner, and a party of friends were bound for a cruise to Bermuda and Nassau, but returned home from Fortress Monroe.

DINNER OF ORIVA'S CREW.—The old Oriva crew, now sailing on Cinderella, had their annual dinner at the New York Y. C. on Jan. 4. Besides Messrs. C. S. Lee, of Oriva, and W. E. Iselin, of Cinderella, there were present Messrs. W. A. W. Stewart, August Montant, J. M. Woodbury, S. B. Pomeroy, A. Bryan Alley, A. B. Simonds, W. B. Simonds, R. C. Cornell, A. Sanderson, Eidlitz, Cooper and Zerega.

WORKING WITHIN SEVEN POINTS.—Not long since the Boston correspondent of the New York *Sun*, in giving an account of the new Burgess fisherman in rough weather, ventilates the time-honored yarn of turning to windward in seven points of the compass—of course implying honest work in a seaway. Now, I am a very ancient yachtsman and have stood at the helm and squinted at the compass of many a wind-jammer, but somehow they all required more than seven points to do their best. The correspondent was further informed by "the man at the wheel" that she made N.W. b. W. on one tack and N.W. on the other; wind steady at N.W. ½ W., presumably. Nice work that. Meantime the Cup is safe if the N. Y. Y. C. will only keep the run of the Burgess fisherman and—"the man at the wheel."—FULL AND BY.

COOPER'S POINT CORINTHIAN Y. C.—This club sailed seventeen regular races and seven match races during the year 1887, commencing in April and ending in November. Dr. Long, of Philadelphia, purchased the yacht Truxen from a member of the club, and after a protracted cruise in the Chesapeake Bay sold her to a gentleman in Baltimore, where she has made a good record.

KNICKERBOCKER Y. C.—Officers for 1888: Com., F. E. Barnes, yacht Zena; Vice-Com., R. Oelsner, Dora; Sec'y, Alfred Varian; Treas., C. W. Lamb; Meas., Charles Coughtry; Steward, Augustus Wagner; Fleet Surgeon, Dr. E. Ringer; Board of Directors, G. C. Barnette, J. W. Harrison, W. H. Erskine, W. A. Stewart and W. D. Reed.

SHEERWATER.—Mr. John M. Forbes has offered the use of his steam yacht Sheerwater to the U. S. Government for the purpose of testing the Belleville boiler, and the offer has been accepted.

GITANA.—On Jan. 4 Com. Weld's schooner Gitana left Boston for Charleston, S. C., where her owner will join her for a cruise in the West Indies.

VOLUNTEER.—It is now definitely stated that Volunteer will not cross the Atlantic next season.

ANSWERS TO CORRESPONDENTS.

P. L. W., Brampton, Ont.—The publication is still running.

H. S. W.—1. Use 3drs. powder, 2¼oz. shot. 2. See rifle columns. 3. It is largely a matter of individual fancy; say 8oz. and 9ft. 4. The reel is not considered superior by anglers.

GORDON SETTER, Dedham, Mass.—Moll III. was by Wood's Duke (Sultan—Moll), and out of Richardson's Leah (Sancho—Moll I.). Belle was by Rifle and out of Nell.

ERIC, Brooklyn.—The Brooklyn Canoe Club is located in the basin of the Atlantic Yacht Club, at Bay Ridge, the dues are about $12 per year. New York is in the new Atlantic Division.

G. P. M., New Boston, Ill.—Can you tell me where I can get a book giving full instructions how to make and fish pound and purse nets? Which book would be the best for me on boat building on skiffs and boats of light draft? I am able to work from any plan. Ans. 1. There is no book which treats of nets alone, except a curious one entitled "Notes on Nets," by Chas. Bathurst, L.L.D., London, 1837, which is full in describing how to knit different nets, and is also stuffed with irrelevant matter. The reports of the U. S. Fish Commission contain the best information on this subject, but the early volumes can only be obtained from second hand book stores. You will find what you want in the following reports: "Nets Movable and Fixed," "List of Patent Pound Nets," etc., Rep. 1871-72. "Pound Nets" (with plates), 1872-73. "Nets for Herring, Mackerel, Porpoises," etc., 1873-74-75. "Purse Nets for Menhaden," 1877. "Patents on Nets and Seines; Purse Seines and Pound Nets," 1878. "Preservation of Nets," 1884. Where two or more years are connected with a hyphen the reports for those years are in one volume. 2. Probably Kunhardt's "Small Yachts," included or if you wish to build smaller boats Stephens's "Canoe and Boat Building."

Brook Trout of Superior Quality Furnished in Quantities to suit Purchasers.

UNITED STATES COMMISSION OF FISH AND FISHERIES, Washington, D. C., Sept. 7, 1887.
Richard E. Follett, Esq., Windham, Conn.—In reply to your inquiry as to the quality of the trout eggs purchased by me for the Virginia State Commission, I beg to say that they arrived in prime condition, hatched out good, healthy fish, and with little loss. Twenty-five hundred were distributed just after beginning to feed, the rest retained until now, when we have about 50,000 fish from 3 to 4in. long for distribution from this lot.
Very truly yours, M. McDONALD, Commissioner Fisheries, Va.

MARYLAND FISH COMMISSION, Oakland, Sept. 19, 1887.
R. E. Follett, Esq.—DEAR SIR—The trout eggs you sent me last winter were so well handled that our loss was nothing in transportation, and the count was rather over than under. In hatching we obtained 98 per cent. I shall favor you with more orders this coming season. Very truly yours, G. W. DELAWDER, Commissioner.

The Forest Waters the Farm;
OR,
The Value of Woodlands as Reservoirs.
BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.
PAR M. ANTONIN ROUSSET.
Translated by
REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.
Price in cloth, 75 cts.; paper, 50 cts.
FOREST AND STREAM PUBLISHING CO.

QUEEN & CO. 924 CHEST. ST. PHILA.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1887 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representa tive of the best field sportsmanship of America. It will maintain its position as the chosen exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1888 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1888 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected ex- perience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportsmen, anglers and naturalists, make up these pages.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away- Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish; they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in he legal close season, and in restricting the taking of game both as to season and methods, o that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., New York.

HOLIDAY PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of holiday gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for the holidays. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Antelope and Deer of America.

By HON. J. D. CATON, LL.D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Rod and Gun in California.

By T. S. VAN DYKE. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By DR C. A. NEIDE. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. BOWYER VAUX ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In his book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and it is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual for boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1.50.

Hunting Trips of a Ranchman.

By THEODORE ROOSEVELT. A delightful book of hunting adventure in Dakota and Montana. Price $3 50.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Forest Runes.

Poems by "NESSMUK." With artotype portrait and autobiographical sketch of the author. Cloth, 208 pp. Price $1.50.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. Cloth, 250 pages. Price $3.00.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among American sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. WYNN, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

Uncle Lisha's Shop.

LIFE IN A CORNER OF YANKEELAND. By ROWLAND E. ROBINSON. See advertisement elsewhere.

Artotypes of Paintings.

By JOHN M. TRACY. Mr. Tracy has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. We have for sale a series of admirable artotypes of these paintings, which preserve with admirable fidelity the spirit of the originals. The artotypes are 15x20 inches. Price $1 each.

Book of the Black Bass.

By JAMES A. HENSHALL, M. D. Comprising its complete scientific and life history, with a practical treatise on angling and fly-fishing, and full descriptions of tools, tackle and implements. Illustrated. Cloth, 470 pages, Price $3.00.

The Still-Hunter.

By THEO. S. VAN DYKE. A practical treatise on deer-stalking. Extra cloth, beveled, 390 pages. Price $2.00.

Southern California.

By T. S. VAN DYKE. Its valleys, hills and streams; its animals, birds and fishes; its gardens, farms and climate; its insects and reptiles, with hints on going to California. Extra cloth, bevel edge, 235 pp. Price $1.50.

Cruises in Small Yachts and Big Canoes;

Or, Notes from the Log of the "Watersnake" in Holland and on the South Coast, the Logs of the "Water Rat" and "Viper" on the Thames and South Coast; with remarks on anchorages for small craft. By H. FIENNES SPEED. Cloth, 280 pp. Price $2 50.

Yachts, Boats and Canoes.

By C. STANSFIELD-HICKS. With special chapters on model yachts and singlehanded sailing. Numerous illustrations and diagrams and working drawings of model yachts and various small craft suitable for amateurs. Cloth. Price $3.50.

Camping and Cruising in Florida.

By JAS. A. HENSHALL. With a list of fishes and birds, 84 illustrations and maps. Cloth, 250 pages. Price $1.50.

Forest and Stream Publishing Co., 39 Park Row, N.Y.

SPORTSMAN'S LIBRARY.

The Diseases of Horses;

Their Pathology, Diagnosis and Treatment. To which is added a complete dictionary of equine materia medica. By HUGH DALZIEL.

A very complete, concise and intelligible treatise, conveniently arranged. Every horse owner should have such a book. Paper, 102 pages. 75c.

FOREST AND STREAM PUBLISHING CO.,
40 Park Row, New York.

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actua canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. The upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene In the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channe outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scen is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border and the artist's remarque, and form artist's proofs, an édition de luxe.

The prices of these engravings are as follows: Singly, $3.00; any group of 4, $10.00; the complete set, $30.00. Any group of four may be ordered, but we beg to suggest the following groups as strong combinations:

Group A.	Group B. (Upland.)	Group C. (Duck).
Plate 1, The Reverie.	Plate 3, Snipe Shooting.	Plate 9, Duck Shooting—over Decoys.
" 2, The Dawn.	" 4, Woodcock Shooting.	" 10, Duck Shooting—Flight
" 7, Trout Fishing.	" 5, Quail Shooting.	" 11, Homeward.
" 8, Deer Hunting.	" 6, Grouse Shooting.	" 12, Home.

AUDUBON'S
Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1856, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories,

Audubon's Birds have never been equalled.

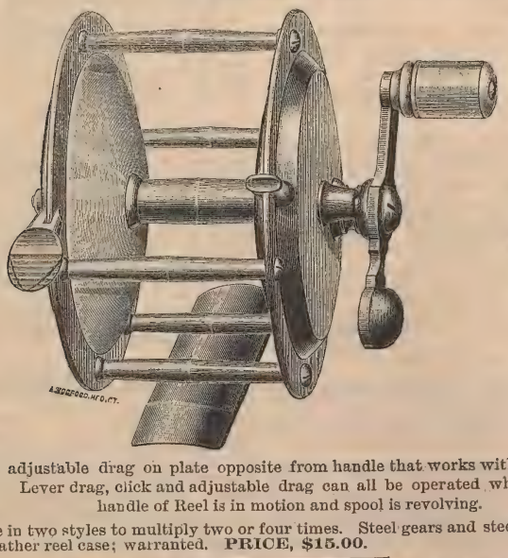
Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.



LIST OF BIRDS REPRESENTED:

Black Vulture and Head of Deer	$12 00	Chimney Swift	$4 00
Redtail Hawk	10 00	Carolina Parroquet	10 00
Jer Falcon	10 00	Golden-winged Woodpecker	5 00

ANSWERS TO CORRESPONDENTS.

BILLS MUST BE PAID.

LAST summer the Colorado militia had their sport with the Ute Indians. Without provocation they attacked them, burned a camp or two, killed some women, two small children and a baby, and ran off about 3,000 sheep and 400 head of horses. All this was very good fun for the white men along the border, who, notwithstanding the fact that the Utes have been driven from place to place and the area of their reservations again and again cut down, still long for the final expulsion of the Indians from the State in order that they may drive their cattle on to the ranges which the Indians still possess. The whole story, so sickening in all its details, was gone over last August, and the disgraceful treachery of the authorities exposed in these columns.

We urged at that time that, while no measures that could be taken by either Federal or State authorities could repair the bitter wrong that had been done these people, they should at least be indemnified for the stock that had been stolen from them, and their losses in this respect be made good. We are glad to see that our view has been adopted by the Secretary of the Interior, and that he has recommended the passage by Congress of a bill which shall authorize the restoration to the Utes of the stolen stock.

Those who at the time followed the history of the disgraceful butchery of Colorado's women and children, know that these Indians, measured by any standard of justice, were guiltless of wrong; that, while their methods were perhaps not legal, they did nothing more than to obtain by craft property which they honestly believed to be theirs, and which was withheld from them by force.

The sentiment of the Army is expressed by General Terry in his report on this affair in which he says that he does not consider that "the burning of the unoccupied habitations of persons for whose arrest warrants have been issued or the opening of rifle fire without warning upon an unsuspecting body of men, women, and little children, are usual steps in the service of process." While the veteran Indian fighter, General Crook, who visited the scene just after the occurrence, says that "in every case the whites were the aggressors and fired first. Colorow had no desire whatever to fight, and made use of his weapons in self-defense only."

There can be no doubt in the mind of any right-thinking person that the Utes ought to be indemnified by the State of Colorado for their losses, but to secure any such indemnity from the State would no doubt take years, and the Indians ought not to have to wait so long. The Federal Government is the guardian of the Indians, and it ought by all means to pay the losses inflicted on them by the State of Colorado, and then take measures to recover from that State the sum paid. The United States can afford to wait, the Indians cannot.

The treatment of our native races by the American Government has been marked by so many breaches of faith, so much cruelty and so much oppression, that to affirm that any one act of barbarity toward these people is the worst of which we have been guilty, would be saying a great deal, but through all the harsh and savage treatment to which they have been subjected, there have been few acts which were more brutal and less justifiable than that which caused the Ute "outbreak" of 1887.

THE OPPOSITION TO RULE 2.

THE numerous letters printed in our Kennel columns from week to week have shown how decided and how widespread is the opposition to the rule which seeks to compel registration in a particular registry. This opposition does not come from breeders who fail to recognize the necessity of somewhere preserving adequate registration of their stock. The opposition is not directed against registration *per se*.

The opponents of Rule 2 agree perfectly with its promotors that registration is absolutely essential in intelligent dog breeding. But they say, we insist upon the liberty of saying when, where, and in what manner we shall put the records which are worth more to us than to anybody else. These men naturally resent the assurance of the rule promoters in assuming to have just discovered kennel pedigree registration as some new and admirable cure-all which all dog owners must be compelled to swallow.

The opposition to this stand-and-deliver imposition is gaining strength as the exact nature of the rule becomes better known. The s lit in the Club itself is in all probability a permanent one, and the estranged sympathies of breeders are not likely to be regained by the Club by anything short of rescinding the obnoxious rule.

THE NEW YORK GAME LAW.

THE committees on game laws at Albany have been appointed as follows: Senate, Messrs. Vedder, Foley and Langbein. Assembly, Messrs. Prime, Hadley, Ainsworth, McCann, Flaherty, Donaldson, Haskell and Hogins.

A bill already introduced is said to have come from those who are represented by Mr. Robert B. Roosevelt. It is a much more simple bill than the average game law measure, it is easily understood, and many of its provisions are most excellent. Briefly outlined, it provides the following open seasons: Deer, Aug. 15 to Nov. 1. Wildfowl, Sept. 1 to March 1. Ruffed grouse, Sept 1 to Jan. 1; on Long Island, Nov. 1 to Jan. 1. Woodcock, July 1 to Jan. 1. Quail, Oct. 20 to Jan. 1. Robin, hare, meadow lark, gray and black squirrel, Sept. 1 to Jan. 1. Rail and meadow hen, Sept. 1 to Jan. 1. Bay birds, July 1 to Jan. 1. Wilson, English, or jack snipe not protected. For fish the open seasons named are: Salmon, landlocked salmon, speckled, brown and California trout, April 1 to Sept. 1; in the Adirondacks, May 1 to Sept. 15. Lake trout, April 1 to Oct. 1. Mascalonge, Oswego bass, black bass, pike-perch, fresh-water striped bass (white bass), May 20 to Dec. 31. Sale of grouse, quail, hare and squirrel is permitted to Feb. 15, venison from Nov. 1 to March 1, and salmon trout, black bass, and pike-perch the year around, provided the same was lawfully killed. Deer hounding is prohibited at all times. Long Island deer are protected for five years. A new feature is the prohibition of game exportation "to a foreign country from the State of New York," which is capital in theory, but will not be in practice worth the ink it takes to draft it.

It is almost too soon to discuss a bill like this, for its present shape is not at all likely to be kept intact after the game law committees have listened to the suggestions of the men who turn up at Albany every year to doctor the game laws to suit their own private purposes. No one imagines, for instance, that the clause forbidding the hounding of deer will get very far in its progress toward passage, although if that prohibiton could be retained, we are inclined to think that the benefits accruing from such a law would more than outweigh any of the defects in the bill.

NOTES AND COMMENTS.

WHAT is the trait of human nature which prompts the residents of the North Woods and the Maine forests to savagely resent the liberal efforts of the State to benefit them by increasing their natural wealth? Not long ago we recorded the raid of a gang of masked men on one of the Maine hatching stations. The Commissioners were prosecuting the work of restocking the waters with food fish, and these miscreants set to work to thwart them by violence. The same spirit has ruled in the North Woods. Fish hatcheries have been established there by the Fish Commissioners of this State; but the residents have resented the attempt to benefit their locality; the employes of the hatching stations have been obliged to maintain an attitude of continuous watchfulness against the attacks of local vandals. The spawning beds of trout have been raked by poachers, who sell the trout to hotel keepers to salt down; and in manifold ways the Commissioners have been shown that the particular sections they have sought to enrich have not the decency nor common sense to appreciate the benefit. We understand that in consequence of this discouraging condition of affairs no further public fishculture will be undertaken at the expense of the State treasury in the North Woods.

Before very long the President will have to appoint a United States Fish Commissioner. Mr. G. Brown Goode, whose manifold duties as Curator of the National Museum will not permit of his retaining the position at the head of the Fish Comissission, has resigned, and the work is now temporarily in charge of Dr. J. H. Kidder, whose scientific attainments and long and close connection with the Commission admirably fit him to direct it. The loss to the Commission by Mr. Goode's resignation cannot but be seriously felt, and it may be hoped that whoever shall receive the appointment as his successor will be a man who will command the respect of the scientific men of the country. Politics should certainly have nothing to do with an appointment of this nature, and from what is known of the President's views of the Fish Commission and its work, it is believed that the selection will be made with the same wisdom that marked the choice of Mr. Goode. It is certain that if the President will take that gentleman's advice in the matter the appointment will be satisfactory. We see more or less in the Washington despatches to the daily press about the different candidates for this position, and that such and such persons are pushed for the place by this or that Senator or Representative. This is all wrong, and it is pretty safe to say that no man who has announced himself as a candidate should be chosen for the position. In the case of this appointment it is more than ever true that the office should seek the man, and not the man the office.

The economic importance of preserving the forests of the Yellowstone National Park is well understood by all who have given the subject any study. These forests form just as truly a part of the material wealth of this country as do the wheat fields of Dakota, the silver mines of Colorado or the cattle ranges of Wyoming. Those who have not familiarized themselves with this subject will learn from the article by Mr. Hague, printed in another column, the office which these forests perform. The author of this letter is better qualified to write of the Park than any one else in the country, for he has devoted years to a careful personal examination of this region and the surrounding country. His letter sets forth forcibly the value of the Park to the Northwest, and members of Congress who are desirous of being informed on this point cannot do better than consult it.

The calamity befalling the Columbus, Ohio, bench show last week, was in all its details a most distressing affair. The building in which the show was held appears to have been a tinder box of the most flagrant character; and in no respect a fit place in which to chain dogs and coop up poultry, where the peril of fire was so manifest. The hurried investigation made by the exhibitors and reported in our Kennel columns can hardly be said to be very satisfactory. A more searching inquiry is called for.

THE ROCK CLIMBERS.

IV.—THE NAMING OF THE TRIBES.

IT was high noon at the St. Mary's Lakes when two horsemen rode across the river, up the bank and into the camp. Dinner was on the fire, and their ten-mile ride had given the new arrivals a good appetite, as they presently demonstrated to the satisfaction of all hands. After the meal was over, preparations were made for a start up the lake. The wagon was hauled down into the brush on the shore and so carefully cached there that it was invisible unless one knew just where it was hidden. The double-tree and single-trees were dropped in the low grass at the foot of a small tree and the harnesses hung up in a tree, out of sight and well out of reach of the coyotes. Then followed the transportation to the water's side of the possessions of the party, and for an hour there was hurrying back and forth between the beach and the camp, and gradually a pile of baggage of rather appalling dimensions arose by the side of the boat. At length it was all there, from the tent pins up to the grub box, and the work of stowing the boat began. When this was completed Jack and Appekunny sprang in and took the oars, the boat was shoved off and they started up the lake. Then the Rhymer and Yo went up the bank, gathered the horses and put the saddles on them, and jumping on their own, started the "cavalyard" along the trail.

It was a perfect day, brilliant and warm and still. Sometimes there was just the faintest air from the west, which stole softly down the mountain sides, gathering, as it loitered over the snow banks and among the pines and through the little glades and parks and along the grassy slopes, the faint sweet fragrance of balsam and juniper and of the late autumn flowers, and of the ripened and fallen leaves of the quaking aspen. Every detail of outline of the jagged rock wall which stood out so clearly against the sky on the west and south and southeast was visible. The sky above was unmarked by a single cloud, and its brilliant blue matched that of the waters below, save when their azure was interrupted by the flashing of nature's diamonds. Then the grass was so yellow, and the pine-clad hills so dark, the rocks so clearly gray, and the snow banks so purely white; the waterfalls sparkled so bravely, and the heads of the tall weeds nodded so blithely, and the air was so fresh, pure and invigorating, and yet so soft and warm, that it was a delight and a happiness to be out of doors in this lovely autumn weather, and to look upon this lovely scene.

Over it all there was silence—the hush of the mountains—the solemn stillness of these solitudes, a peace which is eloquent to hearts educated to comprehend its dumb speech. If this silence was broken it was only by nature's sounds. Perhaps it was the lisp of some breath from the mountains that whispered its message of cold bare rocks and ice-bound rivulets to the long grass on the ridges that lay bathed in the warm October sun; or it might be the faint patter of a grouse's feet as it hurried for shelter into a thicket, or the self-assertive cry of the mountain titmouse, who irritably protested against this intrusion on his privacy. Or perhaps it was a sound sweeter by far than these, but less easy to recognize. At first faint, distant and interrupted, then gradually nearer and clearer, yet still only a murmur, it comes; from above, before, behind and all around, faintly sweet and musically discordant, always softened by distance, it is like the sound of far-off harps, of sweet bells jangled, of the distant baying of mellow-voiced hounds. Far on high the serene blue is flecked with tiny white moving shapes, which seem like snowflakes drifting lazily across the azure sky; and down to earth, falling, falling, falling, come the musical cries of the little wavies who are journeying toward the south land. They pass, and slowly the sounds grow faint.

> Oh hark, oh hear! how thin and clear,
> And thinner, clearer, farther going!
> Oh sweet and far from cliff and scar
> The horns of Elfland faintly blowing!

So the men rode on intoxicated with the beauties of their surroundings, and breathing in health and vigor with each inspiration of the warm sweet air. Add to all this that each held between his legs a vigorous active springy horse, and that they had the mild excitement of hurrying along half a dozen animals over the undulating foothills, and you can easily fancy that the Rhymer and Yo enjoyed their ride up the lake. Now and then, on reaching the summit of some ridge which overlooked the lake, they could see far off under the opposite shore, where it would be sheltered from any breeze that might suddenly spring up, the tiny speck which contained their household goods, but it required sharp eyes to detect it, and only an occasional flash from the oars in the sun as they rose and fell told that it was their craft.

Merrily the animals trotted along the trail in single file, kept from lagging by the lariat which trailed from the saddle horn of one of the riders, and which, when a horse or mule fell behind, had a way of curling round and flying forward and cracking like a whip lash against the flank of the lazy beast with a very enlivening effect.

At last the Inlet flat was reached. Here the stream which flows down from between Kootenay and Divide Mountains has left its old channel and spread itself out over a strip of flat half a mile wide, making a wet, miry piece of ground, disagreeable to cross. This passed, they were soon at the Inlet, which was hardly belly deep, and was easily crossed, and then they turned north, passed Mad Bear Creek, where Appekunny and Bearhead had killed the bear last spring, and in a few moments were in sight of the white tent, which gleamed among the willow and alder bushes on the very shores of the lake.

It was an ideal camp. In front was unlimited water, behind grass for a thousand horses, and at the right wood enough to last half a dozen years. It was picturesque, too. From the water's edge, half a dozen steps from the tent door, the whole expanse of the lower lake was in view, while behind it across the grassy flat, and hardly more than a rifle shot distant, rose the steeply sloping foothills, above which towered the bare gray rock walls of Flat Top and Old Singleshot. And then its comfort! On the west—the side from which the winds blow—there was the protection of a considerable body of timber and of the low brush, which effectually broke the force of the wind, so that no matter how hard it might blow, the stability of the tent would not be endangered.

In due time the boat was unloaded, and the travelers were comfortably housed and felt themselves at home.

After supper, as they reclined on their blankets with their feet stretched out toward the fire, Appekunny told them the story of how the three tribes of the Blackfoot Nation received their names. "I do not vouch for the story," said he. "I heard it years ago from a Blackfoot, and I give it to you as nearly as possible as it was told to me:

"Many years ago, the people lived across [west of] the mountains and in a hot country far to the southward. A season came when for a long time the game was very scarce, and all the people were hungry.

"At this time there was in the camp an old man and his family, among whom were three grown up sons. Now the people were hungry, and at last this Old Person said:

" 'Why should I stay here where there is no game, and where the people are always hungry? I will go with my children and see if we can not find a place where game is plenty, where we can get meat to eat. I will travel until I come to game. I will go beyond the mountains toward the Sun, where no one has ever been, to the land that no man has looked on. It is not likely that the mountain is the end of the world,* and perhaps there may be game there.'

"So they started, the Old Person and his wife, and the three sons and their wives and children. They did not know the mountains, for they had always avoided these rocky heights, and supposed that all they would have to do would be to go over the nearest peak and down on the other side to the plain. They thought that the mountains, whose sharp rocks reached up to the sky, formed a single wall separating the plain where they lived from another plain beyond, but they found that it was not so. Beyond the first mountain rose others and beyond these still others. Day by day as they traveled onward, they climbed the ridges, and saw ever before them other ridges, higher, steeper and more forbidding. The way was rough. Sharp stones cut their feet. Thick timber kept them back. Wide streams and swamps barred their way. There was no game that they could kill, and they became tired, hungry, footsore and discouraged.

"At last they had almost determined to give up their search as hopeless, and to try to return to their own land and people, but as they sat one night by the fire talking it over, that Old Person, the father, said:

" 'Let us keep on a little longer and try to find that country. The way has been long and hard and we are almost worn out, but let us go a little further. It may be we are almost there. You saw that mountain beyond us, toward which we were traveling to-night. Let us climb over that, and if beyond that we see nothing that looks better, then we will turn about and go back to the place whence we came.' So his sons said it was good, and the next day they traveled onward.

"At length they reached the top of the peak, and as they looked down on to the land beyond, they saw before them the prairie, broad and beautiful to these people who were tired of the lonely, rough and dismal mountains. Over the plain were scattered herds of monstrous brown beasts, larger than any that they had ever seen before, with curly hair and short black horns. Many antelope were there and deer in the valleys, and on the ridges of the mountain were plenty of elk. Down on the prairie the streams ran fresh and sparkling and the land was one which it made their hearts glad to look on.

" 'Ah!' exclaimed that Old Person, 'it is good.' Then he sat down and filled a pipe and smoked to the Sun and said: 'Hear, oh Sun. Now you have taken pity on us. Although we thought we were going to perish miserably among these rocks, you have cared for us and have brought us safely from among them. Now we see our living.'†

"And he prayed for help and for plenty to eat and for long life for all his family, and when he had finished his prayer they made a present to the Sun. Then they went slowly down the mountain side and toward night camped on a creek.

"The next day they hunted, but they could kill no game, for they had no arrows, since they had used them all up in crossing the mountains, and the great brown beasts (the buffalo) would not let them get near to them. And all the game was wild so that they could not approach close to it, and they were still without meat and hungry.

"Then that Old Person made some 'medicine.' Very strong it was and black; and he rubbed this on the feet of his eldest son, and after this had been put on his feet the young man became so fleet that he could run right up alongside the fastest buffalo cows and kill them with his great stone knife. This made the young man very proud, and he said to his brothers:

" 'Now and from this time forth I and my children are Siks-ûh-kûh (Blackfeet); this shall be our name.'

"Now the other two sons, when they saw that their older brother could do so much through their father's medicine, while they could do nothing, felt very badly, and they went to their father and said:

" 'Why is this? What have we done? Why do you treat our brother so much better than us? You have made him fleet of foot, so that he can catch the game, while we can kill nothing, and we and our wives and our children have to eat what he gives us. Come, now, make us swift runners also, so that we too can have enough to eat and can have names.'

"Then said the Old Person:

" 'Why do you do nothing except to sit about the fire and eat the meat which your brother has killed? If you wish names, go to war, and when you come back, if you have done well and killed many enemies, and counted *coups* on them, you too shall have names.'

"So the two young men went away to the lodge and told their wives to make them several pairs of moccasins and a warsack each, and they made themselves some war arrows and then they started off.

"Time passed. The Blackfoot killed many buffalo, and the women dried the meat and tanned the robes. The berries became ripe, and the women cut down the sarvice bushes, and holding the branches over a robe spread upon the ground beat off the fruit and dried it, storing it in parfleches for winter use. Then the tops of the mountains became white, and from their narrow valleys Windmaker sent out fierce blasts, chilled by the breath of the coming winter. The leaves fell. From the north came the wildfowl, the swans, the geese and the ducks, and their multitudes darkened the sky or blackened the surface of the prairie lakes, while their hoarse cries resounded night and day through the air. The days became short, the wildfowl went, snow fell and melted and fell again, and bitter winter laid its strong hand upon the land.

"In the lodge of that Old Person there was plenty, and all were content.

"By and by came soft winds from the west, and the snow disappeared. A little later the wildfowl began to return. Then the Thunder God cried out, and that Old Person prayed, asking for plenty of rain, so that the berries might grow, and for health and long life to all his people. Then the grass became green and soon it was summer.

"One night, a year after the young men had gone away, that Old Person and the others were sitting in the lodge, when the dogs barked loudly, and presently the door was lifted and the second son stepped in and sat down by the fire. Thin his robe and worn his moccasins and leggings by long travel, but he was strong, and from his quiver hung a long line of scalps, whose black hair reached nearly to his knees. Then the women hurried and brought food, boiled ribs and dried meat and berries and set before him, and they began to sing and to say how brave he was and how far he had traveled to strike his enemies. And after he had eaten his fill, that Old Person filled a pipe and smoked, and passed it to his son and he smoked; and then he spoke and said:

" 'Father, long the way, and many the streams which I have crossed in my journeyings. Strange the people seen, in numbers like the buffalo which cover the prairie. Many enemies I have struck. These are the scalps of chiefs among the enemies that I have killed. I have brought back no scalp that is not that of a chief,' and he told them all that he had done. Then said that Old Person:

" 'Since you have killed many chiefs, that shall be your name, Ah-Kinah (many chiefs).' So the second son and his children and their children were called Ah-Kinah. But now the word is shortened to Kinah (Blood).

"Again the season passed round. Again the berries ripened, the leaves fell, the waterfowl came and went, and it was winter. Then the Thunder spoke and soon the grass grew. Much of her husband thought the wife of the third son, fearing that she would never see him again, and that his shadow had gone to the sand hills. Often she spoke of him to her children, telling them how brave he was, and that they ought to be like him.

"One night in summer, when all in the lodge were asleep, again the dogs barked fiercely and the lodge door was lifted and a person entered and sat down by the fire-place,

---

*Literally the cut bank, the "jumping off place." The Blackfeet believe the earth to be flat and circular, and that all around it is a precipice beyond which is space.

†That is, that whereby we may subsist.

" 'Who is there?' said that Old Person.

" 'It is I,' said the person, and the woman of the third son knew the voice of her husband. Very happy then was she, and quickly rose to give him food, and as the sticks that she threw on the fire blazed up, she saw his face. Torn and ragged his garments, thin his face, and scarred his arms and breast, but from his quiver hung the scalps, and beside him on the ground was a bundle of plunder. Then she began to sing his praise, and the others in the lodge arose and sat by the fire while he ate. And when he had eaten and smoked, he said to that Old Person:

" 'Father, far have I traveled, and many the people that I have seen. Look on these scalps;' and then he told all that he had seen and done from the time of his leaving until this night. And he showed them the scalps and a bundle of strange wearing apparel that he had taken from some enemies far to the south. And when he had ended he said '*Oki.*'

"And his father said: 'On account of these strange garments which you have taken, your name shall be Pekunny' (garments). And he and his children and his children's children have been called Pekunny ever since.

"So the three tribes of the Blackfoot nation received their names." YO.

The Sportsman Tourist.

SAM LOVEL'S CAMPS.—VI.

MEANWHILE Sam kept camp for an hour or two, and then went out for a little trip on the bay, cruising across the shallow water of the northeast shore to the mouth of Lewis Creek, which till now he had not seen. Its beauty invited him upstream, and when at the first bend he turned and looked forth upon the lake, through the noble colonnade of ancient water maples and button-woods to the grim unshorn steeps of Split Rock Mountain beyond the broad expanse of water, without a craft in sight upon it nor any sign of human presence anywhere, he fancied that he felt something of the sense of complete isolation from all his fellows that the first white voyagers here must have experienced. But in those old days one could not have been so sure of having it safely to himself, as Sam was reminded by the sight of a flint arrow-head on a mud bank among the rushes. For many years after his visit to it this part of Sungahnetuk retained its primitive character, and was a place where one might easily imagine himself set back a couple of centuries to the times when New England was indeed new, when Petowbowk was the warpath of savage and civilized nations, and knew not the peaceful keel of commerce.

An inward yearning aroused Sam from his vague dreams of the past and he plied his paddle lustily toward camp and dinner. He found his comrades at the landing, to which they had succeeded in floating the scow, its wounds almost healed by application of rags, turpentine and grease, a medication for leaky boats imparted to Sam by his Indian friends and by him in turn to Antoine.

"Dah, seh, Sam, bah gosh!" said Antoine, standing with arms akimbo far enough away from his prize to take in all her proportions at one glance, "ant dat pooty good leetly sloops for de boy? Ah'll sail heem wid a pole all de way from where Ah'll fan of it, an' Solem and Zhozeff ant be some more fred of it as if he was in a middly of ten acre lots. Dey can feesh in de water naow, an' took some comfortubbly, ant it?"

Sam admitted the perfect safety of the craft, but expressed some doubts as to the validity of its present ownership. "Sposin' some feller comes along some day, Antwine, an' ketches you or them a usin' o' his boat, what ye goin' tu du then?"

"Bah gosh, seh, Ah'll goin' tol' it he can' have dat boats! When Ah'll fan dat, he ant no more boats as raf' was, an' Ah'll mek it into good boats aout of it! Ah'll bail it wid rag an' tuppytime dat was ma hown, me! Ant you'll see?"

Sam was not convinced, but conceded that there could be no harm in using the scow till called for, and so it was planned that Solon, Joseph and Antoine should go afishing in it that night at a stake just opposite the landing, whose age and marks of frequent use gave silent evidence of an approved fishing place.

"He was leek leetly mites naow," said Antoine, still admiring his prize, as he scooped a few basins full of water out of it, "But he be all taght as one Onc' Lasha boot tam he gin soak up for we'll be ready. Yas, seh! jes as taght an' gra' deal more comfortubbly as dat boots, Ah bet your head! Den when we gat t'rough of it, Ah do' know 'f he ant jis well pull heem up in de rush for day-tam, so 'f some damn bole foolish tink he'll hown it he can' see heem. It was bes' kan o' boats for use it in de naght, don't it, hein?"

"I notice," Solon remarked as they took their way to the camp, " 'at Antwine call this boat o' his'n *he*, which it seems tu me 'at it is a fac-smile of Uncle Tyler's boat, an' is intitled tu the respects due tu the femaline sect, an' my intentions is tu speak of her as she."

After they had eaten supper and in an unhousewifely manner washed their few dishes, Sam, under canvas, fell to dreaming open-eyed of Danvis's dearest inhabitant, and the others, well provided with tackle and worms, went fishing in the old scow.

The creek was almost as silent as the golden and black reflections of sky and wooded shore that rested on its bosom, and for a while the silence was only broken by the whish of the intent anglers' lines and the splash of the heavy sinkers that sent segments of gleaming circles to break the ranks of brooding shadows along the shore. Then a bullfrog sang a solemn prelude, and all his brethren of the marshes bellowed forth a resounding chorus, which aroused a discordant cackle and gabble of some always invisible inhabitants of the rush-screened flats, whether beasts, birds or reptiles, or all of these, one could only guess, and when the chorus ended and the clamor of the rude audience ceased, there came a hush as fully pervading the evening as had the previous uproar. Then a dreaming bird softly rehearsed his daytime love song, a whippoorwill far away lightly whisked the air with his note, one nearer lashed it with sharp strokes, the sound whereof was presently almost overborne by the renewed bellowing of the frogs, the trill of toads and the weird outcry of the unknown tenants of the marshes, only the last most insisted sibilant note of the whippoorwill being heard above the pulsing waves of clamor.

"He'll leek dat poor leetly Williams pooty hard, ant it?" Antoine remarked as he answered the regularly intermittent flashes of the lightning bugs signalling from marsh and tree, with the larger glow of a match as he lighted his pipe, and then announced with the sigh of relief that comes after long waiting, "Dah seh, sometings was bit. Ah do' know mos' so well 't Ah see it, but Ah guess it was heel." After some moments of patient waiting he gave a twitch, and the crooked pole writhed into more intense crookedness, and after a brief struggle a tangled contortion was torn from the water and dropped into the boat. "Dah he was," cried Antoine, "ant Ah'll tol' you he was heel? Dah he was." But where was he? Wriggling his way as swiftly as a snake from end to end of the scow, he was felt here, heard there, almost at the same moment, tangling the line about the feet of the excited anglers, while Solon and Joseph madly stamped at him, and Antoine as madly grasped for him in the gloom.

"Hit it wid you' boots, boy! Keek it wid a steek!" he cried as he tried to pull toward him by the line the captured but unsubdued pr ze. "Zhozeff, strak it wid you' boot!" and Joseph brou ht down his foot, clad in one of the last and most solid pieces of Uncle 'Lisha's work, with a crash that stunned the eel and started one of the bottom boards of the scow. Their feet were getting wet before Antoine had unhooked the eel, when he noticed the gurgle of the incoming water and divined the cause. Hurriedly unfastening the boat, he shouted frantically to his companions to pole and paddle ashore, while he wildly clawed the water with his fishpole. "Oh, Sacre! you'll bus' de boats. Zhozeff! Pull! Push! Hoorah! All of it us be droawn 'f you ant hurry for git dar firs'! Aour hwomans ant see us 'fore we was some corp 'f you ant be hurry!" So Antoine urged them as the old craft, fast becoming water-logged, reeled and lurched toward the landing, to which Sam was drawn by the alarming outcry, and reached just in time to see the scow sink barely its length from shore, and Antoine plunge forward from the bow and wade hip deep to the landing, while he roared "Ah'll got de heel, Sam! Go an' save it de boy!" Solon and Joseph came floundering to land with no harm but fright and wetting, and Sam wading out a little way hauled the boat to safe beaching for the night. "Solon," Joseph asked as he stood with bent body, legs wide apart and dripping arms slanting far from his sides, dismally regarding the craft he had wrecked, "what sect du you call that ere cussed ol' boat naow?"

"Wal," said Solon, after a little dripping consideration, "she is sartinly most capericious, and consequentially I shall continner tu call her a she."

"What on airth be you a savin' that 'ere dum'd snake for, Antwine?" Sam demanded, noticing the care the Canadian took of the eel.

"Dat heels? Bah gosh! Ah'll goin' saved hees skin of it, me. You'll wore dat 'raoun' you backs, you'll ant never had lame backaches! An' it was de bes' flail strings you ant never t'rach all you laftam!"

"Humph! I've hearn tell o' folks wearin' snakes in the' hats tu cure headache, an' I'd jes' livs as tu hev that pesky thing waound 'raound my body. Ugh!"

"Oh, Sam, you was fooler as a geese!" and then to himself as he tightened his grip on his prize, "Lak 'nough you'll gat some dis snakes in you body 'fore you tink, probly!"

The camp-fire burned with unwonted fervor for a summer's night, while the drenched anglers dried themselves in its warmth, and Antoine vaunted himself as the hero of this latest adventure—"Ant Ah'll pooty good captins, seh, to save all dat heel and de boat and de boy, hein?" ROWLAND E. ROBINSON.

Natural History.

FOOD OF THE EUROPEAN SPARROW.

THE following results are taken from papers read before the Biological Section of the Canadian Institute by Mr. W. Boodie:

The food of birds has of late years become a very important subject of investigation from an economic as well as a scientific standpoint. Many old and tenaciously held opinions have been quite overthrown.

It has been shown that the birds of prey are nearly all beneficial, many of them eminently so. It has also been shown that many birds which were formerly considered entirely beneficial are injurious in some particulars.

The rapid increase of the recently introduced European sparrow, its adaptability to climatic conditions in Ontario, its food, its driving away of native species and the general disturbance of bird life in consequence—are subjects which have attracted the attention of ornithologists and elicited some discussion without a very definite settlement of the most important points. This bird may now be said to extend over the whole of Ontario, even over very sparsely settled sections.

During the last summer it has spread from Nipissing along the line of the C. P. R. to the north of Lake Superior, and we need not be surprised to hear that it has survived the 40° below zero of Winnipeg. It is generally admitted that it has driven away a few native species from cities, towns and country villages—species which were taking perhaps rather sparingly to our bustling centers, such as the chipping sparrow (*Spizella socialis*), bluebird (*Sialia sialis*), house wren (*Troglodytes aedon*) yellow warbler (*Dendroica æstiva*), cliff swallow (*Petrochelidon lunifrons*), tree swallow (*Tachycineta bicolor*) and a few others. The following extracts from memoranda, covering a period of six years, are submitted with a view of contributing something to what we know of the food habits of this bird.

I fancy the grashopper-eating habit has been acquired since its advent into Ontario. I am not aware of its ever having been noticed before either in Europe or in the United States.

The first record of this habit was by Mr. Bucke, of Ottawa, in 1881, the next by Mrs. Maria Gardner, a lady of this city, in 1884.

The dissections and examinations of stomachs were made with great care, mostly on recently killed birds.

My thanks are due to many who rendered valuable assistance in these researches.

In the spring of 1879, Mr. R. Baigent, artist, of this city, reported sparrows as eating gooseberry buds in his garden. This, if I mistake not, was published in one of the city dailies.

May 7, 1881—One specimen collected in city. Contents of stomach, broken down vegetable matter, buds of trees.

May 7, 1881—One specimen collected in York township. Contents of stomach, coleoptera, carabidæ, seeds of red clover.

April 10, 1882—Five specimens collected in city. Contents of stomachs, pickings from horse manure, buds of trees.

March 24, 1884—Sparrows eating maple buds on Berkeley street.

March 25, 1885—Sparrows eating maple buds all through city.

April 7, 1884—Sparrows destroying fruiting buds of maple and elm.

April 7, 1884—One specimen collected in York township by Mr. Williams. Contents of stomach, fruiting buds of trees.

Aug. 20, 1884—Sparrows pursuing, killing and eating grasshoppers on Ontario street. By Mrs. Maria Gardner.

Sept. 1, 1884—For some days a small flock of sparrows frequented a dense growth of "pig weed" (*Chenopodium album*), growing near to my workroom window. In order to determine what they were doing, I carefully closed the shutters, leaving a small ocular. When the birds came readily within a distance of about a yard, with a glass of about ten diameters, I quite clearly saw they were eating *aphides* with great relish, as though they were treating themselves to a delicious drink. These visits were frequently repeated, affording me many opportunities for observation.

Sept. 20, 1884—Twenty specimens collected in York Township by Mr. W. Squires. Contents of stomachs—Very sharp sand, broken grains of oats—in one six whole—elderberries, seeds of amaranthus, larvæ of geometrid moth three-quarters of an inch long, three larvæ in one crop, coleoptera.

Oct. 31, 1885—From March 1 to this date 237 stomachs have been examined, 104, or about 43 per cent., contained insects of several orders.

Of 85 stomachs examined from Sept. 1 to Sept. 30, the season of young birds and also the season of migration from the city, 63, or about 74 per cent., contained grasshoppers.

March 15, 1886—Sparrows destroying elm buds on Ontario street. By Mrs. Maria Gardner.

March 20, 1886—Sparrows destroying fruiting buds of maple and elm trees on Berkeley street.

March 28, 1886—Sparrows destroying maple buds on Berkeley street.

March 29, 1886—Sparrows eating maple buds on Ontario street. By Mrs. Maria Gardner.

April 5, 1886—Sparrows eating elm buds.

April 12, 1886—Sparrows eating maple buds on Ontario street. By Mrs. Maria Gardner.

April 21, 1886—Sparrows eating maple buds on Elizabeth street and Queen's Park. By Mr. W. Parks.

Aug. 15, 1886—Sparrows pursuing "flying grasshoppers" (*Œ. carolina*) on Church street. By Mrs. Maria Gardner.

Aug. 20, 1886—Three specimens collected in York township by Mr. Jas. Milne, stomachs contained road pickings, broken oats, fragments of grasshoppers.

Aug. 25, 1886—Seven specimens, young, collected on Don Flats, north of Winchester street bridge; contents of stomachs, road pickings, broken oats, seeds of *Polygonum aviculare*, grasshoppers in all.

Aug. 27, 1886—Five specimens collected by Mr. W. Squires, east of city; contents of stomachs, very sharp sand, in all broken-down vegetable matter, in one, head and femoræ of *C. fermur-rubrum*.

Aug. 29, 1886—Four specimens, all young; collected by Mr. C. Armstrong, in Rosedale; contents of stomachs, in all broken-down vegetable matter and portions of *C. fermur-rubrum*.

Sept. 3, 1886—Nine specimens collected on Don Flats, near paper mill, three stomachs contained fragments of grasshoppers, two contained pupa of a dipter, one contained three small lepidopterous larvæ.

Sept. 13, 1886—Fifteen specimens collected in York township all contained the usual broken down vegetable matter, nine contained portions of grasshoppers, one contained portion of femora of *Œ. carolina*.

Of the forty-three specimens collected from Aug. 20 to Sept. 13, twenty-seven, or nearly sixty-three per cent., had been eating grasshoppers.

May 27, 1887—A young sparrow about a week old fell out of nest and was killed; stomach contained fragments of eggshell, two spiders, one small moth denuded of wings; the head and antennæ were fairly well preserved.

July 17—Saw two sparrows pursuing *Œ. carolina* on Berkeley street. When the grasshopper alighted the sparrows pounced on him, but he eluded them by darting up on wing, the sparrows sitting still watching his downcoming. Four unsuccessful attacks were made. On the fifth mount he got into some shrubbery and escaped.

July 19—Mrs. Maria Gardner handed me a mutilated *Œ. carolina*, over which two sparrows were contending in the Normal school grounds; the head, both elytra, one wing and three legs were gone and the thorax was badly crushed.

July 20, 1877—About noon saw a sparrow breaking legs and wings of *C. fermur-rubrum* in front of 325 Parliament street.

July 20, 1887—Saw a sparrow catch and denude of wings and legs a *C. fermur-rubrum* of Berkeley street, and then fly away with it apparently to nest.

Aug. 5, 1887—Caught four specimens of *C. bivittatis* on Don Flats, liberated them on a patch of *Polygonum aviculare*, Berkeley street, much frequented by sparrows. They were immediately attacked by about a dozen sparrows, and within fifteen minutes three were killed, torn to pieces and devoured.

Aug. 11, 1887—Two specimens collected by Mr. W. Squires, in the east of the city. Contents of stomachs in both, road pickings and broken oats; in one, three pupæ of a dipter.

Aug. 31—Five specimens collected by Mr. D. Cox outside city limits. Three stomachs contained spiders and fragments of coleoptera; one, head and femoræ of *C. fermur-rubrum*.

Sept. 12, 1887—Two specimens collected in city. Contents of stomachs, small pieces eggshell, road pickings, broken oats.

Sept. 20, 1887—Four specimens collected on Don Flats, near paper mill. Stomachs all contained small lepidopterous larvæ and fragments of grasshoppers.

Of the 307 specimens collected from May 7, 1881, to Sept. 20, 1887, the stomachs of 132, or nearly 43 per cent., contained insects of several orders, and 85, or nearly 27 per cent., contained grasshoppers of two species, *C. fermur-rubrum* and *Œ. carolina*. These two, with *C. bivittatus*, on which I fed them on Aug. 5, 1887, makes three species on which the sparrows feed in the neighborhood of Toronto.

MORE ABOUT TEXAS WOLVES.

Editor Forest and Stream:

I wrote you lately something concerning wolves. They are a peculiar and whimsical race which have long afforded me much curious study. They made a deep impression on me on one occasion in my early days, and from that moment I felt great interest in them. There are said to be four sorts of wolves in Texas: the coyote, or prairie wolf; the big gray wolf; the lobo, or loafer as he is commonly called, and the black wolf. Of these the coyote is the most numerous and the smallest, being not much larger than the fox. He loves the prairies, and is not to be found where there are no prairies; though where there are both prairie and forest he is generally abundant; and as much in one as the other. It seems therefore that the prairie is in some way necessary to him; that he must see it occasionally or die. He has a light yellow breast, gray on the back, with bushy tail. In winter he has a heavy, soft coat of hair, which is pleasant to the touch. A few of their skins sewed together make a pretty and exceedingly comfortable robe, if they have been well dressed. The big gray wolf and the lobo I take to be the same animal, though nearly all my backwoods friends hold that they are distinct. The gray wolf they say is two and a half times the size of the coyote, while the lobo is fully a third larger than the gray; also that the lobo is a "dark yellow brindle." I admit that point both as to size and color, but it has seemed to me that these differences may be due to the greater age of the lobo; in other words, that the lobo is merely the big gray wolf grown fat and brown with age. Again, I have thought that the gray wolf is the female of a certain race of wolves, while the lobo is the male; and this supposition is somewhat encouraged by the fact that I do not remember handling a gray wolf which was not a female, or a lobo which was not a male. However, such a difference between the sexes of the dog group of animals would, I admit, be unique.

Also, another difference in favor of those who hold that these animals are distinct, is that the gray wolf is found wherever the coyote is, while the lobo is rarely found except in mountains and remote parts. As to man, the lobo is far more unsocial and morose, while the coyote loves to linger round the haunts of man, and the gray wolf not far away. But I have noticed this unsocial character in the aged males of other animals. Thus, in the season of the curiosity of the females, I have found the brown and venerable bulls of the bison herding morosely to themselves, far away in the mountain valleys, hearing but not seeing the terrible battles that the lusty young lords of their race were fighting for the mastery in love. They seemed to consider themselves laid on the shelf, like books moth-eaten and out of date, but they were then dangerous to man, ready to meet him with a desperate front.

The black wolf is mostly a mountaineer of the remote parts, loving the wildest recesses, having little or no use for man and his haunts. As a rule he is somewhat smaller than the gray wolf, though sometimes they are seen as large as the lobo. In the early days this wolf was said to be common in the heavy timbers of eastern and southern Texas, but he has long since migrated. I cannot certainly say that I have ever seen him or not, but was once forced up a tree by wolves at night, which I was told were of this sort.

The coyote is a great sneak, and this trait is as plainly shown in his countenance as cunning is in that of the fox. His ordinary gait is also that of the sneak, being slow, cautious and cowardly, with a wistful and melancholy look. It always struck me that he is a very melancholy creature, passing his life between a sigh and a tear, and this appearance may not be entirely deceptive. Thus, while he is ever looking out for something that he may catch, he is also ever on the alert lest something may catch and devour him. For instance, the lobo when hungry will chase the coyote on sight, and the latter is very fortunate if he be not caught and eaten up. Therefore, as to him, there is a very narrow gulf between eating and being eaten, and his full knowledge of this must needs, I think, cast a somber shade over his spirit. Something else may also be added on this point, which I will mention further on.

The coyote loves to hang round the camp-fires of travelers at night, smelling their cooking meats. He is then always very close at hand, circling stealthily around the camp or sitting on his haunches watching the pleasing scene; his mouth, I guess, copiously watering as he inhales the sweet odors. He becomes so fascinated that it is vain to attempt to drive him away. He may be fired at, but he will soon return to his gazing and smelling. When the travelers fall asleep he slips into their camp, licks the pots and pans under their very noses and steals all eatables he may discover. I have known them to steal meat from under the pillows of sleeping persons. Should any of the sleepers suddenly awake at such a juncture, the thieves scamper away a little distance and usually put up a very pitiable howl, as if complaining of the unseasonable disturbance; to return as soon as all has become quiet again. From this it seems that the coyote understands the nature of sleep as well as the burglar who enters our houses to steal.

A few days ago on going out of my house at dawn, I saw a coyote in my yard, sitting between two calves which were lying down. I do not think he meditated any harm to the calves; rather that he was waiting for my chickens to descend from their roost, hoping to secure one or two for breakfast. They are very fond of mutton and chicken. Should a sheep stray away from the fold, he is surely lost if a coyote meets him.

The voice of the coyote differs greatly from that of all other wolves known to me. It is rarely a true howl, but a rapid succession of plaintive barks, usually ending with a sort of squeal or cry. The keys of it are high, while the other wolves invariably employ a sweeping and sonorous base, most truly howling.

The gray wolf and the lobo are not sneaks like the coyote. They rely for their support on their speed, their strength and prowess, and the cultivation of these qualities gives them a good countenance and a manly bearing. Besides, they have no special fear of anything except man; and their feeling toward him seems to be more of a respect, to be cultivated at a distance, than of fear. Indeed, in spite of their destructive ways as to sheep and calves, I have quite a good regard of these animals; of whom more later on. N. A. T.

PUBLIC OPINION.

WHERE is the trouble? Is the sentiment in favor of the conservation of fish and game, in the few States where there is any fish and game left, losing ground? Take up the Maine papers, some of them—happily not all—only a few from the backwoods sections—and what do we see? Items like the following:

He arrived too late this year for a bear hunt, but on the first day of January succeeded in capturing a fine deer, which he took to his home the next day to present to his many friends. Go for him, George.

This item was written from West Phillips, Maine, and the sportsman mentioned was from New York. It is against the law to ship game out of that State. The George mentioned is Game Warden Geo. D. Huntoon, of Rangeley. The deer was killed after the season had closed, and yet the local paper has no word of encouragement for the game warden; neither is it in sympathy with the enforcement of wholesome statutes for the protection of what might be made of great value to the locality where the paper is published. Again in the same issue of the same paper, a local correspondent from Madrid, another back township in that State, vents his spleen against the game laws in this wise:

Three feet of snow in the woods and a sharp crust. We hope none of the boys will think of going deer hunting as it would be very wrong to kill them, and we are all very anxious to save them for the sportsmen to slaughter next June and July. But say, boys, if you should get one, just send me a piece as I am laid on the shelf with the rheumatism and can't go.

The local paper allows its correspondent to publish such items and yet it does not give the fellow a smart rebuke editorially. It does not say that the law against the crusting of deer is designed for the purpose of saving that game animal from annihilation. It does not stop to say that the town in which the paper is published reaps an annual harvest from sportsmen greater than all its industries put together. That paper does not explain that the game laws are designed for the good of everybody—the citizens of the backwoods, as well as the sportsmen who annually visit the State. It never points out that the railroads of Maine receive so great a part of their income from the sportsmen and vacationists, drawn thither by fish and game attractions, that these roads could not exist without these attractions. It has not for years pointed out that the little railroad in its own little town derives a very large proportion of its existence from sportsmen and vacationists; that to annihilate the fish and game in the manner that is indicated by the spirit of its correspondent's manifest would leave tracks of the railroad for the use of the rabbits and its locomotives to be sold for old iron. Now, this paper, the Phillips (Maine) *Phonograph*, may not be fully aware of the sentiment that exists among some of its own subscribers; the sportsmen who have visited its locality and have brought home the local paper with them out of pure love for the hours they have spent in the Rangeley region, for the scenes of gone-by days. Even a little newspaper printed in that region has an attraction for them. They take it and pay for it just to know "how soon the ice is going out." They don't care a copper for the paper; it is that little item about the trout fairly caught or the moose or deer legally killed in open season that they wish to read. It cuts like a knife to find items in such a paper like the above. Is the sentiment of the people of Maine against protection and the propagation of fish and game? If it is, then the fish and game must go. The work of destruction will be a short one.

But the paper mentioned above is not the only one that causes the true sportsman distress. The *Industrial Journal*, published in the same State, is avowedly hostile to the enforcement of the fish and game laws. Or at least it allows its correspondents all the latitude they desire in the way of showing how these same correspondents hate the Commission—but more thoroughly hate the wholesome laws the Commission has tried with all their power to justly enforce. That paper never starts out and says a good word for fish and game protection, though it claims to be an industrial journal, devoted to the best interests of its location. The harm that such papers do is great; not that their influence is great, or that they reach a great many people, but because they afford comfort and consolation to the ignorant people of one idea into whose hands they fall. To see that they are tolerated by a newspaper is greater consolation to many ignorant men than falls to the lot of the politician to be elected. Why, how would it do to start a paper somewhere for the encouragement of thieves! Be assured that every thief in the country would read it. Perhaps it would prove to be the only paper that he would read. Yet the thief only breaks the statutes of the State, made for the good of everybody. Does not the man who persists in killing game or taking fish out of season do pretty much the same thing?

Still the country papers are not the only ones that trouble the lovers of fish and game with stuff that never ought to be published. Periodically the smart writer in the daily papers tries to be funny at the expense of fish and game protection. The very first line he writes shows his ignorance of the whole subject, but that matters not; if he only wrote about that which he is well informed, his pen would be stopped forever. But he makes a few dashes at "what it costs to kill a moose in Maine or a deer or a partridge in New Hampshire." Then he explains that "it is a luxury which only the rich sportsman from the city can afford," and winds up with a line of sympathy for the local sportsman or backwoodsman who has not the $100 to pay. He never is struck with the idea that there is a long open season for all this game, and that the local sportsman or backwoodsman is there all the time, and that the game is just as free to him as to anybody. In fact, his chances are greater than those of any other man, for he is familiar with the location, as well as with the game. The smart writer in the daily papers never explains that the game in this open season is in its prime, and that the close season has been created, after years of careful study, only to cover the breeding season and the season when the game would be in danger from annihilation, for the reason that it could be all taken during the season of snow crusts. But such writers are familiar with every subject from theology to medicine, and the only lucky thing there is about them is that they know so much that they stick to one subject only for an article; so that in the rounds of their big (?) brains but one subject suffers at a time, and the turn of that subject does not come every day. SPECIAL.

SHOOTING NOTES.

A LARGE flight of geese and ducks is reported to have been seen from the shores of Long Island Sound, moving south, on Monday, Jan. 9; the geese acted as if they were fagged out and had come a long distance. Up to that date the Sound gunners along the Connecticut shore have been making small bags of black ducks and coots, also killing an occasional goose.

A female "dipper duck" that has been spending most of the shooting season beneath the surface of Newark Bay, was attracted by the street lamps in Kinney street, Newark, on Monday night, Jan. 9. For over an hour she bobbed about the lights, finally bringing up with a crash against one of the wagons of the New York and Newark Pie Company, limited. The driver thought he was being held up and was nearly frightened to death. Hearing something flopping in the street he got out of his wagon and caught the duck, which was uninjured. He gave the "dipper" to Griffin, who keeps an eating house at No. 314 Market street, Newark. Griffin gave the duck a soup plate filled with water to swim about in, so that the duck would not have the trouble to dive any more, which she might do if put in a tub. The bird is very tame, living on fresh caught smelt. She was tried with split corn but refused to eat it.

Clark's steam yacht Mohican still lies at anchor off Old Point Comfort, Virginia. She has on board a party of sportively inclined Newarkers, among whom are W. Campbell Clark, Charles D. Halsey and Horace N. Conger. They are shooting sea ducks from a steam launch belonging to the yacht, getting about a dozen birds a trip. The lower waters of the Chesapeake Bay are covered with coots in all conditions of weather, and in calm times with scattering flocks of geese and blackheads. Many of the latter, under the name of "flock ducks," are netted across the Bay in Tangier Sound. The geese can be shot by running down on them with the wind, against which the big birds are forced to rise, thus affording cross or overhead shots. Years ago sailing for brant was common on the New Jersey and Long Island bays. It was found to drive the birds from these waters and was consequently abandoned. What few ducks that resorted Newark Bay six years ago were routed by small steam yachts hailing from the Bergen shore, the shooters using very heavy shoulder guns. In Long Island Sound a number of well-known New Yorkers, Mr. Howard S. Jaffery being one, follow the ducks about every week in light-draft tugs. The effect of all this, especially in small bodies of water, is to drive the ducks away. The bags are always small and only second-class ducks are killed as a rule.

There were no quail of any account in Kansas this year, and but few as compared with former seasons in the Indian Territory along the Kansas line. Northern Texas to the eastward of the staked plains, however, contains many birds, one of the best sections being Bowie in Montague county. A friend with whom I shot last winter in Texas writes me that he has been having some good "Bob White" shooting near Moore's Station, in Frio county. There are lots of wild hogs in this section which on off days will furnish lots of sport. I have also received a letter from Osage county, Kansas, which says that the praririe chicken shooting there has been very poor; and the quail very scarce.

Two friends of mine who reside in El Paso, and are first-class shots, have been down to Laguna Lake, in Mexico, shooting. They had fine sport, returning with a bag consisting of geese, brant, bluebills, golden eyes, two kinds of teal, widgeon, sprigtails, sandhill cranes, yellow legs and "Jack snipe." This is the place to make a gun red hot without any trouble. It is only a quarter of a mile from Laguna Station on the Mexican Central R. R. Not a dozen sportsmen visit this place in a year. But the best place in Mexico to go for wildfowl is Lerdo Lake, two days from El Paso on the M. C. R. R. There the sportsman will kill ducks and wading birds of varieties unknown even to many ornithologists.

It is not until one makes an extended shooting trip through Central America and Mexico, that he discovers what a large variety of game birds exist there. In all there are over twenty different varieties of quail between the Isthmus of Panama and San Francisco. The most of these I have seen and shot. The Mexicans trap the quail about Paso del Norte, and sell them alive for $1 a dozen

in front of the hotels in El Paso. On several occasions I have noticed albinos in the lot of dusty cooped up little birds.

Chas. H. Raymond, and his brother, Geo. B. Raymond, of Morris Plains, N. J., had a very successful duck shooting visit this year to the San Domingo Ducking Club, at Magnolia, Md. The club is opposite the famous Maxwell's Point and is finely located. The bag consisted of redheads and a few canvasbacks. The birds were shot over stools.

The duck shooting at Carroll's Island has been fair. There are always ducks enough around Carroll's Island and Grace's Quarters, which is on the other side of the Saltpetre River from the island, but the trouble is to get them to fly.

It would keep one busy to keep a record of the accidents that have occurred with guns since the season opened on Nov. 1. I have made cuttings of all I came across, and have now sixty-three victims on the list. The last item is furnished by four boy hunters of Little Rock, Ark. In less than an hour one had both legs shattered, one lost an eye and another was minus a hand. Three out of four is a fair average. Of course, only about one accident in about twenty is reported, and as I do not read the newspapers more than I can help, I must have missed many more items of mishaps in the shooting field. My only wonder is that instead of 63 it is not 6300. I have been careful to notice the people I have accidentally met out shooting this fall; of the twenty-one I came across seventeen had muzzleloaders, and in every instance the hammers were down on the caps. I saw a man tumble out of a wagon, both hammers of his muzzleloading gun became imbedded in a frozen rut, the muzzle pressed against his side, and it was loaded with buckshot for bear. The man was sixty-five years old and perfectly sober, so it is to be presumed the "old boy" had sized the hunter up for a fool, as the gun did not go off. It is waste of breath to talk to people not to point guns at you, to stop monkeying with locks, and carrying hammers down on the caps. They know it all up to a stage in the game when either themselves or their friends know nothing. THE WISE ACRE.

DEER JUMPING.

YOUR columns contain many interesting accounts of deer hunting by a variety of methods—"hounding," as our Northern brother sportsmen term it (we in the South call that "driving"), "still-hunting," "fire-hunting," and "clubbing" in the water. This last method is unknown among us.

There was one other method in vogue in Mississippi during my early childhood, which I have never seen any description of nor allusion to, probably because a great abundance of game, combined with the proper sort of cover, was necessary to success, and these conditions in proper combination having ceased to exist, this method of deer hunting has gone out.

The method was called "driving," too, but not with dogs. The hunters simply deployed in a long, open skirmish line, and rode through the open pine woods on horseback or mulebback. In the localities thus hunted the long-leaf pine woods were almost entirely free from undergrowth and the ground well covered with a species of coarse grass two or three feet high. The hunters were spaced about 50yds. apart in the line, in the center of which rode the "captain" of the hunt, usually an old veteran, selected for the occasion, whose business it was to control the movements of the line of hunters, settle disputes about "who killed the deer," and occupy the place of general commander.

As the party rode in this order the deer were "jumped up" as they lay in the grass in easy shooting distance of one or more of the hunters, who usually carried shotguns. It seems also that the deer, when jumped, very generally run up or down the line, so that few escaped the shower of buckshot poured forth at them.

It was never my fortune to participate in one of these hunts, as the ground lay in a county about 100 miles from the town in which my father lived, and the county authorities put a stop to the incursions of outsiders into their hunting grounds while I was still a boy.

My father and uncle, however, who emigrated from Virginia to Mississippi in "the thirties," were both keen sportsmen, and it was their custom to join a party from our county every fall and go over to Scott county for two weeks' deer hunting; and they never failed to bring back venison. They always went on horseback, accompanied by a wagon with a negro driver and a servant or two carrying guns, camp equipage, etc.

On one of these annual hunts, and the last one I believe, both my father and uncle were prevented from attending by business affairs. My eldest brother, then a lad of sixteen, and a fine shot, was sent to represent them. He joined the party in the camp the night before the hunt was to begin, and conveyed to old Captain Jennings, the customary "captain" of the hunt, the regrets of my father and uncle that they were neither of them able to attend. The captain was much disappointed by their absence, and when my brother modestly stated that he had come to represent his elders the old gentleman smiled and asked him if he could shoot a deer. He replied that he was pretty good at partridges and rabbits, and he supposed he could kill a deer, which belief the captain did not seem to share.

The next morning when the hunt was formed not much attention was paid to Fred, the boy, but he found a place in the line somewhere. In the course of the first day's driving he had the remarkable fortune of killing four deer without a single one being disputed by another claimant, a larger number than was killed by any one else. This of course raised him high in the captain's esteem, who thereafter gave him the place of honor on his right. In the whole hunt Fred bagged eight deer, and was excelled by only one of the party of some dozen or fifteen old hunters. That gentleman killed eleven.

Fred of course came home an inch or two taller than when he left. COAHOMA.

MEMPHIS, Tennessee.

MASSACHUSETTS ASSOCIATION.—The annual meeting of the Massachusetts Fish and Game Protective Association, for the election of officers, was held at the Fremont House, Boston, on Jan. 11. The officers elected were: President, Edward A. Samuels; Vice-Presidents, Chas. L. Woodbury, Walter M. Brackett, Chas. Whittier, John T. Stetson, Henry H. Kimball, Walton C. Taft, Horace T. Rockwell; Treasurer, Frederick R. Shattuck; Secretary, Arthur W. Robinson; Librarian, John Fottler, Jr.; Executive Committee, Henry J. Thayer, Warren Hapgood, Wm. S. Hills, Edward T. Barker, John P. Woodbury, Ivers W. Adams, John Fottler, Jr., Benj. F. Nichols, Henry C. Litchfield, Geo. W. Wiggin, Benj. C. Clark, Isaac Y. Chubbuck; Membership Committee, Henry J. Thayer, Edw. E. Small, Waldron Bates; Fund Committee, Wm. S. Hills, Danl. T. Curtis, Benj. C. Clark. The year just closed has been one of the most prosperous in its history; the association having increased very materially in numbers, and in financial resources. The outlook for the coming year is most promising, and it is hoped and expected that much good work will be accomplished before the beginning of another year.

THE LYMAN SIGHT.—Somerville, Mass., Jan. 14.—*Editor Forest and Stream:* I was pleased to notice in the last issue of FOREST AND STREAM that the price of Lyman rifle sights has been reduced. This will place these valuable sights within the reach of all, and I think will bring them into general use. For a hunting sight in dark weather or in the woods I am satisfied that they have no equal. As an instance of their superiority over the ordinary open sight I will state that I, one day in September, made a run of fourteen red squirrels with a Maynard .22-cal., 10gr., c. f. rifle, in thick hemlock woods where it would have been impossible to see them distinctly with any other sights that I know of. I have no desire to "puff" the goods of any one, but I want all of my brother rifle shooters to know of everything in this line that is good, and I think that the name of Wm. Lyman will long be remembered for this great invention that he has given us.—IRON RAMROD.

THE YELLOWSTONE PARK AS A FOREST RESERVATION.

[From the Nation, New York, Jan. 5.]

WASHINGTON, Jan. 2, 1888.—Of the varied beauties of the Yellowstone Park much has been said in praise. The splendor of the Grand Cañon, the grandeur of the lake and of those scientific curiosities, the geysers and hot springs, have been described over and over again until every one is more or less familiar with the natural marvels of this wonderland. Now that the once famous pink and white terraces on the shores of Rotomahana in New Zealand have ceased to exist, the similar deposits in the Yellowstone Park stand unrivalled. Notwithstanding all that has been written, based upon sentimental considerations, in favor of a maintenance of the Park by the general Government, the most forcible argument for its preservation is an economic one far outweighing all others in importance. It is one which has received but slight attention outside of a narrow circle of the friends of the Park who realize the true value of the region.

The object of first importance in maintaining the Park is the preservation of its forests. Forest preservation is rightfully attracting increased attention in all parts of the country, and it is now very generally admitted that a rigid enforcement of the proper restrictions in the cutting of timber is demanded for the public welfare. Owing to many conflicting interests in the more settled communities, additional protection by legislation is by no means a simple problem. Nowhere is this better shown than in the struggle in New York State to preserve the timber of the Adirondacks against the encroachment of lumbermen.

The Park is a natural reservoir admirably adapted by its topographical structure for the storage of water. No region of equal area in the heart of the Rocky Mountains presents so many favorable conditions for receiving, storing and distributing a liberal water supply. For the preservation of this water the dense forest which covers this region is of incalculable value. The central portion of the Park is a broad, elevated volcanic plateau between 7,000 and 8,500ft. above sea level, with an average elevation of about 8,000ft; it is accidented by broad depressed basins and scored by deep gorges and narrow valleys. Surrounding it on the south, east, north and northwest, are high peaks and mountain ridges rising from 2,000 to 4,000ft. above the general level of the inclosed table land. Across this plateau from the southeast to the northwest, with a very sinuous course, runs the Continental divide, separating the waters of the Atlantic from those of the Pacific. Several large bodies of water, notably Yellowstone, Shoshone, Lewis and Heart Lakes, form such characteristic features on both sides of this divide, that the country has deservedly received the appellation of the lake region of the Park. Hundreds of smaller lakes occupy irregular depressions either in the lava flows or in shallow basins of glacial origin high up in the neighboring mountains. Scattered over the plateau, in striking contrast with the greater part of the Rocky Mountains, occur numerous ponds, marshes and meadows, which hold very considerable amounts of water throughout the greater part of the year. More than 3,500 thermal springs bring up their waters from below to swell the surface flows, while innumerable cold springs coming out from beneath the rocks add their share to swell the current.

Careful observation of plateau, mountain and valley, shows that about 84 per cent. of the Park region is forest-clad. The bare portions of the Park are mainly areas above the timber line, steep mountain slopes, and wet marshy bottoms. The forest is essentially coniferous. A few groves of aspen (*Populus tremuloides*) add brilliancy to the autumnal foliage, but are so insignificant that from an economic point of view they may be discarded. Quite two-thirds of the trees are what are known as black pine (*Pinus murrayana*), and one may travel for miles over the gravelly ridges of the plateau without encountering any other species. On moist ground at high elevations, and where the snows lie later in the season, this species gradually gives way to the balsam (*Abies subalpina*) and the spruce (*Picus engelmanni*). Over large areas, of course, the three species occur more or less mingled. In a few favored localities the statelier tree, the red fir (*Pseudotsuga douglassi*), is conspicuous by its size and vigor. The black pine rarely attains any great size, trees more than 2ft. in diameter being exceptional, while over considerable areas they are so diminutive as to be locally known as "lodge-pole" pine. The young forest is generally made up of shapely, graceful trees, but the maturer growth is not specially attractive. The charm of the forest is found in the natural groupings and park-like character of the trees in the more open country, many of those on the mountain slopes being of exquisite beauty. For grandeur and imposing appearance they are not, however, to be compared with those of the Sierra Nevada or Cascade ranges.

Precipitation of moisture throughout the arid region of the far West is governed in part by mountain mass and in part by the great altitude of single ridges. Across the Park plateau and the Absaroka Range to the eastward the country is unsurpassed in average elevation by any area of equal extent, and is so situated as to form one of the storm-centers of the northern Rocky Mountains. The moisture-laden winds coming up from the southwest precipitate rain and snow upon the plateau and the western slope of the Absaroka Range, innumerable streams bringing the water from the mountains back into the Park. In consequence, the climate of the region is exceptional, the amount of snow and rainfall being higher and the mean annual temperature lower than over the adjacent country. Unlike the greater part of the Rocky Mountains, heavy rains occur frequently through the summer, and snow storms are of common occurrence any time between September and May, the snows lying upon the ground well into midsummer. The region is one of the grandest reservoirs, sending its waters thousands of miles to both oceans. A closer examination of this water supply shows its preservation to be a question of vast economic interest. Two rivers, the Yellowstone and Snake, carry off the greater part of these waters; the former draining more than one-half the area of the Park, and the latter the entire western side of the divide. Yellowstone Lake, the great reservoir for the river which gives its name to the Park, is a body of water of great beauty, measuring twenty miles in length, with a breadth across its greatest expanse of fifteen miles. It has a very irregular outline, with an indented shore of nearly 100 miles, and an area of 121 square miles. Not only is the Yellowstone by many times the largest lake in North America at so high an elevation above sea level (7,741ft.), but it ranks among the first in the world at high altitudes. Upon the western side of the divide, less than six miles from the Yellowstone, and separated from it by a ridge not more than 200ft. in height, lie Shoshone and Lewis Lakes; the former with an area of twelve square miles, and the latter four and one-half square miles. Heart Lake, at the eastern base of Mt. Sheridan, measures three square miles. These reservoirs pour their waters into the Snake, which also finds its source near the southeast corner of the Park.

In the autumn of 1886, with a view to obtaining some data upon the amount of discharge, the largest bodies of water were accurately measured. Not only was the time selected the dryest period of the year, but all lakes and streams stood at a lower level than at any time during the previous five years. Yellowstone Lake stood 20in. below the high-water mark of early summer. The measurements may be said, therefore, to have been taken at the minimum discharge. Measured just below the outlet of the lake, the discharge of the Yellowstone River was found to be 1,525 cubic feet per second, or, in other words, 34,000,000 imperial gallons per hour. The outflows from Shoshone, Lewis and Heart lakes combined yielded 104 cubic feet per second. The Lamar, Firehole, Gibbon and Madison rivers were gauged, and careful estimates made of the Gallatin and Falls rivers, based upon the size and flow of the streams and the area of the country drained. According to estimates of Dr. William Hallock, of the United States Geological Survey, who kindly undertook the gauging of the streams, it was found that the minimum discharge was equal to one cubic foot per second per square mile over an area somewhat more than 4,000 square miles, and that the amount of water running into the Park and leaving it through the five main drainage channels would make a river 5ft. deep and 190ft. wide, with a current of three miles per hour. While this may not indicate a large supply as compared with certain highly favored areas, yet it is for the arid region of the West an exceptional and excessive amount.

In an arid and sparsely timbered country and one of unequally distributed rainfall, forests and moisture maintain reciprocal relations. Experience has shown in Europe, and unfortunately already in America, the injurious effect of disafforesting a country near the head waters of large rivers. One instance will suffice to illustrate this protecting influence of the forest. The report of the recent Forestry Commission of the State of New York says, speaking of the sources of the Hudson River, "that the summer flow of the Adirondack rivers has decreased within the memory of men living from 50 to 75 per cent. Many of the small streams which a quarter of a century ago were abundantly supplied with water during the entire summer are now dry during many months."

Remove the forests from the sources of the Yellowstone and Snake, and the region would become a barren waste. The snow, under the scorching rays of the sun, would rapidly disappear, and early spring freshets and floods, carrying devastation before them, would strip the rocks bare of the meagre soil with which they are now covered. Under the influence of the forests the soil and vegetation are protected, which in turn act as a sponge, regulating the flow and slowly supplying the springs and streams. The climatic benefits derived from the forest-protected region can scarcely be overestimated. From the cool, wet surface of this broad storehouse of water the dry winds coming from the west absorb immense quantities of moisture, which is again precipitated over the agricultural and grazing lands to the eastward. Not only should the present reservation be carefully guarded, but the area of the Park should be enlarged to the east and south, so as to take in a dense forest region useless for agricultural purposes and destitute of mining resources. It embraces a rough and mountainous country abounding in streams, the real source and feeders of Snake River, Yellowstone River and Lake.

The proposed increase extends the boundaries twenty-five miles to the eastward and nine miles to the southward of the present ill-defined limits, which were established at a time when the region had been but little explored. By this enlargement not only the entire western slope of the Absaroka Range, with its mountain torrents flowing into the Park, but the timber lands near the heads of streams which run eastward (the waters of which drain into the Big Horn, an affluent to the Yellowstone) will fall within the protected area. To the southward, on the opposite side of the Continental divide, the country, although less rugged, is equally well supplied with streams, springs and lakes, whose waters uniting make a broad, deep river of the Snake before it fairly leaves the mountains for the plain below.

A proposition looking to the enlargement of the National Park has already been brought before the present Congress by Senator Vest, of Missouri. No obstacles exist to-day against forever setting apart this additional territory adjacent to the Park. If left alone it will soon be invaded by the lumberman, charcoal-burner, and railway-tie cutter, the advance guard of a rapidly increasing population. The preservation of the Park is a necessity to the nation, but to no part of it more than to the Territories of Dakota, Montana and Wyoming. ARNOLD HAGUE.

MONTANA GAME LAW.

AMENDMENTS approved March 9, 1887, amending act of March 8, 1883.

An Act to amend sections 1, 2 and 5 of an act entitled "An Act to protect game, fur-bearing animals and fish," approved March 8, 1883.

Be it enacted by the Legislative Assembly of the Territory of Montana:

SECTION 1. That any person or persons who shall wilfully shoot or otherwise kill or cause to be killed any buffalo, moose, elk, white-tailed deer, black-tailed deer, mountain sheep, Rocky Mountain goat or antelope between the first day of December and the fifteenth day of August of the ensuing year, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than twenty dollars nor more than fifty dollars for each offense committed.

SEC. 2. That Section 2 of an act entitled an act to protect fur-bearing animals and fish, approved March 8, 1883, be amended to read as follows: Section 2. That any person or persons who shall wilfully shoot or otherwise kill or cause to be killed at any time any of the animals mentioned in Section 1 of this act for the purpose of procuring the head and hide only, or for speculative purposes, or for market, or for sale, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than fifty nor more than two hundred dollars, or by imprisonment in the county jail not less than one month nor more than six months, or by both such fine and imprisonment.

Sec. 3. That Section 5 of said act be amended to read as follows: Sec. 5. That any person or persons who shall wilfully shoot, or kill, or cause to be killed, any grouse, prairie chicken, pheasant, fool hen, sage hen, partridge, or quail, between the 15th day of November and the 15th day of August of the next ensuing year, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than $25 nor more than $50, and all persons are hereby prohibited at all times from killing any of the birds described in this section for speculative purposes, or for markets, or for sale; and any person or persons who shall hereafter kill for speculative purposes or offer for sale any of the kinds named in this section shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be fined in any sum not less than $25 nor more than $50 for each offense committed. F. R. ARMSTRONG, Speaker of the House.
R. C. HICKMAN, President of the Council.

MERIT MUST WIN.—Merit will win the confidence of stock owners, no matter what may be said to the contrary, we thought, upon learning the important part HUMPHREYS' VETERINARY REMEDIES were playing in thousands of stables throughout the country. We were further gratified to learn, from an authentic source, that over four years ago the Board of Cavalry Equipment of the United States Army had concluded to recommend for exclusive use in the service, the SPECIFIC VETERINARY MEDICINES made by the HUMPHREYS' MEDICINE Co. These Veterinary Specifics have been thoroughly tested, not only throughout the United States, but in other countries, and "that their superior merit claims for them the highest place among the standard remedies of the day" is the ready testimony of thousands whose experience renders them eminently well qualified to speak.—*Exchange.*

A FISHERMAN'S DIARY.—The late Mr. Alfred Denison kept a fishing diary, from the records of which it appears that in the course of 28 years' angling at Nesside (Holme water), on the Ness, and at Makerstoun and Birgham Dub, on the Tweed, he killed 4,601 salmon to his own rod. In 1883 he landed 235 fish which weighed 2,708 pounds. In 1885 he killed 180 fish on the Tweed in the autumn which weighed 2,651 pounds, and 120 which weighed 972½lbs. on the Ness during the summer. His best day on the Tweed was in 1873, at Makerstoun, above Kelso, when he killed 16 salmon and lost 4. On the Ness, in August, 1873, he had 16 fish in one day and lost 3. Mr. Denison, who belonged to the Stockbridge Club, always fished the Test for a few days in the early part of the season, but salmon angling was his greatest delight.—*London Truth.*

Angling Talks. By Geo. Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Anglers' Book. By Thad. Norris. Price $5.50.

THE NEXT TOURNAMENT.

THE National Rod and Reel Association met on Saturday last in the laboratory of Commissioner Blackford, New York. The attendance was good, and various subjects were discussed. The secretary read the proceedings of the last meeting. Mr. Mather, chairman of the committee on membership, reported in favor of the following rule: "No person shall compete in a tournament who has not been a member for at least seven days previous to such tournament, but the president may, in his discretion, waive this qualification and admit new members on the grounds who may compete." It has been the custom to admit members on the grounds and to allow them to compete, and this custom has been abused by mug hunters who came to the grounds, rod in hand, and, after looking over the entries in a class, paid both membership and entrance fees, won a prize, and were never heard of more.

The following gentlemen were appointed as a Committee of Arrangements:

Wm. Dunning, Chairman; Hon. H. P. McGown, Cuttyhunk Club, Mass.; James Benkard, South Side Club, L.I.; E. G. Blackford, New York Fish Commission; S. M. Blatchford, Squibnocket Club, Mass.; Dr. E. Bradley, Blooming Grove Park Association, Penn.; Martin B. Brown, Wa-Wa-Yanda Club; Henry F. Crosby, Willowemoc Club, N. Y.; D. W. Cross, Oneida Club, N. Y.; Francis Endicott, Richmond County Game and Fish Protective Association; C. B. Evarts, American Fisheries Society; Gen. Rodney C. Ward, Brooklyn; Dr. Geo. Trowbridge, New York; E. R. Wilbur, New York; James C. Cornell, Brooklyn; William C. Harris, St. Lawrence Club; Dr. James A. Hensball, Black Bass Club, Ky.; Thatcher Magoun, Massachusetts Game Protective Society; C. H. Mallory, Ichthyophagous Club, N. Y.; Fred Mather, Fly-Fishers' Club, London; J. C. McAndrew, Restigouche Club, N. B.; James L. Vallotton, Pasque Island Club, Mass.; J. S. Van Cleef, Willowemoc Club, N. Y.; C. Van Brunt, Willowemoc Club, N. Y.; Edward Weston, Greenwood Lake Association, N. Y.; Col. Locke W. Winchester, Restigouche Club, N. B.; Louis B. Wright, Westminster Kennel Club, N. Y.; H. L. Ziegenfuss, D. D., Poughkeepsie, N. Y.; J. A. Roosevelt, Poughkeepsie, N. Y.; C. G. Levison, Brooklyn.

Committee on Grounds: Martin B. Brown, New York, Chairman.

Committee on Rules: J. A. Roosevelt, Poughkeepsie, Chairman; Fred Mather, Cold Spring Harbor, N. Y.; Rev. H. L. Ziegenfuss, Poughkeepsie, N. Y.; C. G. Levison, Brooklyn; Louis B. Wright, New York.

A discussion on rules followed, and as the rules are to be revised by the committee appointed for this purpose the discussion was, as the president stated, merely to get the sense of the Association on certain proposed changes. No change was suggested until Rule 5 was reached, when Mr. Mitchell said that the allowance of 1½oz. in favor of rods, used in the light-rod contests, having metal reel-seats, was too great, and he exhibited one, which, without the bands, weighed a mere nothing. It was decided to abolish the allowance. It was proposed to reduce the time allowance for contestants from fifteen to ten minutes. It was thought best to omit "delicacy" from the scale of points, but when it was proposed to add to the number of points in "acuracy," the vote was a tie. It was thought best to make the distance for accuracy in salmon casting 60 instead of 70ft. In black bass casting it is proposed to strike out "style" from the score of points, and in heavy bass casting to allow the caster to use a sinker of 2½oz. or less, at his option.

The time for the next tournament was fixed for Wednesday and Thursday, May 23 and 24.

Mr. Johnston objected to the rule in single-handed fly-casting which classes the contestants as amateur and expert, and which forbids entrance into the former by those who have ever fished for a living, been guides, or have been engaged in either the manufacture or sale of fishing tackle, and proposed to class all men by their former records, as: those who have a record of 90, 80, 70 and 60ft. respectively.

The menhaden question came up, and Mr. Endicott, chairman of the committee appointed to frame resolutions concerning the capture of food fishes and menhaden, reported that he had called a meeting of the committee to meet the men engaged in menhaden fishing on Thursday, Jan. 19, at Mr. Blackford's. Messrs. Bryan, Wright, Dunning and Johnston offered several valuable prizes, consisting of gold medals, reels, etc., to be competed for at the next tournament, and the meeting adjourned.

THE EAGLE ROD AND GUN CLUB, of Fair Haven, Vt., held its annual meeting on Jan. 6, with Vice-President R. C. Reed in the chair. H. S. Humphrey was elected secretary *pro tem.*, as the secretary of the club was sick. The chairman appointed Merrit T. Mead, Robt. W. Parkhurst and E. J. Williams a committee to nominate officers for the ensuing year; and they reported the following list: President, Rolland C. Reed; Vice-President, E. J. Williams. Secretary, George M. Fuller; Treasurer, D. R. Williams; Executive Committee—Dr. Charles H. Carpenter, Merrit T. Mead, Albert I. Johnson, Hugh S. Humphrey, Robert W. Parkhurst. These officers were then elected. R. C. Reed, George M. Fuller and M. T. Mead were appointed to examine and revise the by-laws and report at the next meeting, which will be held on Friday evening, Feb. 3, when the retiring officers will make their reports and the new officers will take their seats. The club expects to be able to build a club house on the west shore of Lake Bomoseen during the coming summer.

CATFISH ON A TROLL.—Hornellsville, N. Y.—At Silver Lake, a few miles from here, it is not at all unusual to catch bullheads on a troll. As I understand it, the catfish and bullhead are the same, or nearly the same fish. July 3, 1884, John Tenney and my brother caught five on a troll in one day, and P. P. Winn, engineer on the Erie Railroad, who has fished at the lake for many years, says he has caught over a hundred skittering and trolling.—J. OTIS FELLOWS.

TARPON FISHING.

Editor Forest and Stream:

Several years since I clothed, in the drapery of ink, my views regarding the future of tarpon fishing as follows: "In journals devoted to sports of forest and stream we frequently notice references to the lordly salmon, the noble striped bass, the plucky bronze-backers, and the speckled beauties—but the tarpon, the 'noblest Roman' of them all, the game fish *par excellence* of American waters, is seldom noticed. When the acrobatic performances and the fighting qualities of this noble fish become known, something worthy of consideration will present itself to those who can enjoy true piscatorial sport." It has been said that coming events cast their shadows before, and recent events have established the fact that my frequent references to the royal sport attending the capture of the "silver king" have been realized.

In referring to the tarpon that experienced fisherman and accomplished writer, S. C. Clarke, says: "It is a fish as much more powerful and difficult to handle on a rod than a salmon, as the salmon is more powerful than the black bass. This may perhaps be thought a rash assertion, but it is gathered from my own experience. Twice I have hooked a tarpon, and twice I lost my tackle without checking the fish in the slightest degree."

The first tarpon that was captured at Charlotte Harbor, with rod and reel, was taken several years since, by my friend, Senator Quay, of Pennsylvania. It was evening and he was trolling for bass, when he had a strike, and, after a lengthy fight, he landed with rod and reel, a silver-king weighing 38lbs. On his return to Jacksonville he presented to me the rod, reel and line with which he made the capture, and they are in my possession. In April last I visited Charlotte Harbor and collected some data regarding tarpon fishing which will no doubt interest some of your readers. From the best information obtainable I believe the following data regarding the number of tarpon captured last winter at that point, and the names of the captors, will be found correct:

Handline fishing: Senator Quay and son, of Pennsylvania, 21 tarpon, largest 155lbs. G. R. Shultz, of Punta Rassa, 1, weight 135lbs. — Shatton, of Boston, 1, weight 124lbs. Rod and reel fishing: P. Lorillard's party in yacht Riva, 11 fish, largest 143lbs. W. H. Wood, of New York, 11 fish, largest 135lbs. W. G. Russell, of Boston, 1, weight 50lbs., the smallest captured. Peck Brothers, Chicago, 3. L. T. Moore, Kansas City, 5, largest 145lbs. C. R. Jones, Kansas City, 4, largest 131lbs. K. W. Stetson, Kingston, Mass., 1, weight 76lbs. F. T. Tripler, New York, 2. Capt. Randall, U. S. N., 1, weight 118lbs. J. B. Niven, Bridgeport, N. J., 1. — Wright, Wall street, New York, 1. Walter Mann, Philadelphia, 9, 8 captured in 3 days, largest 151lbs., 1 149½lbs. T. Sheldon, of Philadelphia, 1. T. Fellows, Boston, 3. Total, 78.

Within the last two years tarpon fishing at Charlotte Harbor has found many devotees; and during the past winter the Hotel San Carlos at the southerly end of Pine Island has been liberally patronized by tarpon fishers. Tarpon fishing is truly royal sport, for they are strong, agile and cunning. When they take a bait they usually make a lightning-like rush of from 20 to 60yds., indulge in an aerial performance, shake their heads like a terrier, and oftimes expel the bait. The accompanying sketches, illustrating a lady's experience in tarpon fishing, will make the matter intelligible:

Mrs. B., of this city, with her husband, camped out near the mouth of the St. John's River and, clothed in a bathing suit, she approached the beach, cast the bait into the briny deep to capture a channel bass. A tarpon seized the bait and made a rush. Mrs. B. held on to the line in spite of burned fingers; the artful fish appeared in the air and shook his head and the lady found herself *hors de combat* with extremities in the air. A gentleman who was present assured me that the contact of 156lbs. of humanity with the hard sandy beach caused such a seismic effect as to lead the residents of Mayport to believe an earthquake had visited the locality.

It may interest some of your readers to obtain some reliable information regarding the piscatorial attractions and the hotel accommodations at Charlotte Harbor, and how to get there. I visited the locality in April last, and will furnish data, the result of my observations. My first visit to Charlotte Harbor was in 1874, and in your valuable paper I referred to the unequaled fishing at this point. I visited the locality again in 1877, and in another article discussed the piscatorial resources of that section and suggested the advisability of erecting a hotel at that point for the accommodation of fishermen and invalids. Realizing the climatic and sporting attractions of Charlotte Harbor, a syndicate of wealthy gentlemen purchased three miles in length of the southerly end of Pine Island and erected a large hotel and a number of cottages. The rooms in the hotel are large, beds good, and the *cuisine* all the most exacting can ask. Meats are received from Chicago, vegetables are raised on the premises, oysters, clams and fish are plentiful, the island and mainland furnish venison and turkey, the food was admirably cooked and the service excellent. The company has constructed a dock extending to deep water, and from it sheepshead, channel bass, sea trout, cavallii, angel fish, grouper, sea bass, etc., can be captured in sufficient numbers to render the sport attractive. At the end of the dock is a pavillion where ladies can find shade, inhale pure air, and indulge in sports piscatorial. Boats and bait are furnished to guests, and boatmen who are familiar with the best fishing points can be secured at reasonable rates. A daily mail is a feature, and a telegraph station is but four miles distant. During the cold months insect pests are absent. The drives on the island extend for miles and the roads are excellent.

San Carlos Hotel, Charlotte Harbor, is easily reached. Leaving Jacksonville at 8:15 A. M. by the Florida Southern R. R., passengers reach Punta Gorda, Charlotte Harbor, at 8:15 P. M. A pleasant route is to take one of the People's Line of steamers at 3 P. M., reaching Sandford early in the morning. From this point take the South Florida R. R. to Barton Junction, connecting with the Florida Southern R. R. for Punta Gorda. At this point will be found a first-class hotel with every comfort. Fare from Jacksonville to Punta Gorda, $9.45. Leaving the latter place at 8 A. M., Hotel San Carlos, Pine Island, is reached in time for dinner—twenty-nine hours after leaving Jacksonville.

Climatic factors have much to do with the comfort of the invalids and the success of fishermen. It is well known that the air of the sea shore is bracing and calculated to build up invalids; and as Pine Island is near the Gulf and surrounded by salt water, health is guaranteed. During the cold months malarial diseases are unknown, and the mortality of this section for the entire year is less than that of almost any other portion of the United States. The absence of dust and organic germs is all important to invalids, and at this point the air is pure and aseptic. Equability of temperature is an important climatic factor, and in this respect Charlotte Harbor is remarkable. As thermometric vacillations are of great importance, we will give the ranges for the five cold months at this point: November, 36° Fah.; December, 36°; January, 36°; February, 31°; March, 30°; mean for five cold months, 34° Fah. Owing to the slight atmospheric changes, invalids and delicate persons are not liable to contract colds and can spend most af their time in the open air. The mean relative humidity of a resort is important, and in this respect Charlotte Harbor is especially favored. As evideuce of this we will give the mean relative humidity of this section for the five cold months: November, 71.7; December, 73.2; January, 74.2; February, 73.7; March, 69.9 per cent. Rainy days seriously interfere with outdoor sports, and in this respect Charlotte Harbor has much to recommend it. The rainfall in inches and hundredths per month for a period of five years is as follows: November, 2.38; December, 0.99; January, 1.69; February, 2.67; March, 1.04. Mean per month, 1.77in.; for five months, 8.77in. As evidence of the small amount of rainfall at this point I need but compare it with the amount at some prominent health and pleasure resorts for the five cold months, as follows: Niece, 16.86; Mentone, 16.50; Nervi, 23.40; Genoa, 24.72; Atlantic City, 16.93; Jacksonville, Fla., 16.62, and Key West, 9.1in. Frost is almost unknown at Charlotte Harbor. For ten years the lowest point reached by the thermometer was 33.° The air is bracing, the diurnal thermometric range is very low, and high winds are infrequent.

To those who are disposed to indulge in the capture of tarpon, I would say provide a stout two-joint (one long and one short) split-bamboo, lancewood or greenheart rod, from seven to eight feet six inches in length, and a strong reel to carry six hundred feet of 15, 18 or 21 thread Cuttyhunk line. For hooks I would recommend 10-0 O'Shaughnessy or 13-0 Limerick, and for snoods heavy cotton or silk, or jointed piano wire. Minute directions for rigging lines and baiting hooks need not be referred to, for a day's residence at San Carlos Hotel, and open ears to listen to fish yarns and experiences, would serve to initiate the tenderfoot into all the mysteries of attending tarpon fishing. The principal fishing ground is near the hotel.

The fishing for mangrove snapper, devil fish, tarpon, sheepshead, sea trout, channel bass, cavallii, angel fish, lady fish, and jew fish, cannot be excelled. At this point the angler can enjoy an admirable climate and capture noble game fish without the discomforts of roughing it, wading in icy streams and fighting black flies and mosquitoes. Tarpon fishing has already attained a world wide notoriety, and if we take into consideration the accessibility of Charlotte Harbor, the superior hotel accommodations, mail and telegraph facilities, its healthfulness, the absence of malaria, its admirable drives, opportunities for boating, its climatic advantages and sporting resources, we are forced to the conclusion that it is destined to become a popular tourist, sporting and health resort.

AL FRESCO.

JACKSONVILLE, Fla., Dec. 26, 1887.

A note in the *Times-Union*, of Jacksonville, Jan. 3, has this: At St. James City the tarpon season of this year has been opened by a lady from New Haven, Conn. It was a lively tussle on the part of the fish, but as the hook was firmly fastened somewhere down his interior anatomy he was finally landed, though the lady had a chance to use all of her strength and skill. The score was 87½lbs., length 5ft. 7in. The lady's husband took in another weighing 102lbs., and altogether this was counted a good day's sport.

Fishculture.

Address all communications to the Forest and Stream Pub. Co.

THE ROGERS FISHWAY.

Editor Forest and Stream:

I herewith present to you engravings of the Rogers patent fishway, showing its construction, position and the general principles of its working in the case of a common mill-dam, and also a diagram of the auxiliary dam, a later invention, the purpose of which is to adapt the fishway for successful use where the more common mode of construction is impracticable, as in case of natural falls or great dams like the Holyoke in Massachusetts, where it would not be possible to effect an opening in the structure to be overcome.

I feel perfectly safe in saying that this is the only fishway ever invented or used that completely fulfils the purpose for which it is designed, viz., to open the streams of the country to the free and easy ascent of fish to the head-waters and spawning grounds, over mill-dams, natural falls and all other obstructions. This great claim is not based on mere theory or extravagant supposition, but on practical tests made not only in this country, where during the past six or seven years I have personally supervised the construction of nearly one hundred after the style of the patent, which are now in successful operation—in one case a natural fall of over sixty feet having been overcome—but also in the United States where the State of Pennsylvania, after having expended tens of thousands of dollars on other devices, procured the use of this invention after a most successful test at the Columbia Dam on the Susquehanna in the spring of 1887, and is now pushing their construction as rapidly as possible.

An experience of twenty years in the Fishery Service of Canada has brought me into contact with the many obstacles to be overcome in protecting, maintaining and increasing the supply of river fishes, and I am therefore in a position to recommend this fishway as being the only one that will perfectly conquer the difficulties to which the deterioration of the river fisheries of every growing country is chiefly attributable.

The principles of its construction, its position and general features are such as have in every case commended themselves to practical men. The engravings given herewith will afford a pretty clear idea of what these principles are, and will dispense with the necessity of detailed description here. One great advantage in their use is the very small cost of construction and maintenance, as when once properly built they will withstand the pressure of ice and the heaviest freshets without injury; and another is that the water supply is in

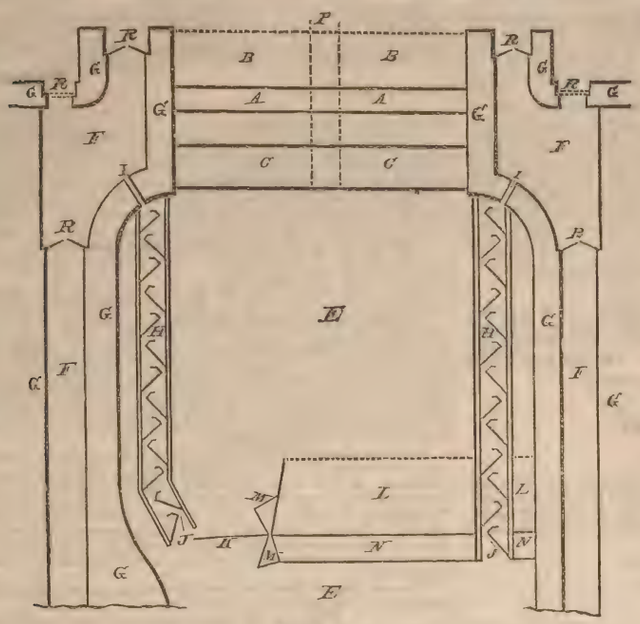

FIG. 1.

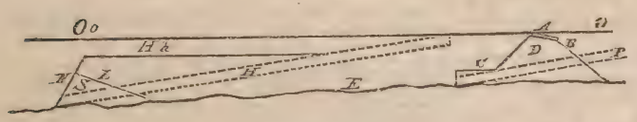

FIG. 2.

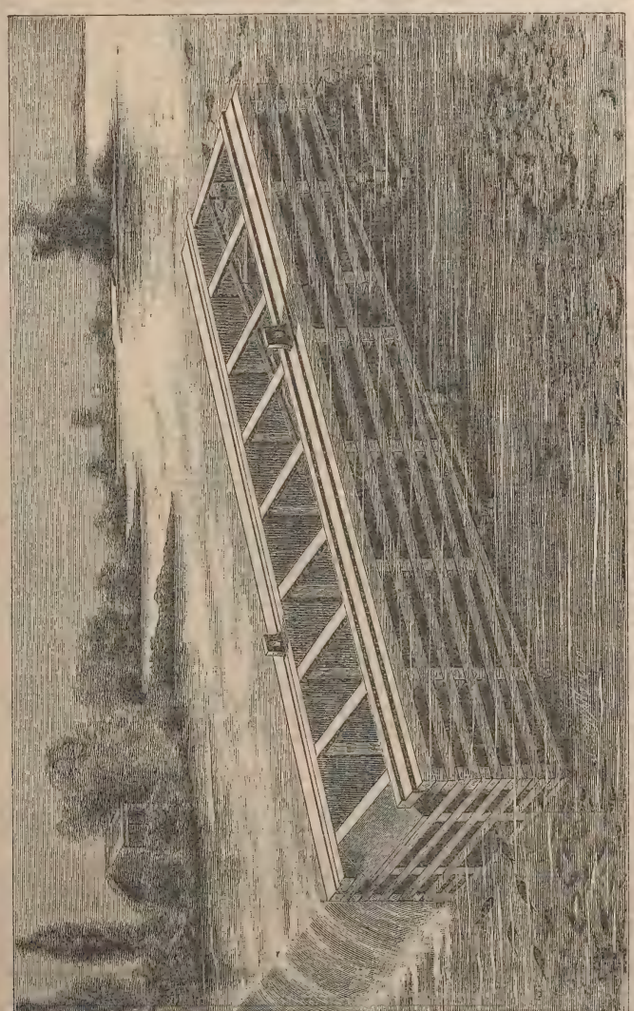
DIAGRAM OF THE ROGERS PATENT FISHWAY AND AUXILIARY DAM.

(The basis of the above diagram is the Holyoke dam in Massachusetts.)

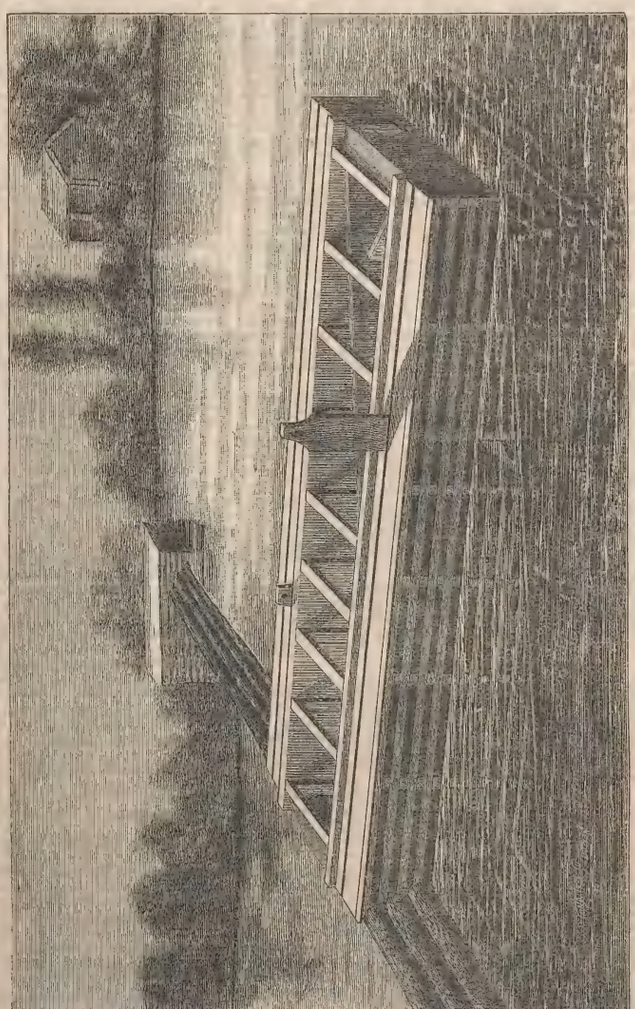
FIG. 1 is a general plan of arrangement. FIG. 2 is a vertical sectional view of same.

Like letters denote the same parts in both figures.



A A represents top of main dam. *B*, inner face of same. *C*, lower face, over which the flood of water pours. *P*, position in which it would be proper to place a fishway where practicable. *F*, a canal built to carry water from pond above down to mills, etc., below. *R R*, gates by which the flow of water may be regulated. *L*, the auxiliary dam, built below main dam. *N*, lower face of auxiliary dam where fish are stayed in their progress up stream. *K*, a wire fence used in some cases for same purpose, where the water has not too much force to prevent its security. *M M*, wings of same, for turning fish in any required direction. *H*, fishway, with an entrance into the canal (this fishway may be carried up around any dam or cliff, as desired). *G*, the wall or bank which separates the water in the canal from the river and holds it at the level of the headwaters. *E*, bed of river where fish come up. *J J*, foot of fishways, showing the open mouths at the face of the auxiliary dams. *I*, outlet from fishway to headwaters, or inlet of water from pond above.

FIG. 2.—*O*, level of water in pond above main obstruction in river. *Oo*, level of top of main dam. *A*, top of sectional drawing of main dam. *B*, upper slope. *C*, front face. *D*, body of main dam. *P*, where fishway should be placed when practicable. *E*, river bottom. *S*, section of auxiliary dam. *L*, back slope. *N*, front or down stream face—the obstruction presented to fish, thus preventing them from passing the foot of fishway and turning them into it. *H*, fishway in position. *Hh*, side of fishway.



THE ROGERS PATENT FISHWAY.

Bird's-eye view, showing interior and fish ascending. The top of the structure is, of course, to be covered in by heavy timber for protection against ice and freshets—spaces being left to admit the light.

THE ROGERS PATENT FISHWAY.

Showing its construction and position in the dam, and fish entering below the dam and passing into the pond above.

THE ROGERS PATENT FISHWAY.

Showing side gate in use during low water in dry season. The gate will be noticed to be drawn up, allowing the water to enter and fish pass through. Another gate is also provided on the other side for use when the water is still lower, thus providing for the free passage of fish at any height of water.

no way interfered with, and on this account they have been received with peculiar favor by mill owners and others interested in water power.

I trust, if the matter of fishways is one in which you are interested either in a private or public capacity, you will give this one your favorable consideration, and I will be pleased, personally, to give you any desired information on the subject.

I feel you would be amply repaid by a visit to Nova Scotia, or to Columbia, Pa., to see some of them in operation.

In cases where a *bona fide* interest is manifested, I am prepared to visit the localities where the erection of fishways is proposed, furnish estimates of the cost and take contracts for the work, or otherwise, either personally or through competent engineers acquainted with the details of the business, give the work so far as may be possible the benefit of my long experience—a matter of no small importance in practical undertakings of this kind. W. H. ROGERS.

TRIBUTES TO BAIRD.

WASHINGTON, Jan. 13.—*Editor Forest and Stream:* I inclose a brief report of the services held last Wednesday evening in the lecture room of the Columbian University, in commemoration of the life and services to science of the late Prof. Spencer F. Baird, whom we all have so much loved and esteemed during a third of a century. He was secretary of the Smithsonian Institution, Director of the National Museum and United States Commissioner of Fish and Fisheries at one and the same time, and the work now done or progressing in each or all of these divisions seems inseparable from his name. The Philosophical, Biological, and Anthropological societies of Washington united to do him honor, and it would have warmed your heart to see the spontaneous fervor which stirred the audience in response to the sincere and glowing tributes paid to him by the speakers. The lecture room was filled to its fullest comfortable capacity with a distinguished assemblage of scholars and men of science. Many ladies were present.

Col. Garrick Mallory, president of the Philosophical Society, presided. Seated on the platform were Chief Justice Waite, Senators Edmunds and Dawes, Prof. Marsh, of Yale; Prof. Cuppe, of Leigh University; Prof. Angell, of Ann Arbor; Prof. Gillman, of Johns Hopkins University; Justice Strong; Prof. Langley, Secretary of the Smithsonian Institution; Prof. G. Brown Goode, U. S. Fish Commissioner; Prof. Alexander G. Bell, Dr. Yarrow, Dr. Fletcher, director of the Mint Kimball; Dr. J. C. Welling, president of Columbian University; Prof. Dall, Dr. Taylor, Maj. J. W. Powell and others. On each side of the platform hung a life-sized portrait of the late Prof. Baird.

Col. Mallory opened the meeting with a fitting eulogy. W. B. Taylor, of the Smithsonian Institution, reviewed his work in his capacity as administrator, outlining his methods in detail, and pointing to examples of the labors in new fields of science which he illumined to the world by his genius.

Prof. W. H. Dall, president of the Biographical Society, spoke of "Prof. Baird in Science." He ranked highest among all the students of the mysteries of science. He had done directly, he said, more than any other man to acquaint the world with the birds and the mammals of America. What he had done indirectly was incalculable. Other scientists had been inspired to work by his publications, and had been assisted by his personal advice and instruction. His works were the most complete and valuable upon the subjects of which they treated.

Major J. W. Powell, president of the Anthropological Society, spoke of the personal characteristics of Prof. Baird; of his great learning and modesty, his simplicity and power. His explorations for science, he said, extended to the frozen snows of the Arctics as well as to the tropics; into the seas as well as across the broad plains of the West. If there was an expedition seeking glory in the explorations of the frozen North, Prof. Baird got his scientific workers a place in the expedition. If parties of surveyors were going across the plains to mark out the line of a great railroad, Prof. Baird's workers went along to gather up the rich deposits along the route. If there was war, some of the scholarly military men were interested to serve Prof. Baird and science. Generals Scott, Marcy, Thomas, McClellan and many others had been laborers in the field to collect specimens for him. He said Prof. Baird was familiar with all nature, and as simple as a child, with all his work into deep science, he loved to read *St. Nicholas.* "Expecting death," said Major Powell, "and having become enervated by over-exertion, Prof. Baird calmly and philosophically awaited the great time of times."

He died at Wood's Holl in the midst of the many ingenious mechanical appliances which he had established there for the prosecution of the work of the Fisheries Commission, and was there unconsciously relieved of his labors. Two days before he died he was trundled about the wharf and the laboratory for a final inspection, and last adieus to his assistants, and meeting a little child rolling along in its perambulator in charge of its nurse, he said to it feebly, with perceptible effort, "I am more of a baby than you are." He realized that his magnificent power was gone—like Samson bereft. With touching reference to his natural modesty, gentleness and goodness, Major Powell aptly concluded with the comfortable aphorism, "Blessed are the pure in spirit, for they shall see God."

In recounting the stupendous, manifold and various services of Baird's valuable life, it was impossible wholly to segregate them from the coöperative labors for fifteen years past of his indefatigable assistant, Prof. G. Brown Goode, who has since succeeded to the honored place which he left vacant; and all the speakers joined with alacrity in paying a full meed of tribute to a gentleman who, I am free to say, possesses in a conspicuous degree many of the most notable and valued characteristics of his honored predecessor. Seldom does it fall to the lot of a public man to hear the eulogies of his superior reflected back in such a degree upon himself. Seldom does one so young receive or merit so full a meed of praise as was to him accorded.

The work of the Smithsonian Institution, even as now subdivided, is onerous, and those who value useful lives will pray that Prof. Goode will not overtask his energies as Prof. Baird has done. This warning I believe to be timely and necessary. CHARLES HALLOCK.

THE NEW YORK COMMISSION.—The new hatchery at Cold Spring Harbor is so far completed that the water was turned in the hatching room last Saturday, and the eggs were moved in on Tuesday. The hatching floor is completed, but the workshop and dwelling rooms for the foreman are not yet finished. The hatching room is 65x36ft., and contains 18 troughs 25ft. long, and two McDonald hatching tables, for both fresh and salt water, a tidal hatcher for floating eggs, and tables for aquaria. The room is ceiled with narrow yellow pine, "filled" and oiled, and is 11ft. high. The distributing trough is fitted with brass gates, which can be shut so that not a drop of water passes them. The dwelling for the foreman is above the hatchery, and a telephone will connect the latter with the house of the superintendent. The water supply is at a height which will allow it to be brought in the upper story for family use. It is, without doubt, the handsomest and most complete hatchery in the State, and it is exceedingly creditable to the Commission. It was planned by the superintendent, Mr. Fred Mather, and the designs were put into practical shape by a student in architecture. There is also a new engine house for the salt water pump, built by the employees of the station.

THE U. S. COMMISSION.—The bill has just been passed by Congress giving the Fish Commissioner a salary of five thousand dollars per year, and provides that he shall hold no other office under the Government as an amendment to the act of Feb. 9, 1871. It is certain that the present Commissioner, Prof. G. Brown Goode, has no desire to retain the place and he will no doubt resign, if he has not already done so. His great work of organizing and arranging the National Museum, of which he is justly proud, is preferred by him. The prominent candidates whom we have seen publicly named are: Col. Marshall McDonald, the present chief of the department of fishculture; Dr. Jerome H. Kidder, the Assistant Commissioner, acting as Commissioner at present during Prof. Goode's leave of absence; and Maj. Thomas B. Ferguson, late Assistant Commissioner and Acting Commissioner during the last illness of the late Prof. Baird. The appointing power lies in the President, who will no doubt make the choice within a few days.

THE PENNSYLVANIA COMMISSION.—The Anglers' Association of Eastern Pennsylvania will hold a reception in honor of the Commissioners of Fisheries of the State at 8 P. M., to-night, Jan. 19, at their rooms, No. 1020 Arch street, Philadelphia.

The Kennel.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 25 cents.

FIXTURES.

DOG SHOWS.

Jan. 24. to 29.—Augusta, Ga., Richmond County Poultry and Pet Stock.

Feb. 13 to 17.—First show Fort Schuyler Kennel Club, Utica, N. Y. E. J Spencer, Sec.

Feb. 21 to 24, 1888.—Twelfth Annual Show of the Westminster Kennel Club, Madison Square Garden, New York. James Mortimer, Superintendent.

Feb. 28 to March 2.—Show of Philadelphia Kennel Club. W. H. Child, Sec.

March 27 to 30.—Fourth Annual Show of the New Haven Kennel Club, New Haven, Conn. E. Sheffield Porter, Secretary.

April 3 to 6.—Fourth Annual Dog Show of the New England Kennel Club, at Boston, Mass. J. W. Newman, Secretary.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **5708.**

RULE NUMBER 2.

Editor Forest and Stream:

As everybody who takes any interest in dogs seems to be having a hack at Rule 2, on one side or the other, although I have always tried to avoid getting mixed up in dog politics, I feel inclined to say a few words as an owner, breeder and occasional exhibitor of setters and Chesapeake Bay dogs. When I say an owner and breeder, I mean that I have for sixteen years owned and bred a few dogs for my own use, although I have sold a puppy once in a while to reduce my expenses for board and training. It seems to me that the opponents of Rule 2 are making altogether too much of an outcry about that half dollar, and that those who are in favor of it, more especially those whose opinions on this subject should carry great weight with it, such as Mr. Belmont, Arnold Burges, etc., are really begging the question, and simply arguing that registration is advisable. That I also believe this, is proved by the fact that the few dogs I own are registered in both the *A.K.R.* and the A.K.C.S.B. In 1879 the first volume of the National American Kennel Club Stud Book was issued. After that I sent four dogs to be registered, and it was not until 1885 that the second volume made its appearance. Meantime the *American Kennel Register* was started, and for three years was the only stud book we had, and it certainly did good service. Among other good accomplished by it, I remember its exposure of a kennel here in Boston, the owner of which, by means of false pedigrees, was doing a thriving business in selling his stock all over the country. Although not "official," I know that the entries were examined before being printed, and appearing every month it afforded an opportunity, which was several times availed of, to anybody interested in that special breed to call attention to any mistakes or misstatements. In looking at my copy of the A.K.C.S.B. to see the number of entries, I find the last one in Vol. III., part 4, American Kennel Club Stud Book, which is the last one I have, as follows under Yorkshire terriers: "5397. Daisy (bitch), Charles Andrews Bloomington, Ill., whelped 1884; sky blue and tan." I would ask in all seriousness what that registration amounts to, even if it is in the "official" stud book?

With the premium list of the Westminster Kennel Club just received comes besides the entry blank, a form to fill out for registration, to be sent with the entries in order to make them eligible. What is to hinder my making out any pedigree I choose? As long as fifty cents goes with it it will be accepted. I think that this is going to be the great trouble, not that the entries in the bench shows will be so much diminished, although they certainly will be somewhat, as if anybody cares to pay $3 to show a dog he probably will not stick at fifty cents, sure, but that a mass of pedigrees, of a character approaching the above, will be forced into the "official" stud book.

It must be admitted that the only possible good that can result from such registrations will be that the financial condition of the A. K. C. will be benefited to the extent of fifty cents for each one. I must confess that it goes against my idea of fair play to have the A. K. C. take advantage of its so-called official position to force a distasteful rule on the dog owners of the whole country, the only object of which seems to me to be to get the better of the *A.K.R.*, more especially as in my humble estimation the latter has really been of more use to dog owners than the former. This, however, is of course only my personal opinion and proves nothing, but is it advisable that registration should be compulsory?

If Daisy, No. 5397, is a good specimen of the Yorkshire terrier, there is no possible reason why her owner should not show her and let her be judged on her merits, but to compel him before doing so to pay fifty cents for having her name, age and color registered is absurd, and the registration of a large number of similar "pedigrees" which must of necessity take place if Rule 2 is enforced will really stultify the object for which the stud book is compiled. In some breeds there are many fine specimens, of whose breeding their owners have no idea, or what is still worse, have been given by the irresponsible dealer from whom they were purchased, an entirely fictitious one. The various special clubs that are being formed are doing good work in correcting this, but I do not believe their labors will be helped by compelling registration and accepting everything that is sent as gospel—if it has fifty cents with it.

MIC MAC.

BOSTON, Jan. 15, 1888.

Editor Forest and Stream:

I am very much surprised that you would permit the statement to be made in your paper that the American Kennel Club was indebted on account of the stud book, when the fact is that the club has paid all bills and now has $800 and over to its credit in the bank. Again, it is not true that any money has ever been contributed by individuals. The stud book has more than paid its way, and the only money received has been for registration fees, advertisements and for the book. I believe that next year we can pay all expenses at 25 cents per dog.

Please also permit me to say that all this howl about "bulldozing" is mere bosh. You might as well say that it is "bulldozing" to have a bench show committee require an exhibitor to pay an entry fee of $3 for each dog. The registration of dogs is to preserve the pedigree. The giving of bench shows is not for the purpose of making money—the object is to encourage and improve the breeding of dogs. Just look at the contest now going on in your own paper over the breeding of the beagle Kino. If this Rule 2 had been in force when this dog was first exhibited the breeding would have then been settled.

I hope in the next issue of your paper that you will correct the statement you have made in regard to the financial condition of the club; and I will say that if you doubt my statement of the same, if you will send Mr. Hammond or an accredited reporter for your paper to the office of the A. K. C., No. 44 Broadway, I will take pleasure in showing him expense account, bank account, and all of the accounts of every name and nature, vouchers, etc., of the stud book committee.

I do not charge that you have knowingly made this misstatement, but believe that you have been imposed upon.

C. J. PESHALL, Chairman of Stud Book Committee.

NEW YORK, Jan. 7.

Mr. Peshall tells us that the stud book has been run so as to pay expenses. This we willingly concede; an examination of the account of the American Kennel Club with the stud book shows that the book has been so managed as to leave a balance in the club's favor. Nevertheless it is presumably true that our explanation of the feverish anxiety shown by the stud book clique to compel registration, was in substance correct, namely, that their real purpose is to bring in more funds than can be collected by voluntary registration. The stud book may have paid for itself as far as the club is concerned; to the uninitiated it may even show a profit, and still it may have been an expensive luxury, the burden of which those now supporting it are devising a way to unload on others. That is to say, the entire expense of the book is not paid by the club, but a portion of it is paid by individuals. If the present secretary is a gentleman of the brilliant parts claimed for him by his friends, it is quite clear that he cannot afford to give his talents and valuable time to the stud book for the paltry wages paid him by the club, namely, $400, or less than $8 a week. One of two suppositions will account for his sticking to the place. His ostensible wages of $400 have been supplemented by assessments on the individuals who were induced by discreditable motives to guarantee him a living salary in order that the book might be put through, and are now willing to let the public do the supporting by means of this tax; or else Mr. Vredenburgh has hung on at his $7.69 a week, in anticipation of something better when a hocus-pocus measure like compulsory Rule No. 2 should be put into operation for his benefit. We still adhere to the opinion that the rule was adopted far the sake of the money there was thought to be in it. Nobody will believe that Mr. Peshall and those with him are doing this out of any public spirited desire to preserve the pedigrees of dogs. Thousands of pedigrees worth preserving were taken care of long before the American Kennel Club came into possession of its stud book; the tendency of the times is toward more universal and careful pedigree records, and dog owners gifted with a normal degree of common sense will look out for their own interests without the intervention of any such gag law as Rule 2.

Editor Forest and Stream:

I am opposed to A. K. C. Rule 2 through principle, not that I am in favor of dispensing with a stud book altogether, but do not want any gag law in mine. I want the privilege to say what stud book I register in, or whether I register at all or not. There is one thing certain, a dog being registered in A.K.C.S.B. will not make that dog pure bred, for I could drive a carriage and pair through many dogs' pedigrees which are registered in public stud books, and I think Rule 2 of the A. K. C. will assist greatly in this respect. For instance: All dogs exhibited must be registered; well, now, what about all the mongrels that can be seen at all bench shows? I suppose an entry in A.K.C.S.B. will elevate these same dogs and make them blue bloods. Their owners will advertise the stock registered in A.K.C.S.B., and henceforth and forevermore this stock will be par excellence. I have entered dogs in this stud book, and perhaps might again, but I do not want any pulling by the ear. The kennel interests of this country are in their infancy, and any arbitrary laws will not help them to mature; nor be tolerated by the American public. I have, or should have, the privilege of registering in any reputable stud book. For instance, the South of Scotland Dandie Dinmont Society publish a stud book, or make entry of all pure bred Dandies and their offspring, and any member can enter his dogs free of charge. Should this not be sufficient for any man or breeder of these dogs? I have devoted time for years in hunting up private records, and have compiled them in my "Breeder's Kennel Record and Account Book," which I procured from FOREST AND STREAM, and I am willing to swear to the correctness of the same. But I do not feel like being taken by the nose and compelled to make public property out of what has taken me years to accumulate and what any breeder would be pleased to have, especially when procured without much trouble. To sum up, I most emphatically say that when I feel disposed to enter any dog in a public stud book, I will do so of my own free will and accord. My kennels of dogs rarely number less than thirty, and I feel as much interest in this matter as any other person, and I also say the New England Kennel Club can count upon some from my kennel (that will not be registered in A.K.C.S.B.) at their coming show.

JOHN H. NAYLOR.

CHICAGO, Ill., Jan. 11.

Editor Forest and Stream:

Mr. Wade writes me, "May I ask if you would write FOREST AND STREAM, authorizing them to republish the extract (herewith inclosed) over your name?"

If you think it worth while to do so, I give you authority, though had I intended my remarks for publication I should have couched them in little different language, though no language could better express my opinion. J. W. ASLOP.

MIDDLETOWN, Conn., Jan. 11.

The extract referred to above is the one given in the following note, which was printed in our issue of Dec. 29: "*Editor Forest and Stream:* The following is an extract from a note of an old friend, long a dog lover and exhibitor, but one who has never engaged in any controversy as to the A. K. C., its stud book, or anything connected with it. He

is thoroughly an impartial outsider, and, I am convinced, voices the sentiments of ninety-nine out of one-hundred of the class, when he writes me: 'Are you going to the New York show? It will be a poor one, I guess, owing to that idiotic rule about the stud book entries. What on earth got into them?'—W. WADE."

Editor Forest and Stream:

Will you please enlighten me through your paper as to Rule No. 2 American Kennel Club. I have been to considerable expense in importing from Japan some Japanese spaniels, and as I have not their pedigrees I would like to know if I will be allowed to exhibit them at New York show next month. I am thinking of calling on the superintendent of the Niagara Free Park to suggest the idea of a similar rule to No. 2, compelling every one who visits Niagara next season to purchase a guide book of C. E. LEWIS.

SUSPENSION BRIDGE, N. Y.

Editor Forest and Stream:

What do the members of the A. K. C. take us Yankees for? If they try to drive us they will find it much like driving hens; we shall go in every direction but the one they wish. Rule 2 would keep any dog of mine out of the shows.

The members of the New England K. C. are not the kind of men to be made to support a stud book unless they wish, and they have the best show in the circuit; and their stand in this matter will give them even more and better entries in April. The expense of dog shows is heavy enough without adding this useless one forced by Rule 2.

E. L. HANDY.

ESSEX KENNELS, Andover, Mass.

Editor Forest and Stream:

New England and New Haven wins will count. The proposed boycott of the Boston and New Haven shows, by refusing to recognize wins there this year, will "peter out" before the next bench show season comes around. If the New England Kennel Club and the New Haven Kennel Club give their shows under American Kennel Club rules, all except the compulsory registration clause, the A. K. C. will be compelled to recognize the prizes won there, just as they recognize prizes won at other shows which were given by clubs not belonging to the association. All talk to the contrary is for the express purpose of hurting the entry lists.

HUB.

Messrs. Craig, Niven, Tucker, Sanderson, Wade, Davey, Cryer, Barlow, Mercer, Sperry, Haldeman, Campbell, Huntington, Willey, Hopf, Dole, Shepherd, Alsop, Naylor, Lewis; Nickerson, Newman, Partridge, and other members of the New England Kennel Club; Osborn, Hemingway, Porter, and other members of the New Haven Kennel Club; Spencer and other members of the Fort Schuyler Club; the proprietors of the Clifton Kennels, Wyoming Kennels and Essex Kennels, and all other owners, breeders and exhibitors who refuse to obey compulsory registration Rule 2, are admonished to give heed and take notice. Mr. C. J. Peshall tells you that your opposition to his dictum is "mere bosh." As Mr. Peshall knows more about this than you do, you will all—the thirty of you who are named, and all the rest—see the propriety of putting away your "bosh" and submitting with the best grace possible.

At a meeting of the New Jersey Kennel Club, Jan. 17, after a protracted and animated discussion, it was voted that the club indorse Rule 2, excepting that it instructs its delegates to suggest a modification of it to the A. K. C., to the effect that all dogs without the proper qualifications (such as correct pedigree etc.) for registration shall not be registered.

To the Editor of the Herald: Mr. A. C. Collins, secretary of the Hartford Kennel Club, in an article published in your paper of the 6th inst., states that his club has not withdrawn from membership in the American Kennel Club. I hardly think the Hartford club in a position to withdraw, as its delegate made the motion which has caused all the kennel troubles. Mr. Mortimer, superintendent of the New York show, estimates a loss of 250 dogs for his show this year on account of the objectionable Rule 2. New York had about 750 dogs last year, so this rule will, if the proposition is carried out, make one-third reductiou to every dog show in the country. If this is true, what will Hartford do when it comes their turn—a club that has not paid its bills of last year yet? Hartford, perhaps, foresees this. It has decided not to have a show this season. It prefers to see the larger clubs fight it out.

Of all the shows which are announced for this season, Utica, Hornellsville, Atlanta, Boston and San Francisco are not to show under the rule which has caused all the trouble, leaving only New York and Philadelphia to stagger under it. The American Fox-Terrier Club have repudiated it by agreeing to pay registration themselves. The Westminster Club, I understand, will do likewise. The principle of the rule, I think, may be all right, but going into effect, as it does, Jan. 1, 1888, just before the coming show season, it hardly gives the bench show committee and exhibitors time to prepare for it. Had it been made to go into effect Jan. 1, 1889, I think there would not have been so much objection.

The rule is defective as it stands now, as the following case shows: The American Kennel Club Stud Book is published quarterly, the next issue appearing April 1. I have no idea of registering my dog, but am going to show him, so I make my entry at New York, Philadelphia, and any other shows that may be held by or before April 1. On the entry blank I write "registered." How are the managers to know whether the dog is registered or not? Some might say, write to the secretary of the American Kennel Club and find out. What a job if 300 or 400 of them come in marked the same way: then there is hardly time to write, as the entries close so near the time of opening the show. As a consequence my dog takes prizes at both shows and has never been registered. Perhaps when the American Kennel Club Stud Book comes out, April 1, somebody will notice that he has not been registered, but the chances are he will be forgotten after the shows. What a kick from exhibitors then!

Because all dogs that are entered in England must be registered is no reason why they should be registered in this country. There is quite a difference in kennel matters in the two countries. In England dog shows have been held since 1859, and the people better understand doggy matters, while in this country the people are comparatively young at the business, our first show of any importance having been held in 1879. It is only of late years that they have attracted much attention.

We have in this country two stud books, the American Kennel Club Stud Book, published quarterly by the American Kennel Club, and the *American Kennel Register*, published monthly by the FOREST AND STREAM. Should I register a dog in the A. K. C. S. Book on Jan. 1, 1888, it would be published April 1, 1888. Should there happen to be a mistake in printing (which happens in both), I notify the secretary of the A. K. C., who will have the correction in the issue of Aug. 1, a period of six months before I get my dog properly registered. Should I register him the same day in the *American Kennel Register* it will be published in the issue of Feb. 1, and should a mistake be made in that, I could get it corrected by March 1, a difference of four months; quite an essential point with breeders.

Can it be wondered at that people dislike being forced into registering in the A. K. C. Stud Book when they get just as much good and in quicker time by registering in the *American Kennel Register*? There is no one but thinks a stud book a great benefit to breeders, and that it will be more so in years to come, but it is not the nature of Americans to be driven, though they can be led.—"*A Fancier*" *in Boston Herald, Jan. 9.*

"AMERICAN KENNEL REGISTER."

Editor Forest and Stream:

The work of preparing the index of the *American Kennel Register* for 1887 has caused unavoidable delay in issuing the January number. Had last year's method of indexing been followed this would not have occurred, but in order to give a complete record for the year I undertook to index the dog shows. This was a very great task and took a great deal of time. I hope its value will render the *Register* more appreciated.

As some of our friends may be interested in knowing how we have withstood the recent shock, I take pleasure in saying that this month shows an increase of fifty per cent. over January 1887. An article on the English greyhound, by "Merlin," Mr. M. B. Wynn on the Crown Prince pedigree, and Birmingham prize list will be among the features.

THE EDITOR.

NEW YORK, Jan. 15.

EASTERN GREYHOUND COURSING CLUB.

THE circular published below explains itself. It is to be hoped that it will meet with a hearty response from lovers of the breed, and that the Eastern Greyhound Coursing Club will prove to be as successful as its most ardent supporters could wish:

"The subject of coursing hares having been under discussion among breeders and owners of greyhounds for some years past without producing any results in the right direction, the undersigned have determined to force the subject by forming the Eastern Greyhound Coursing Club, and thereby enjoy that most fascinating sport which is and has been for many years so popular in Great Britain and our West. The difficulty in obtaining hares has been the great drawback in years gone by, but this is now overcome by Mr. Max Wenzel, who has recently imported a very large number of German-English hares, and has purchased a preserve of sixty-five acres on which to breed them. He will, by July 1, 1888, be able to deliver us fifty brace of leverets (young hares). We have made arrangements with a Long Island property owner who will see that the young ones are neither disturbed, shot nor trapped, but preserved for our fall sport. The expenses attending the planting will be as follows: Fifty brace of hares, at $4 per brace, $200; feed of leverets while young, $10; rent of grounds and pay of keeper, $100; total, $310.

After the first year the plant will not need replenishing by more than ten brace. In order to defray all expenses, etc., we propose inaugurating the Eastern Greyhound Coursing Club with a membership of 25, with initiation fee of $10; dues, $5 per year. The result will be: 25 member at $10, $250; yearly dues at $5, $125. Total, $375. The surplus will be used for purchasing slips, blankets, flags, etc. The yearly dues will be used in extending the preserves and increasing the plant of the hares. The German-English hares average 10lbs., and, being very strong and fast, will afford grand sport. Considering the small initiation fee and yearly dues, and the great pleasure afforded by the sport, we feel sure of the hearty cooperation of all lovers of the greyhound, and this is our reason for asking you to join us. Our first meeting will be held at 148 South Eighth street, Brooklyn, E. D., Monday evening, Jan. 23, at 8 o'clock, where we hope to see you and enroll your name as a member of the club."

W. J. BLACKHAM.

THE COLUMBUS HOLOCAUST.

COLUMBUS, Ohio, Jan. 13.—*Editor Forest and Stream:* The second annual show of the Ohio Poultry, Pigeon, Kennel and Pet Stock Association came to a horrible end yesterday morning. Before sunrise the Fourteenth Regiment armory was destroyed by fire, and in the conflagration perished the entire collection of poultry and all but ten of the dogs.

The armory where the dogs were on exhibition was formerly a rink. It was of corrugated iron on the outside, with interior finish of pine, painted and exceedingly inflammable. The rafters of pine were profusely decorated with bunting, evergreens and other decorations, there was a great deal of sawdust and straw, the coops and benches were of wood, and everything was in tiptop shape for a fearful fire.

J. H. Ray, one of the watchmen, at 5:45 in the morning, went down and fired up the furnaces. Returning he found the St. Bernard Sir Charles loose, and while engaged in chaining up the dog, he smelled smoke, turned and saw a picture in flames; he rushed for an axe to tear the picture down, but could not do this before the flames had spread to the flimsy decorations, and he then gave the alarm. Before any help arrived it was too late to check the flames; the whole concern was a tinder box, which burned with unexampled fury and rapidity. Ray and the other attendants appear to have made some frantic attempts to unfasten the dogs, but no one will ever know just what was done, and the men say that even those dogs which they did succeed in unfastening shrank back into their stalls evidently overcome by terror.

The sights and sounds that followed will never be forgotten by those who gathered there powerless to rescue. As the flames got under headway the poor doomed creatures set up a wailing and moaning almost human in their awful despair and heart-rending in the intensity of their agony. Even the humming of the engines, the persistent pounding of the hose stream, the loud commands of the firemen, the crackling of the flames, the roar of the conflagration, the crashing of glass and thud of falling timbers, all these accustomed sounds of a great fire seemed here a hundred fold more terrible, when mingled with them was heard the awful medly of the dogs, yelps and barks and howls and wails and whines and moans and groans, in a hundred different keys and a thousand degrees of frenzy, defiance, despair; and with all this too the clanking of chains, the explosion of box after box of cartridges and the affrighted acclamation of the poultry.

There were men enough there who would have gone in to the rescue of some of the suffocating, roasting creatures had it been possible for a man to enter that fiery furnace and live but a moment. Some there were who, hearing in the cries of their dogs what sounded to them as appeals and reproaches, would have made the fatal plunge in their overwhelming anxiety to save their brute friends had not other hands held them back. Of all the dogs in the armory only one came out, the Gordon setter Royal Duke, owned by Mr. Hammett, of Philadelphia. Duke came out with a rush, singed and smoking, and was greeted with a cheer. The other dogs saved had been taken home from the show for the night, among them being Mr. S. L. Boggs's Paul Gladstone, which had been taken to a hotel.

In the absence of definite information, which I cannot obtain as the records were burned, it is impossible to give a correct list of the dogs lost. Among them are many that are well known and their loss is well nigh irreparable. The list includes the St. Bernards Sir Charles and Montrose; the English setters Keystone, San Roy's Boy and Lady Rock; the Irish setters Bruce, Max, Begorra, Glenduff, Zella Glenduff and Lorna Doone; the pointers Bow Faust, Patti M., Pap Smizer, Rumpty and Hamlet Sleaford; the cocker spaniel Keno, the collie Roy Boy and the fox-terrier Little Swell. Many well known kennels have lost nearly all of their best specimens, and a large number of individuals have lost the only dog they possessed. All with whom I have conversed have expressed the deepest sympathy for the owners whose losses have been so heavy and so sad. It has put a damper on dog shows in this city, but a damper, I am convinced, only of the most temporary nature. The show was so meritorious and the management was so good that it would be an aggravated calamity should our Ohio people not take heart and try it again another year.

By 7 o'clock the armory was consumed and the fire's work was done.

There has been much discussion as to the origin of the fire; the generally accepted theory is that it was due to a defective flue. Another subject of discussion has been the inadequacy of the force appointed to watch the building at night. The Association invited the exhibitors to appoint a committee to inquire into the Association's responsibility, and Messrs. C. W. Drake and J. S. Mock, representing the poultry interest, and Messrs. A. W. Hitch and S. L. Boggs, representing the kennel interest, acted as such a committee, with Col. A. B. Coit, representing the militia. The following finding was given by the majority, after examining the attendants and taking all available evidence:

We find that at the time of fire two men were on duty and three in the building in reserve. The alarm was given immediately after the fire was discovered. On account of the inflammable nature of the building and the muslin and cedar decoration the fire spread rapidly and in a few minutes the entire building was in flames. We are of the opinion that the fire could not have been subdued after discovered. We find no evidence that the fire originated on account of negligence. We do not find that there was negligence on the part of the association.—A. B. COIT, C. B. DRAKE, J. S. MOCK.

Messrs. Hitch and Boggs, however, were not disposed to assent to this report, and it is understood that they will present their views in a minority report. MORRIS.

[We hope to be able to give a full list of the dogs lost next week, and would be thankful if any one having a catalogue with the absentees marked would forward it to this office.]

THE CAMDEN MASTIFF CASE.

THE exaggerated newspaper reports of the savage disposition of two alleged mastiffs which attacked their owner in Camden, N. J., one day last week, have prompted gentlemen interested in that breed to investigate the affair. The following letters tell the whole story:

THE AMERICAN MASTIFF CLUB, NEW YORK.—Jan. 13, 1888. —*Editor Forest and Stream:* For the sake of the good name of the English mastiff I feel sure you will wish to publish this letter, written by a member of the club and one of the foremost breeders of mastiffs in America.—RICHARD H. DERBY, Secretary.

CAMDEN, N. J., Jan. 12, 1888.—*Secretary American Mastiff Club:* DEAR SIR—As I have received a number of letters from all over the country asking me to investigate the terrible accident which has happened to my friend and brother lawyer Thomas B. French, who was so terribly bitten last Sunday by two dogs, and as I have been for nearly twenty years a large breeder of English mastiffs and know well the dogs in question, I will write a short statement to you in order that the lovers of the mastiff can know that these dogs were mongrels, a cross between the St. Bernard and English mastiff.

Some six or seven years ago I owned a very fine English mastiff bitch Juno, and had her locked in one of my box stalls for service by my English mastiff stud dog. By accident my St. Bernard dog jumped into the stall and lined her. She had six mongrel pups, three short-haired and very much like a mastiff and three with longer hair, resembling the St. Bernard. I disposed of the bitch and all the pups. Two I presented to my friend Mr. French. I understand that the little child was playing with the dogs on Sunday and was knocked down in the play, which frightened her so much she cried for help. This brought Mrs. French to her rescue, and while she was bending over the child Mr. F. arrived on the scene (although up to this time neither the child nor Mr. French had been hurt) and went, as he supposed, to Mrs. French's assistance, and the moment he touched Mrs. French one of the dogs took him by the arm and commenced the attack. The theory is that the dogs were devoted to Mrs. F. and thought the husband was about to injure her, and therefore the attack to defend her. The fight after this was continued by Mr. French against both dogs, and Mrs. French by her nerve and pluck saved her husband's life, and in so doing received the injuries she sustained. My theory is that the dogs were under control of Mrs. French until Mr. French rushed out, and this seems to be the opinion of his partner, Chas. C. Garrison. Of course it is a well-known fact a mongrel of any kind is more dangerous than a thoroughbred. I never knew a thoroughbred English mastiff to injure any one and particularly children, although I have had as many as fifteen at a time; my children play every day with English mastiffs and I have no fear of anything like this taking place. Yours truly, EDWARD DUDLEY.

NEW YORK DOG SHOW.—*Editor Forest and Stream:* Mr. W. E. Livingston, of New York, will judge bulldogs and bull-terriers, and Mr. A. H. Wakefield, of Providence, R. I., will judge beagles. This completes our list of judges, with the exception of the judge of Chesapeake Bay dogs. We will make champion class for toy spaniels other than Japaneese, to be known as Class 125A, for champion King Charles, Blenheims, tri-colors and ruby spaniels, dogs and bitches. Prize $10. The following special prizes, in addition to those already announced, have been offered: $25 for the best field spaniel, $25 for the best Irish setter, a cup for the best litter of unweaned collie puppies, to consist of four, and a silver medal for the best rough-coated St. Bernard bitch, the property of a lady. We have received favorable replies from nearly all the railroads and express companies, and as soon as we have heard from the last of them we will announce it in detail.—JAS. MORTIMER, Supt.

THE HEMPSTEAD COURSING CLUB.—The second meeting of the Hempstead Coursing Club will be held at the Hempstead polo grounds, Hempstead, L. I., Jan. 28. There will be an open sweepstake for fox-terriers of 20lbs. or under at $3 each, with $20 added to winner; an open sweepstake for fox-terriers of 18lbs. or under at $2 each, with a cup added for winner; an open sweepstake for fox-terriers of 15lbs. or under, with a cup added for winner. The runner up in each event to receive 25 per cent. of stake. Entries close Jan. 25. The secretary's address is A. Belmont, Jr., 36 Wall street, New York.

PET DOGS POISONED.—Mr. Wm. H. Robinson, of 221 West Thirty-eighth street, this city, had the misfortune last week to lose his valuable pug bitch Gipsy and Newfoundland Rover. They were poisoned by strychnine, which had been put on fish and thrown into the yard of Mr. Robinson's residence, when the dogs ate it Thursday night. Mr. Robinson is at a loss to account for the motive which could have prompted the poisoner, and he has offered a reward for the detection of the scoundrel.

"GENUINE HYDROPHOBIA."

WE reprinted on Dec. 27 a clinical lecture delivered by Prof. Whittaker, on a "genuine case of hydrophobia," copied from the *Medical and Surgical Reporter* of Philadelphia. The editor of this journal now says, however, that "he has had access to some sources of information about this case other than that supplied by Prof. Whittaker's lecture, and that he has come to the conclusion that it was a case of lyssophobia." In fact, he says that there was no evidence that the man had ever been bitten by a dog at all, except his own belief that a little wound on his lip was caused by a blow from a dog's nose which drove it against his tooth. There was nothing wrong with him until he had an attack of dyspnœa when leaning over a tub of scalding water, and a neighbor told him that this was the way hydrophobia usually began. After that he at once began to show the usual symptoms, and finally died. The *Medical and Surgical Reporter* then goes on to intimate that hydrophobia is in most cases a disease of the imagination, made dangerous or fatal by the treatment usually resorted to.

But we warn our readers, it adds, that they need never expect to cure a patient supposed to have hydrophobia, if they watch him very closely, expose him at a public clinic, offer him water, inject morphine and chloral into him; and, above all, if they add the administration of curare to these measures. A careful study of the literature of hydrophobia shows that morphia, chloral, and curare—drugs commended in most of the books—are useless and probably dangerous, given, as they usually are, in cases called hydrophobia.

It then goes on to say that very few cases of hydrophobia will bear examination.

Let our readers take note that hydrophobia does not seem able to bear the face of scepticism; that it disappears where it is not talked about; that it flourishes where it is cultivated, as in France, and does not exist among savage and enlightened peoples. And let them sift carefully any case which seems like hyrophobia, as to its history and symptoms; let them eschew violence of act or of medication in treating it, and see what the result will be.

We must say that this view derives strong confirmation from what we may call the hydrophobia panics which ravage particular countries every few years. For long periods nobody hears anything about hydrophobia or ever sees a case of it, and then all of a sudden the dogs all seem to begin to bite, and scores of them run around mad every day, and there is a loud demand from people who do not like dogs for the extirpation of the entire canine race, and particular breeds are put under the ban, as being constantly on the verge of hydrophobia. After awhile the alarm dies out and there is no more hydrophobia for a decade or so.

The resemblance of these panics to the witch panics in old times is very striking, and the evidence of a very similar character. We all know that it was sometimes so strong that poor women were convinced by it that they were themselves really witches, and did commit the naughty tricks on their neighbors of which they were accused, and although they knew it would lead them to a shameful death. Some dogs, we have no doubt, are likewise driven into madness by the general expectation of the community in which they live, that it is about time for dogs to go mad and begin to bite. The fact seems to be that but few doctors ever see a case which they know to be hydrophobia, and we have been assured by perhaps the foremost dog dealer in the United States that in twenty years he had never seen a really mad dog, and although he has been bitten about two hundred times, he enjoyed excellent health, and was never startled by the sight of water, either hot or cold.—*New York Evening Post.*

KINO'S BREEDING.—Wrightsville, Pa., Jan. 9, 1888.—*Editor Forest and Stream:* The long-winded effusion of Mr. Schellhass contained in your last issue all sounds very well against myself, but, alas, for the truth of some of his statements, for he that is so anxious "to have truth prevail," has stretched this same truth. Or, is it possible that Mr. Schellhass has misunderstood my former letters on this subject? If so, I am disposed to overlook his failures and would recommend him to spend his leisure hours in a printing office and learn the value of punctuation. And now to the facts of the matter: Mr. Schellhass writes: "Mr. Krueger in a misleading contradiction wrote, 'Kino was imported and as well bred as any beagle living.'" So I did, but only as a quotation of what Mr. O'Shea had told me and not as an assertion of my own. " * * I will state that Mr. Dan O'Shea informed me verbally on several occasions that he would never give the true facts of Kino's breeding to Mr. Satterthwaite; Kino was imported and as well bred as any beagle living," is what I wrote. Subject for study for Mr. Schellhass: The value of the semi-colon after Satterthwaite. This, I think, will put a different light on Mr. Schellhass's misleading assertion. I am sorry to say that Mr. White has made a few mistakes, to put it mildly, in his letters to your journal and to Mr. Schellhass. As I said in my last letter to you, contained in your last issue, it was at the Pittsburg show of 1886 (not last spring) that Mr. White made his claims of being the breeder of Kino to me. What motive does Mr. White think I had at that time "to be afraid it would not sound as well to be out of Maybelle by Searcher as it would to call the dog imported." Mr. White further writes to Mr. Schellhass that he offered to show me a letter proving his claims. This I positively deny. Mr. White made no such offer to me; I have never refused to learn something concerning our beagles, or to read any letter offered for perusal unless the contents of such were of a private nature. As to my desire to pass Kino off as imported, every impartial reader of your valuable journal, who has read my letter contained in your last issue, will be convinced that this is untrue and that I am as anxious as any one to see the breeding of my dog established and that I would be pleased to know him one of the Searcher—Maybelle litter. But I leave it to you, Mr. Editor, whether I, or any one else, is warranted in claiming Kino as by Searcher—Maybelle on the strength of what has been written so far on this subject. If you deem the evidence sufficient, I know it will be the verdict of a disinterested judge and I will accept it, but I cannot take it upon myself to claim Kino bred as claimed by Mr. White upon the evidence so far given.—A. C. KRUEGER. [Mr. Krueger is certainly justified in demanding full proof from Mr. White that his statement as to the breeding of Kino is correct.]

THE CHAMPION RULE.—Leesburg, Va., Jan. 6.—*Editor Forest and Stream:* Having a high regard for your opinion, and seeking information upon a subject with which you are familiar, I ask you kindly to render an opinion on the following: Prior to, and including the year 1884, a dog winning a first prize in any show recognized by the A. K. C. was rendered eligible to the champion class. Subsequently the rule was changed, making three first prizes necessary to attain that distinction. During the year 1884 my pointer Fritz won second in open class and first in winning brace with Pilot and special at Washington, D. C.; also first prize and special in the open class, New York, 1884; was entered in the champion class and won at Chicago, 1884, and was again entered in the champion class at Cincinnati the same year. Now the A. K. C. recognize the awards of all these shows for the year 1884. The question is, to what class does Fritz belong? My opinion is that the recognition of the award at the Chicago show of 1884 by the A. K. C. prevents him from going into the open class.—C. W. LITTLEJOHN. [Fritz is not eligible to the champion class, having won but two first prizes. Although one of them was won in the champion class, the rules distinctly state that three firsts must have been won; consequently he must be entered in the open class.]

BOSTON DOG SHOW.—The premium list of the New England Kennel Club's fourth annual dog show will soon be ready for distribution. The cash prizes will aggregate some $600 more than last year, and many valuable special prizes will also be offered. There will be thirteen kennel prizes of $25 each, and two of $15 each. The judges, so far as appointed, are: For mastiffs, deerhounds, greyhounds, Newfoundlands, Great Danes, spaniels and dachshunde, Charles H. Mason. St. Bernards and pugs, Miss Anna L. Whitney. English and black and tan setters, Dr. Wm. Jarvis. Irish setters, Wm. Dunphy. Foxhounds and beagles, N. Elmore. Bulldogs, bull-terriers, Yorkshire, Skye, Scotch, black and tan and other terriers and toy spaniels, Edward Lever. We shall probably be able to announce the remainder of the list next week. Wm. Tallman will superintend the show.

NEW BEDFORD DOG SHOW.—We have received the premium list of the eleventh annual exhibition of the Southern Massachusetts Poultry Association. The department devoted to dogs provides for 130 classes, the premiums in each class being 60 per cent. of entrance money to first, 30 per cent. to second, and highly commended to third. A large number of special prizes will be given, and the winner in nearly every class will receive one. There will also be kennel prizes for the prominent breeds, ranging in value from $10 to $25. Mr. Charles H. Mason will judge all classes. Entries close Jan. 27, and will be received regardless of the new registration rule. The address of the superintendent is C. T. Brownell, New Bedford, Mass.

IRISH SETTER PEDIGREES.—*Editor Forest and Stream:* The undersigned would be glad to hear from all persons who have purchased Irish setter puppies from Mr. Howard Ireland, alias Associated Fanciers, alias Philadelphia Kennels, located at 237 South Eighth street, Philadelphia, as being by Bruce out of Lady Red or other bitches; would like to see the pedigree furnished with the puppies, which will be promptly returned.—I. HENRY ROBERTS, Box 153, Moorestown, Burlington county, New Jersey.

DEATH OF NEWTON ABBOT.—Mr. A. C. Wilmerding has had the misfortune to lose by death his promising young spaniel dog Newton Abbot, who was run over by the cars Jan. 4. He was a dog well thought of by fanciers of the breed and had won several prizes including first at Buffalo, Philadelphia and New York last year. He was bred by Mr. Wilmerding and was by Black Prince and out of Newton Abbot Lady.

FOX-TERRIER IMPORTATION.—The Blemton Kennel has recently imported the fox-terrier dog Dusky Trap, and the bitch New Forest Ethel. Trap was whelped April 1886, and is by Dusky Splinter (Splinter—Dusky) and out of Spider (Dunner—Sybil II.). Ethel was whelped May 16, 1886, and is by New Forest (Splinter—Olive II.) and out of Auburn (The Belgravian—Brockenhurst Gem).

THE AMERICAN SPANIEL CLUB.—At a meeting of the executive committee of the American Spaniel Club, held at New York, Jan. 11, it was unanimously resolved that the members be requested to vote on the following question: "Shall the club funds be distributed at shows where compulsory registration is enforced?" The vote is to be counted Jan. 21.

MASTIFF IMPORTATION.—The Wacouta Kennels of St. Paul, Minn., have just imported the mastiff bitch Ilford Comedy, in whelp to the noted English winner, Ilford Chancellor. Ilford Comedy is by champion Orlando and out of Idalia, and is full litter sister to E. H. Moore's Ilford Coroner.

AMERICAN COURSING CLUB.—*Editor Forest and Stream:* The third annual meeting of the American Coursing Club will be held Oct. 15, 1888, at Great Bend, Kan.—FRANK K. DOAN, Secretary (1,210 Olive street, St. Louis, Mo.).

NEW HAVEN DOG SHOW.—*Editor Forest and Stream:* The fourth annual dog show of the New Haven Kennel Club will be held at New Haven, Conn., March 27 to 30, 1888.—E. SHEFFIELD PORTER, Secretary (New Haven, Conn., Jan. 16).

SWEEPSTAKES AT PHILADELPHIA SHOW.—The time for receiving entries for the puppy sweepstakes at the show of the Philadelphia Kennel Club has been extended to Feb. 18, the time of closing of entries for the show.

COLLIE SWEEPSTAKES.—The time for the closing of the entries for the second annual collie sweepstakes, to be decided at the coming show of the Westminster Kennel Club, has been extended to Feb. 6.

IRISH SETTER DOG FOUNT.—If any one has lost an Irish setter dog, address, giving full particulars, H. Clay Glover, 1,293 Broadway, New York.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Leo. By Wm. M. Bullivant, West Newton, Mass., for dark orange and white St. Bernard dog, whelped Oct. 23, 1886, by Merchant Prince (Bayard, Sr.—Pastime) out of imported Dorris.

Ilford Rex. By Harry F. Woods, Cincinnati, O., for fawn mastiff dog, whelped Nov. 13, 1887, by Ben Adam (A.K.R. 4733) out of Lady Zara (A.K.R. 2627).

Col. Black Pete. By Dr. J. T. Wheelock, Waterbury, Vt., for black cocker spaniel dog, whelped Nov. 13, 1887, by Black Pete (A.K.R. 3071) out of Vida (Obo II.—Topsy B., A.K.R. 3317).

Maryland Kennels. By A. L. Bosley, Baltimore, Md., for his kennels of beagles, St. Bernards and fox-terriers at Towson, Md.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Nancy Rake—Don Petrel. A. P. Gardner's (Hamilton, Mass.) English setter bitch Nancy Rake (Rake—Phyllis) to W. Tallman's Don Petrel (Don Juan—Petrel III.), Jan. 10.

Belle—Don Petrel. A. W. Leroy's (New York) English setter bitch Belle (Duke of Beaufort—Fairy) to W. Tallman's Don Petrel (Don Juan—Petrel III.), Jan. 2.

Pride—Turk II. Minnehaha Kennels' (Minneapolis, Minn.) mastiff bitch Pride (A.K.R. 1516) to their Turk II. (A.K.R. 2222), Dec. 8.

Nora Whaite—Tipton. M. M. MacMillan's (Mahanoy City, Pa.) setter bitch Nora Whaite (Honest Harry—Vic) to Dr. J. R. Housel's Tipton (A.K.R. 1093), Jan. 2.

Elsa—Apollo. Eugene Stevenson's (Paterson, N. J.) St. Bernard bitch Elsa to St. Bernard Breeding Club's Apollo, Dec. 29.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Druidess. Minnehaha Kennels' (Minneapolis, Minn.) mastiff bitch Druidess (Nero—Lioness), June 10, six (four dogs), by their Turk II. (A.K.R. 2222).

Virginia. C. W. Littlejohn's (Leesburg, Va.) pointer bitch Virginia (A.K.R. 1357), Jan. 4, eight (two dogs), by his Fritz (A.K.R. 1351).

Pet. Wyoming Kennels' (Melrose, Mass.) pug bitch Pet (imported Rep—imported Vic), Dec. 24, four (three dogs), by Chequasset Kennels' Chequasset Diamond (A.K.R. 4595).

Beauty. H. Chapman, Jr.'s (Ridgewood, N. J.) spaniel bitch Beauty (——Nellie), Nov. 28, five (three dogs), by A. C. Wilmerding's Black Prince (Benedict—Madcap).

Gemme. St. Bernard Breeding Club's smooth St. Bernard bitch Gemme (Apollo—Bernice), Jan. 1, three (one dog), by their Victor Joseph.

Kara. St. Bernard Breeding Club's smooth St. Bernard bitch Kara (Mentor—Brunhild), Dec. 12, eleven (eight dogs), by their Apollo.

Flora. St. Bernard Breeding Club's smooth St. Bernard bitch Flora (Barry—Favorite), Dec. 2, twelve (six dogs), by their Victor Joseph (Beauchief—Bertha).

Gypsie Maid. Frank Gowen's (Tamaqua, Pa.) English setter bitch Gypsie Maid, Jan. 10, five (four dogs), by E. W. Jester's Glen Rock (A.K.R. 1616).

Sally. Geo. Lauman's (Yonkers, N. Y.) Irish setter bitch Sally (Chief—Princess Alice), Jan. 10, eight (five dogs), by Max Wenzel's Tim (Biz—Hazel).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Vida. White, black and tan beagle bitch, whelped April 29, 1886, by Ringwood out of Belle, by P. M. Carman, Wrightsville, Pa., to A. C. Krueger, same place.

Ruby. Black, white and tan beagle bitch, whelped April 10, 1886, by Bret out of Pride, by P. M. Carman, Wrightsville, Pa., to F. M. Bennett, Cranford, N. J.

Trifle. White and ticked beagle dog, whelped Dec. 4, 1884, by Ringwood out of Bush, by P. M. Carman, Wrightsville, Pa., to E. P. Eastman, Lancaster, N. H.

Gipsy. Black, white and tan beagle bitch, whelped May 15, 1887, by Rover out of Silk, by P. M. Carman, Wrightsville, Pa., to Associated Fanciers, Philadelphia, Pa.

Fly. Black, white and tan beagle bitch, whelped May 15, 1887, by Rover out of Silk, by P. M. Carman, Wrightsville, Pa., to A. C. Krueger, same place.

Trifle. White and ticked beagle dog, whelped Dec. 4, 1884, by Ringwood out of Bush, by A. C. Krueger, Wrightsville, Pa., to P. M. Carman, same place.

Ruby. Black, white and tan beagle bitch, whelped April 10, 1886, by Brit out of Pride, by W. S. Clark, Linden, Mass., to P. M. Carman, Wrightsville, Pa.

Victor. Black, white and tan mottled beagle dog (A.K.R. 3191), by Associated Fanciers, Philadelphia, Pa., to P. M. Carman, Wrightsville, Pa.

Ilford Rex. Fawn mastiff dog, whelped Nov. 18, 1887, by Ben Adam (A.K.R. 4733) out of Lady Zara (A.K.R. 2627), by James W. Bullock, Mt. Auburn, Cincinnati, O., to Harry F. Woods, Cincinnati, O.

Newton Abbot Count. Black spaniel dog, whelped June 5, 1887, by Black Pete out of Newton Abbot Lady, by A. C. Wilmerding, New York, to A. F. Hyde, same place.

Turk II. Light fawn mastiff dog (A.K.R. 2222), by Minnehaha Kennels, Minneapolis, Minn., to John Hopwood, Menomonee, Wis.

Druidess. Light fawn mastiff bitch, whelped July 2, 1883, by Nero out of Lioness, by Minnehaha Kennels, Minneapolis, Minn., to L. H. Pinkham, same place.

Cyclone. Fawn brindle mastiff dog, whelped March 1, 1886 (A.K.R. 5139), by Minnehaha Kennels, Minneapolis, Minn., to A. N. Sawyer, Sycamore, Ill.

Sprite and Flaunt. Black, white and tan beagle bitches, whelped June 7, 1887, by Bob out of May, by P. M. Carman, Wrightsville, Pa., to Associated Fanciers, Philadelphia, Pa.

Drive, Gipsy and Fly. White, black and tan ticked beagle dog and black, white and tan bitches, whelped May 15, 1887, by Rover out of Silk, by E. P. Eastman, Lancaster, N. H., to P. M. Carman, Wrightsville, Pa.

Wyoming Duke and Wyoming Duchess. Fawn mastiff dog and bitch, whelped Nov. 17, 1887, by Monarch (A.K.R. 5507) out of Salva, by Wyoming Kennels, Melrose, Mass., to Fred'k D. Pierce, Boston, Mass.

Turk II.—Druidess whelps. Mastiffs, whelped June 10, 1887, by Minnehaha Kennels, Minneapolis, Minn., an apricot fawn dog to M. B. Cottrell, Clarence, Ia.; a light apricot fawn dog to Chas. C. Sidler, Milwaukee, Wis.; a dark stone fawn dog to E. Fitzsimmons, Jacksonville, Ill., and a fawn brindle dog to John C. Haskell, Columbia, S. C.

Ben Adam (A.K.R. 4733)—Lady Zara (A.K.R. 2627) whelp. Brindle mastiff dog, whelped Nov. 18, 1887, by Jas. W. Bullock, Mount Auburn, Cincinnati, O., to Mortimer Matthews, Glendale, O.

Bob—Mary whelps. Five black, white and tan beagle bitches, whelped June 7, 1887, by N. Elmore, Granby, Conn., to P. M. Carman Wrightsville, Pa.

Maid of Kent. White, black and tan English setter bitch, whelped April 27, 1887, by British Rock out of Lemah, by George Jarvis, New York, to Jas. H. Yong, Tuckahoe, N. Y.

Fawn. Black and tan collie bitch, age and pedigree not given, by H. D. Brown, Waterbury, Vt., to E. B. Cobb, Stowe, Vt.

Queen. Black and tan collie bitch, age and pedigree not given, by H. D. Brown, Waterbury, Vt., to D. W. Phillips, Moretown, Vt.

Mattie B. Black cocker spaniel bitch, whelped Oct. 30, 1887, by Black Pete, jr., out of Althea (A.K.R. 842), by H. D. Brown, Waterbury, Vt., to W. S. Whisler, D.D.S., Calumet, Mich.

Big Ben. Brindle Great Dane dog, whelped Sept. 3, 1887, by Thyrus II. out of Helen, by H. D. Brown, Waterbury, Vt., to Jo Wells, West Randolph, Vt.

Mainspring—Ferry whelp. Lemon and white pointer bitch, whelped Sept. 12, 1887, by Frank Rivers, Bridgeport, Conn., to F. A. Nims, Monroe, Mich.

DEATHS.

Gypsey C. Liver and white pointer bitch, whelped Aug. 14, 1886 (Croxteth—Van), owned by W. F. Wood, Portland, Me., from poison.

Asphodel. Lemon belton English setter bitch, age not given (Rockingham—Cora of Wetheral), owned by Roscecroft Kennels, Birmingham, Conn., Jan. 11.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

T. M.—It is not at all necessary.

C. E. B., Riverpoint.—It looks very much as though your dog had been poisoned with phosphorus. It is a pity you did not have the other bottle analyzed.

E. W. R., Taunton, Mass.—We think your puppy has worms. Purge with castor oil, and follow this in three or four hours with 20 grains of areca nut powder, made into a pill with lard. Follow this in four hours with another oil purge. Feed only milk for three or four days.

W. E. S., London, Ont.—My cocker bitch has a continual discharge from the eyes, which is so slight as never to reach more than an inch down her cheeks. She also is very jerky in her breathing, as noticed on her side when lying down. Ans. Give five drops of Fowler's solution twice daily in the food.

H. W. E., Brooklyn.—My pug dog seems to have a cold; he snuffles and his eyes run somewhat, and after he has had a run at night he has a chill, followed by fever. I gave him castor oil and that appeared to relieve him. Will you please advise what next to do? Ans. Keep the bowels open with syrup of buckthorn in teaspoonful doses once daily. Give five grains of quinine in pill form night and morning. You may conceal the pill in a small morsel of meat.

A. E., Syracuse, N. Y.—About six weeks ago my large 5-year old St. Bernard dog was taken with the distemper. Our veterinary surgeon gave him granulated sulphite soda and chloride of potash. We gave him as much as would lay on a ten-cent piece twice a day for two weeks. He grew worse. Now he has a jerking in his stomach. He can take a few steps only at a time. He has a good appetite for meat but nothing else. Ans. Give your dog two compound cathartic pills hidden in a piece of meat. Give five grains of quinine, morning and evening, in pill form. Give very little or no meat. Report results.

At Belleville, Republic county, Kan., last Saturday, while R. H. Gallagher and a force of workmen were excavating for the purpose of sinking a coal shaft, near the north line of the city, a hard substance was encountered about 6ft. from the surface. The workmen supposed it was an ordinary ledge of rock, but upon removing the dirt surrounding it, preparatory to blasting, they found what proved to be a petrified buffalo. It is of large size and as perfect a specimen of the bison as ever roamed the plains of Kansas. The buffalo will be shipped to Topeka and placed on exhibition in the Rock Island Station.—*St. Louis Globe-Democrat.*

SMALL CALIBRE MILITARY ARMS.

Editor Forest and Stream:

As various absurd accounts have appeared in American papers, during the last few months, respecting the new small calibre repeating rifles about to be adopted in European armies, I send the following details of the most important facts connected with the barrels and shooting, the accuracy of which may be relied upon. The chief object in reducing the gauge were:

1. To enable soldiers to carry the greatest possible number of rounds of ammunition.

2. To obtain the flattest possible trajectory up to the ranges within which battles are usually decided, that is up to 500 or 600yds.

The experiments have mostly been made with calibres varying from .298 to .312 of an inch, with bullets from 218 up to 312grs. weight, and with powder charges of 55 to 83grs.

In the .450 rifle, Whitworth proved years ago that the best results were obtained with bullets three diameters in length, and with a rifling of one turn in about 20in. With such small bores as .300 the length must be greatly increased in order to have bullets heavy enough for good work at 2,000yds. They are, therefore, made fully four diameters in length. Some specimens which I possess of .307 gauge weigh 218grs.

To keep such a long bullet point foremost a very rapid spin is necessary. The grooves are accordingly made, in the best specimens of these weapons, with one twist in from eleven to four and a half inches. In a rifle which I was allowed to examine while traveling on the continent last year, both lands and grooves seemed to be rounded, so as to leave no sharp angles for collecting the fouling, or causing unnecessary friction.

It was still found that, with such very rapid twists and heavy charges, the friction of naked lead bullets wore out the grooves very quickly. To remedy this, and also to increase penetration, the bullets are covered with cases of other metals, rather thick at the point and shoulder and diminishing to the thinness of writing paper at the base, so as to be easily moulded by the lead into the grooves. Copper, nickel and steel have been chiefly employed, and the use of the last named probably originated the report which appeared, that the French were trying steel bullets with great success. It is, of course, evident that steel alone would not possess sufficient weight for long ranges. As a casing, its toughness and smoothness give it great advantages, but these are counterbalanced by its tendency to rust, to prevent which it has since been nickelplated inside and out before putting in the lead, with what success I have not yet heard.

One of the best of the rifles is that invented by Dr. Hebler, of Switzerland. It is of .307 gauge, with a bullet of 225grs. and a powder charge of 83grs. The grooves have one turn in 15¼cal. or about 4⅓in. The muzzle velocity of the bullet is 1,942ft. a second, and the height of the trajectory up to 500yds. is under 5ft.

The Enfield-Martini rifle of .300 gauge, with its bullet of 385grs. and 85grs. of powder, has a trajectory for 530yds. two feet higher than the Hebler, or slightly less than 7ft. At 1,000yds. the Enfield-Martini bullet has a curve 35ft. high and the Hebler only 30ft. The Enfield-Martini is far superior in its trajectory to any rifle at present used in European armies.

To go into all the details of these small-bore rifles would require a long article, but it may be added that the difficulty connected with fouling has been quite overcome, and that the accuracy (at least in calm weather) is greatly superior at 1,000yds. to that of the Enfield Martini, which again is superior to the Martini Henry.

Attempts have been made to use larger charges of powder by compressing them into solid cakes with a small passage through the center reaching down to the cap chamber. The powder thus burns from the center to the circumference and the recoil is diminished, but the full advantages of repeating rifles for war purposes will not be attained until the invention of a safe and reliable smokeless powder.

The military breech action of the future will certainly be on the bolt principle, which has some important advantages over the older lever actions, like those of the Winchester and Bullard, however well adapted the latter may be to hunting purposes.

The French report very favorably of a powder which they are trying, composed of picrate of ammonium and nitrate of potash, but there is at present some uncertainty whether it is superior to the ordinary smokeless powders produced by the action of nitric acid upon some form of woody fibre.

The fact of the most prominent military authorities in Europe being anxious for the adoption of these small-bore rifles, shows that they consider the advantages of light ammunition and flat trajectory to be so enormous as to make up for all deficiencies, but it is certain that such very small bullets have some disadvantages which seem to my mind, capable, in certain situations, of causing serious losses if not actual defeat to an army using them. J. J. MEYRICK.

DUBLIN, Dec. 13, 1887.

RANGE AND GALLERY.

CANADIAN RIFLEMEN.—The annual meeting of the council of the Province of Quebec Rifle Association was held at the brigade office on the 21st ult. At no previous time within the past five years has the association been in such a satisfactory condition, not only financially, but respecting also the interest exhibited by the representatives of affiliated associations and by the public generally. Though the entries in 1886 showed an increase of 50 per cent. over those of the preceding year, a still further increase is recorded for 1887, the total being this year 2,023 individual and 43 team entries, against 1,534 individual and 36 team entries for 1886. The largest number of entries in any regular match was 144. In the extra series at 500yds. there were 452 entries.

On the subject of ranges the report, after explaining the causes which made the abandonment of Point St. Charles necessary, says: "We are now absolutely without ranges. The D. A. G. requested a number of officers to act as a committee of search, with the view of ascertaining what properties there were in the vicinity of Montreal which would be suitable for the purpose. They have made a report which we believe has been forwarded to the Minister of Militia, and an answer is expected every day. This will decide the situation of Montreal's future rifle range, which we earnestly hope will be a permanent one." The following officers were elected for the ensuing year: Chairman of Council—Lieut.-Colonel Van Straubenzie, D. A. G. Treasurer—Lieut.-Col. Martin. Secretary—Major Blaiklock. Finance Committee—Lieut.-Cols. Brosseau, Fraser and Major Bond. Auditors—Capt. Fair and Lieut. J. G. Ross. Representatives to the D. R. A.—Lieut.-Col. Brosseau, Majors Blaiklock and Bond, Capts. Hood and Sims. Vice-Patrons—The general officer commanding the militia, Lieut.-Cols. Fletcher, C. M. G., Harwood, Hutton and Lyman, Hon. J. A. Chapleau, Hon. D. A. Smith, Hon. John Hamilton, Sir George Stephen, Senator Thibaudeau, Messrs. Alex. Murray, Joseph Hickson, Geo. W. Stephens, Geo. A. Drummond, Robert Hamilton (Quebec), Gilbert Scott, Andrew Allan, James Sicssor, Hector McKenzie, L. J. Forget, H. McDougall, Duncan McIntyre, R. B. Angus, H. M. Allan, A. F. Gault, Hon. J. Shehyn, Hon. James McShane, W. J. Buchanan, R. R. Grindley, George Hague, Wm. Weir, Ald. J. Grenier, A. M. Crombie and J. Murray Smith.

Officers of the Nova Scotia Provincial Rifle Association were elected as follows, at a meeting of the new council held at Halifax on the 11th ult.: President, Lieut.-Col. MacDonald, 66th P. L. F. First Vice-President, Lieut.-Col. Mackintosh, 63d Rifles. Second Vice-President, Lieut.-Col. Curren, 1st Halifax G. A. Treasurer, Lieut.-Col. Mackinlay. Secretary, Major Weston, 66th P. L. F. Council, Major-Gen. Laurie; Lieut.-Col. Murray, Supt. stores; Major Walsh, 63d Rifles; Capt. Barnhill, 78th batt.; Capt. Garrison, H. G. A.; Capt. Harris, H. G. A.; Capt. Crane, 63d Rifles; Capt. Curren, H. G. A.; Capt. Cunningham, 63d Rifles; Capt. Brown, P. L. F.; Major Church, 93d batt.; Capt. King, 75th batt.; Lieut. Maxwell, H. G. A.; Lieut. Blackburn, 78th batt.; Lieut. Cassidy, 63th batt., and Lieut. Dimock, 78th batt. Major Weston and Capts. Garrison and Crane were elected representatives on the council of the Dominion Rifle Association.

HAVERHILL, Mass., Rifle Club, Jan. 14, 200yds., off-hand, standard target:

H E Tuck	6	9	10	9	9	10	8	8	10	5—84

F J Lounsbury	4	5	4	4	4	4	3	5	4	5—42

BOSTON, Jan. 10.—The Massachusetts Rifle Association, represented by 50 members, met at Young's this evening to elect new officers and eat the annual dinner. Colonel Horace T. Rockwell presided at the business meeting, as he did at the banquet. After the reading of reports at the business meeting the following officers were unanimously elected: President, Horace T. Rockwell; Vice-Presidents, J. B. Fellows and N. C. Nash; Secretary, Henry S. Harris; Treasurer, Geo. R. Russell; Directors, W. L. Chase, Dr. F. Chase, O. R. Dickey, H. W. Eager, J. P. Frost, J. B. Fellows, C. W. Hinman, Henry S. Harris, N. C. Nash, H. T. Rockwell, Geo. R. Russell, F. J. Rabbeth, J. S. Sawyer, Solon Wilder and E. J. Wardell. After dinner speeches were made by Colonel Rockwell, ex-President Lucius L. Hubbard, recently returned from abroad; Jas. Nichols Frye, Dr. Gerrish, Major J. P. Frost, who told about the Chicago trip of the rifle team; J. C. Sawyer, Mr. Cooper, of Exeter, N. H., and others.

IRA PAINE.—The chevalier is very sensitive about his Boston record, and wites to the *Herald* of the Hub as follows from Cleveland: "During my visit to St. Louis last week I broke all previous records made in the gallery of the St. Louis Pistol Club. My score was 120 out of a possible 120, at 22yds., shooting through a 2in. bull, and was 120 out of a possible 120, shooting through a 1in. bull; at 12yds.—that is, 10 shots all bulls and clean scores on each of the targets. This record was made in the presence of Mr. Perret, president of the club, and on a night of the weekly shoot when at least twenty members of the club were present. The Bennetts have got themselves in bad odor among the amateurs all through the West. Everybody of great consequence, of course, knows that the score of 914, which is said to have been made by one of them, is all a bluff. I will give either of the Bennetts, or any man in the world, $1,000 to duplicate my score of 909 with a .44-caliber Smith & Wesson revolver on the regulation American target. The game the Bennetts played of shooting against my record was a fine job, but a thing I call cowardly. To begin their so-called record breaking when I was in Michigan deer shooting, and to gain notoriety by beating 'Paine's' record made under difficulties, is no credit to anybody."

Subsequently the following challenge was received from Chevalier Paine. It is self-explanatory:

To the Editor of the Herald: As I am now and then reminded of the recent (said to be) best on record pistol score of W. W. Bennett—and all the respectable weeklies have published it as "the alleged" score—it simply has no value whatever, and in all likelihood never was made.

Now as there may be a lingering doubt with a few people (a very few) I issue the following challenge to the world:

I will shoot a match of 500 shots each—under the same conditions as recent trials (half to be shot in Boston and half in Providence) against any man in the world, and will bet $2,000 to $1,500 on myself. I shall be prepared to shoot any week in March, if notified within ten days through the *Boston Herald*. Now, gentlemen of Boston, if you think you have a good man, come to the front and back him. Let us have no more record breaking when a man happens to be away deer shooting, therefore unable to defend himself. I hold a magnificent gold medal, given me by the military commandant of Vienna, inscribed "Master Shot of the World." I will throw this in as well and let the winner take it. It is worth over $100.

I wish in any event if a match is made for the *Boston Herald* to be stakeholder. I would most respectfully ask you to take no notice of any reply unaccompanied by a substantial forfeit. You can draw on me at sight for any or all of my proposed stakes, in case you are satisfied any one means business. The "Lancers" surely ought to do something for the member of their organization. CHEVALIER IRA PAINE,

Master shot of the World, so designated by Gen. Von Kamcke, German minister of war.

CLEVELAND, O., Jan. 12.

SPRINGFIELD, Mass., Jan. 13.—The tie between Lieut. A. E. Chantler, St. Paul, Minn., and Mat Gindele, Cincinnati, O., to decide the first position (each making a score of 431 points in 50 shots) in match No. 4, second series, for the individual champion gold badge, offered by the Bullard Repeating Arms Co., will be shot off on their respective ranges Feb. 22 next. Mat Gindele won the first match of this series and is now tied with Lieut. Chantler. —BULLARD REPEATING ARMS CO.

CENTRAL VALLEY RIFLE AND ROD ASSOCIATION, Central Valley, N. Y.—At a meeting Jan. 7 the following officers were elected for the year: President, Dr. Jas. F. Ferguson; Vice-President, H. L. Leonard; Secretary, E. F. Payne; Treasurer, Wm. Tietjens; Trustees, L. Hawes, H. W. Hawes, H. W. Burr.—E. F. PAYNE, Secretary.

ROME, N. Y., Jan. 14.—Mr. Will A. Parker to-day shot his fifth string at 100 composition balls tossed in the air. He used a "special Winchester" rifle, .22-cal., made especially for him by the W. R. A. Co. The day was warm, and as a result some very good shooting was done. Out of the first hundred only two misses appeared, and the next string was a full score; 95 were broken on the third and 97 on the fourth attempt. The fifth attempt, made to-day, scored 98 hits and two misses. This brings the score up to 488 out of 500, with such runs as 133, 87, 81. The score by 50s is as follows: 50, 48, 50, 50, 47, 48, 49, 48, 48, 50—488—500. Of the first 244 shots only two misses occurred. The last 30 balls were hit in considerably less than a minute and only one person to put up the balls.—NIMROD.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

BUFFALO, Jan. 11.—Yesterday the Audubon Club had a shoot at the Buffalo Driving Park, two teams of eighteen men each competing. The teams consisted of the following: First team—Capt. Downs, Shwartz, Scott, Auel, Poole, Franklin, Almor, Jacus, Manning, Sukow, Story, Dingens, Sheibert, Fisher, Longnecker, Jaeger, Roberts, Klank. Second team—Capt. Vine, Cornelius, Metzger, Schultz, Riegelmann, Heinz, Collins, Beier, Heinold, Hoeing, Smith, Erb, Gerot, Besser, Jones, Minton, Clark, Stern. The contest was at live pigeons, 10 each, at 21yds. rise, plunge trap, for a supper. Capt. Vine's team won by a score of 122 to 115.

NEWARK TRAP NOTES.—Over 500 shooters were on Erb's grounds, at Newark, on the 14th, to see Gus Freche, of Newark, and H. H. Leddy, of Montclair, shoot their $200 pigeon match. The conditions were: 50 birds each, 30yds. mark, 80yds. boundary, 5 traps, Hurlingham rules, barring weight of guns and caliber of same. The birds, furnished by Miles Johnson, were a lively lot. Freche won, shooting his opponent out on the 44th round. The scores were:

Gus Freche.....0100222122011101200020002001212212201222011—21
H H Leddy.....1011222012102021202102000000000000120 —20

The Union Gun Club held its monthly badge shoot at Springfield on Monday, Jan. 9, at clay-birds, and the chief prizes were won as follows: Diamond badge, Enoch Miller, 25 straight; gold badge, Chase H. Johnson tied with Herbert Lighthipe on 23, and Johnson won the shoot-off 10 to 8; silver badge, Breintnall, Roll, Jobs and Sopher tied on 22, and Breintnall finally won. Other prizes of less value were won by Parker, Pudney, Haines and Morrison. The shooting was unusually fine.

Moses Myers, of Arlington, defeated Wm. Green, of Harrison, in a 15 bird match for $50, at Erb's, on Tuesday, Jan. 10. Myers killed 18, Green 13.

A match was shot on Thursday, Jan. 12, at Erb's, between C. M. Hedden, of Newark, and Wm. Green, of Harrison. The terms were 50 birds, 30yds. rise, for $150 a side. Hedden shot Green out on the 43d bird.

At the annual meeting of the Fifteenth Avenue Gun Club last week the following officers were elected: President, C. Mussell; Vice-President, W. Drastell; Secretary, L. Schilling; Sergeants-at-Arms, L. Spahn.

BROOKLYN, Jan. 11.—The first regular monthly shoot this season of the Unknown Gun Club took place to-day at Dexter's Park, Long Island. This club is one of the largest shooting organizations on Long Island, and the attendance to-day was the the best club has had for years, but out of all the prominent wing shots present only twenty-four were able to compete for the club badge and special prizes, on account of a scarcity of birds. Ten out of the twenty-four did not complete their score for that reason, but will finish at the next shoot, and all ties will be shot off. The birds Chris. Durler furnished got away from the traps in lively style, some of the best shots missing. The rules of the club allow the use of one barrel only, so that the score looks rather poor in comparison to that of other clubs where both barrels are used. The Unknown Club is gradually increasing its membership, and bids fair to rival the Coney Island Rod and Gun Club in the number of first-class wing shots. The score of the shoot is as follows:

J Akhurst (25).....0011100—3 A Schwartz (25).....1100111—5
A Haas (24).....0010010—3 H Knebel, Jr (25).....1110110—5
H Lee (23).....1011111—6 J Behrman (22).....1110000—3
M Chambers (20).....1101100—4 J Houseman (25).....0101010—3
J Skidmore (25).....1111101—6 E Vroome (28).....1010111—4
J Rankin (24).....0100100—2 J Rathjen (28).....1101111—5
H Bohling (25).....1100111—5 E Hillmer (23).....0110001—3
H Plate (25).....1011111—6 R Monsees (28).....1101111—5
H Van Staden (23).....0111111—6 H Shroeder (25).....1101100—4
H Knebel, Sr (25).....0011101—4 H Harned (24).....0100110—3
J Panison (25).....1110011—5

Referee, Mr. H. Knebel, Sr.; scorer, Mr. H. Van Staden, Jr.

At the recent annual meeting of the club nearly all the members, about 70 in number, were present. Mr. Henry Knebel, Sr., was presiding officer and Mr. R. N. Stillwell was secretary. Mr. H. Van Staden attended to the financial affairs of the organization. The principal business of the meeting was the arranging of new rules for shooting at the regular monthly shoots, but the majority of the members being old Long Island wing shots, they would not submit to any innovation to the use of one barrel only, gun below the elbow, birds from H. and T traps. If the club could secure a permanent shooting ground the above rules would probably be changed. The following were elected as officers for the ensuing year: Henry Knebel, Sr., President; W. Tomford, Vice-President; R. N. Stillwell, Secretary; H. Van Staden, Treasurer. The prizes for the past year were awarded as follows: John Rathjen first, being the highest scorer in 12 shoots, killing 69 out or 84 shot at. R. Monsees took the club badge, winning it four times out of twelve, and second prize, killing 68 out of 84 shot at in the club shoot. E. Vroome took third prize as at eleven shoots he killed 63 out of 76. Henry Knebel, Jr., and W. Tomford tied for fourth and fifth prizes. M. Chichester, H. Knebel, Sr., H. Van Staden, A. Haas, J. Boyle and H. Rankin took prizes in the order named. The following is the score of the best shooting during the season of 1887:

	No. of shoots.	Killed.		No. of shoots.	Killed.
S Bloom	6	15	H Mattair	7	27
J Bohling	4	19	R Monsees	12	68
M Chichester	7	38	H Pope	7	23
J Cahill	5	13	H Slate	6	27
J Detlipsen	4	22	H Pfohlman	3	12
J Boyle	11	39	J Rathjen	12	69
J Gilman	9	31	H Rankin	10	36
J Housman	5	25	C Ring	5	11
A Haas	9	34	J Schroeder	4	15
H Knebel, Sr.	9	43	R Stillwell	9	32
H Knebel, Jr.	11	56	W Tomford	9	42
M Leo	4	18	H Van Staden	11	55
R Widmer	3	14	E Vroome	11	63

HAMILTON, Ont., Jan. 11.—A live pigeon shooting tournament was commenced at the Half-way House on the Dundas road, Hamilton, to-day. The following scores were made:

At 12 birds each, 26yds. rise, $75 to first, $50 to second, $30 to third, $20 to fourth, $15 to fifth and $10 to sixth.

First Squad.		Second Squad.	
J Wayper	111111111011—11	G Briggs	111110101111—10
R Stroud	111111011116—10	C Cockburn	011101111111—10
W Stroud	110111111101—10	J Smith	010111101111—9
L Hipkins	110101111111—10	A Bowron	101011111011—9
C Beldam	111111011101—10	A Price	011111111001—8
R Bickell	011101111110—10	J Jackson	000101111011—7
S Jones	101111110110—9	W Ward	010001111010—6
H Graham	001011101001—6	G Griffith	010100——2

A match also took place between H. Graham and C. Beldam at 5 birds each, for $10. Graham killed 4 while Beldam was killing 3.

Jan. 12.—The live pigeon tournament at the Half-way House was continued to-day. There was a good attendance of sportsmen. The shoot for the purse of $200 was concluded, after which there was shooting for sweepstakes at pigeons and blackbirds. J. Bamberger was referee, and W. Jenkins acted as scorer. The shoot of the remaining squads for the guarantee purse resulted as follows:

Third Squad.	Fourth Squad.
E H Smith.....111111111111—12	R Kelly.....111101011111—10
J Smith.....101111111101—10	R Stroud.....010111111111—10
H Kelly.....110111011111—10	E Neil.....110011111110—9
C Forsyth.....011111011001—9	B McLean.....001111111001—8
D Manley.....001011000100—4	

Tens shot off and the money was divided as follows: E. H. Smith $75, J. Wayper $50, L. Hipkins $30, and W. Stroud, R. Stroud, C. Colborn and C. Beldam divided $45.

The next shoot was for $3 sweepstakes at 8 live pigeons, in which J. Wayper got first, C. Cockburn second and A. W. Price third. A number of sweeps at blackbirds followed.

TORONTO, Jan. 7.—Members of the Owl Gun Club had their annual shoot this afternoon on Chas. Ayre's grounds, Eastern avenue, for the handsome John P. Moore cup, which has been won twice by Mr. J. R. Humphreys, president of the Owls, and has to be won three times before becoming anybody's personal property. The weather was fine and the greatest interest was taken in the match. Following are the scores, at 15 birds each, handicap, from 21 to 34yds.; prize, the John P. Moore cup:

J Rice (27) ....011011111111011—12 J Colborne (31).111111010111110—12
G Jones (31)....101110111111101—12

Douglas, Unwin, Ayre, Gould, Tymon, Fleming, Lush, Hoffman, Mallett, Stewart, Montgomery, McDowell, Riggs, Ellis, Rogers and McKay retired. J. Rice won with 5 on shoot-off.

Jan. 10.—The annual meeting of the Owl Gun Club was held this evening in their room, King street east. Most satisfactory reports were presented, the secretary's showing an increase of membership during the year from 70 to 115. There was an unusually large attendance and the utmost harmony prevailed throughout. The election of officers resulted as follows: President, J. R. Humphreys; Vice-President, J. C. Unwin; Secretary-Treasurer, A. Austin; Executive Committee, J. R. Wells, A. J. Tymon, A. R. Lockhart and W. Ward.

BROOKLYN, Jan. 14.—The first shoot of the year by the members of the Fountain Gun Club took place to-day at Woodlawn Park, L. I. The handsome silver cup presented by Mr. Robert Wells was put up for open competition. Mr. W. R. Selover killed six birds out of seven at the 25yds. mark and won the cup. J. E. Lake, H. Thorpe, H. McLaughlin, and E. Bushnell, Jr. killed 5 each and divided second money. In a sweepstake that followed at 25yds. rise, H. Thorpe killed 3 straight and took first money. W. R. Selover took second with 2 out of 3 killed. The club has elected the following officers for the ensuing year: President, John Sawyer; Secretary, Charles Lango, and Treasurer, W. Thorpe.

The Long Island gun clubs which shoot at Dexter Park, L. I., will not lose that ground, as they expected. The Phœnix, Long Island, Washington and Acme all shoot there.

NORTH MIDDLETOWN, Ky., Jan. 7.—An interesting pigeon match took place in North Middletown, Ky., on the grounds of the Bourbon Gun Club to-day. A disagreeable rain fell which caused the smoke to hang in front of the shooter, which somewhat hindered the use of the second barrel. The birds were a fine lot and strong flyers. Condition: 13 live birds, 27yds. rise, 80yds. boundary, the use of both barrels.

"LITTLE SANDY."

LAFAYETTE, Ind., Jan. 4.—The pigeon shooting match between Capt. A. H. Bogardus, of Elkhart, Ill., champion wing shot of the world, and Fred Erb, Jr., of this city, took place here this afternoon. The match was at 100 live birds, 30yds. rise, Hurlingham rules, for $250 a side. It lasted two hours and forty minutes and ended in the defeat of Bogardus. The score was: Erb 93 out of a possible 100, Bogardus 77 out of 93, when he gave up the match. At the close the Captain was handed a telegram announcing the death of his wife and he left at once for home.

Jan. 7.—Fred Erb has issued a challenge to Ed. Voris, of Crawfordsville, in which he says: "I am willing to shoot Mr. Voris 100 live birds, Hurlingham rules, and he can shoot his 'cannon' and I will shoot my little Lefever 12-bore shotgun, under 8lbs., for $100 to $250 a side, on the Lafayette Gun Club grounds." In a former match between these two men Voris defeated Erb,

LONG BRANCH, Jan. 5.—In addition to the fifty bird fifteen hundred dollar international sweepstake match, which will be contested for in the great pigeon tournament here on Tuesday, Feb. 14, a consolation purse of $500 and minor purses for small sweepstakes will be added. Each marksman will be handicapped according to his merits, and will stand from 25 to 31yds. behind the traps. The governing committee—consisting of Joseph Van Dyke, of Long Branch; Henry White, of Red Bank; Fred Quinlan, of New York, and Frank Heyer, of Holmdel—will have charge of the handicapping. The managers of the tournament will be Philip Daly, Sr., of Long Branch; Joseph Anderson, of Eatontown, and Frank Heyer, of Holmdel, with William D. Cambell, of Long Branch, as secretary. The entrance in the big stake will be $75, half forfeit, price of birds added; no gun to be used of larger calibre than No. 10. Miles Johnson, of Robbinsville, N. J., is under contract to furnish 2,000 pigeons for the tournament.

TORONTO, Jan. 2.—Two keenly contested sweepstake pigeon shooting contests took place at the Woodbine race track to-day, but owing to the blustery state of the weather there were not as many present as was anticipated. Nevertheless those present found it hard work to win first place. The birds flew well. Following are the scores. Sweepstake No. 1, at 10 birds, 21yds. rise:

J Rice	1110111111— 9
C Kemp	1110111111— 9
F H Gooch	1110010111— 7
C Riggs	0111111111— 9

Sweepstake No. 2, at 12 birds, 21yds. rise:

J Rice	111111110111—11
C Kemp	111101111111—11
F H Gooch	111110111110—10
C H Riggs	101111101111—10

SAN FRANCISCO, Jan. 1.—There was to have been a big open shoot at Bird's Point, Alameda, to-day, but the clerk of the weather interfered with the arrangements, and only a few of the most enthusiastic shooters put in an appearance. The first shoot was a match for $10 and the price of the pigeons, between Captain Miner, who has just come down from the Arctic, where he has been otter and seal shooting, and Charley Heath, of this city. The match was under Hurlingham rules, 30yds. rise. Miner came out the winner with a score of 9 to 7. Later in the afternoon a freeze-out, $2.50 entrance, was shot off. There were five shooters, and the whole pot was taken by Chaplain with 8 straight kills.

WELLINGTON, Mass., Jan. 14.—There was a good attendance at the grounds of the Wellington club, and some good scores were made in the sweepstake matches. Following are the winners of first in the several events: Six blue rocks, Schaefer; 6 clay pigeons, Swift; 6 blue rocks, Schaefer; 6 clay pigeons, Swift; 6 blue rocks, Schaefer and Chase; 6 clay pigeons, Bartlett and Swift; 6 blue rocks, Perry and Schaefer; 6 clay pigeons, Schaefer, Bill and Swift; 6 blue rocks, Perry and Douglas; 6 clay pigeons, Snow, Swift and Maguinness.

DUNELLEN, N. J., Jan. 11.—The Middlesex Gun Club club shoot drew together many of the members, notwithstanding the biting cold weather, and a very pleasant shoot was the result. Six events were shot, four sweepstakes and two for the club trophies. Considering the very strong wind blowing directly directly across the traps, the shooting was remarkably good.

First event, $3 entrance. Two moneys: Clark 1, Day 2, Manitz 3, Siegler 2. Ties divided.

Second event, same conditions: Clark 1, Day 1, Manitz 2, Siegler 3. Siegler first, Manitz second.

Third event, same conditions: Siegler 4, Forrest 3, C. Smith 3, J. D. Voorhees 3, A. Manitz 4, Conover 4. Ties divided.

Fourth event, three moneys: Siegler 2, Forrest 4, C. Smith 2, J. D. Voorhees 3, Manitz 4, Conover 3, Daniels 2, W. Squires 3, D. Terry 4, E. Miller 2, J. E. Miller 3, Robby 3. First divided. Second and third shot off in next event.

Fifth event—Contest for trophies in classes A and B, optional sweepstakes—$5 entrance—* indicates those who shot for trophy only. Class A—E. Miller 6, Siegler 4, Manitz 6, C. Smith 7, Forrest 5, *Conover 4, *J. D. Voorhees 4. Class B—*J. Lawrence 4, *Daniels 5, *Robby 4, D. Terry 7. C. Smith won trophy in Class A, and D. Terry in Class B—optional sweepstakes in both classes divided—Mr. J. E. Miller, not a member, allowed to shoot in sweepstake connected with trophy shoot—he and Forrest dividing third money with a score of 5 each.

Sixth event—$3 entrance—three moneys.—E. D. Miller 4, Forrest 3, Siegler 4, Manitz 3, Conover 4, C. Smith 2. Ties divided.

TORONTO, Jan. 5.—A shooting match took place at Chas. Ayres's at pigeons this afternoon, at 10 birds each for $10 a side, between Mr. G. H. Briggs and Mr. Alex. Wyness, both of Toronto:

Briggs	1011011111—8
Wyness	0011110110—6

Canoeing.

CRUISING CANOES AT THE MEETS.

Editor Forest and Stream:

After reading Mr. MacKendrick's letter of last week it seems to me that the discussion has reached such a point that it would be only a waste of time to continue it further and I shall in consequence withdraw from it. To sum up Mr. MacKendrick's proposals, he advocates the abandonment of the 75ft. limit race, the abolition of Class A; a cruise at the meet and the offering of cruising prizes. With the desirability of the latter proposition all will agree, and there is no ground for argument. It now seems probable that the Association will offer such prizes, in which case we must all thank Mr. MacKendrick for his work in that direction. As to the 75ft. limit race, it is Mr. MacKendrick's individual opinion that it should be abolished, and in this he may be right or wrong, the issue is not an important one, but he should at least suggest a better race to take its place, and this, I think, he has not done. His suggestion of minimum limits of Class B is unnecessary and would not accomplish its end. To apply it to Pecowsic, she would only have to be widened a fraction of an inch at deck to make her 30in. and perhaps an inch more crown to deck to make her up to the proposed limits, and neither of these changes would make her stauncher in the least. The real meaning of such limitations would be to prohibit Class A canoes from racing on even terms with Class B, and it is a very curious state of affairs when a large boat demands protection and allowance from a smaller one.

In Mr. MacKendrick's opinion all Class A boats are bad and to be discouraged, but he offers no proofs in support of this proposition, and there are very many canoeists, both cruisers and racers, who disagree with him. I must take exception to one of Mr. MacKendrick's statements, which may mislead others who have not seen the boats. He speaks of Vesper as an ideal cruising canoe, and Notus, as by comparison, an inferior boat. I should judge that he has not seen the two, in any case he should be more careful in his statements. Notus is by far the better boat, not only in the lines, but still more when the actual boats are concerned. Vesper is a bulky and clumsy craft compared with the cleaner and fairer lines, not to mention the smooth skin, of Notus, and from a cruising point of view the latter is incomparably superior, and in every sense a staunch, able and sturdy craft. This comparison alone would lead to the belief that Mr. MacKenzie is not so thoroughly acquainted with the boats he praises or condemns as to fit him for a critic. It would do no good if I were to comply with his invitation and sign my name, but I can assure him in parting company that my canoe is fully up to the limits he advocates, 30in. beam and over 12in. depth, a rather full-lined and heavy cruising craft, and with only a cruising rig of some 60ft., but if the cruise he has proposed becomes a fact, she will be with the fleet at the next meet. CRUISER.

We learn from Com. Gibson that he has under consideration a plan for the appointment of a committee on cruising, whose duties will probably be similar to those of the regatta committee in regard to racing. Prizes will also be offered for cruising outfits of all kinds. The long discussion that has taken place in our pages has ended in these substantial results and must now cease, but there are many questions of detail still to be arranged. The objects for which cruising prizes should be offered, the practicability of a cruise at the meet or of contests of any kind for purely cruising canoes, all come within the scope of such a committee's investigation. The needs of the racers are now well looked after by the regatta committee, and the racing programme of the past two or three years seems likely to stand with little need of alteration save in minor details. The proposed committee should do the same for the cruiser that the regatta committee now does for the racers, and if it does its duty half as thoroughly as the late regatta committees have done, there will be no room for such complaints as we have heard this season.

As to racing, we have heard already of half a dozen new canoes, including one for Mr. Barney, Sr., and as far as we can learn, every one is larger than Pecowsic and her sister, so that utter degeneration of the racing fleet that has been prophesied has evidently been postponed for this season at least. There is a desire on the part of some to sacrifice room and comfort in the boat for cruising to racing considerations, where two boats, a cruiser and a racer, are kept; and this is to be regretted as contrary to the avowed purpose of the canoe, all around work; but at the same time nothing can be argued against these boats on the score of dimensions or model, all being up to size and of ample power, as far as we are thus far informed. A suggestion lately made by Com. Gibson in regard to limiting canoes to one rig in racing has not been generally understood, but it is worthy of further discussion. It is to compel a canoe to carry her entire racing outfit in all sailing races; thus if a boat sails a race with a 50ft. sail and wishes to sail the next race with a larger one, she may do it provided that the smaller sail is carried on board as well, not necessarily set, but stowed below. This rule would compel each man to condense and improve his rig so as to make it as efficient as possible in the smallest compass; it would prevent a man from bringing several sets of racing sails to camp and setting such a one as the weather demanded for each particular race, leaving the others on shore. It would probably dictate a large, light sail for light weather, that could be reefed easily and to a small size, and perhaps stowed below when an intermediate sail was needed. As far as we can see, such a rule would rather encourage the use of several small sails, as in Pecowsic, but this would not be objectionable. The proposal seems in no way unfair, and would probably operate beneficially.

At this time many who were disappointed last season are deliberating over new boats, and to all of these we offer the same advice. Do not waste time and money on a new canoe until you are certain that you have got all that is possible out of your present craft. You made certain experiments on your old boat last year, when she was new, the results of which will be wasted if you discard her now to trifle with a model of newer fashion. It takes a season to get a canoe in racing trim; now, if your boat has no great defect, put this winter's work into a new and lighter suit of sails; spend two or three days with file and sandpaper on the laps and nail heads of the hull, not forgetting rudder and centerboard; read, talk and find out what others have done and are doing; overhaul steering gear and small fittings, varnish hull and spars, and when that warm April day thaws you out of your ulster and tempts you to launch for the first sail, you will have a first class boat under you, and will be able to laugh at the man whose new and improved Pecowsic or Notus is still waiting for her first coat of varnish to dry before she is slapped over it, whose sails are represented thus far by a hasty sketch in pencil, and whose marvelous centerboards and cleats of new design as yet exist only in airy visions. The moral might fit some yachtsmen too, as well as it does canoeists, and if they do not see it and profit by it, it will be because they do not realize how much they miss each week by skipping the canoe columns.

We learn also of several new canoes of large size; the officers of the Association, grown fat and prosperous from their offices, now propose to cruise at ease in craft of luxurious proportions and fittings, an autocracy that will look down on the humble racer in his 16x30 canoe. One of those new craft, whose owner we are not at liberty to name, will be 18×36, and fitted in a style of elegance never before attempted; another will be about 18×42 and a little inferior in the splendor of its furnishing. Several others of similar dimensions, but plainer finish, will also be added to the fleet, so that quite a number will be seen at the meet. There is undoubtedly a wide field for a larger craft than the ordinary A. C. A. canoe, something of the same model and rig, but of greater size. Such boats are useful on waters where a canoe is inferior to the ordinary sailboat, and they are at the same time far superior to the latter. They offer a suitable craft to many who, through increasing years or weight or a desire for more ease and less excitement than racing or running rapids affords, are ready to give up the small canoe, and at the same time they bring in others who wish a cheap, handy and comfortable boat for cruising and sailing. We welcome these larger canoes as a most important addition to the fleet, and later on we shall give the lines of several different models. There are, we regret to say, a few canoeists whose idea of canoeing seems to be to force all into the same class of boat, Rob Roy, Class A or Class B, which each prefers for himself, but there are fortunately a great many who look at it in a broader sense as the means for placing within the reach of all a safe, convenient and inexpensive type of pleasure boat, of such varied forms and sizes as will suit the wants of all, but all of the same great family of canoes, and based on the same principles.

THE A. C. A. MEET.

Editor Forest and Stream:

The following, regarding the site chosen for the A. C. A. camp next August, may be of benefit to those canoeists not familiar with Lake George. Long Island is situated on the eastern side of Lake George, about five miles from the head, or southern end, and one-half mile east of the Canoe Islands, the birthplace of the A. C. A. and its home in 1880, '81 and '82. All must regret that the area of the Canoe Islands will not permit of our accupying them this year, because of their association, in the minds of many, with the infant days of our organization. Long Island is somewhat over a mile in length and separated at its southern end from South Island by a strait fifty yards wide. This strait has been chosen for the location of our landing stages, because of the shelter afforded by the islands from the north and south winds. The camp will be placed on one or both of the islands facing the strait, as on either of them there is excellent camping ground. On Long Island there is a fringe of trees extending down both shores and around the southern end, inside of which there is a natural clearing, grass grown and dotted with cedars and hemlocks, a most appropriate spot for a camp.

On South Island the same character of wooded growth is found as on Bow Arrow Point. On neither of the islands is there any marshy or wet ground that will in any way interfere with our camp, the "swamps" spoken of by some being situated at the southern extremity of South Island and, all told, not covering an area 150ft. square. Lake George is associated in the minds of most canoeists with variable winds, because of our experience there at the first two meets of the A. C. A. The men who attended those meets will remember that all the races were sailed, not in the open lake near the Canoe Islands, but at the southern end, off Crosbyside, where the lake is less than three-quarters of a mile wide, and entirely shut in on the east, south and west by high mountains; hence the poor sailing and disappointment shared by all. To the north and west of Long Island there is open water from one and a half to over two miles wide and five miles long, where the races may be held this year with a reasonable certainty of our having the advantage of all the wind that may be blowing. Now that the Delaware & Hudson Canal Co. have extended their road to the head of the lake, and with the facilities that they afford at the foot, the matter of transportation of boats to the lake is comparatively easy. Their trains are run out on to the docks at either terminus, so that the launching of a boat requires very little time or trouble.

For those who wish transportation direct to camp, the committee appointed for that purpose will probably make arrangements with three steamers running on the lake to carry men, boats and baggage at reduced rates. Those from the South and West attending the meet will land at Caldwell, the south end, and will probably adopt the plan of launching their boats at the dock and paddling the five miles to camp. With the usual camp store and mess tent and the numerous hotels and settlements scattered along the lake shores we need apprehend no trouble in obtaining supplies or meals. The beauties of Lake George are too well known to require any mention, but as a canoeist, and one who has spent seven summers on the lake, I must say that no other body of water, thirty miles long, can offer a greater number of charming nooks and short cruises for a canoe. When applied to for the use of his island, Mr. D. S. Sanford extended a most hearty welcome to us, as may be inferred from the portion of a letter he wrote, as given below:

"As an enthusiastic lover of this lake, and a summer resident for many years, and fully recognizing the advantages, pleasurable and otherwise, likely to result from an American Canoe Association meet here during August, 1888, I will cheerfully tender to the gentlemen of the Association the use of as many acres as may be essential for a large colony of camping canoeists, and extend to them the usual privileges of the island. The pleasure I should expect to derive from the meet will fully compensate me for the use of the island, which I the more readily grant, believing as I do that as a rule a canoeist is a gentleman."

Surely, with such a landlord, on a lake that is not surpassed in beauty by any in the world, and all the advantages it offers, the meet of 1888 promises to be the most successful, in every particular, that we have yet held. MACOMB G. FOSTER,
Chairman Committee on Camp Site.

THE NORTHERN DIVISION.—*Editor Forest and Stream:* To allay the fears of "Asticou" I hasten to state that the Northern Division does not arrogate to itself the title of Canadian. It is a remarkably healthy offspring of the A. C. A., and, as was stated at the time of its formation, its boundaries are non-political, the promoters hoping to secure many members from those Northern clubs whose geographical position makes it inconvenient to attend the general meets. In Lake Couchiching we have a site that offers great attractions to racers and cruisers, and to all A. C. A. men we promise a hearty welcome, come they with one sail or fifty.—A. F. D. MACGACHEN.

BROOKLYN C. C.—The annual dinner of the Brooklyn C. C. will be held at Wilson's on Jan. 12. The annual spring regatta of the club will be held on June 23, the programme to be announced later.

W. C. A. EXECUTIVE COMMITTEE MEETING.

THE annual meeting of the Western Canoe Association was held at the Beckel House, Dayton, Ohio, on Jan. 7. All members of the executive and regatta committees were present except Com. Latham and Mr. Kitchin, of Chicago. Vice-Com. Bartlett presided, and the secretary read telegrams from the absentees, regretting their inability to be present.

Rear-Com. Kirkpatrick moved that the annual meet be held at Ballast Island, Lake Erie, Ohio, from July 7 to 23 inclusive. Mr. C. J. Bousfield moved that the alternate days of the first week of the meet be devoted to racing, beginning with Tuesday, July 10. [Tuesday, Thursday and Saturday.] Mr. Thos. P. Gaddis moved that the annual business meeting for the election of officers, etc., be held the first week of the meet at call of the commodore. Mr. G. Harry Gardner moved that a canoe hop be given each week of the meet at the Ballast Island Club house. Com. Bartlett appointed Messrs. Chas. McIville, Bousfield and Root a committee on music, transportation, etc.

It was moved that the secretary-treasurer write to Hon. Geo. W. Gardner, of the board of the Ballast Island Club, that the members of the W. C. A., who do not wish to prepare their own meals, agree to pay one dollar per diem board to the new proprietor of the house. Mr. Gaddis moved that Com. Bartlett be appointed superintendent of camp. Mr. Harry D. Crane, chairman of the regatta committee, presented the report and programme of races for the next meet, which were accepted. A cordial invitation was extended to the A. C. A., British C. A., and all unattached canoeists to attend the next meet of the W. C. A.

It was moved that a report of this meeting be sent to the official organ, the *American Canoeist*, and the FOREST AND STREAM, for publication. GEO. A. WARDER, Sec'y-Treas.

Programme of the W. C. A. Races, beginning Tuesday, July 10, 1888

No. 1. 9:30 A. M., sailing, twice around Ballast Island. Open to all canoes. No limit to ballast or rig. Classes A, B and C.

No. 2. Record event, sailing, Class B, 3 miles. No limit to ballast or rig.

No. 3. Record event, sailing, Class A, 3 miles. No limit to ballast or rig.

No. 4. Record event, paddling, Class 2, ½ mile.

No. 5. Record event, paddling, Class 3, ½ mile.

No. 6. Record event, all classes, 1½ miles. Sail first half, paddle second, sail third.

No. 7. Paddling, Class 1, ½ mile.

No. 8. Upset paddling, Classes 1 and A, 300ft. No special appliances allowed. At signal each canoe must be turned completely over, righted, and with crew inside paddled across the finishing line.

No. 9. Sailing, open to novices only. All canoes, 1½ miles.

No. 10. Sailing for the Gardner challenge cup. No limit to ballast or rig, 6 miles. The cup is now held by N. B. Cook, Chicago, Ill.

No. 11. Sailing upset. All classes, upset with all sails spread. No special appliances allowed. Open cockpit.

No. 12. Hurry-skurry. Open to all canoes. Run 100yds, swim to canoe and paddle 200yds.

No. 13. Sailing, consolation. No limit to ballast or rig; 3 miles. Winners of either first or second place in events No. 1, 2, 3, 6 and 9 excluded.

No. 14. Hand paddling, 100ft.

No. 15. Tournament.

No. 16. Sailing for W. C. A. trophy cup, Classes A and B, 7½ miles. No limit to ballast or rig. Cup now held by C. J. Bousfield, Bay City, Mich.

No. 17. Tandem paddling for ladies, ¼ mile.

No. 18. Sailing, 3 miles, Class C.

T. P. GADDIS, Dayton, O.
H. D. CRANE, Cincinnati, O.
A. W. KITCHIN, Chicago, Ill.
G. H. GARDNER, Cleveland, O.
} Regatta Committee.

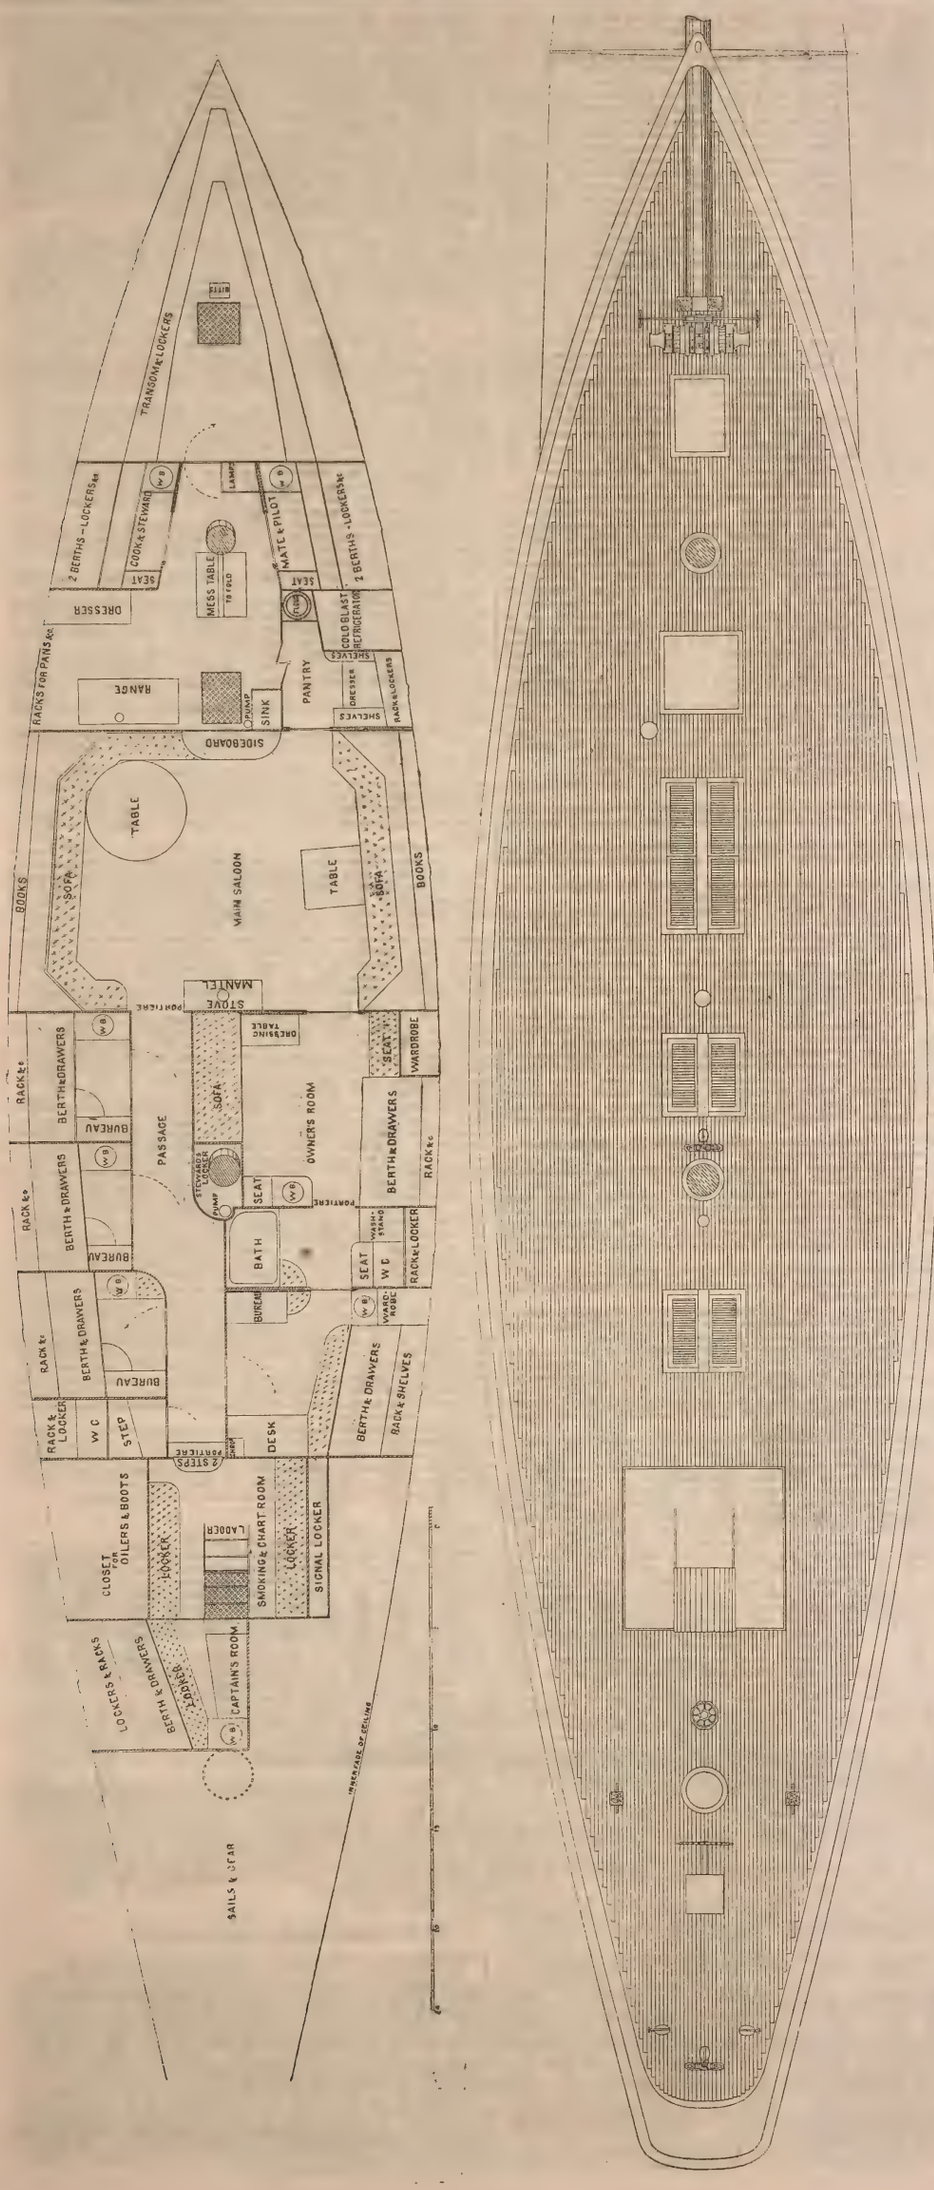
A banquet was tendered the executive and regatta committees and visiting canoeists by the Ruckawa and Stillwater Canoe Clubs, of Dayton, O., a most enjoyable affair. Thirty members of the Western C. A. were present, representing many of the fast-increasing clubs in the West. Enthusiasm is high, and a large and successful meet is assured for 1888.

The annual book will be published at an early date. Each member will have one mailed to his address, and others may obtain them by applying to the secretary of the Association.

Plates were laid at the banquet for the following canoeists: Messrs. Ellard, Shiras, Crane, Stedman, Root, Gardner, Pennewell, Bartlett, Bousfield, Kirkpatrick, Warder, Crawford, H. Theobald, Daniels, Hodge, Ernst, Slagle, Van Ansdal, Wetzell, J. S. Theobald, Gaddis, McKee, C. Schaeffer, Fox, Vincent, J. Schaeffer, Patterson, Woodruff, De Weese and Auil. JABBER.

OTTAWA C. C.—The Ottawa C. C. ball, on the fourth of this month, proved an immense success. Between three and four hundred ladies were invited, while some two hundred couples or so were actually present. The ball was most appropriately opened by Lady Macdonald, the wife of the Canadian Premier, whose charming articles on Canadian sports have lately been attracting much attention in England. Lady Macdonald has half promised to write an article on canoeing, if she does the fortune of the Canadian clubs will be made, for canoeing is one of those amusements that only requires attention to be drawn to it; once tried no one ever forsakes it. A lady too, especially if she, like Lady Macdonald, wields a skillful pen, can do so much to remove the prejudices of her sex against what they too often regard as a dangerous amusement. The ball-room was tastefully decorated with paddles, canoes and flags. At the upper end of the ball-room was a canopy of flags, flanked on either side by a canoe under full sail and draped with flags, the mainsail of one being covered with prize flags won at the A. C. A. meets. In the center between the two canoes was a large and very perfect model of a schooner. At the foot of the ball-room was a handsome canoe, the work of a local builder, surmounted by a trophy of oars and paddles. The spaces between the windows and the gas brackets were decorated with paddles, some of them beautifully hand painted and tied with the club colors, navy blue and white. Lining the passage to the ball-room were several specimens of the canoe builder's art. The dancing continued until the small hours, and every one expressed themselves delighted with the entertainment. The invitation bore the club's cipher, their flag and a double-bladed paddle entwined, embossed in navy blue; the dance programme bore the club flag, a navy blue pointed burgee with a beaver and the letters O. C. C. in white. The following is a list of the lady patronesses of the ball: Lady Macdonald, Lady Caron, Mrs. Costigan, Madame Chapleau, Mrs. T. White, Lady Ritchie, Mrs. R. W. Scott, Lady Middleton, Mrs. Schultz, Madame Taschereau, Lady Grant, Mrs. Perley, Mrs. McLeod Stewart, Mrs. Sandford Fleming, Mrs. Miall, Mrs. Lambert, Mrs. D. O'Connor, Mrs. Hogg, Mrs. Church, Mrs. Henderson, Mrs. St. Jean, Mrs. Gordon B. Pattee, Mrs. C. Mackintosh, Mrs. A. P. Sherwood, Mrs. Berkley Powell.—ALCYONE.

Yachting.



THE DISOWNED CUP.

Editor Forest and Stream:

Let us put the boot on the other leg. Suppose an Englishman were to write to the New York Y. C. as follows:

"Gentlemen, if you will inform me by a certain hour, minute and second of the length, draft, beam, type, etc., down to a fraction of an inch of the yacht you will enter against me, and if you will agree not to vary a particle from those figures, and if you will do this sixteen months in advance, and if you will not ask for time allowance from a larger boat, and if you will not insist upon knowing the size or anything else about my boat, I will appear in your harbor and hail you: Come on, put up or shut up!" Don't you think the entire American press, and Mr. Burgess and his circle in particular, would unhesitatingly pronounce that Englishman a raving maniac or a benighted, insular hog, who takes Americans for babes and fools? Yet these are precisely the terms offered by the New York Y. C. to foreign yachtsmen. Mr. Burgess and his friends are so chock full of "patriotism," that what they would unsparingly denounce coming from an English source, is elevated into a virtue the moment America stands as sponsor. The London *Field* says, there is a meanness about the terms which is repulsive and Americans need to be ashamed of it.

Americans who do not observe things through the small focus of the New York Y. C., or through Boston's inverted binoculars, agree with the sentiments expressed in the *Field*. But it is not worth while considering the subject any more. The America Cup has irretrievably lost its standing as an international trophy. It has been kicked out of doors by the yachtsman to whom the appeal for recognition has been addressed and the New York Y. C. has lost its rating abroad. All of which the public views with the utmost regret and with no little resentment against the perverse minority, who through unsportsmanlike haggling and unparliamentary maneuver have effectually killed the goose that laid the golden yachting egg. PUBLIC OPINION.

DECK AND CABIN PLANS OF SCHOONER "ALERT."

THE CRUISING SCHOONER ALERT.

THE accompanying drawings show the deck and interior of the Alert, whose lines were given last week. The bowsprit is a single round stick, as is now the fashion, but not fitted to house, the heel being stepped in locust bitts running down to the keel. The windlass is of the pump-brake pattern. Abaft it is the forecastle hatch, with a 12in. iron ladder on after side, while abaft the foremast is a second hatch leading to the galley. The main companion is in the form of a cabin trunk, 8ft. square and 26in. high, with windows in the side and fore end. The floor beneath this trunk is raised 2ft. above the level of the cabin floor, so that those in this after room can have a view on all sides from the windows. This room, 8ft. square, is used as a smoking and chart room, and for changing oilers and boots when coming below. On the port side is a large locker for oilers and boots, while to starboard are signal and chart lockers. On each side is a long seat. The entire arrangement is a very convenient one, as the owner has always a view of the deck, which can be reached in a moment, while the drip from wet clothing is not carried into the saloon and staterooms. Abaft this room is the captain's cabin, the space about it being utilized as a sail locker. There being no centerboard trunk to monopolize the best portion of the boat, the designer has had a free scope, and has succeeded in obtaining very good accommodations. The main saloon, 14×19ft., is placed forward instead of aft, as is usual, thus being convenient to the galley. From the chart room two steps lead to a long passage, with portieres at each end, along the side of which are the staterooms. The owner's room, 12×9ft. 6in., is on the starboard side, abaft the saloon. It will be handsomely fitted up with berth, large sofa, dressing table with mirror, wash stand and cushioned lockers. Opening on it is a bath and toilet room. Abaft the bathroom, and opening on by a door, is a large stateroom, fitted with shelves and desk in addition to the regular furniture, which will do duty as the owner's study when not required for guests. On the port side of the passage are three staterooms for guests and a toilet room. There are thus six staterooms, including the one abaft the smoking room. The main saloon is a large and handsome room, fitted with a long sofa on each side. The dining table is circular, while on the starboard side is a card table. Against the fore bulkhead is a sideboard, and opposite to it a mantel and fireplace. In the floor just under the skylight is a large hatch, giving access to the ample stowage room in the hold. The galley is 13ft. long, with a stateroom in each of the forward corners, one for cook and steward and one for mate and pilot. There is also a large cold blast refrigerator, and dressers, shelves and pantries in plenty. The crew's mess table is against the foremast, and the lamp locker is in one corner. The forecastle is separate from the galley, with a door between. It contains hammock cots for seven men.

THE DEED OF GIFT.

ONE of the foremost features of the international contests of the past three years has been the generous and forgiving spirit displayed by Boston to her old rival and detractor, the returning of good for evil, the heaping of coals on the head of an old enemy. In this present era of peace and joy and love, of unity in all things, it is hard to realize that only three short years have passed since New York was laughing in scorn and derision over the news that Boston was to build a large racing yacht; when the utter failure of such an attempt to rival New York's supremacy was gleefully predicted. Remembering all this, there are some carping cynics who still maintain that what Boston has done was not solely from love and affection toward New York, but that rather the shrewd and canny yachtsmen of the Hub were wise enough to realize that their hour had come, and at the same time were able enough to benefit by the opportunity and place Boston at the head of American yachting. The generous manner in which Boston has hurried again to the defense of the New York Y. C. at a time when neither cup, honors nor credit were to be gained, is a sufficient answer to these uncharitable insinuations and is ample proof of the love and affection which exists between these two great cities. The yachtsmen and the press of Boston have rallied to the defense of the new deed of gift, and as the case now stands, Boston is again doing all the fighting while New York looks on.

The comments made by the FOREST AND STREAM have called out a number of excuses and statements in both the Boston *Globe* and *Herald* during the last three weeks, of course at too great length to admit of republishing them in full, but all that has yet appeared in defense of the deed of gift may be classed under one of three heads: general indorsement and commendation; irrelevant and unimportant facts; and incorrect and misleading statements.

Speaking with authority for Gen. Paine, Mr. Burgess and Com. Forbes, the papers mentioned have praised the provisions of the new deed, one and all, as wise, generous and eminently fair, and in addition the Boston *Herald* presents the indorsement of half a dozen more commodores of Boston clubs. We are willing to give full weight to the individual opinions of the gentlemen, recognizing them as we do as the leaders in Eastern yachting, but at the same time we contend that no amount of general indorsement will constitute an answer to a specific charge. Most of the points brought out in the interviews with the commodores mentioned are treated on elsewhere, and it would be needless as well as impossible to discuss each interview in detail here.

As a sample of the second method of defense, we quote from the Boston *Globe:*

"In the first place, a new set of conditions were imperatively needed. The old deed was thoroughly inadequate. By its provisions yachts of almost any size could challenge for the Cup, and the challenger had no assurance that a big boat would not be put against a little one. Indeed, if the challenging yacht had been of a size where the American yachts were weak, and there had been a doubt of the ability of the American boats of similar size to defend the Cup, it is a question whether it would not have been the duty of the Cup Committee to put a larger yacht against the challenger, of course with the usual time allowance. There were questions about the precedence of challenges, and after lodging a notice and starting to build his yacht the challenger might be superceded by a yacht already built. These and many other questions were in doubt, and it was deemed necessary to make the deed exact. This, at least, has been done, and there is now no doubt of the meaning of the deed, and the challenger knows beforehand just what he has to expect."

The question of the advisability of a change in the deed of gift has never been disputed, in fact the first suggestion for such a change was made in the FOREST AND STREAM of Oct. 6, in commenting on the last Cup race. In that article, and still more in detail a week later, we discussed the changes necessary to accommodate the Cup races to modern conditions, and while the right of the holders to change the first deed is at least doubtful, no objection would have been raised to changes which while possibly not quite legal, were in the spirit of the original and in the interest of fair play. The *Globe's* defense of the new deed, that it is exact and definite in its demands, will not hold, as will be seen on inspection, and even by the *Globe's* own admission, quoted further on. The criticisms of the *Field* on Mayflower and Thistle have also been brought forward, but it is not evident that they prove anything in particular.

Of this same irrelevant nature is the statement of Com. Forbes, "the FOREST AND STREAM is a cutter paper, and for the past few years has fallen into a habit of grumbling at anything American." The FOREST AND STREAM has for years been the leader in the reforms that have led directly to Puritan and Volunteer; the strongest advocate of the principles now generally adopted in American yachting, and in the fight for these principles it defended the English cutter, the only craft that then embodied them. Because we have praised in the past much that was not American, it does not follow that we are opposed to American yachts as they now are, or that we cannot give a fair and impartial judgment on such questions as arise over the deed of gift. Our readers know what our position has been toward Mr. Burgess and his boats, and whether the charge of chronic grumbling against matters American is deserved. Just now we are carrying on a vigorous fight against something we believe to be hurtful in every way to American yachting. The Boston *Globe* reiterates Com. Forbes's charge and adds: "If this were not the fact, the paper would separate the good points in the deed from what it considers to be the bad ones, and not join in a wholesale condemnation of the terms, refusing to see any good in them at all."

In the FOREST AND STREAM of Nov. 3 the deed was criticised at length, such points as seemed for the better being noted, but naturally the bulk of the criticism was devoted to the several more prominent points which have since created so much discussion.

Both of these critics ignore the fact that the FOREST AND STREAM is backed in its objections by the two papers which for years have opposed it on every point, but which now call loudly for a further revision of the obnoxious document.

Much stress has been laid on the claim that six months' notice was not sufficient time in which to build a defending yacht, but it is a fact that in every case for four years the challengers have offered the lengths of their boats nearly a year in advance, which offers have been received in a hostile and discourteous spirit by the New York Y. C. In 1884 Genesta sent a notice of her intention to challenge, all that she could do legally, in October, Galatea doing the same. Galatea challenged again in September, 1885, so

that the full particulars of the coming racer were known. In 1886 the Royal Clyde Y. C. wrote in September giving notice of a coming challenge and asking what size of yacht the New York Y. C. preferred to have, and in the last case Mr. Sweet sent his notice of challenge on Sept. 30, and it was generally known that his yacht would be built for the second and not the third class. Thus in every case the challengers have shown their willingness to make known the length of their vessel more than ten months before the races. What has been the course of the New York Y. C. in the matter? The first action has been to ignore the friendly but necessarily informal letter of notice, to stand stiffly on technicalities, and to inform the challenger that when a challenge in due form was received the club would answer it, knowing all the time that such a challenge could not be sent before spring. In '84, '85, '86 and '87 the club's action has been the same, a curt refusal to accept the ample notice given it; and in the latter case, at the meeting to which we allude elsewhere, when Mr. Sweet's letter was read, a resolution was actually offered, though not passed, that similar letters received in the future be returned to the writers. This has been the attitude of the New York Y. C. in the matter, as its own minutes will show. Now what grounds has it for cobbling the deed of gift up so as to demand what it has heretofore refused to accept? It looks rather as though the whole "ten months" clause was merely intended to extort information to which the club has absolutely no right.

Much parade has been made over the liberality and generosity displayed in the provision for outside courses, but the committee itself admits that this was done in case of the Cup ever going abroad; in fact, Mr. Sweet himself spoke informally to the Cup committee before the races of the desirability of securing full rights to centerboard boats in foreign waters.

Looking at the third lot of statements, we find a number which will not bear a close scrutiny. In regard to the main point, the dimensions, Mr. Burgess says in the *Globe:* "The particular dimensions are no confinement to the designer, as he would not want to change them in any event. The FOREST AND STREAM speaks of the challenger being tied down to fixed dimensions, but the fact is that the challenger is at liberty to choose any dimensions he pleases."

The point at issue is adroitly dodged in both these statements. We have never contended that the designer is not at perfect liberty to select any dimension which he may wish within 90ft. What we contend is, when the dimensions are once chosen and given to the club, the yacht must be built to conform exactly to them, varying neither in length, beam nor draft, and this question Mr. Burgess simply evades in the statement above. He further says, as quoted last week: "The new deed says the challenger shall not exceed his stated dimensions. The defender, too, will be in just the same position, in case he decides to build for the extreme limit named in the deed." This is not so, the challenger cannot depart either way from length, breadth and draft, in fact from his model after the challenge is filed; the defender, so long as he is not over 90ft. l.w.l., may do absolutely what he pleases with his boat, may add to ballast or outside keel, or may make her a foot wider.

This statement, too, as noted before, is not correct: "As to being tied down absolutely to a fixed length, beam and draft, why it is practically what I have to submit to with every racing boat. I am building half a dozen boats to-day that will be disqualified if they exceed their class limit in length. They are simply designed 3 or 4in. shorter, to allow for any reasonable change of trim, and, of course, the waterline beam and draft will vary with, but far less than, the length."

Mr. Burgess builds his boats not to exceed a certain l.w.l. length, but no one cares whether they are wider or narrower, deeper or shoaler than his designs show; in fact he has the liberty which every designer should have, to trim his boats after trial, but which is denied a challenger for the Cup. It is easy to build within a specified length only, but it is a different matter to build to an absolutely fixed draft or beam at loadline.

We asked two questions two weeks since which Mr. Burgess has not yet answered. When Thistle's length was supposed to be 85ft., how could Volunteer be the same length if she was designed 85ft. 9 4-5in., in order to take no advantage of the other? Would Mr. Burgess construct, under penalty of disqualification, to give the exact l.w.l. length and beam, and the draft, as per design, and then build a boat that would be at her best racing trim on these exact dimensions?

Mr. Burgess, in criticising the FOREST AND STREAM, says, "When inaccurate statements are put out they are apt to deceive unless they are corrected," which applies exactly to his statements above.

Com. Forbes also makes some statements which are open to correction: "The reason we have had no challenge for the Cup lies deeper than the terms of the deed of gift. Of course these are a convenient handle to lay hold of, but the fact is, nobody wants to challenge for the Cup in the present condition of yachting in this country."

At the time the deed of gift was changed the club had a bona fide challenge in its possession, which does not look as though no one wanted to challenge. Mr. Sweet has been ready for a race, provided a fair match could be made within the class he desired to build for.

In answer to our criticism Com. Forbes also says: "It is said that we are demanding a type of boat which is unnaturally large. In 1885 Americans considered a sloop of 80ft. the limit that could be handled satisfactorily. In three years' time we have raised that limit to 86ft., and there is no reason to believe that it cannot be raised year by year. The committee was wise in putting the limit a little higher than has yet been reached. Moreover, it is an interesting point to note that the English are to blame, if there is any blame, for the size of our sloops. Before the Genesta's challenge we had none over 70ft., and they compelled us to build big yachts to defend ourselves. Now that we have them it is hardly fair for English yachtsmen to object to them on the score of size."

It has been proved by Volunteer that a racing boat of this size is practicable, but our point is that it is not a desirable size, nor one that will be generally popular. It is true that Genesta's length was the first cause of the establishment of the first class; and the right to challenge with a class of yacht which the defender does not possess should be prohibited, but all this does not prove that the establishment of a special class of yacht which from its great cost is beyond the reach of nearly all racing yachtsmen, is other than detrimental. It must be remembered that cruising schooners and steam are each year cutting further into the ranks of racing men, and anything which tends to make more sport at a less expense brings or keeps just so many more in the racing ranks.

Last week Mr. Burgess denounced our statement that the deed virtually called for a length rule, but this week his champion, the *Globe* admits the correctness of our claim as follows:

"The FOREST AND STREAM objects to the length rule. There is no doubt that the effects of a length rule are bad, but what else could have been substituted? The New York Y. C. did not want to demand that its own rule should be used in all races, nor did it want to leave the matter open for foreign clubs to put their particular racing rule upon this Cup. The best substitute seemed to the committee to be this rule."

We happen to know that the committee had it under consideration to confine all future contests to the present club rule, but the outrageous character of this proposition was plain even to them, and the "no allowance" clause was finally adopted as a compromise.

The *Globe* does not take warning by this error which it fell into last week and now admits, but continues to criticise the FOREST AND STREAM as follows:

"The burden of the objection brought forward by this journal this week hinges on a palpable misstatement of a fact. How any one could make such a blunder who had the deed before his eyes it is hard to say. Practically the whole criticism is based upon this misstatement:

"'It is stated not only that certain dimensions shall not be exceeded, but that they shall not be departed from in any way; in short the "reasonable change of trim" which Mr. Burgess alludes to is denied the challenging yachts.'

"The first part of this statement is correct. Certain dimensions are given with the stipulation that 'they shall not be exceeded.' But the deed nowhere states that these dimensions 'shall not be departed from in any way.' The clause of the deed which refers to this point is as follows:

"'Accompanying the 10 months' notice of challenge, there must be sent the name of the owner and a certificate of the name, rig and following dimensions of the challenging vessel, namely: Length on load waterline, beam at load waterline and extreme beam, and draft of water, which dimensions shall not be exceeded; and a custom house registry of the vessel must also be sent as soon as possible.'

"If the statement of FOREST AND STREAM were correct, it would have good grounds for its objection. Of course it would be impossible to compel a designer to give with absolute exactness all the dimensions named. The statement that these dimensions 'shall not be exceeded' plainly has in mind a margin for variation from designed dimensions. There is nothing in the deed to prevent a boat being smaller in any dimensions than is stated in her challenge. It is stated that certain dimensions must be given and of course there must not be a variation sufficient to constitute a breach of faith."

The deed of gift is now a legal document, as far as form goes, with all the verbiage and red tape of a deed or mortgage over the sale of property; it is consequently to be interpreted only by the letter. The passage quoted above says "there must be sent * * * the following dimensions * * * which shall not be exceeded." The words are exact and definite, there can be no dispute over their meaning. Now, what authority has the *Globe* for stating that some margin for variation from these set terms was intended, and who is to say what is a just and reasonable margin? This deed, which the *Globe* praises elsewhere as so exact and definite, does not say the approximate dimensions or the beam and depth within 3, 6 or 12in., but the dimensions, and no one can interpret this otherwise than the actual measurements from the design. If a designer gives the beam of his boat as 22ft. and on measurement she should prove but 21ft. 6in., who is to say that she is the same boat which was named in the challenge? Any one who designs a yacht under the terms laid down must expect, in the event of a departure from the specified dimensions, the same slurs that were cast upon Mr. Watson this season. When such pains are taken to preserve a strict legal form at the expense of brevity and clear language, the deed can only be interpreted in a strict and literal sense, as any other document; and there are no grounds for the assumption that the challenger is at liberty to depart in any way from the letter of its provisions. Even if he were to be allowed to build within the limits, the case would be nearly as bad, as he would not be allowed to increase draft or ballast, even if found desirable and the l.w.l. admitted it. The holder is allowed any possible change; if the *Globe* is correct, the defender may lighten his ballast, but may not increase it, and this alone is an injustice.

The case really is very much worse than this. As we have shown, the challenge must leave the other side by Dec. 7 to insure delivery ten months prior to the first of three races not later than October. By this early date the designer must have positively decided upon the l.w.l. length, extreme beam, l.w.l. beam, and extreme draft. These dimensions carry with them not only the total displacement, but actually the model of the boat, as every designer knows; so that it is not only that the general dimensions of the boat must be settled upon, but the designer must have practically completed his design. The dimensions thus mailed to New York they are fixed beyond recall, there is no possibility of altering the design after further study, nor to trim the boat to any but her designed loadline after trial. If on arrival at New York she measures more or less than specified in the challenge made ten months before, her owners and designer may be tolerably certain that they will be accused of giving false dimensions in their challenge, even if the yacht should not be disqualified. All this is bad; the designer is hurried in his design, he is prohibited from making any changes while building, and he is not allowed the right of trimming his boat at will as long as he does not exceed the racing measurement of the defending club. Bad as it is, however, it is not the worst, for during this time his antagonists have known the principal details of his boat, and they are at liberty to build anything they please to beat her, or to alter their ballast, increase or decrease the draft or depth of keel; in short, to do what they please so long as their yacht is not over 90ft. l.w.l. This is what Mr. Burgess calls even terms; what Com. Forbes, Com. Whitten, Com. Savage, Com. Russ and the rest of Boston's commodores consider fair and sportsmanlike.

The truth of the matter may be briefly summed up:

The New York Y. C. classes by l.w.l. length and gives time by sail area.

A challenger should give the l.w.l. length and the measurement by the New York Y. C. rule, being subject to disqualification if over the class.

The demand for the four dimensions is utterly without right or precedent, a mean attempt to obtain an advantage over the challenger.

The actual effect of this demand, to restrict the designer, is as unreasonable and unfair as it is impracticable.

Gen. Paine and Mr. Burgess last winter spent a long time in studying out how large Thistle was to be; now the New York Y. C. propose to avoid any doubt in the future by demanding peremptorily the desired dimensions, or else no challenge. The four points stated above need no explanation, a man need not be a commodore in order to understand them, and we are willing to leave it to all unprejudiced yachtsmen to say whether this clause of the deed is fair and sportsmanlike or the reverse.

The *Globe* says: "The most objectionable feature of the old deed was that a challenger could always be outbuilt. Considerable discussion was made last winter as to the sportsmanship of this measure, and the new deed was drafted to prevent its recurrence." This is a curious statement, the new deed provides a way of learning the dimensions of the challenger in ample time to outbuild them; and further, while he must of necessity build a seagoing vessel on his 90ft., the defenders may build a racing machine on the same length. Certainly the *Globe* is not quite clear in its conclusions.

Commodore Forbes speaks as follows concerning the manner in which the new deed was adopted: "I should like to know upon what ground the FOREST AND STREAM insinuates that this deed of gift was passed without the approval of the New York club in general. The measure was brought before a meeting which had been especially called for the purpose, and if there had been any objection it would have been brought up then. The measure was passed as any other similar measure would be, and such being the case, it is absurd to claim that it does not represent the sentiment of the club."

It would appear that Com. Forbes was not present at the meeting and is not cognizant of the circumstances attending the acceptance of the deed.

A special meeting of the club was hastily and informally called, no notice being given to members as to its object, and among the miscellaneous business a motion was passed as follows:

Resolved, That a committee of five be appointed by the Chair to confer with Mr. George L. Schuyler on the subject of amending the deed of gift of the America's Cup, and with full power and authority to execute in behalf of the club any and all papers and instruments necessary to effect any changes in such deed of gift and the acceptance thereof which may be mutually agreed upon between them and Mr. Schuyler.

The result of the committee's labors was not made public prior to the regular meeting of Oct. 27, and beyond a few rumors the members who attended the meeting knew nothing of what had been done. The long document was read once by the secretary, and a motion was made for its adoption. One of the leading sailors and racing men of the club arose and asked the commodore whether the club at large could vote on the measure, as the committee had full power, and had used it in accepting the conditions themselves before disclosing them to the club. The commodore decided that the point was well taken, and that the club as a body really had no voice in the matter. The custom in yacht clubs is that any change in constitution, by-laws or sailing rules must be submitted in writing to all the members some time in advance of the meeting at which it will be finally voted upon, in order that all may understand fully what is being done. It would seem that in a matter so important as this, in which not only the honor of the club was concerned, but which was to be more permanent than any other measure ever has been, and to govern all the varying conditions of future racing, at least the usual care would have been taken, that the draft of the proposed deed would have been submitted to all of the seven hundred members of the club, in order that each might discuss and vote intelligently on it. What were the actual facts? The old deed was turned over to the committee of five, for every one in and out of the club knows that the "surviving donor" was brought in as a mere figurehead in the matter; this committee revised the deed and then accepted their own work, after which the body of the club was called in to give color to the farce by a nominal acceptance, with no opportunity given for an objection.

Before the committee was appointed the club had received notice of a challenge from a well-known racing man, and it was well understood that his boat would come in the second class. No sooner was this notice in hand than a special meeting was held and arrangements made to revise the deed so as to effectually shut out this boat's challenge. The need for such haste is not apparent. The concealment of the new deed until it was sprung on the members at the meeting, as well as the shutting off of all discussion, suggest a strong parallel with the methods of certain gentlemen, now residing for obvious reasons at a distance from New York, who held a hurried meeting early one morning to transact some railroad business. The transactions of such a body as the New York Y. C. should be open and public and above suspicion, but all the circumstances attending the alteration of the deed of gift are such as to bring discredit on the club. The very fact that the deed was concealed until it had been finally accepted shows that it was feared that it would not bear public scrutiny. There are many who would have objected to its provisions had they been familiar with them in advance of their adoption; but now that the deed is an accomplished fact, they decline to enter a discussion.

However true this may be, there is every reason why all American yachtsmen that feel as we do, that the action taken by a part of the New York Yacht Club is unfair, unsportsmanlike, discreditable to the nation and destructive to international racing, should enter a protest against such action.

Just now there is considerable feeling over the late races; men are proud of the Volunteer's victory and ready to accept anything proposed by the victors without weighing its merits; the daily papers have stirred up a great deal of ill-feeling over the length of Thistle; and the action of Arrow's owner last spring is still fresh in the minds of American yachtsmen. All these facts combine to prevent a clear judgement of the case on its merits, but it must be remembered that in a year or two matters will have quieted down, the smoke will have cleared away, and American yachtsmen will be ready to take a clearer and fairer view of the deed of gift. Will it stand such inspection? We believe not, and it is th is conviction only that has forced us to take and hold a position in direct opposition to the most prominent of American yachtsmen, the leaders of the New York Yacht Club and the men who have sailed the late races for them. Already foreign yachtsmen have passed a sweeping condemnation on its terms, and we firmly believe that the day will come when American yachtsmen will see the justice of their criticism, but then it will be too late.

America now holds unquestioned the supremacy of the yachting world; Boston, not New York, has produced three yachts in succession that have defeated the best that have been brought against them, and the result of these victories must be felt in yachting circles throughout the country. Is this the time to suffer the hardly won laurels to be dimmed by openly expressed suspicions and accusations; can American yachting at large afford to see the America's Cup locked up from competition, can it allow the action of a small number to clog and impede the development of designing and building as well as of international racing? These are questions for every yachtsman to consider for himself before he declares for the side which is for the moment in favor; or even sits by and tacitly acquiesces in its actions, though disapproving of them.

The main efforts of those who have attempted to answer our charges have been to complicate and confuse the subject by the introduction of certain truths which we have never disputed, and also much other matter that has no special bearing on the case, and in order that we may not be misunderstood or misrepresented we recapitulate our position, most of the points having been taken prior to the appointment of the committee on revision:

The first and second deeds of gift were clearly inadequate to the present and future demands of yachting.

Some change was necessary, either by a new deed of gift or by a fair and liberal interpretation of the spirit of the original deed, the latter being preferable, as the legality of any change in the original deed was at least questionable.

As to conditions to be laid down, the leading points governing the races should be:

That they should be open to all legitimate sailing craft, including centerboard vessels, capable of crossing the ocean alone under sail.

That the races shall be sailed on open waters deep enough for any class of yacht, either keel or centerboard.

That challenging yachts shall be matched, as nearly as may be, from the classes to which they belong, and that no nation shall be compelled to receive a challenge from a size of yacht that does not exist in its racing fleet.

That the conditions of the race shall be absolutely the same for both parties.

That the challenger shall give, with name and rig, the length on loadline and the measurement by the rule of the holder, under which the races will be sailed.

That in the case of a challenge from a boat not yet built, the two parties may make an arrangement at any time after the close of the yachting season, not waiting until spring as under the old deed.

That a challenge from a yacht already built and that has raced for a season, may be sent in up to the opening of the yachting season, or May 1.

That meddling, by any club, with the words of the deed of gift drawn up by the five original donors, should not be permitted, but that questions that may arise in consequence of changes in the conditions of yachtracing, should be decided strictly in accordance with the plainly expressed spirit of the original deed, the recognized principles of sport among gentlemen, and the dictates of ordinary common sense.

There are two difficult questions besides, that of the time necessary to build a new yacht, if needed, and that of time allowance. The question as to notice could easily be disposed of by confining the races to yachts actually built and that have raced in the season preceding the one for which they may challenge. This would be equally fair to both sides, and the result, showing not which nation can outbuild or turn out a special boat on a spurt, but which has the best vessel among its existing fleet, would be of more value than by the present plan. Of course this would not have done in the past, but the racing yacht is now a recognized institution, none other will compete for the Cup, save the fastest of a nation's fleet in the class, and the test will be fair to all. Further, it will remove the complaint so long urged by the New York Y. C., that the holder is put to the expense of races by untried and experimental yachts, not representatives of the fleet, as no yacht will be apt to cross the Atlantic again unless clearly the superior to any of her home fleet. As to time allowance, it is not possible to lay down a fixed rule with a certainty that it may not be obsolete in a few years, and at the same time it is obviously necessary that the matter be not left to the whim of any club which may hold the Cup, else they might find in its past history a precedent for unfair change of the club rule. It must be considered, however that the tendency now is strongly toward fairer rules and greater uniformity; the new British rules not differing radically from the leading American. It might be possible for a club, in anticipation of winning the Cup, to adopt a special rule which would enable it to keep it, but it is in the last degree improbable, and it is difficult to see how it could be done, as the rule would of necessity apply to the club fleet as well as to the Cup races. To guard against such a contingency, however, it would only be necessary to provide that in case of non-agreement the races shall be sailed under an average or the allowances of both parties, the time being computed by each rule, and a mean taken. The present bungling attempt to settle the matter seems to have been made with the idea that in declaring for no time allowance the committee was avoiding the difficulty entirely, but it is evident that they have only put it in another and still more objectionable shape, by returning to the dead rule of length.

These two propositions may be open to argument, but the eight points summed up above cover pretty thoroughly the principles which should govern such races as those for the America's Cup. We decline to pose as sponsors for all the statements which our opponents have ascribed to us, but if they care to take definite issue on the above points, we stand ready to defend them.

Editor Forest and Stream;

In his defense of the new deed of gift, Mr. Burgess is not quite consistent. He says it is a misfortune that under the new conditions international yacht racing must be confined to wealthy men or syndicates, and yet he defends the deed which creates this state of things. It was neither the intention nor the effect of the original deed of gift. If the intention of the donors had been to encourage yacht designing and yacht racing in the largest classes only, they certainly would not have given such a wide range of tonnage as from 30 to 300.

Let the New York Y. C. beware lest they are hoist with their own petard. If some millionaire on the other side with a craving for notoriety should send over a racing machine of the maximum size, with unlimited draft, beam and sail area, I doubt whether even the Bostonian section of the Cup defenders would rejoice at her advent. If such a boat succeeded in capturing the Cup her success would do no good to the cause of true yachting. She would merely prove the power of money, and the short-sightedness of the New York Y. C. in encouraging a new type of marine monster.

Mr. Burgess knows as well as anybody that 80 to 90ft. sloops and cutters are an undesirable type of yacht. They are undesirable in themselves, and they have killed schooner racing. A man who wants a yacht over 75ft. on the waterline should have a schooner. As long as big sloops and cutters are allowed, of course wealthy men will go on trying to out-build one another, but there is more true sport to be found in the smaller classes. The New York Y. C. has made a great mistake in encouraging the building of enormous single-stickers.

PRIVATE OPINION.

NEW YORK, Jan. 14.

THE BURGESS FUND.

THE following correspondence has just been made public:

NEW YORK, Dec. 23, 1887. Mr. Edward Burgess, Boston—Dear Sir: Through the kind medium of our mutual good friend, Gen. Charles J. Paine, we have the great pleasure of sending you the treasurer's check for $10,172.25, the net amount received here in behalf of the "National Testimonial Fund," in grateful recognition of your splendid genius and careful study, resulting in the modelling of the Puritan, Mayflower and Volunteer, which, making such a marked advance, one after the other, on previous designs, so successfully defended the America's Cup against the three English yachts successively sent to this country to wrest it back. No event has in late years redounded more to the credit of this country abroad, reflecting, as it did, the earnest concentration of ingenuity of our people when occasion should require, and forcing the acknowledgment of the English press and people that they have met more than their match on the element on which they held themselves pre-eminent.

To the firm resolve, nautical knowledge and great liberality of Gen. Charles J. Paine are indeed due the first meed of praise, for without him these results might not have been so successfully attained; but it needed the scientific designer to carry out his ideas to success, and in this matter he had the wisdom and foresight to select you as his faithful lieutenant.

Assuring you, dear sir, of the hearty meaning of this slight tribute and of our own esteem and respect, we remain yours very sincerely, J. W. HAYWARD, F. W. J. HURST, } Burgess Testimonial Fund.

Messrs. James W. Hayward and F. W. J. Hurst, New York—My Dear Sirs: Gen. Paine has given me your most kind letter of Dec. 23 with its inclosure of a check to my order for $10,172.25. It is impossible for me to express, as I would, my deep sense of the unparalleled generosity and kindness which prompted such an unexpected gift—one that I feel I have done so little to deserve. But, magnificently generous as it is, I can assure you that I value far higher its testimony to the existence of so many kind friends and well wishers.

I hope you can find some way to express to them my heartfelt gratitude for their great goodness to me.

Please accept my sincere thanks for the very kind words with which you present the gift, and believe me always most gratefully yours, EDWARD BURGESS.

BOSTON, Jan. 12, 1888.

A RULE THAT WILL NOT WORK BOTH WAYS.

ALLUDING to the demand made by a contemporary, that the New York Y. C. shall reconsider the most objectionable clauses of the deed of gift, the *London Field* says: "But this would not remove the real sting from the unsportsmanlike parchment. The objection a challenger would most strongly make, is to the requisition that he must give every important particular concerning his vessel and this ten months in advance of the date for the first match. There is a meanness about this requisition which is repulsive, and American sportsmen need be much more ashamed of it than the ten months clause (taken by itself) or the 'no time allowance' provision. Supposing a British challenger were to write to the New York Yacht Club in these terms, 'If you will tell me ten months beforehand the dimensions, Custom House tonnage, the rig of the yacht you will defend the Cup with, and if you will give me every opportunity of studying her performances, discovering her ballast, plan and form, and judging of her sail plan by aid of photographs during the ten months interval, I will challenge you for that Cup.' Of course, American yachtsmen would think the challenger was crediting them with an unusual amount of softness, and yet it is only the position they have themselves now taken up. We trust, if any more appeals are made to the 'surviving donor,' that provisions will be made that in future an existing yacht shall be challenged to sail for the Cup, and not that a club be challenged to produce a yacht to defend the Cup. We confess, however, that appeals to the 'surviving donor' are becoming ludicrous, especially when we remember how the New York Yacht Club laughed to scorn the decisive statement of the compliant gentleman when he was appealed to by Mr. Ashbury for his interpretation of the word match in the original deed. Perhaps in this case it would be better if the 'surviving donor' took the initiative, and asked the club to destroy the existing deed, so that the original with all its defects may be reverted to. At any rate, that deed was conceived in the spirit of a sportsman and not in that of an attorney, and, so far as we know, was never objected to. In conclusion, we must express a hope that some other British clubs will reply to the new deed in the tone of voice the Royal London has."

THE NEW SECOND CLASS RACER.—The model for the yacht for Mr. E. S. Auchincloss has been received from Mr. Watson, but it is not yet decided whether the yacht will be built from it or a model by Mr. Smith. The length, too, is still undecided, owing to the classes not being yet definitely settled.

CLASSES FOR SMALL YACHTS.

WHILE the old sandbagger has disappeared from the racing, no special type of small boat has as yet taken its place in American waters. There is a field for the development of a class of fixed ballast boats, both keel and centerboard, which shall be adapted for racing under Corinthian rules, while at the same time such boats must be available for ordinary sailing and cruising. It is a matter that even the largest clubs might take up with advantage, to frame suitable rules for the development of small yachts of good model, which may be built and raced at a moderate cost, as such boats are the real training ships for the large racers. The following letter from the Corinthian Y. C. on the Thames, an organization which has done much to further Corinthian interests, describes an experiment in this line which the club is about to make. We wish them all success in the effort, and at the same time recommend some similar legislation to American clubs:

Editor Forest and Stream:

The Corinthian Y. C., having its headquarters on the Thames, has just decided to encourage a new class of small yacht, which, it is hoped, will bring out a useful craft for all-round purposes. The conditions are as follows:

Length on the load waterline not less than 18ft. and not more than 21ft. Actual sail area not exceeding 500sq. ft.; centerboards optional. The boats must, furthermore, be not less than two-thirds decked, and there will be no time allowance for difference of size or rig.

The subject has been attracting considerable attention from those interested in small yacht racing on the Thames, and six members of this club have already signified their intention of laying down boats for next season's racing.

The Corinthian Y. C., since its formation in 1872, has always strenuously upheld the interests of amateur sailing, and it is anticipated that by the adoption of this new class many men will be induced to build, and that in the contests to follow the younger members of the club will have the opportunity of perfecting themselves in seamanship under the command of the older hands.

LONDON, England, Dec. 31, 1887. T. G. F. WINSER, Secretary Cor. Y. C.

"THE LAST OF THE AMERICA CUP."—Under this heading the *Nautical Magazine* speaks as follows: "The practical effect of these provisions is that the English challenger will have to give all the particulars of his vessel ten months beforehand, and that unless he agrees to anything that the New York Y. C. prescribes at the time, as to course, distance, etc., he will get no time allowance. His only chance practically is to build up to the extreme limit, and then, since not only the length but the limiting breadth (loadline and extreme) and the draft will be known, the defense will have ten months in which to build a racing machine with which to beat a vessel which must have been able to sail across the Atlantic. It would indeed appear that unless some further alteration is made in the deed of gift we have heard the last of the America Cup."

DEATH OF MR. OSGOOD.—On Jan. 13 Mr. Franklin Osgood, one of New York's best known yachtsmen, died suddenly, though after a long illness, at the age of 61. Mr. Osgood first owned the Widgeon in 1863, afterwards purchasing Magic in 1869 and building Columbia two years later. Both of these yachts became famous under his ownership through their successful races with Cambria and Livonia for the America's Cup. Of late years Mr. Osgood has owned the cruising sharpie Mascotte.

OSWEGO Y. C. OFFICERS, 1888.—Com., Jas. D. McFarlane; Vice-Com., Allan Ames; Captain, Swits Condé; Sec., Wm. Gordon; Treas., Elliot B. Mott; Meas., W. P. Judson; Fleet Surgeon, J. W. Eddy, M. D.; Directors: Jno. T. Mott, J. B. Donnelly, J. P Phelps.

PRISCILLA.—Com. Canfield has sold Priscilla to an owner represented by Mr. A. Cary Smith, her designer. Some important alterations will be made this winter, and Mr. Smith will race the yacht next season.

OHIO Y. C.—At the monthly meeting on Jan. 13 the new classification proposed by the Interlake Y. R. A. was rejected by the club. This classification is by l.w.l. length as follows: Class A, 50ft. and over; Class B, 40ft. and below 50; Class C, 30ft. and below 40; Class D, 25ft. and below 30; Class E, 20ft. and below 25; Class F, all under 20ft.

DORCHESTER Y. C.—This club has inaugurated a course of lectures on nautical subjects, the first, by Lt. Downes, U. S. N., on the Theory, History and Practice of Chart Making, being delivered on Jan. 13.

YACHTING IN THE SOUTH.—A regatta will be held at Pensacola, Fla., on Feb. 7, 8, 9 and 10, with prizes for yachts, pilot, fishing and working boats.

MAYFLOWER.—Rear-Com. Morgan has had Mayflower hauled out for the winter at Mather & Wood's Railway, Port Jefferson.

CORINTHIAN Y. C. OF MARBLEHEAD.—This young, but vigorous club has been incorporated and will build a house before the season opens.

WANDERER, schooner, Mr. G. W. Weld, will sail from Boston on Feb 7 for a West Indian cruise.

NIRVANA.—Gen. Perkins's schooner was on the railway at Nassau on Jan. 9, having sprung a leak.

ANSWERS TO CORRESPONDENTS.

P. J., Eaton, N. Y.—Would not advise breeding bitch to her brother. There is only one champion Fritz; he is a well-bred dog.

E. G. B., New Britain, Conn.—Zoe is by St. John (Snapshot—Belle) and out of Folly (Rock—Whisper). Grace was by Match and out of Nell.

SUBSCRIBER.—Boz is by Gamester (Crib—Rose) and out of Betsy (Sultan—Busy). Gipsy is by Young Sally and out of Rose. Mose is by Ben and out of an imported bitch.

CONNEAUT, Pa.—The Commissioners of Crawford county were called upon recently to pay a peculiar claim against the county, and one which probably has no precedent in this or any other State. The law compels the owners of dogs to pay a per capita tax on all such animals. This is a recognition of property in dogs, and in consideration of the revenue the county receives from the taxing of them it is liable to sheep owners for all damage done to sheep by dogs on which a tax had been paid, on proof of damage and identity of the dog. One of the leading farmers of this township had a dog and held a tax receipt, making his possession for the year 1887 a legal one. A night or so before the end of the year the farmer heard a great commotion among his sheep, and hurrying out to the inclosure where they were kept he found seven of them dead and another one dying, with the teeth of the farmer's own dog fastened in its throat. The owner of the sheep-killing dog got his gun from the house and shot the dog dead. Last week he went to Meadeville and presented his bill to the County Commissioners for the eight sheep which his dog had killed. He argued before the board that, having paid the tax on his dog, and being legally entitled to its possession, he was as much entitled to remuneration for the loss of the sheep as his neighbor would have been had the dog killed sheep for him. The Commissioners ridiculed the farmer's argument and laughed at the idea of a man being paid for owning a sheep-killing dog that slaughtered his own sheep. The case was placed before the best lawyer in the county by the farmer, and the result was that the Commissioners found that the claim had every chance of being sustained by the courts, and they paid for the sheep.

The Forest Waters the Farm;
OR,
The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by
REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

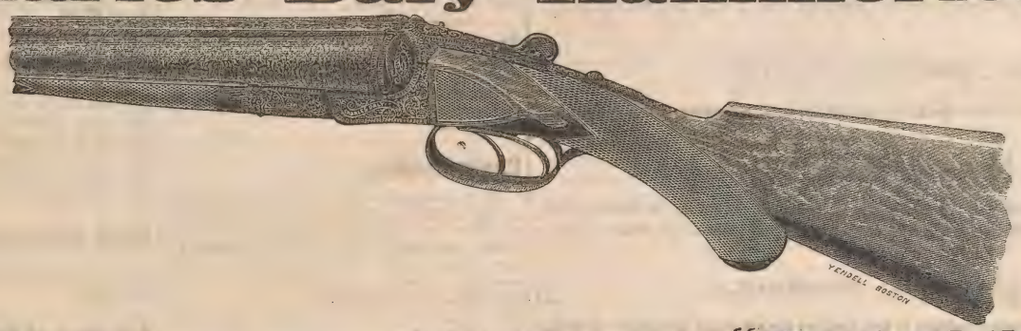
CHARLES DALY 3-BARREL.



The success of this gun introduced last year has exceeded our expectations. The maker's name is a guarantee of perfection in workmanship and every other desirable quality in a gun. The rifle barrel is rifled on a new system, which gives perfect results. The barrels are put together (a difficult thing in a three-barrel gun) with perfect accuracy. IT IS A GREAT CONVENIENCE TO ALWAYS HAVE A RIFLE WITH YOU. THE EXTRA WEIGHT IS NEXT TO NOTHING.

12-Gauge are made with rifle barrel, .32 W. C. F., .32 Marlin, .38 Marlin, .40 Ballard, .45 Government. Price, 85.00
10-Gauge " " " " " .38 Marlin, .40 Ballard, .45 Government. - - - - " 95.00

THE SHOT BARRELS ARE FINE DAMASCUS.

Charles Daly Hammerless.

As an evidence of the worth and increasing popularity of this "Best of the Hammerless," the sales this spring have been nearly double those of any former spring season. Alongside of any other make, costing 50 per cent. more, they excel in every respect. Especially in the remarkable close hitting and consequent solidity and lasting quality, and long-distance shooting. Here is a letter from one of the best shots in the South, who, like hundreds of others, believes the Daly is the ONLY gun:

CHICAGO, April 28, 1887.

F. P. TAYLER, ESQ.—DEAR SIR: The Hammerless Diamond Daly ordered herewith is to be the same weight, drop and trigger pull as my old gun purchased of you in the spring of 1881. The old hammer gun and I will never part company if it can be avoided, and I only hope the new one will prove as good in every respect. I do not expect to get a better one, because I do not think a better one can be made. This gun has been shot in the field and at the trap during the past seven years more than falls to the lot of half a dozen ordinary guns, and it is still solid and good for many years more hard shooting. It carried off the $500 Diamond Badge, representing the State championship of Illinois in 1885, when, owing to a gale of wind and strong birds, very close, hard shooting was required to stop a bird within bounds. In this contest many of the guns (57) on the grounds did not do justice to the men who held them. Now, I want as fine a gun as you can turn out. If it is too pretty to shoot with I have the old one to fall back on. I can only say in conclusion that I am wedded to the Daly gun, and intend to own one as long as I can carry it.

Very truly yours,
GEO. T. FARMER.

SELF-COCKING.

Automatic Ejecting.

This new Revolver is now ready for delivery. It is almost a fac-simile of the celebrated SMITH & WESSON, and is guaranteed equal in quality and finish to **any pistol in the World.** At present will be made only for the .38-caliber S. & W. cartridge. .32-caliber to follow.

A WORD IN SEASON.

Readers old and new of the FOREST AND STREAM may be pleased to know that the paper is now at the close of 1887 enjoying the support of a wider circle of friends than at any former period in its history. This is an interesting fact, for it proves, with the best possible demonstration of success, the sound sense of the theory long ago adopted by editors and publishers, and steadfastly adhered to, that there is room in this country for a journal treating the subjects embraced by our departments, and depending for its support wholly upon what have been accepted by the conductors of the FOREST AND STREAM as legitimate journalistic methods.

The tone and high character of the journal, as one fit for sportsmen to receive into their homes, will be jealously maintained. As there is nothing in the recreations of field and stream inconsistent with the highest type of manhood, so, the editors are convinced, there should be in a journal like the FOREST AND STREAM nothing to offend good taste.

The FOREST AND STREAM will be, in the future as in the past, thoroughly representative of the best field sportsmanship of America. It will maintain its position as the closer exponent of those who seek recreation with gun or rod, rifle, canoe or yacht. Its character will be scrupulously preserved, and readers in 1888 may expect a rich fund of sporting sketches and stories, suggestions, bright sayings, prompt, reliable news, and interesting discussions. Angler, shooter, dog breeder, canoeist and yachtsman, may be assured that whatever is of interest in these respective fields in 1888 will find its way into the columns of the FOREST AND STREAM.

The Sportsman Tourist

columns are filled with bright sketches of travel, camp life and adventure, the reflected experience of a host of outers.

Natural History.

Papers descriptive of bird life, chapters of animal biography, notes on the ways of field, forest and water creatures as observed by sportsmen, anglers and naturalists, make up these pages.

Angling and Shooting.

Time was when a single journal sufficed in this country for adequate discussion of all the heterogenous pastimes and practices dubbed sport. That time has long since passed away. Some of the sports have been outgrown or put under a ban, others have developed to such a degree that each class requires a special organ. The particular fields chosen by the FOREST AND STREAM are those of angling and shooting. The pages given up to these topics are rich with the freshest, brightest, most wholesome, entertaining and valuable open air literature of the day. They have the sunlight and woodsy odor of the haunts of game and fish. they picture nature as seen by sportsman and angler. One has not long to read the FOREST AND STREAM before learning its attitude with respect to game and fish protection. The editors believe in conserving, by all legitimate methods, the game of fields and woods, and the fish of brook, river and lake, not for the exclusive benefit of any class or classes, but for the public. They are earnest, consistent and determined advocates of strict protection in he legal close season, and in restricting the taking of game both as to season and methods, o that the benefits of these natural resources may be evenly distributed.

The Kennel.

This department has kept even pace with the growth of the interest of breeding field and pet dogs. Reports of trials and shows are usually given in the FOREST AND STREAM in advance of other publications, and being prepared by competent writers their intelligent criticisms are of practical utility. This journal is not hampered by personal animosities. It has no judges to "kill." It does not decide a dog's merit by asking who the owner is. It treats all kennel subjects without fear, favor or ulterior motives, and in consequence enjoys a degree of public confidence and esteem denied to such as stagger beneath the incubus of malice and flounder in the bogs of ignorance.

Rifle and Trap Shooting

records scores of meetings and matches, discussions of topics pertaining to the butt, gallery and trap. Secretaries of gun and rifle clubs are invited to send their scores for publication.

Canoeing.

This country is a land of magnificent water courses, and Americans are just beginning to appreciate the canoe as a means of enjoying the delectable charms of river and lake, and bay and canal. The men who are making fortunes by making canoes know best how rapidly the ranks of canoeists are multiplying. Novices and old hands will find in the FOREST AND STREAM canoeing columns, in charge of a practical canoeist, accounts of cruises, lines of new craft, and hints and helps and suggestions without number. Closely allied is

Yachting,

in which the FOREST AND STREAM is the only competent, all-the-year-round, intelligent exponent. Our reports of races are full, prompt and accurate. The numerous illustrations of lines of new yachts make an invaluable record of the development of yacht building.

Weekly, $4 per year; $2 for six months.

Forest and Stream Pub. Co., New York.

HOLIDAY PRESENTS.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction.

Nothing is more annoying or inconvenient than to postpone the purchase of holiday gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for the holidays. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Antelope and Deer of America.

By HON. J. D. CATON, LL D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Rod and Gun in California.

By T. S. VAN DYKE. A story of outdoor life in semi-tropical land. Through the charmingly told narrative runs the tender thread of a love story. Price $1.50.

The Canoe Aurora.

By DR C. A. NEIDE. The well told story of the author's cruise in a tiny canoe from an Adirondack lake to the Gulf of Mexico. Price $1.00.

Canoe Handling.

By C. BOWYER VAUX ("Dot"). The author of this pleasantly written volume is acknowledged to be the first of American, and so of living, canoeists. In his book he tells all about how to sail and handle a canoe, and how to care for it, either when in use or laid up for winter. Price $1.00.

Small Yachts,

THEIR DESIGN AND CONSTRUCTION, by C. P. KUNHARDT. This sumptuous quarto volume covers the whole range of yacht designing and care, and it is the only work of the kind yet issued in America. The text occupies 325 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7 00.

Canoe and Boat Building

FOR AMATEURS. By W. P. STEPHENS. A manual for boat building by the canoeing editor of FOREST AND STREAM. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1 50.

Hunting Trips of a Ranchman.

By THEODORE ROOSEVELT. A delightful book of hunting adventure in Dakota and Montana. Price $3 50.

Training vs. Breaking.

By S. T. HAMMOND, kennel editor of FOREST AND STREAM. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "SENECA." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Forest Runes.

Poems by "NESSMUK." With artotype portrait and autobiographical sketch of the author. Cloth, 208 pp. Price $1.50.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. Cloth, 250 pages. Price $3.00.

Our New Alaska.

By CHAS. HALLOCK. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Woodcraft.

By "NESSMUK." "Nessmuk" is a Nestor among American sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

The History of the Mastiff.

By M. B. WYNN, who is acknowledged on all hands to be one of the first authorities in the world on this splendid breed of dogs. The history of the guard dog is traced from prehistoric down to present time, and the tale is told with the enthusiasm of a true lover of man's best friend. Price $2.50.

Uncle Lisha's Shop.

LIFE IN A CORNER OF YANKEELAND. By ROWLAND E. ROBINSON. See advertisement elsewhere.

Artotypes of Paintings.

By JOHN M. TRACY. Mr. Tracy has won a reputation for his faithful portraits of dogs and his beautiful and sympathetic delineations of the incidents of the field. We have for sale a series of admirable artotypes of these paintings, which preserve with admirable fidelity the spirit of the originals. The artotypes are 15x20 inches. Price $1 each.

Book of the Black Bass.

By JAMES A. HENSHALL, M. D. Comprising its complete scientific and life history, with a practical treatise on angling and fly-fishing, and full descriptions of tools, tackle and implements. Illustrated. Cloth, 470 pages, Price $3.00.

The Still-Hunter.

By THEO. S. VAN DYKE. A practical treatise on deer-stalking. Extra cloth, beveled, 390 pages. Price $2 00.

Southern California.

By T. S. VAN DYKE. Its valleys, hills and streams; its animals, birds and fishes; its gardens, farms and climate; its insects and reptiles, with hints on going to California. Extra cloth, bevel edge, 235 pp. Price $1.50.

Cruises in Small Yachts and Big Canoes;

Or, Notes from the Log of the "Water-snake" in Holland and on the South Coast, the Logs of the "Water Rat" and "Viper" on the Thames and South Coast; with remarks on anchorages for small craft. By H. FIENNES SPEED. Cloth, 280 pp. Price $2 50.

Yachts, Boats and Canoes.

By C. STANSFIELD-HICKS. With special chapters on model yachts and singlehanded sailing. Numerous illustrations and diagrams and working drawings of model yachts and various small craft suitable for amateurs. Cloth. Price $3.50.

Camping and Cruising in Florida.

By JAS. A. HENSHALL. With a list of fishes and birds, 84 illustrations and maps. Cloth, 250 pages. Price $1.50.

Forest and Stream Publishing Co., 39 Park Row, N.Y.

A NOTABLE ART ENTERPRISE!

The Sportsman's Reverie.

A SERIES OF PICTURES FOR SPORTSMEN.

READERS of the FOREST AND STREAM cannot fail to recollect Mr. Thomas F. Watson poem entitled, "The Sportsman's Reverie," printed in this journal about two years ago. Later on a few stanzas were added to cover other scenes of typical American sport with the gun. The author depicted vividly the varied visions which come before the view of the veteran sportsman as he sits in easy chair before the fire. Of the author and his poem the *Detroit Free Press* said in an appreciative notice: "The author is evidently a man of the most acute sportsmanly enthusiasm, as well as of nice literary taste. His poem is built upon a very simple plan. Before a cheerful fire—like Ike Marvel's hero—sits a veteran of rod and gun; he grows half drowsy over pipe and fire and the poet has caught—with a nice and sensitive appreciation—the reminiscences of a hundred hunts which flit through his brain. One experience after another is described with graceful pen touches; the quail, the woodcock, the snipe, the deer, fall before the crack of the gun; a long day's sport—a glorious day such as no man ever compassed between sun and sun—is described, even the trout, from the clear rapid, paying tribute to the prowess of a dreamland sportsman, until at last, with the fall of the quiet night shadows, the sportsman draws his boat to the shore, his tired retriever crouches at his feet, and, with his ducks, the final trophies of his sport, at his side, he looks back over the darkening water; and then, once again at his fireside, the end of the vision comes naturally and gracefully."

And now these "word pictures" of the poet have been complemented with the actual canvas pictures of the painter. Artist-poet and poet-artist have united to give us the poem in a magnificent setting. Mr. Robert Hopkin, the celebrated artist of Detroit, has painted a series of twelve pictures, each telling in color what the poem tells in words. From these paintings have been made superb heliotype engravings, each having beneath it the particular verse of the poem illustrated. The series is remarkable for strict adherence to nature fidelity in portraying action, and artistic merit.

THE TWELVE PICTURES:

No. 1 shows the hunter seated in an easy attitude in an arm chair, gazing reflectively into the fire on the hearth. Above the fireplace are the head and antlers of a deer. The sportsman's right arm is around the neck of his dog, which is resting on his haunches beside the chair. His left hand holds his pipe. The firelight flickers on the floor and around the legs of the chair.

No. 2 represents dawn breaking over a small lake. The night shades are fleeing. A mist is rising from the eastern end of the lake, of which trees fringe the edge. A plover is circling in the air, and in the foreground is a mallard lazily flying out over the glassy water.

No. 3 represents snipe shooting. In the foreground is the sportsman, his body twisted around to the left in the attitude of making a double on snipe. Standing beside him is the setter, waiting for the word to retrieve. To his right is the border of a wood, the branches bending to the strong wind. In the distance are the sails of craft on the lake.

No. 4—woodcock shooting—shows an opening in the copse around whose border a brook is winding. In the foreground, standing deep in the ferns and rank vegetation, is a setter on a point. Behind the dog is the sportsman in the attitude of shooting at a bird flying directly over him.

No. 5 shows a quail hunter in the foreground, walking along ready for the shot, which will follow the rise of the birds, on which the dog is drawing to a point. A haze is over all, and the sky is that of a day in Indian summer.

No. 6 depicts grouse or partridge shooting in the beech woods. The hunter is walking down a slope. The dog has come to a point ahead of him. The bird has flushed and the hunter is shown aiming. The pointer has stiffened into an attitude of strained attention, as he watches the bird fly away. The upper part of the sportsman's body is in the shadow, the lower part in the strong light of the sun rays.

No. 7 shows an angler reeling in a trout. A brook is tumbling down through the woods and over the rocks into the pool. The sky is cloudy and the sunlight is struggling through.

No. 8—deer shooting—is a forest scene in the foreground a buck, just shot, is falling on the edge of a lake. Tearing down the slope behind him are two hounds. To the left, behind the roots of an upturned tree, are seen the head and shoulders of the hunter, whose rifle is still bearing on the deer.

No. 9 represents shooting over decoys. A gale is blowing and the water of the channe outside is lashed into whitecaps. In the bay the decoys are tossing in the chopping waves. In the foreground is a point of rushes, in which the skiff of the hunter is partially concealed. The flock of ducks, which has just swung in outside the decoys, is broken by the discharge of the first barrel. One section is wheeling out over the river. The other has broken off to the side and is wheeling out again to meet the first section. Some scattered birds are dashing above the head of the hunter, and he is twisted around in his skiff aiming at a bird flying above and behind him.

No. 10 shows flight duck shooting. The scen is a marsh, on whose broken surface the sun is setting behind the clouds. In the foreground, on a grassy point, are the hunter and his spaniel. The hunter is in a kneeling attitude and in the act of firing his first barrel. The spaniel is plunging into the water to retrieve the bird which has fallen to the first barrel. In the distance are flying ducks.

Nos. 11 and 12 represent the hunter retiring from the marsh and at home, and these two are among the strongest of the set.

The pictures are printed on the best 150lb. plate paper; size of paper 24×30in.; size of print 14½×17½in. The pictures have the tint and tint border and the artist's remarque, and form artist's proofs, an édition de luxe.

The prices of these engravings are as follows: Singly, $3.00; any group of 4, $10.00; the complete set, $30.00. Any group of four may be ordered, but we beg to suggest the following groups as strong combinations:

Group A.	Group B. (Upland.)	Group C. (Duck).
Plate 1, The Reverie.	Plate 3, Snipe Shooting.	Plate 9, Duck Shooting—over Decoys.
" 2, The Dawn.	" 4, Woodcock Shooting.	" 10, Duck Shooting—Flight.
" 7, Trout Fishing.	" 5, Quail Shooting.	" 11, Homeward.
" 8, Deer Hunting.	" 6, Grouse Shooting.	" 12, Home.

AUDUBON'S
Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1856, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories,

Aududon's Birds have never been equalled.

Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.
